MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

FOREWORD

The primary objective of this history project was to provide those charged with CIC planning, training and operations with a means for exploiting past successes and preventing repetitions of failures, while at the same time establishing a basic permanent record amenable to augmentation, correction, and chronological continuity.

In this initial draft of the History of Counter Intelligence Corps, the researchers, writers and editors pass on for critical reading, correction and amendment a basic manuscript of some 1,600,000 words, or the equivalent of four standard size volumes of official military history.

The great bulk of the work was accomplished during the years 1953-1955 by a special team headed by Lt. Col. Franklin P. Jordan of the Military Intelligence Reserve and Maj. Ann Bray of the Woman's Army Corps. Subsequently others concerned with limited revision and additional editing, and with production. The latter was accomplished as Fort Holabird Printing Plant facilities were available.

To produce a manuscript of maximum value to planners, instructors and operators, research was required by the original group quite beyond that required for a detailed historical recitation of interest to students and others desiring merely a general background of the Corps. To accomplish even the latter, however, it was necessary to cover the records of some 300 CIC detachments operating in a total of more than 60 countries during a period of 33 years. An estimated 25,000 CIC personnel were involved. The achievement of the primary objective was complicated by a number of unique problems.

In the first place, the Counter Intelligence Corps has never been an official "Corps" at all. It never has enjoyed the prerogatives of a formal army technical service, such as the Signal Corps, the Medical Corps, the Corps of Engineers--or even the Military Police. For the first quarter of a century of its existence the "Corps" was authorized no officer spaces, yet officers commanded its enlisted personnel in all phases of the work and themselves were outstandingly active in operations. Obviously a study based on the enlisted record alone would prove useless; it was necessary to carefully examine a mass of official records of G2's, S2's and intelligence officers of many organizations, as well as the official and informal notations of individual counterintelligence officers. These sources were traced down to post, camp and station level.

While researched sources provided abundant proof for the justification of CIC's existence in terms of its contribution to the total military effort, the CIC historian would prefer much more material against which to apply an objective rule. This, it is believed, must await the future, when possibly enemy records of the war years, as well as Soviet records of the same and subsequent years,

CONFIDENTIAL

may reveal the extent to which CIC efforts specifically and admittedly countered unfriendly intentions. In some instances this was uncovered in the project's research program and has been included in the narrative. But unfortunately for the historian, the bulk of this kind of information either never is reduced to permanent record in the first place, or if it is formalized, is among the documents of top priority for destruction upon development of a major military threat from any source.

All military-minded readers will appreciate that security classification factors seriously affect the availability and useability of documentary material. "Top Secret" was established in 1944 as classification for sensitive documents. Since then, regulations provided for periodic survey to effect downgrading. Yet even today research at Army record depositories in Kansas City and St. Louis, Missouri, Alexandria, Virginia, Washington, D.C., and Baltimore, Md., will reveal that there has been little downgrading of counterintelligence and related files. Through extensive interviewing, it is believed that this deficiency has been considerably offset in the material written up to the termination of hostilities in World War II and most phases of the Occupation Era. However, in general, readers of all CIC history of the year 1945 and subsequently, doubtless will realize that locked in some Top Secret vault possibly still being used may be documents that would at least modify some phases of the information they are reading. Until such time as a general down-grading reclassified this material, all history written beyond 1945 must be considered preliminary and possibly subject to extensive rewriting.

A different type of limitation of sources is part of the inevitable problem of the historian in attempting to determine the point at which research of source material reaches a point of diminishing returns and further research will neither add any information of material value nor change the validity of material already written. Added to this is the more practical consideration of cost in time and manpower of research beyond the point where returns indicate the highest place of productivity. During the main phase of the project more than 150,000 pages of CIC official documents were read and evaluated and, where pertinent, summarized or extracted. In addition, nearly 500 persons were interviewed and nearly 100 collateral reference books read or screened. There are many more persons who could have been profitably interviewed had time and circumstances permitted. It is hoped that the comments and criticisms of many readers of this manuscript will provide additional information and that there will then be an opportunity for a revision.

Writing a comprehensive history of the Corps was started following World War I. A special debt of gratitude is due to Col. Cabot Ward, G-2, Service Supply, AEF., for his comprehensive volume prepared in 1919. This portrayed problems and solutions which, if profited from, could have prevented their recurrence again and again. Unfortunately, no such adequate history was prepared

of work of the CIP with the combat troops in action or in occupation during World War I, nor of intelligence work in the United States.

Between the World Wars, in the "years of neglect," little history was made or written by the Corps. By the time CIP went into swift mobilization for World War II, World War I lessons had been buried in the musty stacks of unprocessed official records in the archives. There would have been little time to read and study them had they been available.

A comprehensive history should have been written following World War II, but the overwhelming demands on CIC agents in the Occupation Era created such a current workload that the project was not even considered. A brief summary was hastily prepared in late 1943 when the CIC in the United States was being merged with the Office of the Provost Marshal General, but it was not expanded or amplified after the war and remained a summary. So it was that when the Korean conflict began, there was no background of World War II CIC experience for guidance; even worse, historical data on the activities of CIC in the Occupation of Korea following World War II, had been buried in other files. For the second major conflict in less than a decade CIC personnel went into action with little benefit of the lessons their fellow agents had learned the hard way long years before.

Fortunately, in 1951 when Brig. Gen. John K. Rice was Chief of CIC, a history of the Counter Intelligence Corps was prepared for use at the CIC School. Although this history encountered all the problems of publication prepared under a short suspense date, it met such a favorable response that plans were made in 1952 by Brig. Gen. Philip E. Gallagher, then Chief of CIC, for a comprehensive history. In November 1952, the project was assigned to the special research-writing unit under Lt. Colonel Jordan.

Research soon revealed that the unorthodox command structure of CIC had resulted in its historical records passing through many command channels and that no requirement had existed that copies be furnished CIC headquarters. In some cases G2's summarized their CIC reports and discarded the reports themselves. In other cases, reports went forward but in some instances were lost when all G2 records were lost. Some were destroyed. In sum, vast gaps existed in available information. There were no CIC tactical reports from Europe from D-Day until mid-August found in available records at the CIC Center in 1952 when the project was started. It became apparent that personal interviews of participants would be the only means of obtaining some vitally important information. Had the project been postponed several years, this would have been nearly impossible, since many of the key personalities already were deceased, while others were scattered world-wide and in many cases addresses lost. Memories were lapsing, too, since even parts of World War II activities were more than 10 years old.

008

Another factor had to be considered: In 1947, two free lancer writers were authorized to write a history of the Corps and former members of the Corps were officially encouraged to give them information; many of these former CIC personnel not only gave these writers detailed interviews, but furnished them with various supporting documents; re-interviews and patient digging uncovered duplicate sources to such an extent that it is believed this loss was partially offset, but undoubtedly there are some of the documents that would be of value even now.

In summary, the words of Gen. George Washington apply. Writing of one of his reports in a letter to Congress he said "...in its first edition may not be free from error; time will discover its defects and experience suggest the remedy and such further improvements as may be necessary; but it was right to give it a beginning..."*

Letter of Instructions for the Historical Project

HEADQUARTERS
COUNTER INTELLIGENCE CORPS CENTER
Fort Holabird, Baltimore 19, Maryland

CICC-CS 27 November 1953

SUBJECT: Letter of Instructions: Historical Project

TO: Assistant Chief of Staff, G-3
Counter Intelligence Corps Center
Fort Holabird, Maryland
ATTN: OIC, Historical Project

PART ONE

Mission, Purpose and Responsibilities

1. MISSION: It is the desire of the Chief, CIC, that an official history of CIC be written. This mission will consist of two phases:

a. Compilation and writing of a complete and comprehensive history of the Counter Intelligence Corps from its inception to the current Armistice of the Korean War.

b. Organization of a practical system for subsequent operation by the Assistant Chief of Staff, G-3, CIC Center, that will insure the collection on a world-wide basis and the preservation at the CIC Center of suitable source material from which future phases of CIC history can be written.

2. REFERENCES:

a. AR 220-305, Field Organizations, Unit Lineage and Battle Honors, dated 18 March 1949 (Paragraph 1).

b. SR 220-345-1, Field Organizations, Unit Histories, dated 7 February 1950.

c. DA Circular No. 100, Military History Indoctrination Plan, dated 26 November 1952.

d. AR 220-315, Field Organizations, Unit Awards, dated 11 April 1952 (Paragraphs 37-40).

e. Pamphlet DA No. 20-200, Historical Study, Guide to the Writing of American Military History, dated August 1951.

f. FM 101-5, Staff Officer's Field Manual, Staff Organization and Procedure, dated July 1950, as amended (Paragraphs 17 and 34, RESTRICTED).

g. AR 210-10, Installations, Administration, dated 12 January 1950.

i. SR 345-250-70, Records Administration--Maintenance and Disposition of Intelligence and Security Administration Records, dated 21 January 1952.

j. AR 380-5, Military Security, Safeguarding Security Information, dated 6 June 1952, as amended.

k. SR 380-310-2, Counter Intelligence Corps, Procedures for Personnel, Administration and Training, dated 1 August 1952, RESTRICTED.

l. Letter, DA, (AGAC) (M) 380.01 (6 April 53) G-2-PC, "Instructions Pertaining to CIC Personnel," dated 7 April 1953, RESTRICTED.

3. PURPOSES:

a. Scope: This CIC history is to be world-wide in scope and to ".....pick up, absorb, broaden as and if appropriate, but not cancel, all Counter Intelligence Corps histories and diaries already written." This history will be produced in such detail and in such a manner that it will become the officially approved basis for all subsequent histories and can be edited and downgraded to serve one, several, or all of the following purposes:

(1) Professional Use: A typewritten monograph, possibly classified SECRET and with supporting documentation included as appropriate for use of high level planning particularly at G3 levels.

(2) Semi-Professional Use: Possibly mimeographed and possibly classified CONFIDENTIAL, referenced but without supporting data attached.

Some highly sensitive sections removed or paraphrased. For use in Advanced Courses and by officers in high level positions who require an intimate understanding of the Corps--its capabilities and its problems.

(3) Student Use: Possibly offset printed and unclassified as the CIC history to be used at CIC School in basic courses and for all personnel assigned duties with the Corps or in positions where they deal with the Corps.

(4) General Use: Possibly letter press printed and unclassified. For the general information and education of all Army personnel to facilitate mutual respect, proper understanding of the utilization of the Corps and cooperation with it. This could also serve for orientation of personnel of related outside agencies and even the general public to show the value received from this tax requirement.

b. Classification: The basic manuscript and drafts derived from it will be safeguarded as outlined in paragraph 7f.

4. RESPONSIBILITIES: Responsibilities for the production of this history will be as follows:

a. The CIC, Historical Project, under the staff supervision of the Assistant Chief of Staff, G-3, will be directly responsible for the production of this history by requisitioning the necessary personnel, facilities and funds and for obtaining the necessary clearances and approvals for material used.

b. The Commanding Officer, 902d CIC Detachment, with the concurrence of the Assistant Chief of Staff, G-2, Department of the Army, will furnish seven military personnel, if available, for special duty with the Assistant Chief of Staff, G-3, CIC Center, for completion of the Historical Project; said personnel to remain under the administrative jurisdiction of the 902d CIC Detachment.

c. The Deputy Chief, Counter Intelligence Corps, for the Chief, Counter Intelligence Corps, will approve the general plan of approach and treatment and from time to time review preliminary drafts of chapters or sections of the study to insure that the general approach and treatment are in line with the desires of the Chief, Counter Intelligence Corps and that the full significance of events is realized and commented upon by writers.

d. The Assistant Chief of Staff, G-1, CIC Center, will provide within the spaces made available, on request, qualified researchers, writers, editors, proofreaders, typists and such other personnel as may be necessary as authorized in paragraph 8.

e. The Assistant Chief of Staff, G-2, CIC Center, will grant designated personnel of the Historical Project access to classified files of the Central Counter Intelligence Corps Files which are deemed essential to the production of this history. The G2 will, upon request from the OIC, Historical Project, downgrade or obtain authority to downgrade any classified document or information obtained from the Central Counter Intelligence Corps Files, as appropriate.

f. The Assistant Chief of Staff, G-4, CIC Center, will provide the necessary office space, supplies, equipment, transportation or other facilities necessary for the completion of the project.

g. The Fiscal Officer, Budget and Accounting Division, Comptroller's Office, CIC Center, will provide, on recommendation of the OIC, Historical Project, and after approval by the Assistant Chief of Staff, G-3, a budget for TDY, transportation costs and incidental expenses in connection with the collection of prime source material for an historical study. Specific expenditures within this budget will be on request for the OIC, Historical Project, with approval by the Assistant Chief of Staff, G-3.

PART TWO

Organization and Procedures

5. PHASED SEQUENCE: This historical project will be divided into two phases as follows:

a. Organization Study Research: This is the collection from all prime sources possible--at the CIC Center, at Army Records Depositories and from first hand account by participants, where possible--of material which can be used in combat lessons and for the writing of any history at a later date. Initial objective is the preparation of an official monograph with supporting documents in the form of a preliminary draft.

b. Official History Writing: Following the completion of an approved preliminary draft, the copy will be submitted to the Historical Division, Department of the Army, for approval as an official history as defined by SR 220-345-1, paragraph 2b, so that appropriated or nonappropriated funds may be allocated for

the writing, rewriting and editing necessary and for printing the type or types of publications agreed upon. Other types of publications as listed in paragraph 3, this letter, will be produced as unofficial unit histories as defined in SR 220-345-1, paragraph 2c.

6. ORGANIZATION: (Omitted)

7. PROCEDURES: Assembly of prime source material, organization of that material and writing of that material will follow these general procedures:

a. Assembly: Material will be collected from files of the CIC Center and the School; CIC detachments and other CIC units world-wide. Additional documentation will be secured from Army Records Centers at Alexandria, Virginia; Kansas City, Missouri; Historical Division, Washington, D.C., G2 files, the Pentagon; and in personal interviews or by telephone or mail with prime sources.

b. Debriefing Contracts: All returnees to the CIC Center or the School, will, as part of their processing, fill out an historical questionnaire indicating what phases of CIC history they have personal knowledge of. Questionnaires will be forwarded to the Historical Project, c/o G3, CIC Center, so that arrangements for interviews can be made if the source appears profitable.

c. Organization:

(1) Material will be organized into a chronological sequence broken into significant phases of activity as tentatively outlined in paragraph 6 above. Units will be traced through all their changes rather than following literally a numerical or named unit as such.

(2) Normal chapter sequence for combat activities will be as follows:

(a) The situation or problem faced.

(b) The assigned mission or objective.

(c) The personnel and equipment available.

(d) The terrain, weather and morale.

(e) Preparation for the mission; tactics, etc.

(f) What was actually done or accomplished.

(g) Results; what was learned, good or bad.

d. Writing: (Omitted)

e. Writing Policies: (Omitted)

f. Classification: Classification will be in accordance with AR 380-5 and eventual publication and distribution will be in consonance with paragraphs 5 and 14 of SR 380-310-2, and letter DA AGAC (M) 380.01 (6 Apr 53) G2-PC, "Instructions Pertaining to CIC Personnel," 7 April 1953. The final classification of the final drafts will not be considered during the collection, organization and preparation of the preliminary draft. However, all classified information will be handled, transmitted and stored in accordance with current security regulations.

g. Liaison: Liaison will be maintained with the Historical Division, Department of the Army and the Historical Project, G2, DA.

PART THREE

Administration

8. PERSONNEL: (Omitted)

9. BUDGET AUTHORIZATION: (Omitted)

10. COMMUNICATION AUTHORIZATION: Direct communication is authorized officers of the Historical Project to expedite collection of historical data from prime sources as follows:

a. By Personal Visits: Visit will be authorized provided permission of subject is received and travel funds are approved by G3 and provided that a report of interview is written for the files.

b. By Telephone: Officers of the Historical Project are authorized to make outside official calls to prime sources for the purpose of arranging an interview; for making arrangements for forwarding data by mail; for confirmation of a specific fact, date, or identity; and for obtaining leads to people who can furnish first hand information. A Class "A" telephone will be provided that the Historical oject. The OIC, Historical Project, is responsible for the proper and economical

use of this means of communication. Procedures required by CIC Staff Procedure Manual, Chapter 6, paragraph 62e, will be followed.

c. Mail: Initial contacts with all prospective prime sources of material will be by letter over the signature of the Chief, or Deputy Chief, CIC. Prior to writing such letters, names of those to be contacted will be checked through G2, CIC Center.

11. TIME AUTHORIZATION: (Omitted)

12. REPORTS: (Omitted)

BY COMMAND OF MAJOR GENERAL CAMPBELL:

ACKNOWLEDGEMENTS AND CREDITS

THE STAFF

The Officer-in-Charge of the main writing project desires to express his appreciation for the intense interest, hard work, and the long hours put in by the staff of this project. All were skilled craftsmen, each in his or her own way, yet in so many ways similar that whatever the work at hand, it was done cheerfully and well.

Tribute is due especially to Ann Bray, Maj., W.A.C., Assistant Officer-in-Charge, who came with the project in March 1953 and remained with it to its termination two and a half years later. Her editorial skill, particularly in research, organization, writing and editing all the phases of CIC in combat, deserve highest praise, and her complete devotion to the project in all its phases entitles her to a rating of superior.

During the three-year operation of the project, its originally authorized strength of seven turned over three times so that the Roster shows:

1. OFFICERS

Lt. Col. Franklin E. Jordan	Capt. Irene Taylor
Maj. Henry W. Lowe	Capt. Walter J. Unrath
Maj. Ann Bray	Capt. Benjamin W. Phillips

2. ENLISTED

Thomas Jones	M.M. Meyer	John G. Myles	John E. Pohl
David A. Lloyd	Maurice Amder	D.J. Harrison	D.L. Markusch
R.H. Hudson	W.D. Catterson	D.S. Lamm	G.H. Gates
R.G. Rollins	J.K. Smart	B.R. Bridges	Allen Stiles

Of those trained in writing, the following deserve special mention for their contribution to the project in skill and effort:

Myles Lloyd Hudson Catterson Lamm Gates Smart Bridges

In addition more than three dozen enlisted personnel worked with the project as temporary typists and clerical assistants.

FRANKLIN E. JORDAN
Lt. Col., Inf.
Ft. Holabird - 1955

GLOSSARY

A2	Air General Staff Officer (or Section) dealing with intelligence
AAF	Army Air Forces
AAFPOA	Army Air Forces, Pacific Ocean Area
AAFSSS	Army Air Force Special Services Section
AAG	Army Advisory Groups
AC of S	Assistant Chief of Staff
AEF	American Expeditionary Forces WW I
ADSEC or ASCZ	Advance Section Communication Zone
AFHQ	Allied Forces Headquarters
AFMIDPAC	United States Army Forces, Middle Pacific
AFPAC	United States Army Forces in the Pacific
AFPOA	Army Forces, Pacific Ocean Areas
AFTC	Air Force Training Command
AGO	Adjutant General's Office
AIB	Air Intelligence Board
AJDC	American Joint Distribution Committee
Alaskan Department	So named on 1 November 1943 formerly called the Alaskan Defense Command
AMA	Agricultural Marketing Administration
AMET	Africa-Middle East Theater
AMEW	Africa-Middle East Wing

021

AMG	Allied Military Government
AMGOT	American Military Government of Occupied Territories also an obsecene word in Turkish.
ANVIL	Operational name for the invasion of Southern France WW II
AOT	Allied-occupied territory
APO	Army Post Office
AR	Army Regulations
ARC	American Red Cross
ASCZ	Advance Section Communications Zone
ASF	Army Service Forces
ATC	Air Transport Command
ATSC	Air Technical Service Command
AUS	Army of the United States
AVALANCHE	Operational name for the invasion of Salerno
AWOL	Absent Without Leave
BDM	Bund Deutcher Madel (League of German Girls, subdivision of Hitler Jugend (Hitler Youth))
BIS	Bureau of Information and Statistics of the National Military Council Chinese Nationalist Government
Blubrichter	"Blood Judge" (German)
BSI	British Solomon Islands
BSM	Bureau Securite Militaire (Fr)

CA	Civil Affairs
CAFW	Central African Wing
CAO	Civil Affairs Officer
Carabinieri	Italian Civil Police in peace time. In an emergency it is under the operational control of the Army and used with the various arms and services such as Infantry, Armor, and Artillery. The Carabinieri is considered the elite of the Italian Armed Forces.
CBI	China-Burma-India
CBIT	China-Burma-India Theater
CCC	Chinese Combat Command
CEAD	Central African Division
CG	Commanding General
CI	Counter Intelligence
CIB	Counter Intelligence Branch
CIC	Counter Intelligence Corps
CICC	Counter Intelligence Corps Center
CID	Counter Intelligence Division also Criminal Investigation Division
CIG	Counter Intelligence Group
CINCPAC	Commander-in-Chief, Pacific Ocean Area
CIP	Corps of Intelligence Police
CIS	Counter Intelligence Section
CIT	Combat Interrogation Team

CLN	Committee of National Liberation (Italian)
CO	Commanding Officer
"COBRA"	First Army's code name for the breakout from Normandy
ComZ	Communications Zone
Contact Office	Initial name for the CIC unit in Hawaii
COSSAC	Chief of Staff to Supreme Allied Commander
CP	Command Post also Communist Party
CPUSA	Communist Party in the United States
"CONQUER"	Code name for 9th U.S. Army
(U) Counter Subversive System	(U) Secret informants recruited on a ratio of one to each 30 persons in the military establishment for the purpose or reporting exclusively any evidence of espionage, sabotage, or subversion within the War Department. The system was started in 1917 and abolished following the Army Inspector General's report on Intelligence in 1943. While CIC had no part in operation of the system, the agents worked the cases which arose from reports submitted by these informants.
CPA	Central Pacific Area
CPBC	Central Pacific Base Command
C/S	Chief of Staff also Countersabotage
CT	Combat Team
CWC	Catholic Welfare Council
CWO	Chief Warrant Officer
DA	Department of the Army

DAF	German Workers Front
Delimitations Agreement	An agreement entered into by CIC, FBI, and ONI as to the jurisdiction of the various organizations.
DEML	Detached Enlisted Mens List
Deutsches Arbeitsfront	German Labor Front
DP	Displaced Person
DP-48	Displaced Persons Screening Project
"Dragoon"	The code name used for the operation in Southern France first known as Operation "Anvil"
DS	Detached Service
EEI	Essential Elements of Information
Edelweiss	Anti Nazi organization of Catholic Youths
EM	Enlisted man (men)
EOT	Enemy Occupied Territory
EST	Eastern Standard Time
ETO	European Theater of Operations
ETOUSA	European Theater of Operations, United States Army
FA	Field Artillery
FBI	Federal Bureau of Investigation
FCC	Federal Communications Commission
FFI	Forces of the Interior (French)
FI	Front de l'Independence (Belgium)

Finance Guards	An Italian uniformed police organization dealing with immigration, and the enforcement of customs laws.
Fitchie	French for filing
Flugforschungsinstitut	Flight Research Institute German Airforce
FNU	First Name Unknown
Fragebogen	A personnel questionnaire which was required of each arrestee, city official, job applicant and etc.; by the German government.
FSP	Field Security Police
FSS	Field Security Section
FSW	British Field Security Wing
G1	General Staff Officer (or Section) Dealing with Personnel
G2	General Staff Officer (or Section) Dealing with Intelligence
G3	General Staff Officer (or Section) Dealing with Plans and Training
G4	General Staff Officer (or Section) Dealing with Supply or Logistics
G5	General Staff Officer (or Section) Dealing with Military Government
GAC	German Armistice Commission
Gamma Swimmers	German frogmen, saboteurs
"Galahad"	Code name for General Merrill's Burma Jungle Force, popularly known as "Merrill's Marauders"

Garmis Control	The registration of all visitors at hotels, pensions and other public lodging houses.
Gau	Province
Gestapo	Geheime Staatspolizie (State Secret Police)
GHQ	General Headquarters
GI	Government Issue
GIS	German Intelligence Service
"Gisbomb"	The plan for the aerial attack on German Intelligence Service installations
GO	General Order
GD	Garde de Communication (a subversive French organization)
GPU	Soviet Intelligence Agency
HICOG	High Commissioner for Germany
HJ	Hitler Jugend (Hitler Youth)
HQ	Headquarters
"Husky"	Operational name for invasion of Sicily
IB	India-Burma
ID	Intelligence Division
I & E Office (Officer)	Information office or officer concerned with the dissemination of information and education to the troops rather than the general public who are served by a public information officer.
IO	British Intelligence Officer WW I
IPW	Interrogation, Prisoners of War

IRO	International Refugee Organization
IS	(WEA) That section of British Intelligence which handled penetration agents.
Intelligence Reviewing Board	A Board composed of the heads of CIC, FBI, and ONI who reviewed the findings of the Preliminary Hearing Board (Hawaii)
JAG	Judge Advocate General
JICA	Joint Intelligence Collection Agency
JICPOA	Joint Intelligence Center Pacific Ocean Area
"Justice"	Believed to be the code name for XII Corps
KCP	Korean Communist Party
KIBEIS	Persons born in Hawaii but returned to Japan for the formative educational years.
KDO	Abwehr Kommando
Kempei Tai	Japanese Secret Police comparable to the German Gestapo
Kripo	German Criminal Police
Kwomintang	Chinese Nationalistic Government Central Chinese Government
LST	Landing Ship, Tank
LVF	La Volonte Francaise
Maire	French for Mayor
Maquis	Armed French civilians who were recognized as the combat section of the FFI.
"Market Garden"	Code name for the largest airborne operation ever attempted.

MG	Military Government
MI	Military Intelligence
MI_4	Negative Branch British Counter Intelligence
MI_{5b}	British Counter Intelligence Service
MID	Military Intelligence Division
DIDPAC	(United States Army Forces) Middle Pacific
MII	Military Intelligence Interpretation
Military Governors Review Board	A board that reviewed the findings of the Intelligence Reviewing Board in the Hawaiian Islands concerning interned persons. The final authority.
MILIZ	A police force with a command structure paralleling that of the Luxembourg Union, Fun de Lelzeburger Frecheitsorganisationen Resistance Group.
MIS	Military Intelligence Service also Military Intelligence Section
MLR	Main Line of Resistance
MO	Modus Operandi
MP	Military Police
MTO	Mediterranean Theater of Operations
MTOUSA	Mediterranean Theater of Operations, United States Army
NAAF	North African Air Force
NAFD	North African Division
NAFW	North African Wing

029

NATOUSA	North African Theater of Operations, United States Army
NBC	National Broadcasting Company
NCAC	Northern Combat Area Command
NCAS	Navy Civil Affairs Section
NCICA	National Counter Intelligence Corps Association
NCO	Noncommissioned Officer
Nisei	American-born citizen of Japanese ancestry
NKVD	Russian Police Organization
NOPOE	New Orleans Port of Embarkation
"NORWIND"	Code name for the German offensive against 7th Army begun on 1 January 1945.
NSDAP	National Socialist Workers Party (Nazi)
NWYMA	North West Young Mens Association. A group of men who had fled from North Korea.
NYPE	New York Port of Embarkation
OB	Order of Battle
OCS	Officer Candidate School
OCT	Office of the Chief of Transportation
OD	Bawakenshovepen - a resistance group of the Home Guard of the Netherlands
OIC	Officer-in-Charge
ONI	Office of Naval Intelligence
OP	Observation Post

[redacted]

OSI	Office of Special Investigations (Air Force)
OSS	Office of Strategic Services
"Overlord"	Operational name for invasion of Normandy
OWI	Office of War Information
PBS	Peninsular Base Section
PGC	Persian Gulf Command
PGSC	Persian Gulf Service Command
PI	Philippine Islands
"Pickup"	The code name for the operation to pickup suspects in the Hawaiian Islands following the attack on Pearl Harbor.
PI	Photo Interpreter
PLA	People's Liberation Army (North Korean)
POA	Pacific Ocean Area
POE	Port of Embarkation
PPF	Parti Populaire Francaise (French)
Preliminary Hearing Board	A board set up in the Hawaiian Islands to review the cases of interned persons.
PT&T	Post Telephone and Telegraph
PW (or POW)	Prisoner of War
PWE	Prisoner of War Enclosure
PX	Post Exchange
QM	Quartermaster
QMC	Quartermaster Corps

RAF	Royal Air Force
RCT	Regimental Combat Team
Reichssicherheitshauptampt	The Nazi Party security organization
RIP	Refugee Interrogation Post
RNP	Rassemblement National Populaire
"Roecher Deutscher Ehre"	"Avengers of German honor" An underground organization.
Razwedupr	Soviet Military Intelligence Service
RHSA	Reich Office of State Security
RSHA	Reichssicherheitshauptamt (Combined Nazi Security Organizations)
RCT	Regimental Combat Team
SA	Steirmfalteirlungen (Nazi Party Storm Troopers or Brown Shirts)
SS-SchutzStaffeln or Protective Guard	Considered the most important of all Nazi Party formations. Its original function was to guard Party leaders; by the time of World War II their task was officially defined as that of insuring the internal security of the insuring the internal security of the Reich. The SS was organized in three main divisions: The General (Allegemeine) SS; the Armed (Waffen) SS; and the Security Service (Sicherhertsdrinst) or SD of the SS.
SD	Sicherheitsdienst (Secret Police and Secret Service of the SS.
S2	Regimental or Battalion Staff Officer (or Section) dealing with Intelligence
SA	Special Agent
SAC (or SAIC)	Special Agent in Charge

SC	Signal Corps
SCI	Special Counter Intelligence
Security Subsection of the Control Office	A subsection of the Hawaiian CIC office concerned with installation security.
SFPOE	San Francisco Port of Embarkation
Shadow Plants	Set up and organized by the government exclusively for war production but operated by private parties during WW II.
SHAEF	Supreme Headquarters, Allied Expeditionary Force
SIC	Security Intelligence Corps
SIM	Servizio Informazioni Malitaire (The Italian Counterespionage System)
SIME	Security Intelligence Middle East
SIPO	Sicherheitzpolizei (Security Police)
SKLP	South Korea Labor Party
SLOE	Special List of Equipment
SNAFU	"Situation Normal all Fouled Up"
SOI	Summary of Information
SOL	Societe de L'Ordre Legionnaire
SOP	Standing Operating Procedure
SOPACBACOM	South Pacific Base Command
SOS	Services of Supply
SS Schutz Staffeln	Elite Guard of Nazi Party
SPA	South Pacific Area

SR	Special Regulations
STAPO	Staatspolizei (Political Police)
Schulrat	School Administrator
TAF	Tactical Air Force
TBA	Table of Basic Allowances
TC	Transportation Corps
TD	Tank Destroyer
TDY	Temporary Duty
T/E	Table of Equipment
TH	Territory of Hawaii
TNT	Tri-nitro toluene
T/O	Table of Organization
T/O & E	Table of Organization and Equipment
TODT	An organization known as Todt, popularly called OT, was a semi-military German organization, formed by Dr. Todt in 1938 to build the German Westwall and later utilized by the Army Engineers for construction work both in Germany and in occupied countries. After Dr. Todt's death in 1942, the organization Todt came under the control of Prof. Albert Speer. It was organized into battalions with a nucleus of specialist German personnel and a large amount of hired or impressed foreign labor.
"Torch"	Operational name for the Invasion of North Africa
Torhsuginin	Unofficial Japanese counsular agents

Trans-Pacific Travel Control Bureau	An agency activated by the military governor to make recommendations concerning travel in Hawaii.
TRT	Tactical Reserve Team
TWX	Transmitted Wireless Exchange (Army Telegram)
UNTCOK	United Nations Temporary Commission in Korea
USA	United States Army
USAF CBI	United States Army Forces, China-Burma-India
USAFCPA	United States Army Forces, Central Pacific Area
USAFICA	United States Army Forces in Central Africa
USAFIK	United States Army Forces in Korea
USAFIL	United States Army Forces in Liberia
USAFIME	United States Army Forces in the Middle East
USFET	United States Forces Far Eastern Theater
USAFISPA	United States Armed Forces in South Pacific Areas
USAFMIDPAC	United States Army Forces Middle Pacific
USAFPOA	United States Army Forces, Pacific Ocean Areas
USAFWP	United States Armed Forces, South West Pacific
USAMGIK	United States Army Military Government in Korea

USAT	United States Army Transport
USFA	United States Forces in Austria
USFET	United States Forces, European Theater
USO	United Service Organization
U.S.S.	United States (Navy) Ship
Vehme	An organization of fanatics from various uniformed Nazi parties, set up to seek revenge on all enemies of the Third Reich.
VIP	Very Important Person
WD	War Department
WDGS	War Department General Staff
Wehrwolf	Code name for Abwehr R- Afgoben or stay-behind saboteurs.
WOJG	Warrant Officer, Junior Grade
W/T	Wireless Transmitter
WTF	Western Task Force
WW II	World War II
ZI	Zone of the Interior

Appendix I

ANTECEDENTS OF THE CIC

[redacted]

ANTECEDENTS OF THE CIC

Except for a few instances during the War-Between-the-States in 1861-1865, there is no evidence of any type of counterintelligence organization in the United States Army prior to the inception of the Corps of Intelligence Police in World War I.*

No American general has ever shown a greater appreciation of the value of intelligence than George Washington.** Within a week after taking command of the Continental Army at Boston he was making arrangements for recruiting agents behind the British lines. But the long careers of such traitors as Dr. Benjamin Church of Massachusetts and Gen. Benedict Arnold of Connecticut are evidence that there was virtually no appreciation of the importance of counterintelligence agents. Study of the careers of both these notorious traitors reveals a number of situations where an Army counterintelligence system would have discovered their activities at a much earlier date than the time when their treachery was exposed.***

During the 86 years between the Revolutionary War and the War-Between-the-States, there is little evidence of either positive intelligence or counterintelligence activities in the United States Army except for the "Mexican Spy Company," organized during the Mexican War by Gen. Winfield Scott, and for positive intelligence and combat intelligence carried out by the Army scouts during the various Indian wars. Some mapping projects providing terrain intelligence were carried out during the period and at various times a total of seven Army officers were sent to Europe as military observers. That was it.****

Modern Army intelligence may be dated from the Crimean War when, in 1855, the British Army established a "Topographical and Statistical Section" which developed slowly for another 20 years when it reached the status of an "Intelligence Branch of the Adjutant General's Department.***** Improved means of observation and communication--better roads, steamships, railroads, balloons, the telegraph, cable, telephone, camera, typewriter and microphone--were making

[redacted]

espionage a much more practical occupation, although it still had not reached the point where it was evident that organizations were necessary to counter it.

Only during the War-Between-the-States, 1861-1865, when the Confederate intelligence system became recognized as a security threat, was there any evidence of countermeasures; even then, these were incidental to the major efforts of collecting positive intelligence. Within three months after the war started, Allen Pinkerton had organized an intelligence service for Gen. George McClellan, but there is no evidence of any counterintelligence organization. Superintendant John Kennedy of the New York Police Department, organized for the War Department an intelligence service which is believed to have included counterintelligence work although available records provide no specific information of it.

Some efforts were made to counter the activities of Confederate spies operating in Washington, D.C., when the War Department took over the Detective Police force of the State Department and acquired the colorful L. C. Baker, who soon became a brigadier general and Army Provost Marshal. In 1863, a reorganization resulted in the establishment of the "Army Bureau of Military Information," with Col. G. H. Sharpe, Deputy Provost Marshal, in charge.

The most clearly identified counterintelligence activity occurred in Baltimore, where Maj. H. B. Smith was chief of the Union Army Secret Service of the Middle Department. Maryland was the most divided of the border states, with many troops of both sides and with the state split by loyalties to their kin folks in the army. At Baltimore, Major Smith set up a deserter and refugee screening center specifically to catch Confederate spies. Little is known, however, of the results of his work.*

During the next 52 years until World War I, there is only modest evidence of Army counterintelligence activities--for that matter, only modest evidence of intelligence activities of any kind; but these were significant. In 1882, the United States Navy established its Office of Naval Intelligence (ONI), and three years later the Army established the forerunner of its own intelligence service--the "Military Information Division" of the Adjutant General's Department. Maj. William J. Volkmar and one clerk comprised the Division!

Inventions of the era continued to provide more and better tools for the espionage agent--automobiles and airplanes, celluloid photographic film and photographic printing papers, color photography and motion pictures, wireless and dictating recorders. By 1908, the British War Office had recognized this new threat to security and organized its CIC equivalent, "The Special Branch."

* For details of this era, see also The Spy in America by Byron Price.

In the American Army, what intelligence growth there was concerned the collection of positive intelligence. In 1870, Gen. Philip H. Sheridan accompanied the German Army as an observer during the Franco-Prussian War. The Commanding General of the United States Army (General Sherman) made a European tour shortly thereafter.

From 1880 a regular system of acquiring foreign military information was established when all Army officers traveling abroad were ordered to avail themselves of "all opportunities within their reach of obtaining information of value to the military service." Reports were to be made in writing. Six years later this collection effort was broadened to include orders for all Army Bureau chiefs, Department and Division commanders and the Adjutant Generals of the several states and territories to provide military information. Although not so labeled, much of this domestic intelligence was inherently of counterintelligence interest.

Intelligence collection was further expanded by the establishment of the Military Attache system in 1888, a system which proved so valuable that British Intelligence soon copied it. Unfortunately, United States Army commanders were not so much impressed and, during the war with Spain in 1898, crippled its effectiveness by assigning 11 of the 16 attaches back to troop duty, and reducing Military Intelligence Division from 11 to 2 officers.

Although counterintelligence was not recognized as such during this period, a growing need for better security was evident. In 1889 a "Security" regulation of the Secretary of War limited dissemination of Military Information Division data to the Commanding General of the Army and Bureau Chiefs. By the time the United States Army had organized its General Staff in 1904 with Intelligence as G2, the Adjutant General ha published a text describing the Military Intelligence mission as "The Service of Security and Information."

In 1908, all United States Army intelligence went into an eclipse when G2 (MI) was transferred to the Army War College and remained as an incidental function until revived by the necessity in World War I.

On the eve of World War I, in 1913, the Army Chief of Staff, Maj. Gen. Leonard Wood, summed up the status of Army Intelligence as having no training system for officer replacements; not evaluating its reports; not briefing Military Attaches with the intelligence data available; furnishing "incomplete" official monographs and failing to properly coordinate military information matters. No action had been taken, however, by the time General Wood finished his term the following year.

Fortunately, the Bureau of Investigation of the Department of Justice was operating, and in 1914 broke up a passport forging ring which was assisting

some 800 German reserve officers to return to Germany from the United States. Fortunately, too, an American newspaper, the Providence (R.I.) Journal and the British Intelligence Service in the United States were financing the counterespionage activities of Victor Voska, a Czechoslovakian, who had penetrated the German Intelligence Service in the United States and kept the British informed. In turn, the British kept the American authorities informed. In spite of this, the German saboteur, Franz von Rintelin was able to come to New York and set up an organization which sank 30 allied ships before detection.

Although trouble had been brewing along the Mexican border since 1911, it was not until 1914 that the Army units along the border were instructed to detail officers "in addition to other duties," as Intelligence officers and to collect information from refugees and other sources but "not to cross the border." Two years later all Department commanders were ordered to detail Intelligence Officers at their headquarters; and on the eve of World War I, Adjutant Generals of the several states were ordered to provide for military intelligence coverage on a nationwide basis and establish offices in the principal cities.

Another sign of awakening appreciation of military intelligence was an increase in 1914 of the Military Information Committee budget from $10,000 to $11,000--the first increase since 1903.

In 1915, Maj. Ralph Van Deman, who had been interested in intelligence ever since his first assignment in the work while a second lieutenant in 1897, was reassigned to the Army War College which had absorbed Army intelligence seven years before through a merger of the Second and Third Divisions of the General Staff.*

Major Van Deman discovered that he was the only officer in the Division who had any training or experience in military intelligence. From 1908 on, when military intelligence work had been delegated to a committee of the War College, it virtually had ceased to exist; by the time Van Deman arrived in 1915, a large table was piled high with telegraphic reports from Military Attaches and other intelligence officers in the field which had never been filed. An officer had been assigned to read them and their use had terminated at that point.

With the approval of Brig. Gen. M. M. Macomb, Chief of the War College Division, Van Deman submitted numerous memoranda to the Army Chief of Staff, Maj. Gen. Hugh L. Scott, pointing out that on the threshold of war, the Army was being deprived of vital information it had collected by not having a Military Information Division to process and disseminate it, and recommending correctives. For more than a year these pleas were largely ignored.

* For details of this eram see Van Deman, R.H., Memoirs, Vol 1, 1949, (Central Records Facility).

In an effort to make some of the information available, however, Van Deman obtained permission to have the Command and General Staff School at Fort Leavenworth publish some of these reports and distribute them to the Army, since no personnel of the War College could be spared to handle dissemination.

Had Van Deman been allowed to handle this project, material benefits could have been derived, but instead, another officer selected without even consulting Van Deman wrote the first report to be distributed under the new plan.

Whether intentionally or accidentally, the report selected was not information obtained by American Intelligence officers but was a copy of a report which had been obtained from the British under a pledge of secrecy by the United States Military Attache in London. The new plan was terminated then and there! America entered the First World War on 6 April 1917. Intelligence reports from all over the world were rushed to the War Department by telegram and cable, only to be deposited in the War College files.

Shortly after the declaration of war, both the British and French governments sent missions to Washington; each mission had an officer representing military intelligence. These officers were sent to the War College, but as there was no American counterpart, their visits "consisted entirely of conversation."

With the consent of the President of the War College, Van Deman went to the Army Chief of Staff shortly after the war started and explained the problem. Whereupon General Scott said that he saw no reason for the United States Army to have a military information service since both the British and French had such organizations. The United States should ask them to furnish us any necessary information.*

Undaunted by this refusal, Van Deman obtained permission to appeal to the Chief of Staff again and then again. At that point, General Scott not only ordered Van Deman to cease advocating a military information service, but gave him strict orders not to see the Secretary of War on the subject.**

Major Van Deman then had to make a decision that represents the most dangerous occupational hazard of the military profession for the individual. He had done his best to persuade his superior to act. He could quit now and have the deep sympathy and respect of every Army officer who has fought for his beliefs and lost. Or he could risk what many men value more than life itself--his professional reputation--and fight for his firm conviction.

---

* Van Deman, Ralph H, Maj Gen, Memoirs, 1949, Vol 1, AIC, Ft Holabird, Md., (Cen Rec Fac).

** Ibid.

Van Deman was too much the soldier to disobey the orders forbidding him to go to the Secretary of War, but shortly thereafter discovered that his good friend the Chief of Police of the District of Columbia usually breakfasted at a club with the Secretary of War, Newton D. Baker. In due time the Chief found it expedient to outline certain intelligence problems to Secretary Baker.

At this same time, Lady Luck seemingly smiled. Van Deman was assigned to escort a famous and respected woman novelist on a tour of training camps in the vicinity of the nation's capital, in connection with a survey she was making at the request of the Secretary of War. In conversations, she mentioned that she had recently talked with an American who was serving with British Intelligence in Europe and spoke strongly of the importance placed on the work by Allied military authorities. Never one to miss an opportunity, Van Deman quickly explained the Army situation and his problem. The novelist became excited and said she would see the Secretary of War that day. And she did. Thus doubly targeted, the Secretary became interested.

He telephoned the President of the Army War College and ordered Van Deman to report to him. Forty-eight hours later, orders went out to establish such a branch, and since Van Deman was the only officer with any knowledge of the work, on 3 May 1917, he was assigned to organize it.

Unfortunately, the Secretary of War's order established the Army Military Intelligence Service as a branch of the War College. More than another year of constant effort was required to win independent status, and it was not until 26 August 1918 that it was reestablished as the Second (G2) Division of the General Staff; and Army intelligence was permanently back as an active part of the service.

This position called for a general officer as Chief, but Van Deman then began to pay for his maneuvering over the head of the Chief of Staff. Before the change was made, Van Deman was ordered to Europe and the brigadier generalship was awarded another officer. "Accidentally," General Van Deman's number on the promotion list was dropped back 40 spaces, * and it was not until 1927, 10 years later after he had "gone out of line," that he became a brigadier general. This promotion came only seven years after assignments other than intelligence, following World War I.

Thanks to Van Deman's courage, there was an intelligence organization in the Army General Staff to welcome the request from the American Expeditionary Force for a secret service unit which became the origin of the Army's Counter Intelligence Corps. In fact, Van Deman's belief in the importance of counter-intelligence led to a criticism in one instance that he had neglected other phases

* 201 File, Van Deman, Ralph H, Army Personnel Records Center, St. Louis, Mo.

of intelligence to favor it.* Although the record provides no evidence to support the validity of this criticism, the record does show that Van Deman recognized the dangers of communism and the need to combat its activities more than a quarter of a century before most of his contemporaries and associates were even aware of its existence, much less its nature and its international aspects.**

Thus was Army counterintelligence born out of the indifference and opposition that had marked the history of Army intelligence itself. And even though it would prove its worth in World War I, this would be forgotten in the long interval of peace that followed and it would not be until World War II and the subsequent occupation era that the Army Counter Intelligence Corps would become an important and respected part of the Army team.

Appendix II

HISTORICAL SUMMARY OF FORT HOLABIRD

CONFIDENTIAL

[redacted]

THE TEN YEAR HOME OF THE CIC AND FORT HOLABIRD 1945-1955

By 1955 Fort Holabird had been the home of the Counter Intelligence Corps for 10 years. But it had come into existence as Camp Holabird for other purposes in December of 1917, during World War I. The Army had purchased 153 acres of land between Shell Road* (now Holabird Avenue) and Colgate Creek to establish its first motor transport depot officially known as the Holabird Quartermaster Depot. In the more than two score years since then the post has grown to a 240 acre area and to its initial investment of $50,000 for land, the improvements in buildings, roads and facilities have increased its value to more than thirteen and a half million dollars. It became a Fort on 15 April 1950.

The post was named Holabird in honor of Brig. Gen. S. B. Holabird, Quartermaster General of the Army 1883-1890. It was operated by the Quartermaster Corps until July 1942 when it became Holabird Ordnance Motor Base. In October 1943 when the Ordnance Corps transferred automotive development to Aberdeen, it became Holabird Signal Depot. The post remained a huge Signal depot until the end of 1954. Since the Baltimore and Ohio Railroad has a deed to a right-of-way bisecting the post, permanent connections existed for a rail shop and in 1937 the Army railroad repair shops came to Camp Holabird. These were developed into the largest plant of its kind in the U. S. (By the end of the 1950's however, Department of the Army was finalizing plans for decentralizing the shops, with their removal from Ft. Holabird.) The Holabird military reservation always has had a number of varied tenants, such as a branch of the Judge Advocate General's Corps, a branch of Army Finance Corps, Enemy Prisoner of War Information Bureau of the Provost Marshal General, and numerous other units.

Intelligence activities first came to Holabird, 7 July 1943, when Counter Intelligence Corps agent candidates were given an automotive course there. In August 1943, the CIC Staging Area was established at Camp Holabird and operated until May 1944. CIC returned to Camp Holabird on 10 October 1945 and its Center and School were there 10 years later, when it was announced on September 1954, that they would become part of the Army Intelligence Center. On 1 May 1955, the CIC School, which had moved into a new million dollar building in January, became the Army Intelligence School. A Department of Field Operations Intelligence also had been created. Similarly Combat Intelligence training which had been taught at Fort Riley, Kansas, became a Department of the new consolidated School.

During World War II, Camp Holabird had a population of some 7,600 and was commanded for the first time by a general officer--Brig. Gen. Herbert J. Lawes. In 1947, Brig. Gen. G. V. Keyser became the first general officer to

---

* Shell Road was made of Oyster Shells.

[redacted]

be chief of the Counter Intelligence Corps and in 1954, Maj. Gen. Boniface Campbell became the first Commanding General of the Army Intelligence Center.

Camp Holabird has many claims to "firsts." There in 1919 the first motor pool was operated for Washington diplomats. In 1920 the first transcontinental motor convoy started from Holabird. In 1925 the first Army fire truck was built there. In 1940, Holabird tested and developed the newly created jeep and developed "Superman" the famed 6x6 Army truck that General Eisenhower called one of the major factors in winning the war; the first Army amphibious vehicles were tested in Colgate Creek mud which by this time was replacing the creek canal that had enabled Holabird to have its own dock and boats in 1918. While under the Signal Corps, Camp Holabird was the development site of the photographic equipment for the first atomic tests and for radar to detect buzz bombs approaching London. During World War I, Holabird processed all military vehicles for Europe. In its many schools it has taught members of all the various armed services and representatives of many foreign governments.

Commanding officers of Holabird, under its various designations since its formal activation early in 1918, have been.

NAME	DATE OF COMMAND
Col. Franklin S. Leisenring	Mar 1918 to 7 May 1919
Col. Wm. D. Chitty	7 May 1919 to 5 Dec 1919
Lt. Col. George P. Hawes, Jr.	5 Dec 1919 to 30 Jun 1920
Lt. Col. George B. Sharon	1 Jul 1920 to 9 Dec 1920
Maj. Charles G. Mortimer	9 Dec 1920 to 11 Jan 1921
Col. George E. Ball	11 Jan 1921 to 10 Jun 1924
Col. Wm. G. Gambrill	3 Jul 1924 to 12 Aug 1926
Col. Edgar S. Stayer	12 Aug 1926 to 29 Aug 1932
Col. Brainerd Taylor	30 Aug 1932 to 31 Dec 1936
Col. D. K. Mitchell	31 Dec 1936 to 16 Aug 1938
Brig. Gen. H. J. Lawes	17 Aug 1938 to 30 Oct 1943

[redacted]

NAME	DATE OF COMMAND
Col. Lawrence Watts	8 Nov 1943 to 30 Jul 1947
Brig. Gen. George V. Keyser	31 Jul 1947 to 10 Jan 1948
Brig. Gen. E. A. Zundel	11 Jan 1948 to 24 Aug 1949
Brig. Gen. John K. Rice	25 Aug 1949 to 20 Aug 1951
Brig. Gen. Phillip Gallagher	20 Aug 1951 to 20 Aug 1953
Maj. Gen. George B. Barth	20 Aug 1953 to 22 Oct 1953
Maj. Gen. Boniface Campbell	22 Oct 1953 to 27 Nov 1956
Maj. Gen. Richard G. Prather	28 Nov 1956 to --

The various "Chiefs" of CIC at Holabird (only) have been:

Brig. Gen. Edwin A. Zundel	26 Apr 1947 to 8 Jun 1949
Maj. Gen. John K. Rice	9 Jun 1949 to 19 Aug 1951
Maj. Gen. Phillip E. Gallagher	20 Aug 1951 to 19 Aug 1953
Maj. Gen. George B. Barth	21 Aug 1953 to 18 Oct 1953
Maj. Gen. Boniface Campbell*	22 Oct 1953 to 27 Nov 1956
Maj. Gen. Richard G. Prather	27 Nov 1956 to --

---

* General Campbell was the first Commanding General of the newly constituted Army Intelligence Center.

NOTE: Several Deputy Commanders bore the dual responsibilities of commanding Holabird as well as heading up CIC for limited periods. Included among these were Col. M. C. Noble, Col. J. E. Raymond and Col. Frank M. Hosterman.

THE COUNTER INTELLIGENCE CORPS IN THE KOREAN CONFLICT

(Summary)

THE COUNTER INTELLIGENCE CORPS IN THE KOREAN CONFLICT 1950-1953

Forword

As previously stated, research on CIC in the Korean Conflict soon revealed that many documents essential to a detailed account were still too highly classified to include in a history covered by "Confidential." Similarly, much information furnished by persons interviewed concerned material meriting a security classification above "Confidential" and, consequently, these reports could not be included.

This account is actually a preliminary survey furnishing the reference points from which a historical writer in the future can prepare a complete text. While for the casual reader it furnishes some indication that CIC had a vital part in the conflict, the limitations of this outline should be kept constantly in mind. From the historical viewpoint, delay will provide the benefits of time in which to gain a more accurate perspective and objective evaluation than is possible of activities only shortly removed from the status of current events.

The future writer will, when the security classification is reduced, find that there are many aspects of Operation Salamander, Big and Little Switch, and control elements of Task Force Indianhead deserving special attention. There are numerous other operations not designated by special names and titles in various files of the Army Intelligence Center which will undoubtedly be either regarded as regraded or available for regrading by that time. A roster of key personnel who should be both interviewed and consulted for names of others to interview is appended to this report. It is hoped readers will suggest others.

An extremely valuable guide for interviewing these sources is the pamphlet "Counter Intelligence Corps Operations in Korea" published by the CIC School in November 1951. Although originally published as "Secret" this publication was downgraded to "Confidential" in August 1954 since its author (Maj. Mark K. Hansen) was not identified in the text and his observations on administration, operations liaison and equipment were not authenticated by reference to other source documents or by footnotes showing detachment or participant. While this same omission invalidates its current use as a prime historical document, its importance as a future guide should not be overlooked.

--THE EDITORS

[redacted]

KOREAN CONFLICT 1950-1953

In January 1950 the Korean Chief of Staff reported to the United Nations Commission on Korea that an Army of 175,000 troops had been organized by North Korea and that among these troops were 20,000 Korean Communists who had formerly served with the Chinese Communist Forces. On 10 May 1950 the Korean Defense Minister reported to the same agency that North Korean troops had moved to the 38th parallel in a strength of 185,000 men, 173 tanks, 32 naval vessels and 197 planes. He added that 6,000 trained guerrillas had been moved into South Korea.

On 12 May 1950 this information was given two officers of the staff of Brig. Gen. William L. Roberts, who agreed with the estimates of strength but did not recognize any imminent danger, and thought the South Koreans could handle the Northern forces. *

Counterintelligence sources in Japan disagreed with this finding; in fact they anticipated the invasion of South Korea in July and passed on the information that the North Koreans expected to complete conquest of the Southern Republic by fall of the same year. **

In 1945 when the 441st CIC Detachment took over responsibility for counter-intelligence coverage in Japan, all tactical units in the command were relieved of their detachments. It was felt that integrated control of counterintelligence would better the security position in Japan and permit much greater coverage.

At the time of the 1946 integration, however, there is evidence that a plan was contemplated whereby agents with the 441st would be earmarked, at least on paper, for duty with given tactical units, should an emergency arise. *** It was also contemplated that a plan would be drafted for equipping the units so earmarked from 441st supply channels. Such a plan was drafted by Col. Paul A. Hurst but records and interviews do not disclose its disposition or whether it was later disregarded.

In 1949 another plan formulating detachments for duty with tactical units was drafted by the 441st, but it appears questionable that this plan was adopted or followed for the Korean emergency. No record of a supply plan in this era can be found. ****

Nor is there any record of a plan for emergency utilization and deployment of CIC at the Center. Although it was problematical in early 1950 that the United States would become involved if a Korean War occurred and even more questionable, if we disregard intelligence reports, when the conflict actually would occur, there is no record of preparation for the expanded intelligence coverage that would be necessary even if this country retained a nonbelligerent status. In 1949, CIC experienced an overstrength of considerable size, and in late 1949 and early 1950, records reveal that the Center was not preparing for expanded use of CIC, but on the contrary, actually was preparing to contract and control CIC manpower. *

CIC Agents Not Ready for Combat

CIC agents sent into Korea with the first tactical units were not trained or experienced in CIC combat operations nor were they in a state of general preparedness for the emergency. One document bluntly states that the commander of the 441st had foreseen the need for combat field training long before the conflict in Korea, and had set up a program for such training. ** This program, however, did not include indoctrination into actual CIC operations with a tactical unit, but offered such courses as basic infantry skills of map reading, first aid and field sanitation.

Although many agents with the 441st were combat veterans, very few, if any, had experience with CIC in a combat situation. *** This would account to some extent for the confusion which dominated the initial days in Korea in some of the earliest detachments sent with our forces. One officer reported that after the detachment was physically set up and in a position to operate, no one knew what should be done first. The problem was solved by putting agents to the task of creating an informant net in the area, not with special targets or information in mind, but simply because it seemed a good idea to have information. ****

It was for the purpose of meeting this lack of training that an actual course in CIC combat operations was set up by the 441st CIC Detachment in Japan. The course was instituted within a matter of weeks after the Korean conflict broke out and was included in a staging program which lasted from three weeks to three months for each newly organized detachment, depending on the urgency of the need for the unit in the combat zone. ***** The course, itself, lasted about two weeks.

[redacted]

It was to the S4 section of the 441st that fell the duty of equipping the CIC units destined for Korea when our forces first entered the action. S4 actually equipped five units from its own stores and supervised the equipping of seven more teams by various districts. Radios were practically unobtainable and the nonavailability of several Engineer and Signal items necessitated resort to commercial substitutes. Procurement of the equipment from 441st supplies worked a hardship on local investigations, since no authority existed for replacements. The situation was remedied by arrangement with G4, FEC, for substitution of the items.

Difficulties raised in outfitting the early detachments sent to Korea, prompted the S4 of the 441st to list the following lessons learned:

> "...Central stockpiling of equipment needed under combat conditions, or cataloging of sources for such material, would have readily enabled CIC districts and areas to equip teams, would have avoided depletion of investigative and other equipment at district and area levels, or would have made these supplies available from existing logistical sources even on short notice; upon issuance of authorization for the establishment of a CIC combat-type team, equipment issue could have been accomplished through G4 channels upon the establishment of a priority for the need; in the preparation of requisitions for combat-type CIC teams, special emphasis should be placed on the procurement of organizational equipment for weapons, organizational vehicular tools and equipment, cleaning and preserving supplies, ammunition and expendable supplies."*

Historical Recapitulation

Discussion of CIC's role in Korea is facilitated by drafting a framework for reference in the fast moving and ever changing tactical situation. A chronological presentation of the events involved may prove of assistance.

On 25 June 1950, the North Koreans invaded the southern Republic; two days later the United States entered the fray with United Nations (UN) support. Seoul fell to the North Korean (NK) armies on 28 June and on the first day of July, the 24th Infantry Division was flown into the action. On 8 July, Gen. Douglas MacArthur was named United Nations commander and as the month progressed, Republic of Korea (ROK) and UN forces were backed down the peninsula into the Pusan perimeter. By 6 September, the North Korean offensive had reached its high point, when the city of Pohang was taken, deep in South Korea.

* Historical Rpt, 1 Jan - 30 Oct 50, O ACofS, G2, GHQ, FEC, Part II, p 81, (Secret) (Departmental Records Branch, AGO, Alexandria, Va.).

[redacted]

[redacted]

On 15 September, the X Corps was moved out from the Pusan area and made an amphibious landing at Inchon, the port city of Seoul, capital of South Korea. Simultaneously, I and IX Corps moved out of the perimeter and pushed northward to reach Seoul on 26 September. On 7 October, about three and one half months after the invasion, United Nations troops crossed the 38th parallel into North Korea, reaching Pyongyang, the North Korean capital, on 19 October and sending advance forces to within a few miles of the Yalu River and Manchurian border inside of a week. It was at this point that the intervention of Chinese Communist Forces became apparent. *

Communist China promised support to North Korea in early October 1950, prior to crossing of the 38th parallel by UN Forces. In October, an intensive anti-US propaganda program was begun to prepare the Chinese people for war. It was earlier than this, however, that a marshaling of Chinese forces began on the Manchurian border. In July, an estimated 116,000 regulars were in Manchuria, but a month later the force had been increased by 100,000 men and in August there were 250,000 troops in the area. This number was doubled by a transfer of troops from South and Central China in September, and at the date of the first UN encounter with Chinese troops, there were in excess of 850,000 troops massed in the area. **

The buildup was not at first alarming, for the troops were from the Fourth Chinese Army Group, normally stationed in Manchuria, but moved south to participate in operations against Hainan and Formosa. It first appeared that they were merely being progressively returned to former locations. It was only when units not component parts of the Fourth Army Group began to appear that serious consideration was given to intervention possibilities of the Chinese Communist Forces (CCF). By this time, 10 corps, each with three divisions, were poised at the border and the precedent set by the Chinese was carefully examined.

The nucleus of the North Korean Army was formed by release from Chinese forces of all men of Korean origins in 1949 and 1950. When the obvious sympathies of the Chinese were thus considered, the potential of 30 divisions within marching distance of the UN front had serious connotations.

Sizeable entry of these forces into the Korean conflict began about 14 October. Chinese broadcasts reported, however, that these were only token forces from three corps, and not until 3 November was it estimated that these forces were vanguards for soon-to-arrive divisions and armies. By the end of November it

[redacted]

was clear that UN troops were engaging the Third and Fourth CCF Field Armies and the independent CCF 66th Corps, while the First CCF Field Army was being held in reserve. Total strength of the CCF was estimated to be in excess of 220,000 men. *

On 26 November, the Chinese Communist forces buttressed the routed remnants of the North Korean Armies and opened an offensive drive that pushed UN forces south through Pyongyang in early December and forced the sea evacuation of troops that had been stranded at Chosin Reservoir from Hungnam on the east coast. By the first of the year, the Red forces had recaptured Seoul, but the UN set up a strong defensive line about 30 miles south of that city that stemmed the advance. Offenses and counteroffensives brought the UN forces back to Seoul by 15 March 1951, and back to the 38th parallel by the end of that month. On 11 April 1951, General MacArthur was removed from command and replaced by Gen. Matthew Ridgway. After more than three additional months of fierce but stalemated action, truce talks were opened on 8 July at Kaesong. There followed more than two years of "on-again off-again" truce talks and accompanying continuation of fighting. Then an armistice was signed on 27 July 1953. **

441st and Korean CIC

The part which the 441st CIC Detachment played in preparing detachments for duty in the Korean conflict cannot be overstated.

Simultaneous with the approval of the United Nations for commitment of Far East forces, the 441st took steps to have tactical CIC teams ready for shipment into the combat area on 72 hours notice. On 1 July 1950, when first UN ground forces were committed to action, the 441st manned and equipped what was to become the 24th CIC Detachment which accompanied the 24th Infantry Division. By 10 July, five detachments from the 441st attached to American Ground and Service Forces were in Korean action.

After this initial effort, planning continued at Tokyo Headquarters, since it was clear that additional ground forces would have to be committed. When the 1st Marine Division arrived in Japan, the 441st provided it with a detachment, and although the 2d Division arrived in Japan with a detachment formed from the 115th CIC Detachment at Sixth Army, the 441st was called upon to provide assistance with linguist personnel and in the procurement of the Special List of Investigative Equipment. Six more detachments were furnished during August and September 1950. During the same period augmentation teams were formed

* Ibid, p 80.

** Chronology of Korean Conflict, compiled by Capt Earl D. Klem, (Uncl) (Cen Rec Fac).

for the 3d Infantry Division and Eighth Army detachments. By 30 September, a little over two months after the outbreak of the UN police action, approximately 234 agents had been furnished by the 441st to tactical units in Korea.

All CIC units committed to Korea were ordered by the Theater G2, Maj. Gen. Charles A. Willoughby, to maintain contact with the parent organization. Copies of operational reports as well as summaries of activities and recommendations for more efficient utilization of personnel and equipment were required to be sent to Headquarters, 441st CIC Detachment. To expedite transmittal, the reports were forwarded through Headquarters, Eighth United States Army Korea, where a daily courier pickup was made.

The fluid situation in the initial stages of the conflict and the lack of combat know-how on the part of the agents sent from Japan confined the major part of CIC activity to security surveys, screening of refugees and line crossers and the preparation of target lists for the projected offensive action to move north.

At one point, all detachments were confined to the Pusan perimeter and directed activities toward safeguarding the security of that area and particularly the port city of Pusan. During this period, the widest counterintelligence security coverage possible was maintained and CIC either supervised or actually handled patrolling of roadblocks, water and power stations, areas surrounding various army installations, various headquarters and command posts, and port facilities.*

Surprisingly, a search of available records does not provide, as such, a list of detachments committed during the Korean action. A back-check through the Adjutant General's records on divisions, corps, and armies committed, however, makes possible a reasonably complete roster.

The 2d, 3d, 7th, 24th, 25th, 40th, and 45th CIC Detachments accompanied respective infantry divisions of the same numerical designation into Korea. The First Cavalry Division was provided counterintelligence service by the 191st CIC Detachment, and the First Marine Division, a component of X Corps, had its own CIC detachment, the 181st. I and IX Corps of the Eighth Army, and the independent X Corps, had attached to them, respectively, the 201st, 209th and 210th CIC Detachments. The 308th CIC Detachment was assigned to Eighth Army.

The 442d CIC Detachment served the Far East Liaison Group, while the 705th and 704th CIC Detachments held down static missions with the 3d and 2d

Logistical Commands. The 801st CIC Detachment was first assigned to assist the 705th in the Seoul-Inchon area, but later moved to join the 308th at Eighth Army Headquarters.*

Korean Operations

Although the Korean Police Action brought out certain combat innovations and showed the increased importance in stressing night maneuvers, infiltration tactics, and general importance of the foot soldier, it added little that was new or novel to CIC operations.

Reporting on the activities of each individual detachment committed during the three year period of hostilities would serve no useful purpose. Screening of Monthly Reports of CIC activities without particular regard to the unit concerned provides, however, a representative cross section of cases that could have been handled by any of the detachments involved. When cases or investigations processed by a detachment appear unique, appropriate credit and mention is given.

308th CIC Detachment

The 308th CIC Detachment was hurriedly formed and equipped to accompany the Eighth U.S. Army into Korea by the 441st CIC Detachment in Tokyo. In the early period of formation, 17 men were taken from the Tokyo office of the 441st, and placed under the command of Maj. Gordon Flaherty. The force was eventually increased to a total strength of 37 men. None had any combat CIC experience. The detachment first set up headquarters at Taegu but dropped back to Pusan by August 1950. With the advance northward, headquarters was moved to Seoul by the end of September, and advance headquarters was established for a short time in Pyongyang. Once withdrawal south began in November, the headquarters was removed again to Taegu where it remained until the cease-fire was accepted. With the cease-fire, the detachment moved back into Seoul.

As the first CIC unit in combat during the Korean conflict, the 308th found itself without operational or administrative SOP to fall back on. Such documents were drafted and forwarded to other units as they entered the conflict. Since it was first and was the detachment of Eighth Army, the 308th became a control center and agency for CIC in Korea. Reports from all other detachments were channeled through the unit, where they were examined, screened and a copy retained for a central file. The original copy of all reports went back to the G2, United Nations Command, in Tokyo. The records available do not show authority for the 308th to assume this role as a coordinator, but the need for some central

* Historical Data Cards, Organization and Records Section, TAGO, Pentagon, Wash, D.C.

control was recognized by all unit commanders; the 308th at Eighth Army headquarters appeared to be the logical agency to do this, it assumed the burden and discharged it.

Since all forces in Korea, with the exception of X Corps, were under Eighth Army, other reports came into the hands of the 308th for processing. X Corps was consolidated and absorbed into Eighth Army when the withdrawal southward began in December. From the Daily, Weekly and Monthly Activity Reports forwarded through the 308th, the 308th drew items for a summary of activities throughout Korea, which they disseminated to all detachments. X Corps was included in distribution and often contributed items of counterintelligence interest even before its integration into Eighth Army.

Operations

The 308th spent the first weeks in Korea in setting up an internal organization and in procuring interpreters, translators, and housekeeping personnel. Liaison with Korean and United Nations agencies was an early project, and the first real performance of CIC duties came in security surveys of the detachment office, Eighth Army Headquarters, the Taegu Ordnance Depot and the local Signal depot.

Since the detachment was operating in the country of a friendly foreign government, and there was no military government agency, it was often impossible to integrate operations as CIC did in combat when the operational area was hostile; South Korea was a "host" nation to the United Nations troops. When a program of integrating Republic of Korea troops into Eighth Army components was inaugurated, the 308th was ordered to run background investigations on the Korean troops. This task proved impossible because of a lack of files and the language barrier involved, and it was later turned over to the ROK Army G2. He agreed to do all in his power to investigate the subject troops, but faced the same lack of adequate records that CIC had encountered. Not only were most official records in the north country which was occupied at that time by North Korean troops, but many had been burned to avoid the possibility of capture during the hasty withdrawal south.

While the 308th was at Pusan it had no area coverage responsibility and set up a pattern that was to be followed throughout the conflict. This involved doing very little tactical or positive intelligence work. The detachment was employed in integration of reports and Prisoner of War interrogation and also began to set up project and target files. When the detachment moved north to Taegu from Pusan, the evacuation security work was handled by the First Cavalry Division team in conjunction with the 308th.

While the detachment was in Taegu, the work continued along the same lines that had been established in Pusan. Considerable target information was supplied the 181st CIC Detachment which was staging with the First Marine Division for the Inchon landings. Target files for the 181st were scanty, and much credit for the job done at Inchon should go to the 308th. As the United Nations troops moved north into Seoul, the 308th aided in the reduction of targets in the city, and all detachments concerned relied heavily on the files and target lists drafted by the 308th. There was not, however, any integrated plan for the intelligence reduction of Seoul. Still a wealth of information was quickly collected and many target personalities were picked up.

During the advance northward and the layover at Seoul, refugee control became the principal problem of the 308th. There were no control centers or check points as CIC generally contemplates them, and the Korean National Police generally handled this problem. CIC was called upon to advise and recommend, but when positive steps were taken, the old problem of operating within the framework of an existing foreign government arose.

Until the detachment moved into Seoul, there was no planning for a move north of the 38th parallel. Once in Seoul, however, the detachment was directed to prepare target lists for an expanded mission in any part or portion of Korea. Target planning and processing of reports took up the short static period in Seoul just prior to the move northward into Pyongyang.

Task Force INDIANHEAD

As a part of the target planning of the 308th at Seoul, the North Korean capital of Pyongyang figured prominently. Informant and report sources provided a mass of information and the list of targets and personalities assumed formidable proportions. On 16 October 1950 the Eighth Army G2 told the commanding officer of the 308th to turn over to him all material on Pyongyang and prepare a CIC plan for reduction of the city. The next day a staff meeting was held and the plan was discussed, and the material compiled by the 308th analyzed and accepted. It was determined that the reduction of the city could best be effected by formation of a special task force for the job, hence the conception of Task Force INDIANHEAD.

The group was formed by taking six men from the 308th CIC Detachment, 10 men from the 2d CIC Detachment, and one or two from other detachments in Eighth Army to make up a total force of 22 men. Six operational two-man teams were formed, and 10 men were held in reserve for assignment to targets after the city was taken or for assistance to other teams. The task force was commanded by the G2, 2d Infantry Division, and the commanding officer of the 2d CIC Detachment acted as operations officer for the unit. Something over a company of troops from 2d Division were detailed to the force, with armor, for any tactical support

necessary to make the unit self sustaining if resistance was encountered. As it happened, the city was deserted when the task force entered and the troops were used as guard and jailor personnel. Also assigned to the force were Korean interpreters, Interrogation of Prisoner of War teams, and engineers for demolition work.

The Force enjoyed considerable success and collected several thousand documents and a few target personnel. The favorable results of the operation led to the development of new CIC techniques for target reduction and other "task force" missions during the Korean conflict. On the same order, but not so successful from the standpoint of material collected, was a task force organized to reduce Seoul when we moved into the city after the withdrawal down the peninsula in November 1950. *

201st CIC Detachment

The 201st CIC Detachment had its inception in August 1950 when a group of 17 agents was put on detached service from the 441st in Japan to Eighth Army Headquarters at Taegu. It was contemplated that the groups would be put with I Corps which was still in the process of formation with troop elements being sent from V Corps at Fort Bragg, North Carolina. An advance party of four agents was sent from Tokyo by plane to set up offices for the group and make initial liaison contacts. The rest of the detachment followed by ship and rail, arriving a week later to find offices set up. Within the month, the unit was designated the 201st CIC Detachment and attached to I Corps.

Initial supplies for the detachment were provided by the 441st, and all needed equipment was available with the exception of winter clothing. This was eventually furnished through I Corps channels. All agents in the detachment, with the exception of the commanding officer, had CIC experience but none had ever been with CIC in combat operations.

One agent in the group, Capt. Walter E. Petrie, reports that after the detachment was settled in Taegu, confusion reigned supreme. The big problem was, what should be done first?

The commanding officer, Maj. Louis A. Shone, II, first put his agents to establishing liaison with other detachments in the Taegu area and with Korean civil authorities. At this time, September 1950, the Eighth Army still had headquarters in Taegu and army, corps, and division size detachments were all represented. During this lull in operations, according to Petrie, informant nets

* Interview with Capt Ben Obata, Army Intelligence School, Ft Holabird, Md., 24 Sep 1955.

were created without special targets or information in mind, but merely because it gave the men some experience in dealing with Koreans. I Corps finally took positive form and was initially composed of the 1st Cavalry Division, the 24th Infantry Division, the 1st ROK Infantry Division, and a British Brigade consisting of two battalions, the Gloucesters and the Sutherland and Highlanders. Since the 201st was intended as a tactical unit to move with Corps headquarters, there was no necessity for a network of field offices.

Internal CIC liaison with I Corps was created, and the first experience with combat activities arose when the First Cavalry Division began to send back to Corps, for extensive interrogation, captured North Koreans. Only two or three prisoners trickled back per week, and the work was not onerous.

Liaison with ROK CIC and Korean National Police was felt to be extremely poor during the early months the detachment served in Korea. Captain Petrie felt that this was caused in large part by the attitude of American agents that with our arrival in Korea, we were to take over and run the show with Korean agencies merely providing assistance. The Korean agencies felt, understandably, that they knew more about the country and what was going on than the newcomer American forces and that the treatment of them as underlings and assistants to an American hierarchy was neither warranted or wise. It was only after agents began to treat the Korean agencies with respect and as equals in the war that cooperation and liaison improved.

No policy was established by the Far East Command for the channelling of reports during the early period of the war. As stated, the 308th at Eighth Army, by liaison cultivation and little more, became the office of record for the area and acted as a semiauthoritative coordinating agency for all CIC in Korea. Captain Petrie was of the opinion that there should and could have been a stronger central control and coordinating echelon.

On to the Wars

Prior to the UN breakthrough from the Pusan perimeter, friendly forces were bottled into the southeastern portion of the Korean peninsula. At the time, IX Corps was holding the west end of an arched line with the 25th Infantry Division, the 2d Infantry Division, and the 2d and 6th ROK Divisions. X Corps, with the First Marine Brigade, the 7th Infantry Division, and the 3d Infantry Division, drew back

to Pusan to stage for the Inchon landing. I Corps held the east end of our defensive line with support and control in the far west invested in ROK forces.

It should be made clear that I and IX Corps were parts of Eighth Army, while X Corps for a time was responsible only to the Far East Command. This caused considerable coordination difficulty in Korea during the early months of the advance net of the perimeter.

With the Inchon landing, X Corps began its advance toward Seoul from the west and moved quickly to pocket NK forces into the southern portions of the peninsula.

To close the trap, IX Corps began to move north, making at the same time a westward sweep. I Corps moved through the center of the peninsula trying at all times to continue the east end of the line maintained by IX Corps and form a pocket for the NK forces. I and II ROK Corps moved up the east side of the peninsula far ahead of I and IX Corps, but holding when they reached the 37th parallel to straighten the front with UN forces. North Korean troops in our rear were mopped up by IX Corps elements.

As I and IX Corps moved into the Seoul area, X Corps was pulled from the action to prepare for landings at Wonsan. With the movement northward from Seoul after line-straightening operations, IX Corps remained in the eastern side of the line, I Corps moved through the west central sectors and X Corps along with I and II ROK Corps moved to the west end of our line. During this hurried movement north, the work of the 201st was necessarily rushed to keep pace with the forward elements of the Corps. At all times, the 201st kept its headquarters with the forward elements and no attention was given the rear areas unless specifically requested. CIC headquarters were always near, but not in, the Corps command post. During the advance, the 201st interrogated line crossers, aided in the screening of refugees, and formulated such security plans as were needed in the rapidly changing situation. The tactical intelligence job of CIC during this period was of greatest importance.

In August 1950, tactical CIC teams were assigned additional temporary functions of collecting positive intelligence, order of battle information, and, in some cases, intelligence and reconnaissance missions.* This was necessitated by the shortage of experienced tactical intelligence personnel. The work became of prime importance to CIC, for close liaison with G2s made it clear that their primary interest was in tactical information needed for the immediate situation rather than in counterintelligence reports. On the advance north, and

---

* Annex 3 to Historical Rpt, 1 Jan - 31 Oct 1950, O ACof S, G2, GHQ, FEC, Tab 34, p 6, (Secret) (Departmental Records Br, AGO, Alexandria, Va.).

during the strategic withdrawal to the south, the greater part of CIC energies was directed toward this positive intelligence effort.

Not far north of Seoul, the retreat of the North Korean Army became a rout, and even our forwardmost elements were encountering little resistance. In the race to the Yalu, our columns kept largely to the main roads and rarely fanned out to map up or pick up bypassed troops.

As this left vast areas of the countryside unexplored and unexploited, it invariably occurred that in villages behind our front-lines the government changed hands almost simultaneously with our passing. Committees were formed in most communities which took over governmental functions and control from Communist officials. Still, North Korean forces roamed at large through these areas and kept agents operating behind UN lines. To counteract this situation, it became an I Corps practice to dispatch two CIC agents in a jeep, with an interpreter, to cover the areas bypassed and ignored by our tactical troops. Once in contact with a village committee, these agents would collect all intelligence information possible and radio reports to headquarters. It was not uncommon for the teams to accept the surrender of North Korean troops and often the jeep trailers were filled with surrendered arms and equipment. Many enemy agents and deserters were picked up through the cooperation of village officials who afforded UN forces excellent cooperation. No instances were recalled by Captain Petrie when these teams encountered resistance in attempting to round up NK troops or agents.

Not until UN forces had withdrawn from the Yalu to Seoul did the 201st run into a static situation. It was during this period that the detachment intensified its activity by prolonged interrogations of refugees and prisoners of war. While the more routine CIC duties of security surveys and inspections were carried out as necessary, they were not considered of prime importance.

Task Force INDIANHEAD in which the 201st participated deserves additional mention at this point. Prior to entering Pyongyang, the Task Force target area, while the 1st Cavalry Division remained across the river and a ROK division was circling to enter the city from the east, the 201st formulated a plan for intelligence reduction of the Pyongyang zone. But when the 201st moved to forward positions, preparatory to entering the city with the first wave of troops, they found another CIC group prepared to usurp their job.

Several days prior to this, on 16 October 1950, the G2 of 2d Infantry Division had been directed by Eighth Army headquarters to organize a special force of CIC agents to reduce Pyongyang. The reason for not informing I Corps CIC of this plan, when its troops were at the very door of the city, does not appear. When the agents of the 201st discovered the mission of the task force, they generously

put themselves at the disposal of that unit and made it a joint operation. The force, augmented by 201st agents, entered Pyongyang with the first troop elements on 18 October and remained in operation for five days. Many documents, publications, films and pieces of materiel of value were obtained. The items provided top-level strategic, economic, industrial and political intelligence which would otherwise have been lost without the effective operation conducted by the unit.

In March 1951, when the UN retook Seoul after the January withdrawal from the city, the 201st planned and executed a similar operation with some measure of success. Elements of the 3d CIC Detachment worked with the 201st, but information obtained was meager since the city had been occupied for only three months and the withdrawal of North Korean (NK) and Chinese Communist Forces (CCF) troops on that occasion was orderly.

In May 1951, when the 201st had taken up a static position with I Corps, on what eventually became the cease-fire line, Captain Petrie was sent on a new assignment to the island of Kangwah-do. The island lies at the mouth of the Han River on which Seoul is situated and at that time, extended across the battle lines on the mainland. The UN had no troops on the island and it was known that agents from North Korea were using it as an entryway and that the island also was serving as a vital link in black market operations between North and South Korea.

The isolated area was occupied by guerrilla forces who were unquestionably participating in the black market trade and perhaps even aiding enemy agents, but who were by and large sympathetic to the UN cause.

A British sergeant who had had experience with guerrilla forces in Yugoslavia during World War II was first sent to the island to establish liaison. A few days later, Captain Petrie was sent to handle intelligence security in the area and stop the flow of black market goods through the island. The two lone UN men on the island did an effective job.

The travel of agents from North Korea through the island was effectively cut off by placing armed guerrillas at all available landing beaches where a swimmer or boat might come ashore. The task was not too great, for most of the island had sheer cliffs along the beach which made access impossible. At the same time, this step effectively stopped the flow to the island of textiles and manufactured goods from the north and foodstuffs from the south, the stock-in-trade of the black market.

Petrie managed to keep open a route for our agents in North Korea. Many agencies involved in the conflict utilized the route through Kanwah-do to place agents in the north, and in every case, Petrie coordinated and directed the travel of these men. In addition to organizing the guerrilla police units which patrolled the beaches on the island, Petrie managed to go farther and instigate and suggest

harrassment raids by the guerrillas into North Korea. Petrie described the guerrillas as little more than bandits, but their forays into North Korea for food, ammunition and loot had a definite value to the UN cause. Petrie left the island in September 1951, to return to Japan. *

201st CIC Detachment

The 201st CIC Detachment with I Corps, moved frequently as did most units in December 1950. The detachment was broken into sections, the majority travelling with the Corps advance command post and the remainder attached to the Corps forward command post. ** During late December and most of January, the detachment was largely occupied with the questioning of refugees and suspected hostile agents, sent up from forward echelons for intensive interrogation at a more stable level. The pattern for saturation employment of agents by the enemy was easily discerned during this period, and appropriate information directives thereon were forwarded through the Corps and Eighth Army structures. ***

2d CIC Detachment

The 2d CIC Detachment entered the Korean Police Action during August 1950. It was assigned the usual preliminary matters of security surveys and the development of liaison contacts. All agents wore the "U.S." collar insignia and were addressed as "Mister." Certain equipment and logistic shortages immediately became evident. Tentage provided the detachment was inadequate as was the amount of transportation vehicles and trailers. The fluid tactical condition during the early months of the conflict necessitated frequent and immediate moves by the unit; only the procurement of trailers and trucks from other units gave the detachment the mobility required. ****

Administrative difficulties also put in the usual appearance. The commander of the 2d CIC Detachment found that the usual Monthly Report forms did not allow a fair reporting of the detachment's activities. No provision was made on the forms for some types of investigations handled and the commander, Capt. Virgil H. Herald, suggested that the forms be abandoned as useless during the fluid tactical stages of combat duty. During October 1950, Captain Herald reported that his detachment was providing assistance to military police and guard details to prevent infiltration and tie ups along the main supply route. He added that routine refugee screenings

---

**** Monthly Report of CIC Activities, Aug 1950, 2d CIC Det, signed by Capt Virgel Herald, (Conf) (Cen Rec Fac).

in conjunction with Korean National Police had revealed a number of guerrilla and North Korean troops causing scattered fighting at remote control and check points. He closed the report with the recommendation that agents be given thorough training in basic infantry principles before being sent into the area. *

During December 1950 the 2d CIC Detachment and the 2d Division felt the effects of heavy personnel and equipment losses incurred during action in the latter part of November. The situation tactically was extremely fluid and refugee screenings were kept at a minimum but still deemed necessary to protect command post security. All records and office equipment of the detachment were lost in combat in November and clerical work was temporarily eliminated and clerical personnel employed in assisting agents.

The detachment found that during combat with the division, investigations had, of necessity, to be short and quickly conducted. Interrogations were handled under great pressure, and tactical moves often caused investigations that merited development to be dropped and abandoned.

Casualties within the detachment caused the commander to forward the suggestion that agents, hospitalized and sent to Japan, be returned to their units through channels other than regular replacement facilities. Frequently, he reported, the system in use delayed the return of men at periods when they were most vitally needed, and in some instances, caused them to be permanently lost to their detachment. **

3d CIC Detachment

The 3d CIC Detachment reports for late 1951 present some idea of the popular occupation of detachments in refugee screening. During November, almost no other CIC work was accomplished, although a considerable time was devoted to interrogation of prisoners of war and the collection of positive intelligence. Continual screening of refugees was undertaken through patrolling of road networks and National Police check points within the area under jurisdiction of the 3d Division. ***

During December, the 14 agents with the 3d Detachment screened more than 2,000 indigenous personnel with 3d Division and conducted almost 900 interrogations. The detachment also participated in Operation Skunkhunt in December, when all reserve troops of the division were turned over to CIC supervision for clearing of all indigenous personnel within the division sector. Twenty-five

[redacted]

security risks screened from over a thousand persons rounded up in the operation were turned over to Corps for further interrogation. *

The detachment also endeavored to provide counterintelligence support down through subordinate levels of 3d Division.

The officer who served as S2 of the 7th Infantry Regiment, 3d Infantry Division, reported excellent tactical and nontactical support by the 3d CIC Detachment during late 1950 and early 1951. The detachment commander, Maj. Clare R. Jensen, made daily visits to the S2s at regimental level and freely offered whatever assistance he could provide. In 1951, when the regiment was holding a position at the s-curve in the Inchon River about 50 miles north of Seoul and on the main supply route, the 3d CIC Detachment gave its first concrete assistance by screening all indigenous employees. The regiment at that time had a rear area of almost division size, and the difficulty of the job was increased by the fact that few records were available to facilitate the checking process.

The 3d CIC gave troop lectures at the request of the S2, especially directed at pointing out the dangers of allowing children the free run of all positions. Some trouble had been experienced with the use of children as low level agents by the North Koreans, and the S2 reported less fraternization with the children after the CIC lectures.

The 7th Regiment S2 also recalled that it was standard procedure to call in CIC to check areas being vacated for documents which might have been overlooked or left behind.

An enlisted man with psychological difficulties was removed from active duty with the 7th Regiment after CIC investigated his story and claim that he had been ambushed. The right flank of the regiment was protected by troops of the British Brigade, and since the British rely upon a "strong point" method of holding a front line, rather than offering a continuous line of resistance, there had been some infiltration through their line into 7th Regiment rear areas by North Korean troops. It was thought, however, that increased security and guard vigilance had removed the possibility of further infiltration when the enlisted man concerned reported that he had been ambushed while driving his truck within the regimental area. The truck was riddled with holes, but when the man was questioned to get information on the raiding party in order to preclude further action by it, his story was not consistent.

Under CIC interrogation the man admitted that being confined to duties in the rear area, he had come to feel "out of it" and wanted to attract some attention with

* Ibid. Dec 1951.

[redacted]

his "ambush" story. He admitted to emptying two clips of carbine ammunition into the truck and confessed that he had neither met or seen a raiding party. The man was turned over to higher headquarters for disposition. *

24th CIC Detachment

As stated, the first CIC detachment into Korea was the 24th, which moved into the area with the 24th Infantry Division on 1 July 1950. Agents were deployed from division level in teams down through the regiments. A reserve force was held at division and used for assistance at lower levels or put onto higher level cases.

The fluid and changing situation during the early months of the conflict required agents be put to the task of refugee screening and control and the gathering of positive intelligence information. When the 24th began its advance north in September, the mission changed to one more common to CIC, but limited positive intelligence gathering continued. In most cases, positive intelligence leads were passed to other agencies for information or action, but occasionally, CIC was called upon to follow through on atrocity investigation and civil matters. **

During December 1950 the 24th CIC supervised the screening of more than 13,000 refugees and recommended routing that kept traffic off the main supply route in the division sector. All Korean males of military age were carefully examined, particularly when the division moved across the 38th parallel, to minimize the danger of enemy troop infiltration. Clearance of Korean Nationals employed or integrated with the division proved a difficult task for the detachment, since few records were available to verify statements. ***

In January 1951 the southbound refugee traffic was heavy because of the rapid advance of NK and CCF armies. The detachment screened in excess of 25,000 refugees during the month and assisted Military Police in searching personal belongings to seize contraband arms or would-be infiltrators. Several prisoners of war were interrogated by the detachment to assist in the collection of positive intelligence. ****

In February, as the United Nations stemmed the Communist march south, refugee traffic again began to move north through the division sector, but in much smaller volumes than had been handled in the movement southward. It

---

* Interview with Maj J.F. McAuliffe, At Ft Holabird, Md., 26 Sep 1955.

** Monthly Rpt of CIC Activities, Oct 1950, 24th CIC Det, /s/ Capt Harvey Cook; (Secret) (Cen Rec Fac).

*** Ibid, Dec 1950.

**** Ibid, Jan 1951.

was also during this month that American prisoners of war were liberated at a compound just south of Seoul, and a comprehensive Summary of Information on Communist indoctrination and brainwashing techniques was compiled by interrogation of the men by 24th Detachment agents. *

Since the 24th was heading the advance north of the UN forces in March, little refugee traffic passed through the division sector. Main attention was once again turned to gathering of positive intelligence required by the G2 and maintenance of the security of division and subordinate command posts. Indoctrination of troops into procedure in event of capture was concentrated on during this period, as well. **

In April the spring offensive of the CCF started another flow of refugees south through the Division area as the 24th engaged in retrograde movement. Korean National Police actually handled the check and control points by this time, but CIC supervision was required. This was to be the last great difficulty with refugee movement, since shortly after this the tactical situation became stabilized and reasonably static. Communist propaganda leaflets began to appear in great volume during this period, and though CIC collected them whenever possible and sent forward reports, it was impossible to stop air drops and arrival of the literature. ***

With the first truce overtures being delivered in June, it became apparent that current positions held by the 24th Division could become permanent, and an ambitious program of refugee evacuation out of the division sector was begun. Civil assistance personnel handled the actual movement of refugees, under CIC supervision. More than 18,000 were relocated during the two month period. A mobile check point unit was created to pick up those who by accident or design avoided or by-passed screening stations.

A Summary of Information during this period from the 24th CIC Detachment contains a case which illustrates a feeling that was becoming current during mid-1951. Few persons took such direct action, however.

A letter was picked up in APO channels leaving Korea, because of its address to Joseph Stalin, Premier, Moscow, Russia. Examination disclosed a return address on the envelope, which CIC traced and used to conclude the case. The author of the letter was found and admitted that he had drafted the letter to the Soviet premier. In it he urged Stalin to exert his influence to bring the Korean hostilities to a close and to cease antagonism of the United Nations so that the war would end and "we can all go home." ****

25th CIC Detachment

In December 1950, as United Nation forces regrouped to the rear in the face of the Communist advance, the 25th CIC Detachment was faced with a refugee situation that defied control. An estimated quarter of a million refugees moved through the division sector; all that could be done was to route them off the main supply route between Pyongyang and Seoul. Spot screening was attempted and was distressingly successful, for the number of enemy soldiers, agents, and guerrillas who were picked up at these points was very large. CIC in the division rear, at Taejon, reported refugee movement at the rate of 10,000 to 15,000 a day south through that city. *

181st CIC Detachment

The 181st CIC Detachment with the 1st Marine Division managed to keep 10 agents in the field out of a total personnel strength of 16 men. The unit urged in November 1950 that a central control office be set up in Korea to obtain maximum efficiency from all detachments. The report pointed out the lack of inter detachment coordination because of the lack of such control. **

During December 1950, the 181st worked no cases because of the tenuous tactical situation during the withdrawal of the detachment and Marine division from Hungnam, North Korea. The only work of the detachment consisted of positive intelligence missions that would aid the G2 in expediting the evacuation. When the 1st was landed at Masan some distance south of Hungnam, the 181st advocated and implemented a vigorous propaganda program directed against guerrilla bands in the area. The campaign was directed along lines emphasizing the need to fight and protect Korea against China, a former ruler of Korea. ***

The zone of 1st Marine Division responsibility changed in January 1951, and all agents were delegated duties to assist regimental combat team S2s in counter-intelligence and security work occasioned by the physical move. In its monthly report for this period, the 181st passed along the information that most agents picked up by the detachment during refugee screening operations carried some means of identification on their persons. Elementary as it may have seemed, the detachment commander recommended that all suspect persons be given a thorough body search to check for such documents. The rugged and hilly terrain

*** Ibid, Dec 1950.

[redacted]

handled by the division gave rise to an operational difficulty during this period. Radios used for control of agent teams did not function efficiently, and a request for more powerful sets was made. *

The evacuation of Seoul and Inchon as the Communist forces advanced in January put the detachment back on the job of refugee screening. The detachment commander admitted in his report that security screening was inadequate, but added that the movement south of the civilians had been fairly orderly. He noted, too, that while division policy was to stop northern movement of refugees through the division sector, there was no policy with regard to movement south. During the month, the detachment captured 12 persons believed to have been connected with an espionage ring. All carried broken copper spoons, presumably as a means of identification, and four of the men had allegedly been signaling the enemy with a heavy mirror. Tactical considerations prevented immediate investigation by the 181st, and the prisoners were sent up to X Corps for exploitation. **

Seven couriers were picked up by the 181st in May; under CIC interrogation, all admitted to performing espionage missions for the enemy. No pattern could be determined in questioning of the men. The ages of the men varied from 17 to 75 years and no definite schooling or training was common to all. All had short range missions and carried a Japanese coin as a common means of identification.

Evidence collected during June 1951, when 31 agents were apprehended by the 181st, led to the conclusion that the enemy was attempting a "saturation" policy with regard to espionage activities. Five women were among the agents sent to Corps for further questioning and all had short range tactical missions. A new item of information that the agents were instructed to determine was whether Japanese National troops were being employed with the UN force. ***

During August 1951, as the static nature of the division's employment became apparent, the 181st began a program to screen all indigenous employees. The detachment coordinated the program with the ROK liaison office and found it could handle as many as 50 cases a day. The screening included detailed interrogation into background and personal history; political and social affiliations; and a check of available files. If the processing was satisfactorily completed, new passes were issued. Persons hired for more responsible positions such as interpreter or translator were required to fill out personal history statements which were sent to Eighth Army for a check of the central CIC files. ****

704th Detachment with Second Logistical Command

First records available for the 704th CIC Detachment, attached to the Second Logistical Command, pick the unit up in mid-October 1950, subsequent to the breakthrough from the Pusan perimeter. The detachment was composed in large part, of men formerly with the 441st in Japan. Sub-offices were maintained in Masan and Koje-do and the area of responsibility included the southern tip of the Korean peninsula.

Close liaison was maintained by the detachment with the Korean National Police, and it was felt that assistance from that branch was preferable to coordination with ROK CIC, for, by and large, that group was immature and inexperienced. Much reliance was placed on civilian interpreters, since only two agents in the detachment spoke Korean.

In the headquarters office at Pusan, the biggest job for agents was providing port and personnel security. Surveys of port facilities were run at regular intervals and patrol activity by agents in troop congregation centers and along the docks was common. Most troops moved to Korea during 1950 came through Sasebo, Japan, to Pusan and were then moved by truck up the peninsula. Liaison contacts with shipmasters proved a valuable source of strategic and tactical intelligence. Positive intelligence activities of the detachment ranged from covering holiday demonstrations to obtaining civilian opinions of interest at high military levels.

As a part of the port security program, indoctrination lectures were given incoming troops on security measures and the safeguarding of military information. The talks were generally informal and were given in whatever locations were available. Their purpose was as much a capsule indoctrination of troops to Far East culture as the implementation of security measures.

The Pusan office was involved in a case, in 1950, which required the apprehension and return to their homeland of several Japanese who had come to Korea as houseboys and cooks for American troops and officers. News agencies got wind of the presence of Japanese in Korea and almost gave rise to an incident by reporting the presence of Japanese with our tactical units. Although the Japanese were not in combat, their presence provided a possible source of embarrassment, making their hasty and discreet removal from the area adamant.

The 704th had little to do with refugees, but left its screening and detention in large part to Korean National Police. The unit did establish informant nets within refugee camps in order that order of battle information might be picked up and to establish a source for identification of enemy agents. Actual handling of the refugees was left to Korean National Police.

[redacted]

Assistance was also given by the Korean National Police in stamping out Korean civilian espionage rings. At least three operating rings were brought to the attention of CIC through informants, and in every case Korean police handled civilians involved, calling on CIC only for supervisory assistance and aid in interrogation. It was generally felt that the rings were formed by underground Communist elements of the South Korean Labor Party but the tie-in with this organization could not be definitely established. One CIC agent who worked with the Korean Police in the arrest of a ring felt that the more important people never were apprehended. The rings were well organized and administered, but a clear dichotomy was made between the information-gathering level and the group responsible for analysis and forwarding of the information. It was this latter group that apparently escaped capture. The information sought by the rings was largely order of battle and arrival, strength and departure of troops from the port cities; general effectiveness cannot be estimated.

Guerrilla Activity

Even during the Japanese occupation, guerrilla bands had flourished in the Chiri-San area of South Central Korea. When our troops broke out from the Pusan perimeter and advanced north, North Korean troops cut off behind our lines took to the Chiri-San hills and either joined existing guerrilla forces or formed bands of their own. At any rate, there were guerrilla forces in excess of 30,000 men at large in the mountainous area to the rear of UN armies. The job of keeping tab on the disposition and activities of the group fell upon the 704th and was given to Agent Tero Miyagishima.

For supply and arms the guerrillas depended upon raids of village settlements in the area, and could properly be considered bandits rather than resistance forces. Since we had no troops in the area, coverage was most difficult. While there was evidence that the guerrillas were providing a prisoner escape route from Koje-do island, just off the tip of Korea, to North Korean front-lines, thereby indicating Communist sympathy, no tie-up between Communist forces and the guerrillas was concretely established. It was felt that the Communist-dominated South Korean Labor Party was aiding the renegade hill forces, perhaps even directing espionage and sabotage activities by the guerrillas, but again no positive evidence was found.

To effect coverage in this area where neither South Korean or American forces had control, Miyagishima set up an informant net which varied in size from 20 to 30 men. After initial recruitments were made from persons who offered their services to CIC, it was generally the case that these agents would create their own nets, often from among an immediate family group. The system worked well and brought in a steady flow of information which gave thorough coverage of the area. The informants

maintained contacts in the isolated hill villages and were of the opinion that penetration of the bands was virtually impossible and amounted to a suicide assignment. All information then was second hand, at best, and came in large part from villagers who dealt with the guerrillas or had other first-hand contacts. The only treatment of the problem was to evaluate the information accordingly.

Miyagishima moved over the entire southern peninsula area by boat and truck to keep in touch with his informants; he tried to make the circuit at least once a month. Most informants were able to forward reports to the Masan office at least once a week and from that point they were analyzed, incorporated and sent forward.

An attempt to control the guerrilla forces was made in December 1951, when a ROK division was sent into the Chiri-San area with orders to capture and wipe them out. The mopping up was dubbed "Operation Rathole" and its success appears questionable. Miyagishima said news stories as late as August 1955 reported the existence of guerrilla activity in the Chiri-San area. *

801st CIC Detachment

The 801st CIC Detachment arrived in Korea at Pusan on 14 December 1950; it was originally designated Provisional CIC Detachment. After designation as the 801st, it served first as a bolstering force to the 210th CIC Detachment attached to X Corps, but after two weeks with that unit it was attached to the Second Logistical Command to assist the 704th CIC Detachment. Finally, the 801st was transferred to Eighth Army control. The detachment was a rear area unit and did not at any time come in contact with forward elements.

Cases handled by the detachment varied little from normal CIC operations. However, detachment records do add clarity to the supply problem in Korea. The 801st found that tentage provided was totally inadequate and mess facilities woefully short. The unit was never close enough to other masses to pool facilities and considerable "scrounging" of utensils and kitchen supplies was necessary to set up a functional kitchen. Motor transportation was insufficient but the situation was solved by "borrowing" a two-and-a-half ton cargo truck. It was found that the truck was not only desirable but essential to the mobile type of operations encountered in Korea.

Photographic equipment proved of great value to the detachment, but the portable darkroom included in the TO & E was too large and cumbersome for transportation. Confidential funds were readily available for the payment of

* Interview with Lt Tero Miyagishima, Ft Holabird, 28 Jul 1955.

indigenous employees and informants but it was suggested that payment in food and clothing would produce better results than were obtained with local money.*

CIC During Truce Negotiations

After August 1951 the line in Korea became stabilized. Fighting continued and action varied from light to heavy but the deployment and assigned areas of units became static, and the frantic movement that had characterized the first year of the Korean action abruptly stopped.

As the battle situation settled down, the stream of refugees that had harassed CIC during the first year dried up and detachment employment became largely routine.**

Security became a prime CIC consideration. Since units were rotated regularly from line to reserve duty in rear areas, the security of these movements became a CIC operation. Surveys and checks were organized on an irregular schedule, and posters and calendars urging observance of AR 380-5 were procured and disseminated.***

Detachment training was instituted as time became available and shortcomings that had appeared during combat phases were remedied. Some detachments employed a system of internal rotation so that each man could perform any assignment for which he was required within the detachment framework.****

Badges and credentials of agents were generally held at the detachment headquarters and agents were issued cards which insured them freedom of movement and adequate identification, but which did not identify the men as CIC agents and could be destroyed easily.*****

As operations settled, instances of misuse of CIC personnel in prisoner of war interrogations and on positive intelligence missions was stopped, for the most part, since detachment commanders were given the opportunity to educate G2 and S2 officers as to proper employment of CIC. Still, many investigations outside the normal purview of CIC's mission continued due to a shortage of investigative personnel in the area.******

High level liaison contacts did much to improve CIC's position during this period. Support of the security program promulgated by detachments on the part of General Van Fleet and his chief of staff did much to give CIC stature and cooperation at lower levels. Security lectures to incoming troops before they were assigned to the line became a general practice. The lectures were directed at acquainting the men with CIC, its mission, and how mutual assistance could benefit both CIC and the troops. *

Security coverage for military and governmental personnel touring the Korean area during 1952 and 1953 provided considerable work for CIC. Almost every combat unit had official visitors; in all cases, CIC was delegated the duty of providing security for these parties, either alone or in conjunction with some other agency. **

During truce negotiations it became apparent that there might be certain conflicts of interest between Korean Nationals and American troops in Korea because of the attitude of the Korean President relative to a peace that would leave Korea divided. This raised problems for CIC in that most detachments had been relying all during Korean duty on indigenous interpreters and translators. Where the aims of the Korean government and the United Nations coincided, there was no reason to doubt the loyalty and trustworthiness of these employees but where a conflict of interests arose, some difficulty appeared in relying on the services of Korean Nationals.

As the situation developed, some interpreters resigned and others refused to do any task which might appear inimical to the best interests of the Korean government. This led to numerous requests for Korean linguists whose loyalty to the United States was firmly established. ***

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

CIC IN THE ICELAND BASE COMMAND

Half-way between New York and Moscow on the great-circle air route from America to Europe, a bleak, glacier-dotted island hugs the rim of the Arctic Circle--Iceland.

Here, in a strange land of bubbling volcanoes, placid lakes, and ice-covered wastes, CIC agents manned a remote insular outpost throughout the long years of the war, keeping a lonely security watch over bustling harbors and airdromes.

Global war thrust new significance upon little Iceland. For centuries, its clannish, peace-loving people had tilled the soil and fished the seas, maintaining always a policy of strict neutrality--no army, no navy, no fortifications. But in 1940, when German armies swept into Denmark (whose king was Iceland's titular sovereign) British forces moved swiftly to occupy Iceland. Soon troop ships were steaming into harbors previously reserved for fishing boats, and soldiers were drilling at camps near Reykjavik, Iceland's capital and largest city.

Icelanders received the British coolly. The Althing, Iceland's parliament and the oldest legislative body in the world, insisted that the island country would remain neutral. Iceland's prime minister urged courtesy toward the British, but from the first, Icelanders were suspicious and resentful of the troops. On 10 May 1941, the anniversary of the British occupation, many of the native population wore black armbands in silent protest.[1]

First U.S. Troops Arrive

The first American troops in Iceland, a force of 4,400 Marines of the 1st Provisional Brigade, received no warmer reception when they landed at Reykjavik on 7 July 1941, although the United States sent its men into the island at the invitation of Iceland's government. The 33d Pursuit Squadron of the Air Corps landed in Iceland a month after the Marines, and by mid-September, Army ground troops were arriving. First American ground troops in Iceland were 5,000 men of the 10th Infantry and the 46th Field Artillery Battalion, who landed as an advance detachment of the 5th Division. With the complete buildup of American forces in the summer of 1942, the U.S. Army officially relieved the British of the

1 Rpt on Iceland prepared by Capt F. R. Stevenson, a British Intelligence Officer assigned to RAF Hq in Iceland, dtd 15 Apr 43, (SECRET) (Central Records Facility).

burden of protecting Iceland from invasion. The Iceland Base Command became a part of the European Theater of Operations.[2]

The coolness of the Icelanders toward American and British troops gradually thawed. As reports of Allied victories reached the little island, whispered sentiment began to favor the Allies, though neutrality remained the official government policy throughout the war. Natives made friends with American soldiers, and cooperation became the watchword.

Before this change in atmosphere, however, Special Agents Weldon M. Jacobs and Donald S. Connell had arrived on 17 November 1941. Transferred from the Third Corps Area at Washington, D.C., these agents were the first members of the detachment, DEML-CIP, activated in the Iceland Base Command on the day they arrived. Maj Richard D. Stevens, an infantry officer who had been working in the G2 office, was designated as commanding officer of the new detachment, which was to work under the staff supervision of Maj George A. A. Jones, assistant chief of staff, G2, for the Iceland Base Command.[3]

Faced by Problem of Employment

Problems popped up immediately. Not the least of these was the question of how to employ the agents. With more than 3,700 miles of coastline, broken by innumerable fjords and small ports, Iceland was particularly vulnerable to the clandestine landing of enemy agents from German submarines. Communications between the small coastal towns were limited and unreliable. There were no railroads, and the poor roads which linked some of the fishing villages were blocked by snow from mid-November until late April. Major Stevens had to determine where his two agents could work most effectively.

It was decided that Connell, a staff sergeant, would be assigned to the Port Control Office at Reykjavik, where he was to work closely with British authorities.[4] Soon he was boarding all incoming and outgoing ships, checking passengers and crews against subversive watch lists and asking them routine screening questions. Other port control duties included inspection of baggage and mail, blockade of docks during embarkation and disembarkation of troops, security lectures to

2 U.S. Army in WWII, The ETO Logistical Support of the Armies, Vol. I, May 41 - Sep 44, Office of the Chief of Military History, DA, Washington, D.C., 1953, pp. 14-19.

1456

survivors of torpedoed ships, and liaison with Icelandic authorities and with British, Norwegian, and United States Navies.[5] Port Control assumed new importance as more and more convoys steamed through the North Atlantic and as lend-lease to Russia was accelerated.

Meanwhile, Special Agent Jacobs, a technical sergeant, was placed on duty in the G2 office at Camp Pershing, although he first spent several days at headquarters of the British Field Security Corps in Iceland to learn how their files were organized.[6]

In addition to normal investigative work, Jacobs was required to set up the detachment's files and administrative system. He also wrote the monthly Counter Subversive Summary and Counter Intelligence Summary for the G2 of the Iceland Base Command.[7]

Personality Clash Hampers Operations

A misunderstanding on the day Connell and Jacobs arrived in Iceland resulted in considerable ill will between the agents and their superior officers, and records of the early days of the detachment indicate a personality clash which hampered detachment operations.

Believing that they would work in civilian clothes as they had in Washington, Connell and Jacobs were disgruntled when Major Stevens and Major Jones ordered them into uniform. Neither of the agents spoke the Icelandic language, and Major Jones felt they would be less conspicuous among the native population if they were in uniform.[8] Connell insisted that he

The situation was aggravated when three additional agents arrived in Iceland on 25 January 1942. The three, Staff Sergeants Kjartan L. Christopherson, Mark F. Hill, and William F. Updegraff, also arrived in civilian clothes.

Meeting the new arrivals as their ship docked, Connell and Jacobs

and Neither Major Jones nor Major Stevens were notified that the new agents had arrived.

Finally, two days after the trio landed in Reykjavik, Connell introduced them to Major Jones. When Major Jones ordered the men into uniform, Connell protested, and a bitter argument followed. After tempers had cooled, Major Jones agreed that

Updegraff, in uniform, worked out of the G2 office at Camp Pershing.[10]

Need for More Agents Becomes Critical

Personal differences cropped up frequently in these early days on Iceland, but they soon were forgotten in the press of duty and in the face of war. Mounting counterintelligence responsibilities focused attention on the critical need for more agents, more officers, and more equipment for the island command.

Major Gen C. H. Bonesteel, commanding general of the Iceland Base Command, took a personal interest in the procurement of additional CIC personnel. On 27 February 1942, General Bonesteel forwarded to the Commanding General, Army Field Forces, a recommended table of organization which called for 14 officers and 103 enlisted men for the Counter Intelligence Corps in Iceland. He received no reply to his request until 5 May 1942, when The Adjutant General advised him that authorization was being secured for three officers, twelve special agents, thirty-five agents, and nine clerks. Within twenty-four hours, General Bonesteel radioed The Adjutant General that nothing less than his original request would be satisfactory.

When repeated correspondence through official channels failed to result in any substantial increase in CIC quotas for Iceland, General Bonesteel, on 21 July 1942, wrote a personal letter to Major Gen George V. Strong, Assistant Chief of Staff, G2, War Department, in which he outlined the counterintelligence situation in his command and asked for General Strong's assistance. At that time, only nine Special Agents were on duty in Iceland, and one of them was preparing to

9 Rpt on Conditions Found in Iceland by Special Agent Donald S. Connell, covering a period from Nov 41 to Jan 42, undated, (Unclassified) (Central Records Facility).

10 Monthly CIC Summary Nr 3, period: 1 Jan 42 to 31 Jan 42, prepared by Maj Richard D. Stevens, dtd 1 Feb 42, (CONFIDENTIAL) (Central Records Facility).

return to the United States to attend Officer Candidate School. Five officers from the G-2 section were performing counterintelligence duties, resulting in what General Bonesteel called an "undue burden" on the G2 office.

"Iceland must be considered as three separate and distinct sectors which are isolated from each other except for telephone or radio communication, and movements by ship a considerable portion of the year," General Bonesteel wrote in explanation of his requests. "This means that each of these sectors must be self-sustaining tactically and for counterintelligence measures."

The Reykjavik area, General Bonesteel explained, was the most important of the three. He listed its principal subdivisions as Reykjavik and its harbor, a naval base at Hvalfjord, the Vestmann Islands, the Borganes and Bordeyri sector, and an important airdrome at Keflavik. He indicated that a separate CIC organization at Keflavik would be desirable. The other major areas, as General Bonesteel saw them, were the area around Akureyri and the Budareyri sector, consisting of the towns of Budareyri, Seydisfjordur, and Hofn. Because of transportation and communication difficulties, General Bonesteel insisted that separate counterintelligence organizations for each of the sectors were essential.[11]

Additional Agents Authorized

The letter to General Strong brought quick results. On 24 August 1942, General Strong notified General Bonesteel that the five G2 officers who had been performing counterintelligence duties were being transferred to CIC and that five additional officers were being assigned to the Iceland Base Command. Moreover, additional special agents were being assigned to bring the Iceland CIC detachment up to its full authorized strength of 29, and an additional allotment of 56 agents and 18 clerks was being made for the Iceland Base Command.

General Bonesteel's request for 17 jeeps, three one-half-ton trucks, and three pickup trucks for CIC use was denied.[12]

When additional agents were authorized, it often became necessary to recruit them locally, since it was difficult to obtain replacements either directly from the United States or through the European Theater of Operations, in which the Iceland Base Command technically was included. Almost two-thirds of the men in the Iceland detachment in 1943 were taken into CIC after they had first been assigned

11 Ltr, Maj Gen C. H. Bonesteel to Maj Gen George V. Strong, AC of S, G2, WD, 21 Jul 42, (SECRET) (Departmental Records Branch, AGO, Alexandria, Va).

to the Iceland Base Command in other capacities. For these men, there was little formal CIC training. They watched and learned while they worked.

However, when new agents arrived from the United States, officers of the detachment briefed them on the work in Iceland in special, one-week orientation courses. The first of these courses was held in the fall of 1942. Political, social, economic, and geographic conditions in Iceland were stressed, and the newcomers were warned what problems they would be likely to face.[13]

13 A History of G2, ETOUSA, Appendix A, CIC Operations in Iceland, 30 April 1945, p. 301, (Unclassified) (Departmental Records Branch, AGO, Alexandria, Va.)

Agents Work in Outlying Sections

By May 1943, nine officers and 98 enlisted men were on duty with CIC in Iceland,[20] and Colonel Stevens (he had been promoted to lieutenant colonel) had established single "cells" of agents in outlying areas of the island. Some agents were completely isolated in bleak outposts for six months or more during the long winter.[21] In these areas where travel over snowbanks could be made only on foot, skis and snowshoes were standard equipment for CIC agents.[22]

Much of their work was watching--scanning the skies for enemy aircraft, watching the shoreline for German submarines, and looking for strangers in the small fishing villages. If it was a lonely mission, it was a necessary one. The enemy would not try to send all his agents through the busy port control office in Reykjavik.

Meanwhile, CIC operations in Reykjavik had expanded into many new areas besides port control. German nationals had to be watched closely. Censorship, press and radio control, safeguarding of military information--all these responsibilities were thrust upon CIC.[23]

20 Roster, CIC Det, Iceland Base Command, dtd 6 May 43, (Unclassified), (Central Records Facility). NOTE: Combined Roster of 6 May 43 and 1 May 44 attached as Appendix 1.

Espionage Investigations Important

Besides port control activities, investigation of suspected espionage was the bulk of the detachment's work. Of 68 cases closed in July 1943, more than half involved suspected espionage. In October 1943, 113 cases were closed, of which 47 were espionage investigations and 45 were routine personnel security checks.

Some sample cases during this period: Reykjavik businessman who wanted to visit the United States was found to be a potentially dangerous former Nazi; a bomb, dropped from an unidentified plane onto a house in Reykjavik, was found by Royal Air Force and CIC personnel to be only a practice bomb; the theft of dynamite from a municipal storehouse in the Vestmann Islands was investigated; a merchant seaman was discovered attempting to carry uncensored messages to the United States.[25] In April and again in August 1943, CIC agents interrogated crews of German airplanes shot down over Iceland by Army Air Force P-38's.[26]

CIC strength reports for 1943 do not reflect an accurate picture of the number of persons engaged in counterintelligence work, for rosters were padded with names of mechanics, janitors, orderlies, and drivers who had been taken into the Corps. At one time during 1943, 13 such persons were filling vacancies authorized for agents because personnel for housekeeping duties could not be

procured otherwise within the Iceland Base Command.[27] Later, however, these men were transferred out of CIC but were placed on duty with the detachment. Other personnel who worked with, but were not assigned to the detachment, included five civilian interpreters and translators.[28]

By the end of February 1944, the detachment had dwindled to seven officers and 74 enlisted men. Capt Harold A. Saberhagen signed the monthly information report for February as acting chief of the CIC detachment in Iceland.

Training Intensified in February 1944

Training was intensified during February 1944. Five agents and one officer attended advanced French classes taught by a professional instructor engaged by the detachment. Four agents studied advanced German, and one officer and seven enlisted men began a course in elementary German. Small arms instruction and firing were conducted throughout March. Believing that many of the agents in the Iceland Base Command eventually would see combat duty in Europe, Captain Saberhagen recommended that materials for individual study be prepared and distributed to agents who were faced with the possibility of an European assignment. Another significant phase of training was a policy of rotating agents within the Iceland Base Command. Captain Saberhagen wrote:

> Due to the shortage of personnel and the necessity of continuous activities, in many fields, in connection with the occupation of Iceland, it has been impossible to conduct an extensive training program. However, a policy of rotating personnel to assignments with our various sections has been followed in the past and will be continued. This gives the individuals concerned a practical up-to-date knowledge of all phases of CIC work in an occupied nation.

Routine investigations of suspected espionage, along with port control duties, continued to be the bulk of the detachment's work. A breakdown of the case load in February 1944, a typical month, revealed the following:

	Cases closed	Cases pending
Personnel	3	8
Disaffection	5	3
Sedition	1	0

27 A History of G2, ETOUSA, Appendix A, CIC Opns in Iceland, prepared by Historical Sec, ETOUSA, dtd 30 Apr 45, p. 302, (Unclassified) (Departmental Records Branch, AGO, Alexandria, Va.).

28 Rpt, CIC Experiences in Iceland, prepared by Capt Charles E. Larkin for Chief, CIC, ETOUSA, dtd Aug 43, (Unclassified) (Central Records Facility).

1464

	Cases closed	Cases pending
Treason	0	0
Espionage	51	16
Sabotage	0	3
Violation of AR 380-5	2	10
Totals	62	40

If the number of cases seems small in proportion to the size of the detachment, it must be remembered that agents were not assigned to one big pool at headquarters in Reykjavik but were widely dispersed throughout Iceland. U.S. military forces were concentrated in a few localities, and the task of guarding the long coastline was left largely to CIC agents. That made it necessary to station operatives in as many different places as possible.[29]

Five Detachments Created

Partly because of this need for dispersal, the detachment was drastically reorganized in the summer of 1944. The Provisional Detachment was abandoned, and five new detachments were created, with a total strength of seven officers and 75 enlisted men. Completed on 12 July 1944, the reorganization led to activation of the 461st, 462d, 463d, 464th, and 465th CIC Detachments in the Iceland Base Command. The 461st became Headquarters Detachment, with its offices at Camp Tripoli, Reykjavik. Port control duties were assumed by the 462d CIC Detachment. The 463d was given jurisdiction in the Reykjavik Defense Area; the 464th, the Akureyri-Seydisfjordur Defense Area; and the 465th, the Keflavik Defense Area.[30]

The policy of dispersing agents throughout the island paid rich dividends in the spring of 1944, when agents in the Akureyri-Seydisfjordur Defense Area captured five enemy agents and obtained a wealth of information about German espionage and sabotage schools.

Enemy Agents Captured

Early in May, a civilian informant in Seydisfjordur notified Agents Dwight P. Miller, Jr., and Kenneth F. Haan that three suspicious strangers had been seen

29 CIC Monthly Situation Rpt, Iceland Base Command, for Feb 44, Capt Harold A. Saberhagen to AC of S, G2, Iceland Base Command, dtd 1 Mar 44, (SECRET) (Departmental Records Branch, AGO, Alexandria, Va.).

30 Ltr, Lt Col Dori Hjalmarson to CG, Iceland Base Command, 13 Apr 45, subj: Unit History--Counter Intelligence Corps Det, (Unclassified) (Departmental Records Branch, AGO, Alexandria, Va.).

in the area. It took a dangerous boat trip up a raging river and an exhausting mountain climb through heavy snows for the agents to reach the spot where the strangers had been seen--but it was worth it. Miller and Haan captured a German soldier and two Icelanders who revealed under interrogation that they had come ashore from a German submarine only three days before. The three, all trained enemy espionage agents, said they had been sent to Iceland to report by radio on military and naval installations along the East Coast of Iceland, along with information relative to convoys and shippings, weather, and anything else they might observe. Agents obtained from the prisoners lists of instructors in several German sabotage and espionage schools, floor plans of various German offices, codebooks, and information concerning the type of sabotage instruction German agents were receiving.

Only a few weeks earlier, Agent Anthony Fricano, also acting on a tip from a civilian informant, apprehended two enemy agents while they were asleep in a farm house on Iceland's East Coast. Both were native Icelanders who had been trained in Germany and returned to Iceland on an espionage mission.

Agents Miller, Haan, and Fricano were awarded Bronze Stars for their capture and interrogation of the enemy agents.[31]

Agents in other areas of Iceland were just as busy, although their work was less spectacular.

Air Passengers Screened

The heart of the Keflavik Defense Area was a major airdrome, where hundreds of transient aircraft landed weekly with civilian passengers, European war casualties, and combat and ferry aircraft crews. CIC resident agents at the airdrome screened all passengers arriving at Keflavik and instructed them in security measures in force at the airdrome. Shipping control was a minor, but important, CIC function at Keflavik, since fishing fleets from the Faroe Islands often docked there.

Liaison was important to the agents at Keflavik, too. Besides the usual liaison with British and American military and naval chieftans, the agents also served as guides and interpreters for visiting members of American, British, and Russian legations.[32]

Liaison With British Important

An investigation in December 1944 illustrates the effectiveness of this liaison. An intelligence officer of the British Royal Navy notified CIC that British radio units had, on several occasions, picked up German language broadcasts apparently being sent from a hidden transmitter in the vicinity of Meeks Field, near Keflavik. The British believed the broadcasts were originating at some point along the coast, where movements of all incoming and outgoing vessels could be noted and reported to German submarines.

With the aid of three Signal Corps radio operators equipped with mobile transmitters and receivers, two CIC agents began monitoring wave lengths over which the German broadcasts had been heard. At the same time, voice contact was maintained with the U.S. Navy radio net. If the CIC agents heard German voices, they were to contact the Navy net, which would relay the warning to Signal Corps personnel waiting at Keflavik with radio directional finders. Upon determining the site of the enemy transmitter, the direction finders were to report to CIC agents who would then apprehend the operators.

For 16 hours the agents listened, as a convoy passed from Reykjavik Harbor through the outer bay to the ocean. No German voice was heard. The monitoring eventually was terminated with negative results, but the operation demonstrated clearly the close cooperation between CIC, British Intelligence, and the U.S. Navy and Signal Corps.[33]

Port Control Duties Grow

In Reykjavik, port control duties continued to grow. During December 1944, a typical month, CIC agents cleared 76 ships arriving from foreign ports and completed security checks of another 49 vessels awaiting departure from Reykjavik. A total of 1,494 passengers and crew members were screened on their arrival in Reykjavik Harbor, and 1,170 were paneled before departure. More than a thousand pieces of incoming mail were censored. Port control also was extended to the near-by cities of Hafnarfjordur and Vestmannaeyjar.

By the spring of 1945, agents in Reykjavik were maintaining close liaison with Allied legations, Althing, subsidiary agencies of the Icelandic government, photographic laboratories, newspaper editors, and local police. Through these measures, agents were able to win the confidence and the cooperation of the civilian population. In a report dated 13 April 1945, Lt Col Dori Hjalmarson, chief of the counterintelligence sub-section of the G2 office, noted that CIC agents were performing "a variety of public relations functions...which are not exactly

33 Monthly Information Rpt for Dec 44, Lt Col Dori Hjalmarson to CG, Army Service Forces, dtd 1 Jan 45, (CONFIDENTIAL) (Central Records Facility).

in keeping with official duties but are paramount to maintaining the confidence and aid of Icelanders in safeguarding the security of the country."[34]

Problems of CIC in Iceland Reviewed

With the defeat of German armies on the Continent, CIC's role in Iceland was completed. Iceland had remained neutral; its government, stable throughout the war, no longer feared enemy invasion. Agents of the 461st, 462d, 463d, and 464th CIC Detachments sailed for the United States early in June 1945, and their detachments were deactivated. The 465th CIC Detachment was deactivated six months later.[35]

In retrospect, several problems which plagued the CIC organization in Iceland come to light.

Not the least of these was the language problem encountered by agents assigned to the Iceland Base Command. Little known and difficult to learn, the Icelandic language was a very real barrier to agents who found it necessary to deal with the native population. Despite the use of civilian interpreters and translators and the periods of language instruction given new agents, the detachment's efficiency was materially reduced by the inability of its operatives to speak the native tongue. In a report prepared in November 1944, Capt Howard K. Hutchinson, acting chief of the Iceland Detachment, commented:

> Experience in Iceland indicates that too much emphasis cannot be placed on the necessity for agents to speak the language of the locality to which they are to be assigned. Developments in the past have conclusively demonstrated that the value of an experienced agent is at least halved by his inability to speak Icelandic...

Captain Hutchinson also recommended that agents be given "training in the political complexion, economic setup, and cultural standards of the countries or localities to which they will be assigned."[36] Had agents bound for Iceland been given such briefing before leaving the United States, or while en route to Iceland, the detachment could have eliminated the week of orientation which was found necessary for all new agents.

From the standpoint of the enlisted men within the detachment, the lack of opportunity for advancement in CIC was a disturbing factor. More than once agents complained that the best ratings went to clerks, while the responsibility assumed by investigative personnel went unrecognized.[37] A tour of duty in bleak, remote Iceland was never popular, but it was even less so when agents remained in grade for two years at a time while their superior officers received frequent promotions. One agent who served more than a year and a half in Iceland reported:

> The only real problem in regard to the agents in the Iceland detachment is the universal one--promotions. It will be two years this summer since anyone in the detachment has been promoted. Officers are promoted almost regularly on a six month basis. While this is relatively unimportant, the men no longer feel that there is any incentive.[38]

Long tours of duty in Iceland did not help morale. After a 1943 inspection tour of the European Theater of Operations, Lt Col Hugh D. Wise, Jr., reported that no rotation policy existed for CIC agents in Iceland. Agents who had been in Iceland for as much as two years had to sit back and watch while their friends in line units were rotated at 18-month intervals. One officer who had served with CIC in Iceland for 26 months had his scheduled rotation cancelled at the last minute by a G1 ruling that CIC rotation would have to be arranged by the War Department rather than by Headquarters, Iceland Base Command.[39]

Vacillation on the question of whether the first CIC agents in Iceland were to work in uniform or in civilian clothes led to the compromise of identities in a few instances. Agents would be seen in uniform one day and in civilian clothing the next. Icelanders soon dubbed the G2 office "chameleon, the lizard which changes colors." The situation became so acute at one time that officials of the

...tish Praise CIC Thoroughness

But not all persons with whom CIC agents worked in Iceland were critical. British intelligence officers had words of praise for the thoroughness of the CIC investigators. A British report in the spring of 1943 compared CIC agents with noncommissioned officers of the British Field Security Corps in this manner:

> The C.I.C. agent is mainly an individual investigator, acting on a complaint from some other source, handed down to him through official channels, as opposed to the F.S.N.C.O. who searches himself for complaints....Therefore there is less free-lancing in the C.I.C. and more control from the top, but there is greater investigational thoroughness and always a discontent with anything less than a completely thorough local investigation....C.I.C. agents excell on the practical side, owing to training in surveillance, and in the use of their many pieces of mechanical equipment...[41]

Those words from a British intelligence officer who saw CIC in action are a fitting tribute to the manner in which CIC agents carried out their mission in Iceland.

Part V: CIC in The Middle East 1942-1945

Part V

CIC IN THE MIDDLE EAST, 1942-1945

The need for American counterintelligence in the Middle East originated in the security requirements of U.S. installations and personnel in the area. These requirements were underscored by the volume of intelligence activity, including espionage and sabotage, being carried on by other world powers. Ambitious nations had perennially viewed the Middle East, crucial for its strategic position and its rich oil resources, as a target for influence or conquest. Their intelligence organizations, which over the years had played a significant role in the struggle for control of the Moslem-Arab regions, were particularly active in 1941 and 1942.[42] But the factors that combined to draw U.S. troops, and then CIC, into the area can best be considered in the light of military developments that reached a crisis in the summer of 1942, when the German advance reached its zenith.

Allied forces were suffering reverses in North Africa and Russia as Axis armies bombarded El Alamein defenses and rolled toward Stalingrad in what was envisioned as a gigantic pincer movement threatening the entire Middle East.[43] An Allied retreat from Egypt and even the fall of Russia became real eventualities.[44] In this foreboding military context the first contingent of CIC agents was ordered to Cairo.

Preceding CIC into the area, and more directly responsible for its arrival, were U.S. military units that had been increasing steadily in number since February 1942, and American civilians who had been performing military missions there since several months prior to Pearl Harbor.[45] The types of direct participation by Americans in the Middle Eastern war activities at these early dates were of three kinds: missions, established after the passage of the Lend-Lease Act to work on the shipment of war goods to the Allies and to assist in the efficient maintainance of American equipment;[46] the U.S. Army Middle East Air Force,[47]

42 "Counterintelligence Situation in the Middle East through June 1943," prepared by Evaluation Branch, CIC, (CONFIDENTIAL) (Central Records Facility).

45 Biennial Report, by George C. Marshall, 1 July 1941 to 30 June 1943, pp. 98, 138.

46 Biennial Report, by Marshall, pp. 70 and 98.

47 This was a kind of advance echelon for the Ninth Air Force, which was established in the Middle East on Nov 12, 1942. (The Army Almanac, p. 596).

which, several months before the northwest Africa landings, was flying missions against Rommel's armies and against enemy supply lines across the Mediterranean;[48] large ordnance and aircraft depots, built in the Middle East, "at a time when the enemy's success in Libya and Egypt indicated a long campaign of recovery on the part of the United Nations in the Middle East with a possible withdrawal to bases in Eritrea or the Levant."[49] As over-all control of these activities was transferred to the military, a theater-level command was designated in June 1942 for the United States Army Forces in the Middle East (USAFIME).[50]

CIC Opens Cairo Headquarters

On September 20, 1942, a month after they had been directed to assemble, four officers and 27 noncommissioned agents of the Counter Intelligence Corps sailed from New York for Suez. By November 12 the detachment[51] had set up headquarters in Heliopolis, near Cairo, under the command of Captain George Haig.[52] Its principal objective, Captain Haig stated, was "to subdue or eliminate activities or sabotage work of the Axis agents there."[53] Unfortunately the CIC agents had received little background training, and their initial efforts were aimed necessarily at gaining some understanding of the psychology and customs of the peoples, the local political problems and the activities of Allied and enemy intelligence agencies. Further, they needed to "sell" the Corps both to Allied intelligence and to U.S. Army staff officers who, for the most part, knew little about CIC. Thus much time was devoted toward overcoming obstacles which never should have existed rather than in the performance of CIC responsibilities.[54]

Lieutenant Colonel Leo J. Query, who had arrived 17 November to replace Captain Haig as commanding officer of the detachment, sent agents to various regions to lay the groundwork for field offices, while others attended courses at

48 Marshall, Biennial Report, 1 July 1941 to 30 June 1943, p. 99.
49 Ibid, p. 122.
50 The Army Almanac, p. 606.
51 Originally the CIC personnel comprised two detachments, designated as Casual Detachments 6615-RRR and 6615-SSS, but upon their arrival in the Middle East they became one, generally referred to as the "USAFIME CIC Detachment." On 1 August 1944, it became the 400th CIC Detachment. (400th CIC Detachment's History, Part I, pp. 1, 6) NOTE: No roster of this detachment is available.
52 "History of the Counter Intelligence Corps in the Middle East, September 1942 to May 1945," prepared by the 400th CIC Detachment, Africa-Middle East Theater, Cairo, Egypt, 20 May 1945, Part I, p. 1, (Unclassified) (Central Records Facility).

54 400th CIC Detachment's History, Part II, p. 2.

a British Military Police school and at a Royal Air Force Security Investigations Branch school. By early December the Levant and Eritrea field offices had been established. In February a field office was set up in Teheran for coverage of Iran and Iraq. Offices were to be added in later months at crucial points throughout the Middle East and much of Africa.[55]

In the short span between the time CIC was first directed to the Middle East and the time they were in a position to begin operations, the military situation had changed radically. With the British Eighth Army's drive across Libya, and the Allied landings in Morocco and Algeria, the enemy's ejection from Africa appeared certain. Moreover, the threat of a German invasion of the Middle East by way of the Caucasus had dissipated; by January 1943 the Red Army was advancing westward. American construction programs in the Middle East consequently were curtailed[56] and, with less demand for security measures at depots, CIC could concentrate more on the neutralization of enemy intelligence activities and on the collection of political information. The latter mission, although not assigned to CIC until after its arrival, was to become its most time-consuming task.[57]

Political Factors Affect CIC

Those political factors peculiar to each country which are pertinent to an understanding of problems that affected the Corps can best be discussed separately with the resumes of CIC activities in each region, but certain patterns that existed throughout most of the Middle East can be mentioned here. The Axis once had military control over wide areas. With their withdrawal they left behind organized intelligence groups and innumerable collaborators. Also, they had made some headway, through elaborate propaganda campaigns, in influencing the peoples of the nonbelligerent nations, convincing many of an ultimate Axis victory, and exploiting anti-colonial feelings against Allied nations.[58]

Wise, Jr., "Visit to Headquarters, United States Army Forces in the Middle East and Field Offices of the Counter Intelligence Corps of that Area," p. 2; and "Briefing Material, USAFIME," November 1943, p. 4, (Unclassified) (Central Records Facility).

58 "Counterintelligence Situation in the Middle East through June 1943;" 400th CIC Detachment's History, Part II, p. 1; and "Subject Matter of Axis Broadcasts to the Middle East through June 1943," prepared by Evaluation Branch, CIG, (CONFIDENTIAL) (Central Records Facility).

Besides the Axis, Russia, too, was attempting to further its imperialistic ambitions in the area. Finally, local political elements, as well as professional renegades, were in a position to harm the Allied war efforts if their activities were not checked. Threats to Allied security were not always instigated by enemy agents; frequently they were by-products of the maneuvers that various nationalist groups - e.g., the Zionists and Arabs in Palestine - practiced in trying to weaken each other and to realize their own ambitions for postwar power.[59] Although proven espionage and sabotage by Axis agents was limited, professional spy and saboteur networks did exist, and were continually strengthened by agents arriving by parachute and submarine.[60] The need for Allied counter-intelligence and counterpropaganda steps was unquestioned.

The success that counterintelligence organizations were to attain, once they were well established, is recorded in numerous reports made in later months concerning enemy agents apprehended before they could accomplish their missions. A few of the more significant cases are mentioned later. Here, an indication of the types of activity that would confront CIC can be found in the missions of a German parachute party captured in Palestine in October 1944. Interrogation of its personnel - two of the five were Gestapo members - revealed that the group's objectives were to sabotage Allied installations, to help in the military training of Arabs and incite revolts, and to relay military information to Germany by radio. They were equipped with radio sets, sabotage material, arsenic with instructions for its use as a poison, forged Danish passports, U.S. Navy discharge papers, money, medicine and three types of high-grade secret ink. A number of Arab contacts were to assist them in their mission. In this instance, the sabotage group was rounded up a few days after landing near Jericho, Palestine, after setting off from Athens. Because of their early capture and because their equipment was damaged and scattered in the jump, they presumably had been unable to accomplish any of their objectives.[61] It will be seen that such attempts were made continually throughout the war.

The responsibility for security in most of the Middle East belonged primarily to the British, but both Americans and Free French intended to protect their own interests to some extent at first hand.[62] Some doubt arose, however, concerning the wisdom of having CIC operate in certain Middle Eastern countries. Lieutenant Colonel Hugh D. Wise, Jr., then Assistant Chief of CIC, mentions in a report of

59 400th CIC Detachment's History, Part II, p. 1; and "Counterintelligence Situation in the Middle East through June 1943," pp. 3, 8.

60 "Counterintelligence Situation in the Middle East through June 1943;" 400th CIC Detachment's History, Part II, p. 1; "Briefing Material, USAFIME"; and Memorandum, 20 December 1944, by Agent John G. Heyn, Hq, 305th CIC Detachment, "400th CIC Detachment" (Unclassified) (Central Records Facility).

61 Summary of Information, 9 December 1944, Hq, CIC, USAFIME, "Palestine Parachute Party," (Unclassified) (Central Records Facility).

62 Col Wise's Report, pp. 2, 3; and "Briefing Material," p. 4.

13 September 1943, "It is recommended that further study be made of the advisability of placing CIC personnel on duty in rear echelon or static areas where an Allied country has been established over a period of years and bears the counter-intelligence responsibility for the area while it is jointly occupied."[63]

That some misunderstandings did arise is indicated in a report, dated August 1943, by 2d Lieutenant Thomas J. Nokes, CIC's Liaison Officer in USAFIME:

> "One rather pointed question regarding policy, although not always expressed, is ... 'of what authority or for what purpose are you Americans in this area anyway?' and in view of the fact that other Allies, specifically the Greeks and the Poles, were discouraged from similar representation in these areas, this question deserves a sensible answer. The British are in these areas because they are responsible for the tactical security of their troops and installations. Where American local interest seems to be out of proportion to the American troops or installations, the right of various American organizations in the area appears to be based upon British or French courtesy."[64]

Although some British officers may have questioned the intentions of the United States in having intelligence organizations in the area,[65] they provided, after a time, full cooperation.

British Intelligence Cooperates With CIC

It became apparent soon after CIC began working in the Middle East that its operations would become immeasurably more effective if it could develop close relations with the ranking British counterintelligence organization. Security Intelligence Middle East (SIME) was a large, experienced agency, on a higher level than the Field Security Wing (FSW), the usual CIC counterpart in other areas. Early attempts to establish liaison met with limited success. The British at first seemed unimpressed by CIC and reluctant to cooperate fully. Several weeks of indecision passed before SIME decided to work with the Corps.[66] Then, however, subordinate British intelligence agencies were required to give CIC maximum

cooperation. Excellent relations followed, and the results were mutually advantageous.[67]

Indicative of SIME's policy is the following excerpt from a directive of Colonel (later Brig) R. J. Maunsell, Head of SIME, dated 29 August 1943:

> "The American Intelligence Services have an important role to play in the Middle East area, not only on behalf of the United States Government, but indirectly on behalf of the British and Allied Governments as well. In particular, as far as SIME is concerned, the activities of the Counter Intelligence Corps should be assisted in every possible way and its officers treated with the same degree of confidence as the officers of SIME. It should be borne in mind that the officers of the CIC are valuable colleagues, who are in a position not only to assist us in our activities, but also to provide us with objective and independent information which should be of particular value."[68]

A number of CIC agents received formal intelligence training through SIME.[69] CIC was given access to SIME files, and information was transferred freely in both directions.[70] CIC became the normal channel of communication between SIME and all other American intelligence organizations, and SIME held the corresponding position in respect to CIC contacts with British intelligence.[71] The two groups shared certain facilities and equipment. Their top-level representatives met periodically to discuss political and military trends affecting security, and CIC personnel were assigned to work regularly with SIME. The latter group included Lieutenant Nokes, the CIC Liaison Officer, and a number of agents who were

stationed at various times in British interrogation and examination centers.[72] The extent to which the liaison developed is shown in an extract of a letter written 3 June 1944, by Brigadier Maunsell to Colonel John Toumlin, director of the American Office of Strategic Services (OSS) in the Middle East, reaffirming the established policy:

> "The only matter at issue, as far as I am concerned, refers to the channels of communication between your organization and mine. When the American services first started to establish themselves in the Middle East I suggested to CIC, and they entirely agreed, that they should be the exclusive routine channel for all contact between ourselves and American secret organizations, and that we should be the exclusive channel for contacts between CIC and other British secret organizations. This seems to me a logical and economic procedure, since CIC is the closest American analogue to SIME and since OSS were to work in the closest cooperation with their British counterpart ISLD. There are a number of other good reasons why this seems to me the best working arrangement. First among them is the fact that CIC and ourselves thoroughly understand each other's manner of operation and, in addition, there are CIC officers working in SIME offices. Secondly, it seems more desirable that any queries on matters of security by OSS should be made to CIC, which is the responsible American body; if CIC were unable to provide the answer to any query they would refer the question to SIME, who might have the information desired; this should not only serve to protect OSS security, but would keep CIC fully informed on all matters pertaining to American security. Thirdly, the whole purpose of having a U.S. Liaison Officer with SIME would be stultified if direct contacts at all levels between SIME and other American organizations became a matter of routine. It was not, of course, intended that this arrangement should in any way preclude direct discussions or contacts between you and myself, or between your senior officers and mine, on such matters as cannot be dealt with effectively through a third party. On the contrary, we welcome such personal contacts. I am afraid that you may have gained the impression that we may not be anxious to cooperate with you. This is very far from any idea I have ever entertained; in fact I regard it as our absolute duty to do everything possible to assist any American service to the best of our powers. But it is my belief that the channels of communication through

Martin, 21 December 1944, "CIC Activities of 400th CIC Detachment;" (Unclassified); and "Weekly Report," 13-21 June 1943, Hq, CIC, USAFIME, p. 1, (Unclassified) (Central Records Facility).

CIC will enable us to do our task, in so far as your organization is concerned, more efficaciously."[73]

The beneficial results of the relationship with SIME were not only immediate ones of an operational nature. They also included what amounted to a concentrated education for CIC agents by their more experienced colleagues in counterintelligence operations, particularly counterespionage. Moreover, this liaison increased CIC's prestige within the American Army.[74]

Liaison With U.S. Intelligence Agencies

It might be noted here that liaison between the Corps and other American intelligence agencies varied in scope and efficiency. With OSS, relations in this theater were close and mutually helpful, each organization furnishing the other with all pertinent information it had collected - though on occasion confusion arose over channels of liaison with British intelligence.[75] By June 1943, CIC could report that it had constant, productive liaison from headquarters with OSS and the Office of Naval Intelligence as well as with SIME and the French Surete Generale.[76] On the other hand, there appears to have been little coordination of activities with the Joint Intelligence Collection Agency (JICA), at least by the fall of 1943. Colonel Wise believed this situation existed because "the JICA agency is disorganized and ineffectual."[77] Lieutenant Nokes remarked in his report of August 1943, that in many areas, "little liaison exists among the various American organizations where, in many instances, one group does not know what the other group is doing."[78] Some contact was made with the Office of War Information and the Military Attaches, and in Egypt information relevant to CIC's mission was obtained from Lend-Lease and diplomatic representatives. In general, the Corps maintained as close a liaison as was practicable with all Allied intelligence organizations, principally as a means of obtaining assistance in the evaluation of sources and information.[79]

CIC Selects Targets, Establishes Central Control

With the uncertainty that arose from overlapping, or nonexistent, limits of jurisdiction, and with the absence of a clearly defined mission,[80] the selection of areas to which CIC, USAFIME was to direct its energies had to be based on the exigencies of the hour and its capabilities to perform tasks. Besides opening avenues for information through other agencies, CIC men were posted under cover in spots where they could keep immediately abreast of political developments. Security coverage was set up in sensitive locations, and routine investigations of military personnel were carried out. Undercover agents were placed in Eritrean construction depots to investigate suspected saboteurs. Preliminary steps were taken to develop centralized control of all field offices and to establish a central records file at the CIC theater headquarters.[81]

Cairo remained the center of American counterintelligence in the Middle East. The Chief, CIC, USAFIME, operated virtually as the AC of S, G2's counterintelligence officer in addition to commanding the detachment. All CIC personnel were attached to theater G2, though assigned to the Military Intelligence Service, War Department (MIS, WD), until 10 April 1944, when they were assigned to the Commanding General, USAFIME.[82] When the Persian Gulf Service Command became a separate theater in December 1943,[83] administrative control of its CIC detachment remained with USAFIME. Reports from all field offices were sent through Cairo, then to both the Chief, CIC and the Chief MIS, WD. The central card and report files multiplied rapidly, and by November 1943, the former contained some 25,000 names.[84]

Cairo also provided practical training for incoming personnel reporting to the theater chief. Newly arrived agents usually worked with more experienced ones in Egypt before being sent to other field offices. A regular training program that emphasized languages and technical subjects was conducted.[85]

Colonel Query retained command of the USAFIME detachment until December 1943, when he was transferred to the United States. His successor, Major Dana H. Boone, was moved to the Office of the Chief, CIC, in January; and Captain Edward P. Barry assumed command. When Captain Barry was transferred to OSS in October 1944, Captain Joseph E. Barrett acted as CO until Captain Thomas J. Nokes was

recalled in November from the Military Attache's office in Turkey. Captain Nokes remained in charge through the spring of 1945. Major George R. Shoals commanded the 400th CIC during the months prior to its inactivation in November 1945.[86]

Delta Group Covers Egypt

After USAFIME was divided into regions for CIC activity, Cairo also housed the headquarters of the "Delta Group" CIC, which provided direct coverage of Egypt. At various times the Delta, Eritrea, Western Desert (or Ninth Air Force), West Africa, Palestine, Levant, and Persian Gulf (or Iraq-Iran) groups comprised the intermediate echelon between theater headquarters and field offices.[87] Delta Group offices were set up in Cairo, Alexandria, Ismailia, Port Said and Suez.[88] Their work is succinctly outlined in Colonel Wise's report of September 1943. Agents stationed in the Cairo field office had the following functions:

(1) Investigate suspected enemy activities.

(2) Live at various hotels, keeping tab on suspected persons and those associating with them.

(3) Watch consistent travellers who are suspected of being couriers.

(4) Watch prostitutes who are suspected of gathering information for the enemy, and night spots which are suspect or where suspected individuals are wont to be.

(5) Do some personal conduct cases - these are few and do not involve much trouble since they usually involve military contacts with persons who are already the subject of CIC attention.

(6) Conduct personnel investigations when referred by Provost Marshal upon the grounds of subversive connections having been discovered or suspected.

(7) Develop and maintain widespread informant nets.

(8) Make periodic trips to develop leads and check on items which develop in the environs of Cairo (e.g., in the Heliopolis airport) but where there is not sufficient cause to require men to be stationed there.

(9) Maintain contacts with Lend-Lease authorities and the State Department, receiving information with respect to matters coming to their attention which might stem from the activities of enemy agents (e.g., strikes of laborers unloading Lend-Lease materials).[89]

In addition, one agent in Cairo who had many personal contacts was charged with obtaining and evaluating information on Egypt's internal affairs, with emphasis on anything that might indicate Axis influence. This was done at the insistence of the G2, and its successful accomplishment resulted in increased prestige for CIC.[90]

Colonel Wise also describes the missions of CIC at the Alexandria field office, where two agents were assigned to perform these duties:

"(1) Check constantly on loose talk by many soldiers passing through there on leave and by sailors and merchant seamen on shore from ships.

(2) Check prostitutes and pensions for enemy agents or sympathizers engaged in securing information for transmittal to the enemy.

(3) Make repeated security checks of the port.

(4) Make investigations assigned from Cairo.

(5) Gather general information of interest to G2 and send it to Cairo."[91]

The other field offices had similar functions, though the most noteworthy responsibility for agents at Port Said, Ismailia and Suez was to aid the British in securing the vital Suez Canal area. Attempts to sabotage the canal decreased with the German retreat, but the following report reflects the seriousness of the subversive threat in the days before the Allied conquest of Africa. Lieutenant Nokes relates that:

"...the British seriously considered stretching a large net the entire length (about 90 miles) of the Suez Canal in order to tell by the breaks in the net where the enemy had dropped mines in the water. The enemy regularly dropped three different types of mines in the canal water and these were located by having British Army personnel at regular intervals along the

89 Col Wise's Report, p. 4.
90 Ibid, p. 5.
91 Ibid, p. 4.

canal watch for the splash at night and mark the spot so that the mine could be removed in the morning. An airplane was regularly flown the length of the canal with a detecting device to locate the magnetic mines. Only one large ship was sunk in the canal as the result of these mines."[92]

A considerable amount of evidence pointed to the existence of intelligence rings in Egypt, believed to have evolved from its pre-war German and Italian settlements and from Axis diplomatic agencies.[93] However, while this evidence, together with isolated instances of sabotage, demanded continuous investigation, few captured suspects could be identified with any certitude as Axis agents. A number of investigations resulted in the discovery of illegal, though not subversive, activity.

Because its investigations often led to information indicating criminal activity, CIC worked closely with the Criminal Investigation Division. A publicized case that exemplified cooperation between the two agencies occurred in Cairo in the fall of 1943. Here CIC was involved in the capture of a key operative in an international gold-smuggling gang. The capture followed a "tip" from the British Embassy that a Gaston Levy had been buying large quantities of gold in the black market. The Corps' interest in the case sprang from the fact that Levy had already been under investigation because of contacts with a suspected espionage ring. Together with Provost Marshal investigators and British agents, CIC for several weeks carefully prepared the groundwork for Levy's seizure. CIC and Military Police apprehended Levy at a Cairo airport in October 1943, and confiscated an estimated $150,000 in gold that he was transporting in a U.S. Army airplane. Levy was turned over to Egyptian authorities and imprisoned. Further arrests in other countries followed when it was revealed that Levy was part of a ring working on at least four continents.[94]

It is interesting to note that in Egypt not only were most security cases handled jointly with the British and turned over to them for ultimate disposition, as they were in other countries, but it was also necessary for the British to call in the Egyptians to assist in effecting arrests.[95]

A major security problem arose when the Allies were preparing for the invasion of Sicily. A large part of the British task force was in Egypt prior to

the assault.[96] Despite the extensive precautions taken, the force was necessarily vulnerable. It remained a mystery that the enemy did not attempt to attack it. Lieutenant Nokes, referring to a concentration of some 200 ships in and near the harbor at Alexandria, stated, "Opinion was expressed that one bomb hit on the ships being loaded with gasoline and ammunition would have set off all the ships along the whole dock area."[97]

While the investigation of reported security violations by American personnel consumed a substantial part of the Delta Group's efforts, the number of violations committed was not great. The regular surveillance CIC kept on hotels, bars, and restaurants revealed a fairly high degree of security consciousness on the part of the U.S. troops. Along similar lines, CIC investigated many instances of censorship violations, but concluded that most of these resulted from ignorance of the regulations.[98]

CIC Works With Ninth Air Force

Libya was brought into the CIC sphere of operations in the spring of 1943. Major John T. McCafferty was placed in command of the Ninth Air Force CIC Detachment, which was to have its activities centered around the air bases in Tripoli and Benghazi. A skeleton force of agents drawn from other regions of USAFIME opened the Libyan field offices in May, and in a short time they were reinforced by a group of agents sent from the U.S.[99]

As the section's mission was broadened to include work not directly related to air force security, it came to be known as the Western Desert Group. When in September and October 1943, the Ninth Air Force left the Middle East, there was little need for continued CIC coverage of Libya. The unit was disbanded, and its personnel returned to Cairo for other assignments. In later months, however, the Tripoli field office was reopened, and functioned for a time on a small scale.[100]

100 400th CIC Detachment's History, Part I, p. 7; Memorandum by 1st Lt Sidney V. Barnes, "Report of CIC Activities in the Middle East," (Unclassified) (Central Records Facility); and Weekly Report, 18-31 July 1943.

CIC in Libya participated in the apprehension of a number of enemy agents. Some were members of a group of Axis parachutists who landed near Benghazi in June 1943; most were captured and turned over to British authorities.[101] Others were Italians landed by submarine that August; all were captured before they could fulfill their mission, the destruction of aircraft in the Benghazi area. It was reported that the latter group, scheduled to be picked up by submarine after finishing its assignment, offered little resistance to capture. They, too, were turned over to the British for necessary action.[102] Although a ring of espionage agents was also believed to be hiding among the Italian sections of the population, a minimum amount of activity was found there. Many Italian soldiers, a large number of them deserters, were rounded up at various times, but this segment, as a whole, was not participating in subversive activity.[103]

Colonel Wise reported that by September 1943, the Western Desert Group, then commanded by 1st Lieutenant Sidney V. Barnes, was carrying out the following functions:

(1) Assisting the British in checking the holders of civilian identity cards.

(2) Investigating violations of 380-5[104] and censorship regulations by U.S. personnel.

(3) Constant check on ... the civilian population to determine its attitude toward the U.S.

(4) Investigation of subversive activities of civilians when such activities affect the U.S. Army or when the British ask for assistance.

(5) Performance of security surveys at airfields and other Army installations.

(6) Constant check on violations of the nonfraternization with Italian civilians regulations.[105]

One of the principal problems involving Americans stemmed from speculation by Ninth Air Force personnel concerning their future missions. CIC, investigating alleged "leaks" of information, concluded that rumors regarding future raids came

1488

from accurate, though not specifically founded, loose talk by these airmen.[106] A particularly detailed investigation followed the first major raid on the Ploesti oilfields, 1 August 1943,[107] for it was suspected, partially because of the heavy losses suffered, that the Germans had been forewarned of the attack. But no proof of deliberate subversion was found.[108]

Programs of security education finally were inaugurated by air force S2s, with the advice and assistance of CIC. The Corps also aided air intelligence officers in improving what had been a generally unsatisfactory countersubversive system. In addition, CIC investigated numerous plane accidents and mishaps, but, almost without exception, insufficient evidence was found to prove or disprove sabotage.[109]

Lieutenant Barnes reported that the cooperation received from Ninth Air Force intelligence officers was often "lukewarm at best." He wrote, "We received the impression sometimes that we were looked upon as trespassers in forbidden territory."[110] This situation was in contrast to the splendid relations maintained with British intelligence in Libya and with the Adjutant General and Provost Marshal offices.[111]

CIC frequently worked with the latter, for here, as in other areas, it was summoned into cases that were normally out of its jurisdiction. In one of these, CIC assisted the Provost Marshal in an investigation into the sale of a poisonous liquor, called lagbi, to Allied troops. One soldier had died and several had become sick from drinking it. Findings showed that the liquor, which was easily made from date palms, had no apparent central source, and that its sellers seemed to be motivated by private rather than enemy-inspired desires. Several restaurants that had been selling the drink were closed, and their owners sentenced to prison.[112]

Agents Discover Saboteurs in Eritrean Installations

In Eritrea, Italian agents, aided by pro-Fascist elements of a large Italian population, were numerous and active in 1942 and 1943. Since the conquest of Italy's East African empire by the British in 1941, demonstrations and disturbances by these groups had been occurring frequently. After the first American installations began operating in early 1942, saboteurs, spies, and agitators turned to them as primary targets.[113] Consequently, one of the CIC detachment's first and most difficult missions in the Middle East was an anti-sabotage and anti-espionage one at these installations. By early 1943, CIC agents discovered several saboteurs in U.S. workshops and arranged for their dismissal and internment. Steps were taken to combat slow-downs, inefficiency, and other passive measures by native employees which hampered operations perhaps even more than instances of active sabotage.[114]

Although at this time the changing military situation brought about curtailment of projects and eventual closing of factories in Eritrea, the scope of CIC responsibility did not diminish immediately. On the contrary, the new unemployment problems brought about further disturbances and more frequent arrests.[115] But by the summer of 1943, the situation had become sufficiently quiet, in respect to American interests, that only two CIC agents remained in the country. Both were in an undercover capacity, one in Gura, covering the airfield and the Douglas Aircraft Corporation plant, and the other in Massawa, checking on port security.[116] A substantial amount of their time in later months was spent on the collection of political information.

As long as American personnel remained in Eritrea, many routine security investigations were necessitated. Carelessness regarding safeguarding of information was prevalent, particularly among civilian employees, and the practice was especially dangerous in view of the amount of enemy intelligence activity being carried out.[117]

Air Transport Bases Covered

CIC coverage extended into the equatorial regions of Africa. On 15 September 1943, the headquarters of the United States Army Forces in Central Africa (USAFICA) was joined to USAFIME.[118] With this consolidation, the Chief, CIC, USAFIME gained control over a detachment that was operating in central Africa.

This group, under the command of 1st Lieutenant Glen E. Curry, had been attached to USAFICA since March, when it debarked at Takoradi, Gold Coast, after sailing from New York. Its principal task was to help maintain security of American air bases and other military installations across central Africa. From headquarters at Accra, Gold Coast, agents carried out missions, largely security surveys, from Dakar, through Liberia, the Gold Coast and Nigeria, to the Sudan.[119] Although Liberia was a service command (United States Army Forces in Liberia) under USAFIME,[120] no agents from Cairo were working there. Coverage came principally through a detachment assigned to the Air Transport Command (ATC) and, to a lesser extent, through USAFICA.[121]

The USAFICA detachment made little contact with enemy agents, though investigations of a routine nature into possible espionage and sabotage were required regularly. For the most part, the Accra group concentrated on making recommendations for passive security precautions at the various installations. Considerable effort was put forth to combat laxity that existed in many offices regarding security regulations. Lieutenant Curry reported that often information contained in a classified document was not safeguarded as required and that troop movements and the destination of military personnel on travel status were too frequently made a matter of common knowledge.[122]

Most of the work the USAFICA detachment had been doing was taken over by the Air Transport Command CIC when the amalgamation of theaters took place. Consequently, the bulk of this group was transferred to Cairo immediately. Coverage was continued on a small scale through what was called the West African Group until June 1944, when John Dubbs, the last Accra agent, arrived at USAFIME headquarters. It was not until the spring of 1945, that the 400th CIC Detachment again established a field office in Accra.[123]

[redacted]

[redacted]

Jurisdictional confusion had arisen when this area was being covered by both the USAFICA and ATC detachments. Though the former was attached to theater, it too was operating with the Africa-Middle East Wing (AMEW), ATC.[124]

It was largely to avoid this conflict and duplicated effort that Lieutenant Curry's unit was moved to Cairo. The ATC CIC was active in other USAFIME areas also,[125] and remained independent of the theater detachment. Here, however, with a unified command over Army and Air Force, jurisdictional limitations had been fixed. Further, the broader mission of the USAFIME detachment, of which air base security was but a comparatively small part, served to minimize disputes between the two groups. Close liaison was maintained in Cairo; for example, an ATC CIC agent stationed in Khartoum, Sudan, sent copies of his reports through USAFIME.[126] Nevertheless, Colonel Wise, obviously referring to the ATC detachments, reported, "It is essential that all detachments in a given theater be responsible to and report to the Chief of the CIC in the theater and that the personnel be assigned or attached on an area rather than a unit basis."[127]

CIC Meets Internal Security Problem in Palestine

The Levant field office, established in December 1942, originally was responsible for CIC duties in Syria, Lebanon, Palestine and Trans-Jordan. But, in August 1943, a separate Palestine field office was opened to cover the latter two countries.[128] The headquarters of the Levant office, commanded by 2d Lieutenant Francis R. Tworzydlo, was in Beirut, Lebanon; agents worked at least part-time in Latakia and Tripolis, Lebanon, and Aleppo and Damascus, Syria. CIC's Palestine headquarters, under 2d Lieutenant Edward W. Hayden, was in Tel Aviv; agents were stationed in Haifa, Jerusalem, Tiberias and, later,

124 Letter, 29 July 1943, by Col H. R. Kibler, Chief of CIC, "CIC Detachments with Air Transport Command Wings," (Unclassified) (Central Records Facility).

125 AMEW ATC was later divided into North African Wing (NAFW) and Central African Wing (CAFW), both extending at least partially into USAFIME. 1st Lt Pat J. Kirwin was CO of the AMEW and, after the split, NAFW CIC detachments. 1st Lt Louis A. Ginocchio and 2d Lt Garland F. Smith successively commanded the CAFW unit. The wings were later renamed North African Division (NAFD) and Central African Division (CEAD). (Letter, Col Kibler, "CIC Detachments with Air Transport Command Wings;" and Reports on ATC in Air Force CIC files.) A discussion of the activities of CIC detachments with ATC is to be found in another chapter.

[redacted]

Jaffa, Palestine. Activities in Trans-Jordan were found to be insufficiently important to warrant full-time coverage.[129]

The security problem in Palestine was primarily an internal one. Axis espionage and sabotage was carried out on a small scale only, and Fascist propaganda was ineffective among the Jewish population. There were sizable pro-Axis groups among the Arabs, but most of their leaders were living as exiles in enemy countries, and the Arabs in Palestine did not present a serious direct threat to security. However, the continuous feuds and occasional outbreaks between Arabs and Zionists were always a potential threat to Allied installations, equipment and personnel.[130]

The most successful penetration of American security appears to have been carried out by intelligence agents of the Jewish para-military organization "Hagana." It was generally conceded, though not proven, that Hagana had infiltrated into U.S. headquarters in Tel Aviv.[131] While leaders of the Jewish Agency had expressed willingness to exchange information with Americans, the U.S. did not want to collaborate with them openly, for fear of further alienating the Arabs. The anti-American attitudes that already existed among many Arab groups had been based largely on allegations of pro-Zionist policies by the U.S., and this belief was continually furthered by Axis propaganda broadcasts.[132]

The largest single mission for CIC in this region was the study of internal conditions with the aim of gathering information on the identity of enemy sympathizers and on any contemplated disturbances. In addition, agents checked constantly on security of the American installations in the Tel Aviv area, on port security at Haifa and on the safeguarding of information by military personnel.[133] The serious extent to which security infractions were practiced was pointed out in a report from the Palestine office in September 1943:

133 Col Wise's Report, p. 5.

"General surveillance of local restaurants, hotels and bars proved that violations of AR 380-5 are alarmingly in evidence. The volume of "loose talk" is so great that this office is not in a position to remedy the situation. Numerous military personnel have been warned of these violations. However, to effect any check it will be necessary to approach the problem from...the headquarters...whence the men come. Almost all violations concern air force personnel."[134]

In Tiberias, the CIC representative had the additional duty of watching against the smuggling of enemy agents into Palestine by way of Syria.[135]

In the spring of 1944, the migration of Jews from the Balkans into Palestine increased greatly. Because the existing refugee control system proved inadequate for complete security screening, the British opened a refugee examination camp near Haifa. CIC Agent Joseph H. Martin, who had been working with SIME at interrogation centers in Egypt, established and participated in the operation of the screening machinery at Haifa. Although earlier investigations conducted by the Jewish Agency were apparently successful in eliminating enemy agents, the Allies had to watch for potential trouble makers who might represent threats to security.[136]

Axis Intelligence Concentrated in Levant States

One of the most important problems of a strictly counterintelligence nature which faced the USAFIME detachment was found chiefly in the Levant states. What was probably the largest percentage of Axis intelligence agents being sent into the Middle East came by land, sea, and air into Syria and Lebanon.[137] To observe their arrival and prevent their operations required considerable vigilance by Allied security agencies. Moreover, the problem was complicated by the number of Greek refugees who escaped into the Levant in fishing boats. A few of the agents captured by Allied counterintelligence were found to be members of "Dashnag," an Armenian terrorist group. Besides the newcomers, German and Vichy French networks, developed prior to the Allied occupation of Syria and Lebanon in the summer of 1941, were still active. It was estimated that over 400 agents and

informers had remained underground. Ringleaders directed their activities from neutral Turkey via radio and a courier system of natives and, purportedly, neutral consuls.[138]

Pro-Axis sentiment in the Levant had a number of sources, including: hatred for the French that grew out of allegedly corrupt colonial practices; the demonstrated strength of the German forces; the anti-Jewish Axis policies; and German and Italian promises to help the native groups improve living conditions and obtain independence.[139] Though this sentiment declined as the course of the war changed, it continued to impede Allied attempts to quell Axis activities in the area.

Security responsibility was shared by the British and Free French. An agreement between the two had given responsibility for military security to the British and for civil security to the French, though this division of authority led to complications. Further, the feud that existed among the various French factions - followers of De Gaulle, Giraud and General Catrous - was in itself a source of security problems.[140] CIC's part in the overall security picture was principally one of providing advice and assistance. Yet its duties of establishing contacts and keeping informed of political developments were at first predicated largely on the possibility existing in 1943 that substantial numbers of American troops would enter Syria. In later months the Corps continued to collect all possible information on political happenings as well as on intelligence activities.[141]

CIC kept in direct contact with British and French intelligence at the Aleppo examination and interrogation center, and eventually assigned an agent whose primary function was to represent the Corps in all cases which had American interest. Here, as was the case in Egypt, Palestine and Italy,[142] where the British had other Combined Services Detailed Interrogation Centres, the CIC

142 While Italy was outside the geographic limits of USAFIME, the interrogation of refugees from the Balkans at the port of Bari, Italy, concerned the USAFIME detachment. A CIC field office was opened in Bari in February 1944, (400th CIC Detachment's History, Part I, p. 5).

1495

representative worked with the British in examining suspects. A number of agents of various levels had been found among the multitudes of Balkan refugees who were questioned at these centers. CIC took part in their interrogations and in studying their methods of operations.[143]

A CIC summary of information pertaining to two agents captured in Syria is interesting and informative as an example of Axis espionage methods:

> "George Livaditis and Constantinos Photinos, the two agents who were sent to the Middle East by the Germans in the middle of this year (1943), have been tried by Tribunal Militaire and were executed at Beirut on 29 September.
>
> "Livaditis, son of a Greek father and a German mother, came to Turkey in May last on an espionage and sabotage mission in the Middle East. He was not, however, given any sabotage equipment, since part of the plan of action was that he should enlist in the Greek forces and work under cover of his military duties. After three or four months he was to desert, cross into Turkey, and report to the German Consulate at Iskenderon (Alexandretta). He was given certain accommodation addresses in Greece, Turkey, and Spain with which he could communicate in secret ink, and was also instructed to listen at specified times to the Athens radio for messages in plain-language code addressed to "Jean-Jacques." Livaditis was arrested at Aleppo while attempting to enter the Middle East, and after his interrogation was handed over to the Fighting French authorities.
>
> "Constantinos Photinos was recruited as an Axis agent by Livaditis in Greece after the German occupation. In June 1943, he left Piraeus in a caique which, it was intended, should put him ashore some miles south of Latakia. He landed, however, just north of the Turkish frontier and after a few hours was arrested by a Turkish patrol and subsequently handed over to the British authorities in Syria. As in the case of Livaditis, Photinos was expected to enlist in the Greek army in the Middle East and to carry on espionage and, more particularly, sabotage. He also was given an accommodation address and "white-headed matches" for secret writing, and was told to listen for messages on the Athens radio. Should he meet Livaditis in Syria, he was instructed not to recognize him. Photinos brought some explosive and incendiary material in a metal box

143 Lt Nokes, "CIC-SIME Liaison Exclusive of Field Office and Balkan Planning Section Cooperation;" Lt Nokes, "Special Liaison Report," pp. 3, 4; and Col Wise's Report, p. 6.

with him on the caique, but stated that he threw the box into the sea before he landed."[144]

That Allied counterintelligence measures contributed rapidly and effectively to a safer internal situation in the Levant was seen in a CIC report dated 14 October 1943:

> "It is reported that the general security situation of the Levant States is probably more satisfactory than at any time in the past eighteen months. The frontier and coastal control, which has been largely responsible for frustrating the enemy's attempts to introduce his agents, is being maintained with unrelaxed vigilance."[145]

The need for continued precautions remained, but past security measures, together with Allied successes elsewhere and a relief of food shortages in the Levant, resulted in a more satisfactory domestic situation and a more workable atmosphere for Allied activities.[146]

Persian Gulf Group Protects Lend-Lease Routes

CIC functions in Iran and Iraq differed somewhat from those in the other Middle Eastern areas. Where the collection of information in the Levant, Palestine and parts of Africa brought CIC into the field of positive intelligence, its activities in the Persian Gulf Service Command (PGSC) were circumscribed, for the most part, within a more narrowly understood counterintelligence area. Its prime concern was to eliminate interference with the delivery of supplies to Russia, and it spent much time enforcing security measures along the rail and truck lines.[147] The sensitive political climate that arose from the occupation of Iran in sectors by British and Russians had led to an agreement that there would be no intelligence activities there. In fact, the use of CIC credentials was not allowed, and in May 1943, the G-2 division of PGSC was dissolved by order

1497

of Major General Donald H. Connolly.[148] CIC was then placed under the operational command of the Provost Marshal, though it continued to carry out security functions.[149]

USAFIME retained some control over this group even after PGSC became a separate theater, the Persian Gulf Command (PGC), in December 1943.[150] But, both before and after the formation of PGC, disagreement existed concerning the source and extent of authority over its CIC. USAFIME objected to the enforced operational limitations and to administrative actions involving the transfer of personnel which, it appeared, took the command of CIC away from its CO. The matter was settled following a series of conferences in September 1943. Control of the unit's activities was retained by USAFIME within the limitations that had been established by higher authority regarding the scope of intelligence operations in PGSC. After December 1943, this control was reduced to certain administrative areas.[151]

Headquarters for CIC in PGSC had been set up originally in Teheran under Lieutenant Edward P. Barry in February 1943. A second office soon was opened in Basra, Iraq, under 1st Lieutenant Edward A. Tobin; and agents were stationed along the rail and road routes leading to the Russian zone. By November the Iraq-Iran Group was the largest in the Middle East; in addition to the Teheran headquarters, there were field offices in Khorram Shahr, Ahwaz and Isfahan, Iran, and Baghdad and Mosul, Iraq. Its personnel at that time consisted of four officers and 25 agents.[152] Major John T. McCafferty assumed command of the detachment in October 1943; almost complete rotation of personnel was effected during the following three months. In April 1944, the group became the 2747th provisional detachment prior to being activated as the 468th CIC Detachment.[153] That autumn, since security requirements had lessened considerably, it was requested that the strength of the detachment be reduced to three officers and two enlisted men. However, the 468th was ordered to return to the United States and, upon its relief in January 1945, Lieutenant Colonel McCafferty and four assistants were transferred to the Provost Marshal Division, PGC. The others were 1st Lieutenant Ovid Corsatea, 1st Lieutenant David M. Weil, T/Sgt Francis O. Schue, and S/Sgt Albert L. Moccia.[154]

1488

Among the duties performed by CIC in Iran and Iraq, strictly counterintelligence functions included loyalty checks and investigations of disaffection, espionage and sabotage. An estimated 600 background investigations of Officer Candidate School prospects were conducted, in addition to checks on personnel being considered for cryptographic duties and on applicants for naturalization as American citizens. Of the few disaffection cases, there were none in which disloyalty was proved.[155] Investigations into instances of sabotage, while they were carried on continually, resulted in no proof of enemy action. According to Colonel McCafferty:

> "In all cases it (suspected sabotage) appears to have been the result of an isolated grievance on the part of a tribesman, a civilian employee or possibly, in isolated cases, United States military personnel. No one type of incident has been repeated enough times to warrant the establishing of extra precautions, and investigation has not conclusively established the guilt of any person or persons."[156]

Axis intelligence had gained a foundation in Iraq and Iran in pre-war years.[157] Agents operated with a great deal of freedom until the summer of 1941, when the British put down a pro-Axis revolt in Iraq and established a "protective occupation" in Iran, placing substantial numbers of troops in both countries.[158]

But German agents continued to have contact with Berlin. They aided the vast propaganda program which exploited pan-Arab, anti-Semitic and anti-colonial sentiments, and which remained highly effective until Germany's final defeat became evident. Axis sympathizers were found in the Iranian government and army, and several tribal groups actively assisted German agents.[159]

CIC was involved in two espionage cases of particular interest. One was that of Rudolph Hamburger. Colonel McCafferty summarized the case in the following way:

> "Rudolph Hamburger (was) a widely travelled gentleman, who offered an American Army officer a substantial sum of money for information

relative to the operations of the Persian Gulf Command. His operations were reported to the Counter Intelligence Corps which placed Hamburger under surveillance. There was every reason to believe that Hamburger was operating for the Germans. He was arrested in May 1943, and after two days of interrogation stated that he was employed on behalf of Russian Intelligence. Hamburger was then released to British Security who turned him over to the Russians with instructions to get him out of town. Hamburger was travelling on a Central American passport, and information concerning his apprehension was widely circulated by the Military Intelligence Division to all commands throughout the world in the event he should appear in any other area."[160]

Perhaps the most important espionage agent captured in the Middle East was Franz Mayer. The case was primarily a British one, but CIC, and particularly Agent Horace D. Hodge, of Bay City, Michigan, provided assistance both in Mayer's arrest and in the roundup of his ring members. British intelligence for a long time had been aware of the existence of an espionage ring, and Mayer was well known as a German spy familiar with the Middle East. But it was not until early 1943, when Mayer's diary was recovered from a raided house, that his role as chief of German espionage in Iran became known. And it was only in August of that year, when counterintelligence agents followed a parachuted German agent to his headquarters, that Mayer was apprehended. Warned by a servant of his impending arrest, Mayer was attempting to burn papers when he was captured by Allied agents. These papers revealed his identity, included maps of all railroad tunnels in Iran with instructions signed by Hitler for their destruction, and contained lists of his agents and informants.[161] Mayer was interned, tried and executed. Approximately 130 of his Iranian collaborators were arrested by British, American and Russian security units. With the close of this case the greatest threat to the Lend-Lease program in Iran passed.[162] Moreover, according to Colonel McCafferty, "As a result of Mayer's arrest and British disclosure of the extent of cooperation by Persians in Mayer's efforts, particularly cooperation in high official sources, the Persian government declared war against Germany and became an Ally."[163]

That Mayer's arrest followed upon the Allied discovery of an agent equipped with sabotage material was ironic. For, while saboteurs were being sent from

160 Col McCafferty, "Historical Report, CIC, PGC," p. 3.

1500

Germany with the mission of damaging the railroad and other installations along the route to Russia, Mayer's idea of the most profitable procedure to be followed differed. He believed that Germany could not be stopped in its march to India, and considered the preservation of these installations necessary in the execution of the war. He would not, therefore, permit any sabotage of the railroad or roads between Teheran and the Persian Gulf. His plan was to arouse tribes to action against trains and truck convoys, and thus to make the aid-to-Russia program ineffectual.[164]

An interesting sidelight to the case became known after Mayer's arrest. An American soldier had been told many details of the spy's operations by Mayer's mistress, as they had been related to her by Mayer. But the soldier had refused to believe her; the story was, to him, too incredible. Information that might have led to a much earlier break in the German espionage network was not received until it was useless. It seems superfluous to comment, in such a context, on the importance of CIC's mission of instilling security consciousness in military personnel.[165]

Another kind of function filled by CIC in PGC demanded giving considerable time to duties that were normally the responsibility of the Provost Marshal's investigators. Among the more important of these duties was the investigation of black market activities. By the careful, extensive use of informants, CIC identified ring leaders, and at least two major operatives were forced out of business as a result of raids.[166]

One of the biggest cases involved the loss of tires being shipped by rail to the Russian-occupied sector of Iran. CIC discovered that the tires were being thrown off open flatcars in remote mountainous regions - the first step to their being sold on the black market at prices which reached 700 to 800 American dollars. The organization that was uncovered included both Americans and Iranians. A number of the guilty were caught, and the whole activity stopped when, on CIC's recommendation, all removable goods were thereafter shipped in sealed cars.[167]

Resourceful investigative procedure was often required. A noteworthy case was the murder of a man thought to be an American. There were no clues other than a decapitated, badly decomposed body. To establish identity a CIC finger-print expert, Agent William J. Tilli, of Patterson, New Jersey, cut off the fingers

167 Interview with Robert C. Ebaugh.

and put them in embalming fluid. He succeeded finally in getting a clear set of prints and eventually received from Washington identification of the victim. He was an American soldier. With cooperation from Iranian police a suspect was found. A woman who ran an illegal tavern frequented by the soldier admittedly had been annoyed by his odd humor, his habit of stroking a skull he often carried. Iranian officials thought she believed it to be the skull of a relative. Suspicion heightened when she was seen attempting to hide a butcher knife, and she was arrested. But CIC, not satisfied, persuaded authorities to arrest the local sheik, with the expectation that, through his people, information on the murder might follow. It came - via the sheik's wife. The murderer was a native who had killed the victim when the latter became drunkenly abusive. The arrest was followed by a confession, trial and hanging.[168]

Although the gathering of positive intelligence had been precluded by PGC policy, CIC followed closely political events and trends which could affect the security of American personnel and installations. In Colonel McCafferty's words, "In a country where the right and left are sharply divided and the explosive qualities of the population might easily make themselves felt in either actual harm to personnel, damage to installations or at least delay in operations, this was considered as a part of CIC mission."[169] Further, a close watch was kept on the many Americans employed in a civilian capacity for, "In a country where the prestige of the American Army is affected by American prestige as a whole, it was deemed important to report on any incident involving Americans, whether military or civilian."[170]

Security Provided for Top-Level Conferences

CIC was called upon to carry out a number of special missions, among which was the security coverage of top-level conferences held in the Middle East. In November and December of 1943, CIC, together with other Allied intelligence groups, covered the SEXTANT Conference in Cairo and the "Big Three" meeting in Teheran.[171] Agents also accompanied a special flight which transported the President of Turkey and his cabinet to their meeting with Allied leaders in Cairo. Again, in February 1945, following the Yalta Conference, CIC was responsible for the security of a series of meetings in the Suez Canal area between President Roosevelt and the Kings of Egypt and Saudi Arabia and the Emperor of Ethiopia.[172]

172 400th CIC Detachment's History, Part II, pp. 5, 6.

[redacted]

At the Cairo conference CIC issued all admission passes and provided for security of American representatives and their billets and conference rooms, while the British arranged for security of all other VIPs and their quarters.[173] There are almost no reports available on CIC's activities at Teheran, where it shared security responsibility with British and Russians, though it is recorded that Captain Barry, of Evanston, Illinois, who was then CO of the PGSC Group, was awarded the Legion of Merit for his work during the conference.[174] On one occasion, a CIC agent, Robert C. Ebaugh, of Baltimore, impersonated President Roosevelt so that, as Ebaugh put it, "If anyone decided to take a pot-shot at the President, he would shoot me instead."[175] A rather detailed account of CIC's functions on these occasions is found in a report on the post-Yalta meetings, which gives this summary:

"The 400th CIC Detachment performed the following security functions in close cooperation with the AC of S, G2:

1. Maintained master list of all military personnel of this headquarters who knew of this movement.

2. Assigned undercover agents to pick up any rumors in public places frequented by military personnel and in towns adjacent to proposed conference area where certain advance preparations had to be made.

3. Promptly investigated every suspected leakage of information concerning the movement.

4. Security briefed all personnel selected to participate in the movement, such as drivers of the transport, Army photographers, signal corps personnel, etc., all of whom were given CIC security clearance prior to their selection.

5. Provided CIC coverage to the escorting party of each king and other dignitaries to and from the conference.

6. Surveyed in advance the conference area and made security recommendations to the officer commanding.

7. Met with the Secret Service personnel accompanying the presidential party to coordinate security precautions.

175 Interview with Robert C. Ebaugh.

1503

[redacted]

8. Arranged for extra guards on large German and Italian POW camps in the vicinity of the conference area; and immediately prior to the arrival of the Presidential party, and during the conference, CIC undercover agents of German and Italian extraction patrolled these areas.

9. Checked all communications into and out of the restricted area and security briefed all authorized personnel coming into or departing from the conference area.

10. Constantly checked all guard control points and other security precautions immediately before and during the conferences.

11. Arranged for the questioning and detainment, under guard, of all unauthorized persons arriving into the conference area during the conference period.

12. Security briefed all participating personnel following the conclusion of the movement."[176]

In other areas of the theater CIC agents enforced security regulations as military and civilian parties moved to and from these conferences. Similarly, at various other times U.S. officials passing through USAFIME were given protection by CIC and Allied security agencies. An instance in which special precautions were required was a trip through Egypt by a group of U.S. senators in August 1943.[177]

Planning for Balkan Invasion

For a time considerable effort was expended toward preparing a detailed counterintelligence plan for the Balkans.[178] While it was agreed that CIC would not enter the peninsula until it became an area in which Allied troops were operating or until it was entered by Allied military missions, the sense of urgency surrounding the project emanated from the consideration high strategic circles

1504

were giving to a Balkan invasion.[179] CIC and SIME cooperated in the counter-intelligence plan, in order to lay the groundwork for the two agencies to direct and carry out security and intelligence duties in the Balkans on an equal footing.

Theoretical assumptions based on probable military measures formed the framework for an outline of the security organizations' mode of operations. The outline, while developed from SIME methods and procedures, was similar to CIC operations in other theaters. "Operational" and "static" security teams were planned, with duties corresponding to those CIC was performing in Europe and the Pacific. It was unique in that it called for Joint American-British static units under a combined staff. The CIC-SIME teams were to direct security intelligence; CIC and FSW combat teams would be under their jurisdiction. Agents expected to take part in the Balkans expedition were being trained in Cairo and Bari, Italy.[180] After it became evident in late 1944, that the invasion would not take place, a number of the CIC personnel who had undergone this training were transferred to OSS, and the target material that had been prepared was also given to OSS. Among the agents transferred were Major Edward P. Barry, who had been CO of the USAFIME detachment from January to October 1944, Captain Francis R. Tworzydlo and 1st Lieutenant Edward W. Hayden.[181]

CIC in Turkey

In September 1944, Captain Thomas J. Nokes was placed on temporary duty in Turkey as security advisor to the U.S. Military Attache, General Richard R. Tindall. Besides carrying out his duties as security advisor, Captain Nokes represented CIC interests in Turkey, being specifically concerned with the direction from Turkey of German and Japanese agents in USAFIME. He was recalled in November to assume command of the 400th CIC Detachment. Except for this brief period CIC did not operate in Turkey until the Istanbul field office was established in early 1945.[182]

400th Disbands After V-E Day

The area covered by the 400th CIC Detachment was expanded with the formation of the Africa-Middle East Theater (AMET) in March 1945.[183] Both Turkey and the rest of Africa were added to the detachment's field of operations. At that

time field offices were being maintained in Cairo, Alexandria, Ismailia, Port Said and Suez, Egypt; Tripoli, Libya; Asmara, Eritrea; Aden, Aden; Haifa and Jerusalem, Palestine; Beirut, Lebanon; and Aleppo, Syria. Additional field offices were then opened in Istanbul, Turkey; Accra, Gold Coast; Algiers, Algeria and Casablanca, French Morocco.[184] However, the quantity of work was decreasing; and, where the detachment's strength had numbered 60 to 80 during most of 1943-44, there were but four officers and 31 enlisted agents in AMET from January to May 1945. After V-E day, two officers and eight enlisted men remained in the detachment. Their mission was to maintain the CIC central file section and to provide the now limited security coverage needed in Cairo, the Suez Canal area, Aden, the Palestine-Levant area, Algiers and Casablanca. Also, certain agents already established under cover were retained temporarily to provide intelligence coverage until OSS or the Military Attaches were able to take over.[185] During the fall of 1945, increased activities of nationalists in Egypt and Zionists in Palestine were watched closely by CIC, that such activity might not hinder the security of remaining American installations. On 15 November 1945, the 400th CIC Detachment was disbanded. Its two officers, Major George R. Shoals and Captain Stephen Smyk, were reassigned to G2, AMET, and its enlisted personnel were returned to the U.S.[186]

Personnel Problems Encountered

Most of the operational difficulties that beset the organization have been mentioned. There were, in addition, a number of personnel problems. One of the common ones in CIC, the lack of linguistic ability, was not serious in most regions of the Middle East, for a large number of the agents were linguists. According to one report, about 85 percent of the CIC personnel spoke fluently the languages necessary in the area.[187] In the Persian Gulf Command, however, this was not the case; no one in the 468th CIC wrote or spoke fluent Persian. Where agent linguists were not available, the use of interpreters became necessary. But it was pointed out that CIC agents whose primary qualification was language ability were not desirable, since their employment was too limited. Although a knowledge of the native language was essential to undercover assignments, it was thought that for most other types of work English sufficed in much of the Middle East, except French North Africa and Turkey where French was needed.[188]

1506

A related problem arose from the use of interpreters. The field from which they could be drawn was limited, and Colonel McCafferty observed that in Iran most of the English-speaking natives who could be used were Armenians rather than Persians, and that, "Minorities are clannish in this country and have their grievances against the majority. Accordingly an unclear picture of the country as a whole is often obtained if information is received wholly from these groups."[189]

He thus made the recommendation that, "it be impressed on evaluating officers that information from minority groups often presents a distorted picture of the country as a whole."[190] The problem is again reflected in a statement from an earlier history, "There would appear to be need for closer attention to sources of information in an area like the Middle East both for reliability and economy."[191] The existence of feuding minority groups affected also the employment of undercover agents. It was felt that Americans of Middle Eastern origin, the logical prospects for long-term undercover assignments, tended to give information that was biased in the interests of their own groups.[192]

The rank of enlisted men was a source of operational complications when they were assigned to field and liaison duties - particularly since, a report states, "Senior American officers constantly compromise the rank of civilian clothed CIC agents in such field and liaison assignments despite all directives to the contrary."[193] It was fortunate that in some cases, Allied groups, notably SIME, were willing to consider CIC agents as officers. For example, in planning the Balkans operations, "It has been mutually agreed by CIC and SIME that CIC agents would be considered of officer status and would assume the responsibility of such. Such an agreement relieves CIC of the impossibility of matching SIME officer for officer and likewise raises CIC agents from a pure Field Security status."[194] Along these lines, Colonel Wise reported, "It is the opinion of the CIC officers of the theater that all Special Agents should be commissioned officers since the character of the work being done by them warrants it. Moreover, it is believed that direct commissions should be given."[195]

Conditions under which CIC agents were obliged to live made the establishment of a rotation system particularly important in the Middle East. Colonel Wise recommended that agents should be returned from the Middle East after nine months or a year at most. Factors of climate, food, living conditions and

1507

loneliness of CIC personnel should be taken into consideration, he said.[196] Lieutenant Sidney V. Barnes added, "An agent remaining too long in the Middle East eventually becomes known as such to the natives, and further, the climatic effect on the individual induces a feeling of lassitude and boredom with the work."[197]

In most areas the summer weather was oppressive; disease abounded in improper sanitary conditions. Typhus, typhoid, smallpox and cholera innoculations were essential precautions for incoming personnel. New agents were cautioned by USAFIME CIC: "Upon arrival in the Middle East the individual should exercise great care in eating raw fruits and vegetables. An upset stomach condition, known as "gyppy" stomach, is quite prevalent. Milk and ice cream should be avoided...since these items are never in a sanitary condition."[198] In Iran, unsanitary conditions often prohibited the use of drinking water. Agent Charles V. Sloan pointed out that it was necessary to drink wine instead of water with meals. When water was safe it was expensive, for it had to be boiled - and fuel was costly.[199] In some areas the quantity of food was insufficient, as for example in Palestine where an extensive rationing program was enforced. That it made life unpleasant for CIC men is reflected in Agent Elias Hanna's plaintive comment, "For over six weeks this agent hadn't had an egg...obtainable only from the black market at an average cost of twenty cents each. Coffee and tea were always served without sugar."[200] Clothing was also a problem; agents were advised to bring civilian clothes from the U.S. rather than pay several times as much for inferior products in Cairo.[201]

USAFIME CIC Mission Summarized

A summary of CIC's accomplishments in the Middle East must place emphasis on the part it played in the collection of political information, which generally would be considered on the other side of the nebulous line between "positive" and "counter" intelligence. This collection, which had become part of its mission by direction of the theater commander, involved, in Colonel Query's estimate, 50 to 75 percent of the detachment's activities by November 1943. Through 1944, as security demands lessened, positive intelligence was entrenched more firmly as CIC's major function in USAFIME. With the shortage of activity by other U.S. intelligence organizations in the theater, CIC was the chief source of information for G2; in September 1943, it was estimated, 85 percent of the positive intelligence collected came through CIC.[202]

1508

Colonel Wise reported:

> "The information being gathered by the CIC relates generally to the identity of enemy sympathizers and agents, the political developments which can be expected to create disorders, the economic conditions which may stir trouble, etc., including the general temper of the people with respect to the United Nations cause in general and the U.S. particularly. Since it is recognized that one of the prime aims of the enemy agents in the area is to capitalize on political and economic conditions to create trouble, the position is taken that keeping track of this is a proper CIC function."[203]

Among those areas more commonly regarded as proper to counterintelligence, the duties of conducting routine investigations and security surveys far outweighed, in time and effort consumed, the energies spent in the more colorful mission of apprehending spies and saboteurs. During its three years in the Middle East the USAFIME detachment made surveys of all U.S. installations, communications systems, and ports or areas frequented by American personnel. It conducted many hundreds of background investigations. It caused both military and civilian personnel to become security conscious by promptly investigating and bringing to light violations of security under AR 380-5. It helped maintain travel control.

Behind the capture of enemy agents were the interrogations, conducted jointly with the British, of thousands of suspects, which, in turn, were preceded by the screening of many more thousands.[204] These activities, together with the special missions - the security of top-level conferences, the establishment of liaison, the criminal investigations, the various undercover assignments[205] - were broadly the sum of CIC's achievements. But, as one historian put it:

> "The accomplishments of CIC in the Middle East might best be summarized by the fact that while CIC arrived in the Middle East totally unknown and generally regarded with suspicion and doubt, by the end of the European war, most American and Allied personnel in the area recognized CIC as a practical and productive counterintelligence organization, and matters pertaining to counterintelligence and security would rarely be acted upon without first consulting CIC."[206]

Part VI: CIC in Newfoundland Base Command

Part VI

CIC IN NEWFOUNDLAND BASE COMMAND

Because of its proximity to the North American mainland, the British island of Newfoundland was marked by United States military strategists as an important line of defense even before the United States entered the war. Separated from Canada only by the St. Lawrence Bay and lying directly across the Atlantic from most of Europe, Newfoundland's rugged 6,000-mile coastline provided key locations for coast artillery emplacements for the defense of both the United States and Canada.

Preparing an adequate defense of the island was not easy. Although Newfoundland has a total area of approximately 43,000 square miles, almost two-thirds of its population of 300,000 were crowded into the little Avalon Penninsula on the southeast tip of the island. Inland, the terrain was rugged and often impassable. Transportation and communication facilities were poor with the result that it was necessary to construct not only military and naval bases, but also transportation and communication networks to connect them. By the time the United States entered the war, this defense construction on Newfoundland was well under way, with both the United States and the Canadian governments participating.

But the preparations for war were impeded by the lethargy of the Newfoundlanders themselves. Indifferent toward any war effort, they were reluctant to cooperate with defense measures such as the blackout. There were some indications that they resented the presence of troops in their midst, although lease agreements had been negotiated between United States and Newfoundland governments.[207]

U.S. Installations Established

Although the primary responsibility for the defense of Newfoundland rested with Canada, the United States established four major military and naval installations on the island, along with numerous coastal artillery outposts. Headquarters of the Newfoundland Base Command was located at Fort Pepperrell in St. John's, the capital city, located on the southeast tip of the island. With a population estimated at 50,000 in 1942, St. John's was Newfoundland's largest city and principal seaport. American forces also occupied Fort McAndrew and the Argentia Naval Base, both at Argentia; Harmon Field at Stephensville, on the St. Lawrence Bay, and the U.S. Army Air Base at Gander, to the north.

---

207 Memorandum, Capt Neville K. Adkinson to Chief, Counter Intelligence Corps, dtd 29 May 42, subject: "Counter Intelligence Activities, Newfoundland Base Command," (SECRET) (Central Records Facility).

The United States Army was assigned the protection of a large portion of the Avalon Peninsula. The defense area included St. John's, with its busy harbor, as well as important outposts at Flat Rock, Torbay, Middle Cove, Outer Cove, and Logy Bay. These outposts were manned by elements of the 3d Battalion, 3d Infantry, which maintained 24-hour patrols of all beaches in the area.

In addition to the 3d Infantry, American forces in the Newfoundland Base Command included troops of the 24th and 421st Coast Artillery Battalions, 805th Military Police Company, 58th Engineers, 21st Signal Service Company, 162d Signal Photo Company, 8th Air Corps Squadron Command, and other supporting units.[208]

Civilian Employees a Security Problem

From the first, the troops stationed in Newfoundland were considered less a security problem than the hordes of civilians who were sent to Newfoundland from the United States to rush construction of the American bases. As early as September 1941, inspectors from GHQ, Army War College, commented upon the "lack of surveillance over possible fifth-column activities" among civilian workers on the extensive construction projects.[209] Lieutenant Colonel P. M. Robinett, Assistant Chief of Staff, G2, GHQ, Army War College, was among the first to suggest that CIP agents be sent to Newfoundland. On 6 September 1941, he recommended to the War Department that a minimum of two agents be assigned to the Newfoundland Base Command.[210]

Despite continual prodding by Colonel Robinett, the War Department delayed allotment of CIP quotas for Newfoundland until 6 December 1941, when two special agents, one technical sergeant and one staff sergeant, were authorized for the Base Command.[211] But action came swiftly once the quotas were set. Orders transferring Special Agents [redacted] and [redacted] to the

Newfoundland Base Command were issued on 12 December 1941,[212] and by Christmas day, both were in Newfoundland and ready to begin work.

Construction on the American bases was booming when and landed in Newfoundland. New laborers were arriving daily from the United States to join Canadian and Newfoundland citizens who already were at work. By the summer of 1942, when the construction activity was at its peak, 1,200 U.S. civilians were employed at Fort Pepperrell, 950 at Fort McAndrew, 650 at Harmon Field, and 200 at the Army Air Base at Gander. Some 10,000 Newfoundlanders were employed at the American bases at this time, with 3,000 of them at Fort Pepperrell.[213]

Problems of Undercover Agents

Both and arrived at St. John's in civilian clothing, without military equipment. Upon reporting to the S2 of the Newfoundland Base Command, they were told that they would work under cover, primarily in St. John's and at Fort Pepperrell.

But their cover was inadequate. No cover arrangements had been made before the agents sailed from the United States, and once in Newfoundland they were forced to resort to the flimsiest of stories to explain their presence there. Although had traveled in civilian clothing, his travel orders listed his rank and service number. By the time his boat docked in St. John's, fellow passengers were calling him "sergeant" and were asking why he was not in uniform. fared somewhat better en route to Newfoundland, since he had refused to accept travel orders stating his connection with the Army. In St. John's, rented a room in a civilian home, explaining that he was a U.S.O. representative. Four days later, his landlord accused him of being a spy, and was forced to move.[214]

To strengthen cover, he was ostensibly employed by the base censorship office, and to some extent, he actually censored incoming and outgoing mail. His CIC duties often required him to leave the office for extended periods, however, and he insisted throughout his stay in Newfoundland that the cover employment was

inadequate. Nevertheless, the censorship duties did enable him to learn considerable information about persons who were suspected of subversive activities.

For six months, continued in this capacity, gradually recruiting a net of trusted informants to supply information on persons under investigation. When the S2 requested an investigation of a particular workman, made his report on the basis of personal observation and discreet inquiries of these informants.

Low Morale Source of Difficulty

During first winter in Newfoundland, low morale among civilian workers inspired more than the usual amount of gripes and not a small amount of isolationist talk, bordering on pro-Nazi sentiment. Newfoundland winters are cold and wet, with strong gales and torrential rains sweeping across the island almost continually. On dreary winter nights, the civilian workers staged drinking bouts in their barracks. Tongues were loose, and criticism of the United States often was severe. Isolationism was a favorite theme, and anti-British, pro-German arguments were popular. as a resident of one of the civilian barracks, sat in on most of these sessions and noted the identities of the men who were most critical of the United States. But invariably, investigation proved they were talkers only. When sober, they were completely loyal. checked the possibility that the offenders were slowing construction work, but he usually found the most ardent complainers to be the best workers.[215]

Later, after 17 months in Newfoundland, he wrote:

> Evidences of any organized enemy activity in that country (Newfoundland) were very small if not actually nonexistent. Invariably, suspicious individuals would prove to be "crack-pots" and "loud-mouths," and nothing in their daily life would indicate any real activity.[216]

Water-front Activity Watched

meanwhile, concentrated on coverage of water-front establishments in St. John's. The foreign element, mainly seamen, were crowded into the harbor area, which was considered to be particularly vulnerable to penetration by enemy agents. Newfoundlanders gave little evidence of war consciousness, and the local government was reluctant to enforce security measures along the water-front. After a few weeks in Newfoundland, however, established liaison with local police and often persuaded them to arrest suspicious persons lingering aroung the docks.

215 Memo, , to Chief, CIC, dtd 10 Jun 43, subj: "Under cover Mission in Newfoundland," (Unclassified) (Central Records Facility).

216 Ibid.

When urgency demanded, himself made arrests. For example, a civilian informant warned that a construction worker bound for the United States on a leave of absence planned to smuggle mail past censorship authorities. stopped the individual, searched him, and took him into custody when he discovered a letter intended for posting in the United States. Under interrogation, the prisoner stated that the letter had been given him by stationed at Fort Pepperrell. Although apparently harmless from a military standpoint, the letter was highly critical of religious activities in the Army.

apparently was given no cover employment, and almost from the first he was used to conduct overt investigations. A counter subversive system had been established by the Engineers before the CIC agents arrived in Newfoundland. When the counter subversive informants reported suspicious persons, was assigned to make open investigations of the cases. On cases involving military personnel, a Military Policeman worked as assistant, obtaining information not normally available to a civilian.[217]

By the summer of 1942, identity was so widely known that he left the censorship office and worked directly out of the S2 office. In his new position, he maintained contact with Newfoundland, British, and Canadian authorities and had access to their files. In addition to reports of his own investigations, prepared most routine reports for the S2 office. His investigative work consisted primarily of records checks, surveillance of night clubs, hotels, and bars, and an occasional check on flashing lights reported by jittery Newfoundlanders. The flashing lights invariably proved to be flashlights used in violation of blackout regulations rather than enemy signaling. also traveled about Newfoundland to help establish a counter subversive reporting system.[218]

Additional Agents Requested

By the spring of 1942, both agents were so busy that Lieutenant Colonel Dyke F. Meyer, the S2 officer, notified the Military Intelligence Division in Washington that a minimum of six additional agents were needed to supplement the work of the two already in Newfoundland. Colonel Meyer reported a need for an additional agent in the St. John's area, two each at Fort McAndrew and Harmon Field, and one at the U.S. Army Air Base in Gander.[219]

219 1st Ind; to missing correspondence, Lt Col Dyke F. Meyer to MI Division, War Department, dtd 23 Mar 42, (CONFIDENTIAL) (Central Records Facility).

However, it was not until after Captain Neville K. Adkinson made an inspection trip to Newfoundland in May that action was taken to procure additional CIC personnel for the Newfoundland Base Command. Captain Adkinson noted numerous security deficiencies at Fort Pepperrell and St. John's Harbor. Guard systems were inadequate; sentries allowed unidentified persons to pass in and out of restricted areas at will. No identification system existed for civilian employees. The counter subversive system was poorly organized. He urged that at least two agents and one qualified officer be ordered to the Newfoundland Base Command to strengthen CIC work there.

Noting the difficulties which and had encountered in maintaining cover, Captain Adkinson recommended that one of the new agents for Newfoundland be employed in the United States as a timekeeper for the Base Contractors and the other as a minor official in the U.S. Consulate at St. John's. He urged every precaution to conceal their identities.[220] Major Hugh D. Wise, Chief, CIC, concurred in Captain Adkinson's recommendations, and requested the assignment of two additional agents and one officer prior to 15 September 1942.[221]

Two More Undercover Agents Assigned

In September, Special Agents Jack S. Blue and Joseph P. Gilbert were selected for the Newfoundland assignment, and extensive preparations for their undercover work were made in New York and in Washington.[222] Gilbert was employed by the Newfoundland Base Contractors as a truck driver, and Blue was instructed to report for work with the American Consulate in St. John's. Credentials, service records, orders, and similar papers were forwarded by registered mail to the S2 of the Newfoundland Base Command. Blue landed in Newfoundland on 29 September 1942, and Gilbert arrived on 8 October.

Gilbert plunged into his strenuous work as a truck driver immediately. Blue, after reporting to the American Consul, was assigned to work around the American docks as a "shipping expert." Gilbert, working sixty hours weekly in his civilian job, had little time for counterintelligence work; Blue, on the other hand, found it difficult to keep busy enough around the docks to maintain his cover.[223]

222 No action was taken on the recommendation that a CIC officer be ordered to Newfoundland.

223 Memorandum, Special Agents Jack S. Blue and Joseph B. Gilbert to Chief, Counter Intelligence Corps, dtd 10 Jun 43, subject: "Undercover Mission in Newfoundland," (SECRET) (Central Records Facility).

Need for Undercover Deemed Ended

Actually, by the time Gilbert and Blue arrived in Newfoundland there was little need for undercover work among the civilians. Most construction projects had been completed, and the American workers were being returned to their homes on the mainland. Where and had found an abundance of work but little cover, Gilbert and Blue had adequate cover but virtually nothing to do. After two months in Newfoundland, Gilbert wrote to Captain Lowell J. Bradford:

> Jack and I haven't been able to accomplish a thing here and I don't believe that the whole set-up here is accomplishing much. I don't intend any criticism of anyone in these statements. But there don't seem to be any leads on anything and I'll be darned if I can dig any up. Jack and I both feel like we are wasting our time. The job is finishing up here and all the Americans will soon be gone.[224]

The only information furnished the S2 by Blue and Gilbert during four months undercover was, by their own evaluation, "of rather trivial importance." Blue reported the inadequacy of the guard system on the docks and the causes of petty thievery in the harbor area. Gilbert relayed a tale of flashing lights on the coast near St. John's and provided information on a house of prostitution frequented by American civilians.

Despite a lack of information, the agents continued to make weekly reports to Captain Robert L. Mushen, who had replaced Colonel Meyer as S2. Usually the reports were oral. Captain Mushen was contacted by telephone, and in a conversation as ambiguous as possible, the agents arranged to meet him at his quarters or in a parked car. Similar precautions were taken whenever Gilbert and Blue found it necessary to contact either or [225]

By January 1943, Captain Mushen was ready to concede that Gilbert and Blue could not be used to full advantage while under cover. In a report to Major Wise he wrote: "In general, these men have been able to function effectively, although there is not an abundance of material for them to work on."[226] Two months later, he asked permission to bring them into the open:

---

225 Memo, Special Agents Jack S. Blue and Joseph B. Gilbert to Chief, CIC, dtd 22 Aug 43, subj: "Undercover Mission in Newfoundland," (SECRET) (Central Records Facility).

226 1st Ind. by Capt Robert L. Mushen, dtd 21 Jan 43, to ltr, Maj Hugh D. Wise to S2, Newfoundland Base Command, dtd 23 Dec 42, subj: "CIC Special Agents Transferred Undercover to Newfoundland Base Command," (SECRET) (Central Records Facility).

It is now believed that better advantage can be taken of the services of these agents by furnishing them their credentials and allowing them to report direct to this headquarters for instructions. Due to the limited size and stable character of the work groups in which they are employed, the length of time they have been here and the fact that they are among the few American National civilians still remaining in Newfoundland, suspicions have already been aroused as to their true identities. There is, on the other hand, a considerable amount of investigation to which these men can be assigned, were they permitted to operate "in the open."[227]

Once the cover was abandoned, Gilbert and Blue joined and in the performance of routine CIC duties such as investigation of possible sabotage, security leaks, and loyalty investigations of Newfoundlanders employed on American bases or associated with U.S. Army personnel. Although it was customary for agents to secure the permission and assistance of local police before investigating Newfoundlanders, it often was necessary to make discreet inquiries without notifying the police or other Newfoundland authorities. The police tended to whitewash all Newfoundlanders. Agents also were employed to check out the usual reports of flashing lights and strangers seen in remote areas.[228]

Security Surveys Made

Security surveys conducted by CIC agents in Newfoundland brought a tightening of security at all U.S. installations on the island, although the change was most noticeable at Fort Pepperrell. When CIC agents and inspectors continued to decry the inefficacy of the civilian identification system, a fingerprint-photograph badge and identification card system was established, and restrictions on the movements of visitors were enforced. For the first time, a perimeter barrier completely enclosed the installation, with guards posted at all entrances.

Dock security remained a headache. CIC cooperated with the Port Security Office directed by British Army Intelligence in St. John's, but officials of the Newfoundland government refused to consent to any security program which would close the docks to the public. Cargos were unloaded at privately owned docks, where it was possible for anyone to watch movement of ships in and out of the harbor. U.S. Army sentries guarded military cargo destined for American

1518

installations, but their only control over persons in the area was to enforce a no-smoking rule. Watchmen employed by the companies which operated the wharfs seldom displayed more than a casual interest in strangers in the area. Eventually, the Army constructed its own docks, and CIC's security recommendations were followed.[229]

Sabotage Probabilities Investigated

A sabotage scare flared in Newfoundland during the winter of 1942-43. Late in December, several civilian employees were killed when fire gutted the Knights of Columbus Hostel in St. John's. CIC agents did not investigate. When local police found indications of incendiarism, however, CIC was alerted to watch for any evidence of sabotage by fire. With raging winds lashing the Island throughout the winter months, a single incendiary device, effectively placed, could conceivably have destroyed an entire installation. A month after the blaze at the Knights of Columbus Hostel, oil-soaked papers were discovered in a back room at the USO building in St. John's. CIC was asked to check the possibility of attempted sabotage, but an investigation by Special Agent Kraft was inconclusive.[230]

Liaison Activities Important

By early 1943, CIC had established liaison with six other security organizations operating in Newfoundland. In addition to the Port Security office of British Army Intelligence, agents occasionally worked with the Canadian Army Security Division, Canadian Army and Navy Intelligence, the Security Division of the Newfoundland Constabulary, and the Office of Nava. Intelligence. According to a report prepared by Special Agents Blue and Gilbert, liaison between CIC and these agencies was good, with the exception of the Security Division of the Newfoundland Constabulary and the Office of Naval Intelligence. The Newfoundland agency was said to be lax in answering requests for investigations of Newfoundlanders, and the Office of Naval Intelligence was reported to be reluctant to furnish information to CIC.[231]

Personnel Turnover in 1943

The year 1943 brought a complete turnover in CIC personnel in Newfoundland. First to leave the Base Command was Special Agent Coleman, who was selected to

attend Infantry Officers' Candidate School.[232] who with had come to Newfoundland in December 1941, returned to the United States on 1 June.[233] And on 3 August, the Commanding General of the Newfoundland Base Command was instructed to issue orders transferring Blue and Gilbert to the Fourth and Second Service Commands, where they had been stationed prior to their Newfoundland assignment.[234]

As replacements, Staff Sergeant Edward E. Knauss and Corporal Edward J. Flynn were ordered to the Newfoundland Base Command, apparently in the summer of 1943.[235] Working in uniform, they lived in regular Army barracks with other enlisted men assigned to Base Headquarters at Fort Pepperrell.

It is not apparent why Knauss and Flynn were required to work in uniform, since other CIC agents in the Newfoundland Base Command had always worn civilian clothing. From the first, the uniforms hindered their work. Gilbert and Blue wrote:

> The position of these agents (Knauss and Flynn) is difficult inasmuch as the men with whom they live are aware that the agents are doing investigative work of some sort. This makes the men suspicious of the agents, because they are not absolutely sure of their position and feel that they might be watching their activities. These agents have also found it difficult...inasmuch as their work often calls for their interviewing commissioned officers who are none too cooperative when they realize they are being questioned by a sergeant....It is frequently necessary for them to visit other installations to conduct investigations that seem to be of great importance. Officers seem to doubt that the enlisted men have the training and experience necessary, and place little confidence in their work....Agents Flynn and Knauss feel that this attitude on the

part of officers whom they contact tends to undermine confidence in themselves and detracts from their ability to conduct a successful investigation.[236]

CIC agents in Newfoundland officially became a part of the 466th CIC Detachment assigned to the Newfoundland Base Command on 25 July 1944, when the Commanding General activated the 466th under provisions of Table of Organization and Equipment 30-500, dated 24 January 1944. Strength of the new detachment was set at one technical sergeant and one staff sergeant.[237]

The detachment was returned to the United States for deactivation on 4 September 1945.[238]

Part VII: CIC With U.S. Forces, South Atlantic

[redacted]

Part VII

CIC WITH U.S. ARMY FORCES, SOUTH ATLANTIC

Even before the United States activated the South Atlantic Command in World War II, CIC had men in that area performing a counterintelligence mission. Although Brazil maintained a nonbelligerent status until 22 August 1942, elements of the Air Transport Command were allowed the use of bases within that country for operations against the enemy. The tremendous importance of these bases will explain, in part, the need for attention to counterintelligence matters.

Fighter planes could not be flown across the Atlantic to Europe without the installation of extra tanks and equipment. Transport planes and bombers could be ferried without too much difficulty, but the large fuel load required naturally cut down on the amount of cargo that could be carried. To eliminate these difficulties, a ferrying route through South America, Ascension Island and North Africa to the Continent was set up.[239]

United States Army Forces, South Atlantic Command (USAFSA) was created in November 1942, to secure the cooperation of Brazilian Armed Forces and provide logistic support to Air Transport Command bases in Brazil and at Ascension and Fernando do Noronha Islands. As early as May 1942, however, Air Transport Command bases were operating along the ferrying route in Brazil and Ascension Island, as part of the South Atlantic Wing, Air Transport Command.

The earliest CIC activity in the area occurred in May 1942, when two CIC agents, Anthony Mattos and Jose Bensaude, were temporarily relieved of assignment to CIC and assigned to the South Atlantic Wing to provide counterintelligence coverage in the area. These agents served at South Atlantic Wing Headquarters in Natal, Brazil, in more or less of a counterintelligence capacity from May to November 1942.[240]

In February 1943, the Commanding General of Air Transport Command requested that a CIC detachment be attached to the South Atlantic Wing. The request was approved and first elements of the detachment began to arrive in May 1943.

---

239 Memo for Chief, CIC from Maj Lowell J. Bradford, dtd 25 Sep 1943, Subj: Field Trip through USAFSA, (SECRET) (Central Records Facility).

240 The experiences of these agents are detailed in the Chapter, CIC With the Air Force.

Although USAFSA had been activated by this time, the detachment was sent on orders signed by Brigadier General C. R. Smith, Air Transport Command Executive Officer, and no notice was given to the G2, USAFSA or to the A2 of the South Atlantic Wing. Major General Robert L. Walsh, Commanding General of USAFSA and Commanding General of the SAW, ATC, did not object to the arrival of countersabotage and liaison sections of the detachment in the theater, but made every effort to block the entry of a counterespionage section into his command. He felt that the maintenance of undercover agents in the counterespionage section might endanger the friendly relations between Brazil and the United States. No action was taken upon his suggestions. By June 1943, the detachment, broken into countersabotage, liaison, and counterespionage sections, was operating throughout the command at ATC bases. General Walsh's objection to the counterespionage section led to repercussions which will be expanded later.

The South Atlantic Wing Detachment

These three sections within the South Atlantic Wing, ATC detachment worked as follows:

The countersabotage section was headed by 1st Lieutenant Louis A. Ginocchio and manned by five agents and a clerk. The men were dispersed to various bases within the Wing and placed undercover as mechanics and line inspectors. They remained under the command of Lieutenant Ginocchio and submitted reports to him relative to their mission, which was, primarily, to check and investigate all actual and apparent sabotage to planes and material passing through the Wing. They were expected, also to develop leads as requested and maintain observation on the acts and sentiments of Brazilian employees within the military bases.

The liaison section was a two-man affair, consisting of Lieutenant Anthony R. Mattos and a clerk. The section's function was to maintain liaison with Brazilian governmental agencies, coordinate the evacuation of suspected subversive Brazilians from the area of military installations, secure cooperation from Brazilian agencies in determining the loyalty of Brazilians working for the U.S. Army, and perform administrative functions required by the detachment. The section office was at USAFSA Headquarters, Recife, Brazil.

The counterespionage section consisted of four agents and was under the direction of Lieutenant Mattos. All men in this section were quartered privately and operated as civilians. Its mission was two-fold; checking leads developed by the countersabotage section and developing informant nets among American and Brazilian civilians. The group also reported on loose talk by military or civilian

1526

translents and cooperated and maintained close liaison with the American Consular Service, as well as Naval Intelligence and FBI agents in the area.[241]

The fear on the part of General Walsh that the presence of American undercover agents in Brazil might endanger American-Brazilian relations led him to issue orders that the CIC undercover section of the South Atlantic Wing leave the command. However, at a conference with Brigadier General Hayes A. Kroner, Chief, Military Intelligence Service, General Walsh agreed to allow the detachment to remain if Brazilian authorities were informed of the nature of CIC work and the name of the commanding officer. He further stipulated that the activities of the group be directed against American and Axis nationals and not against citizens of Brazil.

To implement and assist in setting up such a program, Major Lowell J. Bradford, Liaison Officer, CIC, made a field trip through the USAFSA headquarters and installations in September 1943. Major Bradford suggested that the section be transferred to USAFSA rather than remain with the ATC Wing, but otherwise merely implemented the suggestions of General Walsh. Under those general conditions the detachment continued in operation until January 1944.[242]

At that time, the liaison and counterespionage or undercover section were transferred to USAFSA Headquarters and the countersabotage section was moved and attached to the Central African Wing, Air Transport Command.

Another detachment was sent to the South Atlantic Wing, Air Transport Command in February 1944, these men operating in uniform as War Department Inspectors. The detachment restricted its operations to the Headquarters at Natal and was withdrawn from the area in May 1944.

Meanwhile, the 432d CIC Detachment was sent and attached to Headquarters, USAFSA, in March 1944. The detachment, commanded by 1st Lieutenant Frank L. Reed, continued in operation until deactivation of the Command on 15 October 1945.[243]

Intelligence Coverage by Attaches

Reports from September through December 1943 indicate the important assistance given CIC by Military Attaches in providing intelligence coverage in the South Atlantic Command.

When the G2 received reports that German saboteurs had landed on the Brazilian Coast and made inquiries of CIC, a letter to the Naval Attache in Rio de Janeiro brought a prompt explanation. Two men had been put ashore in a rubber boat from a fishing vessel with radio equipment and a considerable amount of money. Both confessed that they had come to Brazil as German espionage agents and were taken into custody by the Brazilian general staff. Early correspondence indicated that the general staff was monitoring the frequencies assigned the agents and might attempt transmission of messages in accordance with the codes and schedules confiscated from them.[244]

Information on all developments of the case was freely interchanged between the Attaches and CIC. In the final correspondence in the file, dated 10 December 1943, it was reported that the Brazilian Army was operating the radios in a closely guarded secret operation. The Attache at Rio de Janeiro advised that the circuit was probably compromised since it was popularly known that the agents had been captured. The Brazilians, however, felt that they had a valid and uncompromised contact.[245]

Personnel

One of the major tasks of the 432d CIC Detachment was the clearing of military personnel for cryptographic and other classified duties. Investigative files and cross files on such personnel were set up and maintained throughout the tenure of the unit in the Command.

Clearances on Brazilian personnel employed by U. S. Forces were handled by the detachment through close liaison with Brazilian Political Police, Maritime Police and Army agencies. The primary aim was to screen out those persons with subversive tendencies, and the presence or absence of such tendencies was ascertainable only through a continuing coordination effort with Brazilian agencies. To further this clearance program of Brazilian nationals, a Joint Intelligence Committee was set up, composed of representatives of American Army, Navy and civilian intelligence agencies. This agency acted as a central liaison

245 Ltr from Maj A. F. Fuller, Asst Military Attache to Colonel Raymond, dtd 10 Dec 43, (SECRET) (Central Records Facility).

1528

instrumentality in dealing with Brazilian agencies. Between March 1944 and May 1945, 1,546 Brazilian employees were investigated by the 432d and reports forwarded for action.[246]

Control of suspected subversive personnel was maintained by alert detection of the presence of unauthorized persons in or near USAFSA installations. A free exchange of information with Brazilian and American agencies in the area facilitated control, and a card file was maintained and kept current on all individuals coming to CIC attention. Even the most minute and seemingly irrelevant information was collected and noted on each individual's card for possible use at a later date.[247]

The full cooperation of Brazilian political police made possible extensive relocation of Axis sympathizers and suspected subversives, upon CIC recommendation, to areas remote from operational and strategic installations. An informant net created and fostered by the detachment was invaluable in furnishing warnings to the detachment relative to movements and activities of the many Axis sympathizers in the area. Complete coverage could not have been attained in any other way because of the limited number of agents at the disposal of the Command.[248]

Technical Facilities

The 432d did not have a technical laboratory in the South Atlantic area, but the movement of planes through the area on the tremendous wartime ferrying scale gave the detachment ready communication and access to facilities in the Zone of the Interior.

A case involving an objectionable note on a desk calendar was investigated by agents. After handwriting and printing specimens of all suspects were taken, comparative analysis of the specimens and objectionable notation was necessary to resolve the case. An expert opinion was necessary since the notation was not only morally objectionable, but possibly indicative of pro-Nazi leanings. Within 13 days, the documents had been forwarded to Washington, processed and returned to the detachment. On the basis of CIC investigation, the person who made the notation was removed to nonsensitive duties.[249]

248 Ibid, p. 12.

249 Case File, Subject: "Investigation-Handwriting," 432d CIC Det, December 1944, (CONFIDENTIAL) (Central Records Facility).

Physical Security

Agents with the detachment made security surveys of all installations in the theater and submitted reports to the S2 or A2 of the installation involved. Agents were also detailed to study plans and reports on physical security forwarded to the Command G2 for consideration, and their recommendations were sent back through the G2 and forwarded to the originating agency.

Within the scope of the detachment's port security program came ship security matters. As a part of this program a conference with the Chief of Police and the president of the Brazilian Stevedores Syndicate was arranged to establish maximum security in loading and unloading American ships. Although arrangements could not be made to have just one crew of men handle all stevedoring aboard a particular vessel, it was agreed that steps would be taken to facilitate patrolling of the stevedore crews by having them wear a minimum of clothing, little more than shorts. To check on persons coming aboard the vessels, it was further agreed that the head of the crew would furnish the Military Policemen at the gangway with a roster of stevedores on a given job. This would provide a check list for control of persons boarding or alighting from the boats during the unloading process.[250]

In many instances, the port security job was complicated by the fact that vessels suspected of carrying contraband or illegal goods would be of a registry foreign to either Brazilian or American authority, and despite the fact that the vessel would put into a Brazilian port, the authority of CIC to investigate was simply nonexistent. Only through tedious and delicate liaison contacts could CIC obtain any information or access to such vessels.

In one instance, an Argentine ship arrived at Rio Grande de Sol, Brazil, and informants brought word to CIC that the ship was carrying strategic materials destined for export from Argentina to Germany. Examination of the vessel was effected only after high level liaison contacts were made through the American Embassy and then the inspection was performed by Brazilian rather than American agents. Although this particular inspection was fruitless, the detachment considered the work involved to be worthwhile since it resulted in a procedure being set up by which inspection of foreign vessels could be effected by CIC upon the application for proper authority from the Brazilian military establishment.[251]

250 Memo for AC of S, G2, from Lt A. R. Mattos, dtd 6 May 1944, Subject: Conference, (SECRET) (Central Records Facility).

251 File, Title, "Ships (Miscellaneous)" 432d CIC Det, covering period January-February 1945, (CONFIDENTIAL) (Central Records Facility).

Commercial Firms

When USAFSA installations were set up during the early years of World War II, it was found in many cases that business firms in the vicinity were pro-Axis. With the cooperation of informants and Brazilian political authorities, most of the firms were weeded out and the Brazilian government often caused personnel of these firms to relocate.[252]

Although it was not within the scope of CIC's mission in Brazil to investigate activities of the Brazilian Army, information obtained by CIC and disseminated to proper Brazilian authorities led to the arrest of one officer and eight enlisted Brazilian Army personnel for the sale of government owned arms and ammunition to unknown persons in Pernambuco. The lead on the case came to CIC through an informant in a shop selling small arms who was disgruntled at having lost the sale to the Brazilian Army personnel.[253]

252 History of CIC in South Atlantic Theater, dtd 30 May 45, over signature of Maj Frank Reed, Chief, 432d CIC Det, (CONFIDENTIAL) (Central Records Facility).

253 File, Title, "Army-Navy Sales" 432d CIC Det, undated, (CONFIDENTIAL) (Central Records Facility).

Safeguarding Military Information

Because of the presence of known Axis sympathizers in the Brazil and USAFSA area, the 432d was called upon to enforce AR 380-5 to the letter. Poster and slogan campaigns were constantly being run, and the most trifling infringements of regulations were reported to the appropriate commander in view of the delicate situation in which American forces were involved. Not only were safeguards against information reaching Axis sources important but the nature of operations was such that Brazilian-American amity might also be shaken if information were leaked. All news releases to the Brazilian press were coordinated with G2, USAFSA, and the Commander of the 432d. Close coordination was maintained with the theater censors, and a policy on comments regarding Brazilian political matters was established.[254]

As a part of the safeguarding program, mail security was considered to be of the greatest importance. In June 1944, the detachment investigated pilferage of mail aboard planes passing through the command, but finally concluded that the pilferage had not and could not have occurred at USAFSA bases.[255] During the next month, security surveys were run at all mail handling depots and temporary storage areas. Although some instances of slit mail bags and consequent pilferage continued to arise, the number so sharply decreased that CIC closed its investigation and left final corrective procedures to Army Postal Inspectors.[256]

The last incident of importance recorded by the 432d with regard to mail security occurred in March 1945. A minor crisis arose when several pieces of mail and official correspondence addressed to USAFSA Headquarters in Recife, Brazil, were given to a sergeant, on leave in the city, by a hotel clerk along with a request to see that they were properly delivered. An immediate CIC investigation was ordered by the Commanding General and the results of the investigation, though not spectacular, showed a careful tracing by CIC. It appeared that all mail addressed to USAFSA at Recife was delivered to Panair do Brasil since there was no direct service to USAFSA. A civilian employee of the Panair company, who had some remote connection with the U.S. Army, would then take the mail to the clerk of the largest hotel in Recife and request the clerk to give the mail to the first man from the post that he saw in town. CIC recommended correction

of the situation by institution of a courier service between the post office and USAFSA installations.[257]

Sabotage

Although the 432d was the only CIC detachment assigned in the South Atlantic Command, it had no jurisdiction on Air Transport Command bases within USAFSA. The Air Transport Command had no CIC of its own after May 1944, but relied on Intelligence and Security Officers for investigations. Most often, however, Air Transport Commands would call upon CIC for investigative assistance and such requests were honored whenever possible. Eventually, despite a shortage of CIC agents at USAFSA Headquarters, two agents of the 432d were permanently assigned to Air Transport Command bases at Belem and Ascension Island.[258]

The "Gatun" Case

The U.S. Army Transport Gatun caused the 432d no end of investigative difficulty. A breakdown of the ship at sea disclosed evidence that appeared to point to sabotage. An investigation was conducted aboard the ship when it arrived at Recife and the suspicion of sabotage was confirmed. The investigation led to the conclusion that the sabotage attempt, carried out by a person familiar with marine engines, had been designed to immobilize the ship while at sea. Since repairs on the ship had been made immediately prior to the cruise to South America, recommendations were forwarded to G2, War Department, urging investigation of the incident at the shipyard in the Zone of the Interior. Many experts were called in for assistance before the case was closed at Recife.

About ten days after CIC finished the sabotage investigation of the Gatun, reports of a series of fires aboard the vessel were received. Although sabotage was again suspected, investigation disclosed that the fires were due to negligence of crew members and spontaneous combustion.[259]

257 Ltr, dtd 23 Mar 45, from Maj Frank Reed to CG, USAFSA, Subject: Investigation of Mails, 432d CIC Det, (CONFIDENTIAL) (Central Records Facility).

258 The activities of agents of the 432d with regard to investigation of Air Transport Command cases are included in the Chapter on CIC with the Air Forces under the section on ATC. It was felt that such inclusion was appropriate since the agents were under operational control when assigned such cases, of Air Force I & S officers rather than the CO of the 432d.

1533

[redacted]

[redacted]

Pump Station Case

A sabotage investigation was opened in November 1944 when the water pumping station at Headquarters USAFSA caught fire and was completely destroyed.

Investigation revealed that two Brazilian employees had been trying to fill a kerosene lantern with gasoline inside the pump house and had dropped the lamp into a puddle of gasoline to start the fire. The investigation's principal value was that it pointed up the complete lack of adequate fire fighting equipment in the area and led to the implementation of a vigorous fire prevention program.[260]

The Natal Pipeline

An official of the Natal police notified the Standard Oil Company of Brazil that a sabotage attempt was planned against a pipeline owned by the company running from Natal to Parnamarim Field, a USAFSA installation. The attempt was to be made during a forthcoming uprising. When the oil company asked assistance in guarding the line, CIC was called into the case.

Investigation proved the story of impending calamity to be false and a figment of the overzealous policeman's imagination. However, a security survey of the pipeline was made, and several recommendations for improved security of the line were offered and accepted by the company.[261]

Loss of the Belo Brazil

In March 1944, the 432d had perhaps its most puzzling case of suspected sabotage. A Brazilian sailing vessel, the Belo Brazil, was chartered by the Army Transportation Officer at Belem to transport Army radio beam equipment to stations along the Brazilian coast. About two weeks later, the owners of the vessel reported that the ship had been distressed in a small storm and its mainsail had been carried away. They further stated that a subsequent storm had caused the vessel to swamp and sink with consequent loss of all cargo. The monetary loss to the United States was something over $500,000.

A Board of Officers, convened to investigate the loss of the equipment, concluded that it was doubtful that the vessel had sunk. Although the stories of the master and crew of the vessel were in accord, searches for the wreckage by Naval and Air Force components had failed to find any evidence. Divers let down

1534

[redacted]

in the area where the vessel had reputedly been lost found no trace of the ship. Two pieces of the cargo had been washed ashore on a nearby island, but the Board felt the evidence was not conclusive, since prevailing currents would have carried all flotsam to the same beach. At this point CIC was called into the case.

CIC carefully went over the ground the Board of Officers had investigated and extended the investigation with full cooperation of Brazilian investigative agencies and other American intelligence services. Undercover agents were sent out to try to procure on the commercial market equipment similar to that lost on the Belo Brazil. Crew members of the vessel were interrogated time and time again. Extensive hydrographic studies were undertaken with the aid of Army Engineers and Signal Corps technicians. The backgrounds of the owners and agent of the vessel were carefully scrutinized.

The case was kept open for almost one year, and though little evidence was turned up that had not been presented to the Board of Officers, the Commander eventually recommended that the case be closed with the conclusion that the vessel had sunk with all cargo aboard.[262]

Political Reporting.

The undercover and liaison contacts of the 432d put the detachment in an excellent position to keep tab on the complex Brazilian political situation. By August 1944, it had become the practice to provide regular reports to the Commanding General and the War Department on current governmental developments.

Since the Brazilian Army, Navy, and Air Force were embroiled in the picture as well as the two principal political parties, it took the part-time efforts of four men to gather all necessary information. The most important facet of the system was a series of contacts which advanced information regarding future developments and facilitated more accurate estimates of the present situation. After integration and evaluation, the reports were forwarded to the Commanding General, USAFSA, the U.S. Navy, and the American Consular Service.[263]

Miscellaneous Files

The 432d, in conjunction with the issuance of political reports, maintained many related card files. One indexed all pertinent economic information procured

262 File, "Loss of Radio Beam Equipment 'Belo Brasil' ", 432d CIC Det, Period Mar-Dec 44, (SECRET) (Central Records Facility).

relative to Northern Brazil; another catalogued labor unions, officials, and general policy; finally, a separate file on all labor agitation, uprisings, demonstrations and strikes was kept current.

Tactical Intelligence

264

Particular attention was given to collecting information on Argentina in view of the fact that rumors were current in 1945 that Argentina and Brazil were about to conclude a trade agreement. During the early part of 1945, Argentina had not yet declared war on the Axis powers and her loyalties were in a questionable state. Collection of information on Argentina slackened when the nation declared war on the Axis in March 1945.

265

Miscellaneous Activities

All censorship intercepts forwarded to USAFSA were processed through the 432d CIC Detachment. The 432d extracted that information which appeared to be of counterintelligence value and forwarded information to Military Attaches in the areas concerned. An extensive public relations and goodwill program was carried on by officers and enlisted men of the detachment. Weekly luncheons and get-togethers were held for Brazilian Military and government personnel, and birthday and Christmas cards were mailed at proper times in the name of the detachment. All requests for assistance directed to the detachment by Brazilian military or civilian personnel were given the highest priority possible under the current caseload.[266]

265 Ibid and File, "Argentina," 432d CIC Det, covering period July 1944 through January 1945, (SECRET) (Central Records Facility).

266 Ibid, p. 13.

Among miscellaneous cases handled by the detachment was one involving the pilferage of articles from baggage of personnel being air-ferried to the United States after V-E day. Investigation into the matter was ordered by the Commanding General, USAFSA, after he received a letter from a Staff Sergeant complaining of the theft of a souvenir pistol at the Belem base. A thorough survey of baggage handling and storage facilities was made along with efforts to recover articles stolen. Several recommendations for increased security were forwarded, but records do not disclose whether any stolen articles were recovered from Brazilian workmen or military personnel at the air terminals and depots. It was reported that the incidence of pilferage dropped sharply after more stringent guard regulations were implemented, but isolated cases were recorded up to the time the detachment left the theater.[267]

Ascension Island

The activities of the 432d CIC Detachment on Ascension Island have purposely been divorced and placed in a section separate from the other functions of the unit in USAFSA.

Ascension had an overall area of approximately 35 square miles, but its location about midway between South America and Africa gave it a great value as a link in the air ferrying network. The principal military activity on the island was carried on by the Air Transport Command, and though the island was a part of USAFSA, until May 1944, counterintelligence responsibility was vested in the South Atlantic Wing of Air Transport Command. Although the Wing had one CIC agent attached to it, the man was utilized in an undercover capacity and had no investigative duties. Investigations were handled by the Intelligence and Security officer who was a part of the A2 office. Coverage under the system was perhaps adequate, but when the high value of the air base from a strategic point of view was considered, the system left something to be desired. The Intelligence and Security officers were not required to have investigative training and they had many other duties which precluded the devotion of all efforts to counterintelligence activities. In addition, the knowledge of Intelligence and Security officers with regard to checking and implementing security measures was limited, and, consequently, passenger and traffic control was almost totally neglected.[268]

267 File, "Baggage Security," 432d CIC Det, period Aug through Sep 1945, (CONFIDENTIAL) (Central Records Facility); and File, "Thefts, USAFSA," period May through Sep 1945, (CONFIDENTIAL) (Central Records Facility).

268 History of CIC in South Atlantic Theater, dtd 30 May 45, over signature of Maj Frank Reed, Chief, 432d CIC Det, (CONFIDENTIAL) (Central Records Facility).

The security laxness on Ascension and at other Air Transport Command bases which relied upon Intelligence and Security officers for counterintelligence and security coverage is well illustrated in a case which arose during September 1943. During an in-flight inspection of landing gear aboard a C-87 transport plane, a stowaway was discovered in the nose section. The man, an Army sergeant, told Military Police at Ascension Island an almost fantastic story.

The man had been on tactical duty in North Africa when illness within his family led to his decision to return to the United States without official sanction. He left his unit in a truck convoy and then managed to stowaway on three successive flights before he was apprehended en route to Ascension. He reported that he had boarded each plane without difficulty, and had not once been questioned as to identification or leave papers. Crews and guard personnel on the planes he boarded had allowed him the freedom of the craft, and he had even been lodged in transient facilities at stops along the way. His apprehension was purely accidental and would probably not have occurred had he not concealed himself aboard the plane instead of asking permission for the ride, as was his practice. The sergeant was discovered only because of mechanical difficulty with the landing gear and his own fatigue which had led him to board the plane the night before it left. The officer who investigated the case at Ascension conservatively stated that the exploits of the Sergeant led him to believe that "a gross lack of security exists, and therefore places this and other stations in great jeopardy."[269]

This case, and others of a similar vein were reviewed by Major Lowell J. Bradford, GSC Liaison Officer, when he made a security survey of Ascension Island in 1943 at the request of the Commanding General, USAFSA. In addition to many recommendations for physical security, Major Bradford recommended that "...an experienced CIC investigator...be placed on duty...to perform passenger control and other duties..."[270] When the 432d CIC Detachment was assigned to USAFSA, Agent Asa T. Lively was sent to Ascension and remained there until the Command was deactivated.

Agent Lively was sent to Ascension undercover as a War Department Technical Representative. His cover story allowed him to mingle with both officers and enlisted men and he was generally thought to be an investigator for either the FBI or Treasury Department. Lively worked with the S2 of the Air Transport Command at the island and developed leads and conducted such investigations as were requested by Headquarters USAFSA or the operations officers of the 432d.

Conclusion

Just prior to deactivation of USAFSA in 1945 and the subsequent removal of the 432d from the South Atlantic, Major Frank Reed, the CIC detachment commander, summarized the justification and purpose of his unit. He wrote, "The defense of North America is closely allied with South America and in a large degree depends on the backing and unity of the South American countries." Keeping tab on activities in South America, and lending intelligence assistance to those countries during a period of emergency was a necessary activity. Since American Consular officials and Military Attaches, because of their position, were accepted as "official spies," that task fell upon and was performed by CIC.[278]

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Section 1

THE COUNTER INTELLIGENCE CORPS ASSIGNED ROLE IN NORTH AFRICAN INVASION

It was late August 1942. The opening offensive of the war was being fought by the United States Marines in the Solomon Islands. Off Guadalcanal a United States naval air task force was winning a decisive victory over the Japanese fleet. Churchill was in Moscow briefing Stalin on the Dieppe diversionary raid and the plans of the British Eighth Army to start its victorious drive at El Alamein in October.*

CIC agents, slightly more than one thousand in number,** were assigned in the nine Service Commands of the United States and in many of the 39 non-combat foreign areas where United States troops already had been deployed. During this summer of the first year of the war, they were making security surveys of Army installations, giving security lectures to troops, checking backgrounds, attempting to plug all leaks through which the enemy might learn of our plans. Many were frankly restive that their role would keep them in the United States or, at best, far back in the rear echelons of overseas commands.

In Washington and in London intensive planning was getting under way for one of the largest invasions in history, the invasion of North Africa which, after many conferences and numerous changes finally, on 22 September, was scheduled for 8 November 1942.*** The plans called for the penetration, with a force of 107,000 men,**** of a coast 800 miles long, extending from Safi on the west to Algiers on the north, and bounding a vast area where the deep-rooted religious and racial hatreds of the heteregenous population posed a political problem that could not be gauged in advance. Although fervently hoping that the few French officials with whom advance negotiations had been carried out would be able to prevent French opposition to our landings, each task force was primed to respond to "Play Ball," the code signal to be flashed to the entire force at the first hostile French act in any sector.*****

Three task forces were organized for the invasion. The Western Task Force, composed of the 3rd Infantry and the 2nd Armored Divisions and the major part of the 9th Infantry Division, reinforced with supporting arms and services, was to sail from the United States to invade French Morocco on the west, from Safi to Port Lyautey, under command of Major General George S. Patton. The Center and Eastern Task Forces were to sail from England. The Center Task Force, better known

as II Corps, commanded by Major General Lloyd Fredendall, and consisting of the 1st Infantry Division, Combat Command "B" from the 1st Armored Division and supporting corps troops, was to land in the vicinity of Oran and establish contact on the right with General Patton's force and on the left with the Eastern Task Force, which was to land at Algiers under command of Lieutenant General K. S. N. Anderson, British. The latter was to be a combined British-American force, consisting of British commando and infantry units; two United States regimental combat teams, one from the 9th and one from the 34th Infantry Divisions; and a Ranger Battalion.*

Counter Intelligence Corps Chief Learns of Missions With Western Task Force

In Washington, later in August 1942, the Chief of the Counter Intelligence Corps, Major Hugh D. Wise, Jr., a reserve officer from Princeton, New Jersey, was called to the office of Major General George V. Strong, Director of the Intelligence Division of the General Staff, and told to procure from the nine Corps Service Commands approximately one hundred Counter Intelligence Corps agents for tactical employment.

"When?" asked Major Wise.

"Immediately," was the answer.

To Major Wise this was both a blow and a challenge. Until that moment no one outside the office of the Counter Intelligence Corps Chief had seemed to consider the possibility that Counter Intelligence Corps agents might do their investigating under combat situations with pistols strapped to their belts. Major Wise and Lt Col Gordon Sheen, who had left for England early in August, had visualized this possibility and had drafted a Counter Intelligence Corps Field Manual which was then being staffed through the various War Departments, without being greeted by any particular enthusiasm. It actually was accepted as a "Tentative" Field Manual on 20 November 1942, 12 days after the landings in North Africa. Even when Major Wise was directed to prepare 100 agents for the invasion, it was not clear that they would be expected to work in front areas. Major Wise knew that few of the men available had even one day's training in any of the combat arms — that for many their longest hike had been from the bus stop back to the office. But by the middle of September he had assembled 71 Counter Intelligence Corps men, 58 enlisted and 13 officers, for assignment to Western Task Force for Operation TORCH.**

Major Wise was not the only one confused about the North African invasion. Operation TORCH was credited with being responsible for the addition of the word "SNAFU" to the Army's vocabulary.*** Its code

*The War Reports of General Marshall, p. 89
**Interview with Col (Reserve) Hugh D. Wise, Aug 1953 and Aug 1954
***USA WWII WD Washington Command Post, Office of the Chief of Military History, Washington, D. C., 1951

name was changed three times from GYMNAST to SUPERGYMNAST to TORCH. It was originally planned for March 1942. It was postponed and reconsidered. It was ordered by President Roosevelt for 25 July 1942; was changed to 7 October, to 15 October, to 7 November, and finally to 8 November. General Eisenhower was not designated Allied Commander-in-Chief until 7 August, and the debating phase of TORCH did not end until 5 September, barely 60 days before the final D-Day.* Secretary of War Stimsom wrote in his diary that even the patient General Marshall was stirred up over it. Stimson wrote, "He is naturally tired of these constant decisions which do not stay made."**

It was not until 13 August 1942 that the G2 Section for Western Task Force was initiated with the appointment of Colonel Percy G. Black as Assistant Chief of Staff, G-2, charged with the organization of his section and the preparation of an Intelligence Plan which would set up an intelligence system for the combat phase as well as for the territorial occupation which was to follow. It was recognized that no accurate estimate could be made as to how long the Western Task Force, widely separated as it was to be from the other Task Forces, would have to operate as a semi-independent force, a situation which placed upon the G2 Section a tremendous responsibility. Hurriedly various sub-sections were formed and assigned their tasks in the planning. Information concerning the area to be invaded was obtained from every available source, processed, evaluated and condensed for distribution to troops after sailing.

The Counterintelligence sub-section was charged with the security of the entire planning, including physical security for the Task Force Headquarters in the Munitions Building and the Ports of Embarkation, as well as with the planning for its own mission. One of the big security problems, one that seemed almost impossible of solution, was found in the preparation of the maps. Prior to this time, most of the maps prepared for the Army had been let out on contract to civilian firms by the Office of the Chief of Engineers. Security forbade this procedure, but production within the Engineer Reproduction Plant offered a hazard almost as serious when it was discovered that only a few of the 800 civilians employed in the plant had ever been investigated. As many safeguards as possible were set up. The finished maps were taken by armed guard to a warehouse in Norfolk, Virginia, where they were sorted and packaged accordingly to troop sailing lists and placed aboard ship for distribution by the Counter Intelligence Corps the second day after sailing. Only sub-Task Force Commanders received the maps before sailing; however, in order to allow subordinate commanders to work out tactical plans without compromising the destination of the Task Force, special beach head maps were made with all names blanked out and with a false North.***

(✓) In retrospect it appears that the planning staff for TORCH had been impressed with the effectiveness of the Field Security Police of the British and Canadian Armies; Field Orders outlining the Counter

1547

(U) Intelligence Corps mission in both the Western Task Force and the Center Task Force reveal this influence,* For the largest invasion to date in history, it was necessary that every possible means be used to protect its security, Counter Intelligence Corps agents were trained investigators. It was assumed that a few weeks seasoning with the combat troops, added to their initial 13 weeks basic training, would enable them to carry out this assignment easily. The Counter Intelligence Corps carried it out, but not with ease.

Unfortunately the assumption that the Counter Intelligence Corps agents had had basic military training was not valid. It was true that the War Department had ordered that all inductees be given basic military training before being assigned to any duty, foreign or domestic, and the Chief, Counter Intelligence Corps, used every means to enforce the order, but the Service Command G2's were caught between critically conflicting responsibilities. All had backlogs of investigations of thousands of persons for sensitive positions. They had night and day work for every investigator they could get; these investigators did not require any basic military training to make investigations among the civilians. So the agents were put to work with the idea that when the pressure eased off they could catch up on the military training requirement. But the pressure never slackened and it was only when it was too late and there was no time that they realized their men were not prepared. No one had told them that the Counter Intelligence Corps had a combat mission, probably because even at War Department level it was a last minute decision. Many wouldn't believe it, but the orders were firm to fill their quotas at once and get the men to Washington for a final briefing before assignment with the combat troops of the Western Task Force, then known as Task Force "A." Soon 71 Counter Intelligence Corps agents, fresh from warm rooms and soft beds of urban life were camping with seasoned troopers of the 2nd Armored and the 3d and 9th Infantry Divisions, and calling the harassed Chief of the Counter Intelligence Corps harder names than the ground they slept on. They couldn't understand it and the Chief was in no position to argue or explain.**

Invasion Mission Assigned

In assigning to Counter Intelligence Corps its general mission for the invasion, the field orders, drawn up with little precedent for guidance, reveal a far-sighted conception of the Counter Intelligence Corps eventual role in combat as well as of the difficulties Counter Intelligence Corps agents would encounter through lack of understanding of their mission by commanders of other units. This is illustrated by the following excerpt:***

*Extracts from British Manual, "Security Officer's Course Field Security Wing," School of Military Intelligence, Matlock (J-72) (C)
**Interview with Lt Col Hugh G. Wise (Reserve), 8 Aug 53
***9-2, Annex 5 to Final Report on Operation TORCH, G2 Report, Western Task Force (Departmental Records Branch, Alexandria, Va.) (S)

"It is the mission of the Counter Intelligence Corps to provide effective counterespionage, countersabotage, and countersubversive security of Task Force "A" and to detect and investigate all cases of positive or suspected disaffection, sabotage, espionage and subversion within or affecting the military service. The Counter Intelligence Corps will not serve to replace or assume the responsibility for Provost Marshal operations, tactical combat intelligence or countersubversive installations prescribed for all field force units, but will be considered as a supplemental counterintelligence agency available to the commander for the enforcement of security measures, investigations, counterintelligence discipline, and special protective operations.

"It is essential to the effective accomplishment of the Counter Intelligence Corps mission that the personnel of the Corps be encouraged to exercise their initiative to the fullest extent and that they be permitted to operate without restrictions upon their movements or channels of communication. Speed is the essence of counterintelligence, and lateral communication between Counter Intelligence Corps echelons is authorized whenever the circumstances require and by whatever means may be available. Members of the Counter Intelligence Corps are frequently entrusted with extremely hazardous and important missions of a secret nature requiring expeditious action and when engaged upon such missions they must not be delayed by the observance of standard customs and prohibitions.

"The Counter Intelligence Corps has a definite mission to perform and unnecessary hazards in combat action are to be avoided to effect that mission. This is not intended to deter the efforts or retard initiative of Counter Intelligence Corps personnel to execute vigorous action in accomplishing their mission. Counterintelligence is a basic function of command and is an operational rather than a staff intelligence agency."

In spite of the firmness of the above directions for the utilization of the Counter Intelligence Corps, certain commanders substituted their own interpretations of the mission of counterintelligence personnel,* an ever-recurring shortsightedness that put the first Corps of Intelligence Police (CIP) men who arrived in France in World War I to digging latrines and was still being met during the early days of the fighting in Korea.

Capture of the members of the German Armistice Commission with their documents and records was assigned as first priority for the Counter Intelligence Corps, with the explanation:

*95 TF 3-2, G2 Annex to Final Report on Operation TORCH, Western Task Force (Departmental Records Branch, Alexandria, Virginia) (S)

"The German Armistice Commission has organized Moroccan industry for the delivery of all available raw materials and foodstuffs to the German war machine. Their control extends over all aviation, shipping, port, railroad, storage and merchandizing facilities and related utilities. It must be assumed that the Commission will make every effort to destroy these facilities rather than allow them to fall into the hands of the invading forces intact."

General directions specifically applicable to the Counter Intelligence Corps: "Although it is hoped that the French will not offer serious opposition to the landing of the United States Forces, security plans will be carried out as for an ordinary military operation, and resistance and Fifth Column activities must be expected. Vigorous countersabotage measures will be instituted immediately following the establishment of a beachhead. . . . The enemy can be expected to attempt: destruction of buildings and contents; injury of materiel and introduction of foreign substances into oil, and poison, glass or disease germs into food and water; and the incitation of riots, unrest and disaffection.

"Counter Intelligence Corps officers and men have been attached to the major tactical units and assigned to the various landing forces in addition to the Headquarters Detachment, Western Task Force. Following the assault, these detachments will immediately proceed to designated rendezvous points for the execution of counter-espionage and countersabotage missions. These missions will be designated in secret orders prior to embarkation."

Western Task Force Counter Intelligence Corps Makes Plans -- With 53 Days to Go

On 16 September, just 53 days before the invasion, Lieutenant Colonel William B. Parsons of Seattle, Washington, who was to head the Counterintelligence Section for the invasion, and Major Charles A. Ellis, of Brooklyn, New York, who was to command the Western Task Force Counter Intelligence Corps Detachment, were called to Washington to organize the Counterintelligence Sub-Section of the G2 Section, and begin the indoctrination for the mission.*

Shortly after his arrival in Washington, Parsons called in all the officers and non-commissioned officers assigned to the Counter Intelligence Corps Detachment for a three-day intensive orientation course from September 21 to September 23. Writing for this period, Lt Col Jack B. Cameron, at that time 2d Lt Cameron, whose service with CIP and the Counter Intelligence Corps then totaled five years, described the situation as one of confusion. He prefaced his narrative by the comment, "Any paper written eleven years after the events it attempts to record and comment upon accurately, suffers one major weakness:

*95 TF 3-2, G2 Annex to Final Report on Operation TORCH, Western Task Force (S)

its author has the benefit of considerable reflection and experience which he can readily employ to accent weaknesses which were non-existent or vague to him at the time the events were taking place.... Obviously, much that appeared important in 1942 today has assumed its proper proportion and, upon reexamination, had no direct bearing on events except as they affected performance of duty...revealing is the fact that today, in the light of the Corps advancement, many criticisms we had in 1942 are not recognizable as our own defense because of our individual and collective unpreparedness brought about by a lack of planning, organization and training, and basic foundations for firm execution."*

Amusingly Colonel Cameron related the experiences of the group that gathered in Washington for orientation. After being shuttled from office to office for several hours, they finally were "herded into a small room whose walls were covered with newspapers (hiding maps of various European areas) and a colonel was ushered in. His address...was a command for the Counter Intelligence Corps to go out and 'Kill, kill, kill!' With these words rebounding in the small room and blanching the faces of the entire group, he was rushed out and extensive orientation ended."

The group then returned to Counter Intelligence Corps Headquarters, Colonel Cameron wrote, where they were addressed by key Counter Intelligence Corps personnel who told them that they were "the pick of the crop" and, to accent this point, were told that "there wasn't a man at Headquarters Counter Intelligence Corps who wouldn't 'give his right arm to be in our shoes.'" A huge map, dotted with pins with names attached, was uncovered for a brief moment, but not long enough for any of the men to identify themselves with their pins.

The Detachment was divided into three sections, one to go ashore at Safi with the 2d Armored Division, one at Port Lyautey with the 9th Infantry Division, and the third at Fedala with the 3d Infantry Division.** At the conclusion of the initial invasion, certain designated members of each of these groups were to advance with the divisions, while the remainder were to stay as headquarters personnel in each of the sectors. Second Lieutenant Jack Cameron was assigned to command the 3d Infantry Division Detachment, Second Lieutenant Paul A. Heegaard-Jensen the 2d Armored Division, and First Lieutenant John G. Hammond the 9th Infantry Division Detachment. The Headquarters Section in the Fedala-Casablanca area was to be commanded by Major Ellis, the Headquarters at Safi was to be operated under Second Lieutenant Robert R. LaBranche, and the Rabat-Port Lyautey sector under Second Lieutenant William B. Cornell.***

*Ltr from Lt Col Jack B. Cameron, Hq 450th CIC Det, APO 55, to Chief, CIC, Ft Holabird, Md., Subject: "CIC Operations, French Morocco, 8-11 Nov 42," dtd 9 Feb 54.

**95 TF-2, G2 Annex to Final Report of operations of Western Task Force (Secret), French Morocco (Departmental Records Branch, Alexandria, Va.), and CIC Plan, Task Force "A" (Papers sent by Col Parsons) (Z-16) (Secret)

***For rosters of these Detachments, see Appendix 1.

For their first brief training the men were sent to the tactical units to which they were to be attached. Cameron and Anthony Cuomo, his senior non-commissioned officer, went to Camp Picket where they found the rest of their group who, upon reporting to Lt Col Mercer C. Walter, the 3d Infantry Division G2, had found him as baffled by their presence as were the men themselves. "Colonel Walter, however, was an intelligent, patient man," Col Cameron wrote, "and after a discussion, we decided that eventually the War Department would spell out a specific mission or employment policy for the Counter Intelligence Corps Detachment." In the meantime, they decided that since the men were counterintelligence agents, their job would be security, and on that basis they became security advisers to the G2.

Recognizing that much physical conditioning was needed for the men to pass their embarkation tests, a training program was set up immediately. "Although we were often 'kidded,' particularly when our detachment of five men went alone on full field road marches, our efforts to meet the combat standards of the Division were well rewarded by our being quickly accepted as part of the Division Team," Cameron wrote.

Shortly after their training program got under way, they were ordered to Western Task Force Headquarters at A.P. Hill where they found the remainder of the 13 officers and 50 enlisted men of the Counter Intelligence Corps Detachment, except the senior officers who had not yet reported in, cleaning cosmoline from Military Police and Headquarters Company weapons. Since the groups that had gone directly to A.P. Hill had been quartered with the Headquarters Company for the Task Force, the Headquarters Commandant had "decided the Counter Intelligence Corps personnel were his to use as he saw fit, particularly as no one else wanted to claim what he called 'a citizen's army of misfits.'" The reason for his disdain was apparent. Upon the arrival of the group they had been issued eight pyramidal tents, and when one of the officers plaintively asked, "What shall we do with these?" the Detachment was off to a bad start with Headquarters Company. The situation became worse when the tents were set up, squeezed in uneven ranks between two already established rows of tents, and adopted by Military Police and Headquarters personnel as repositories for trash. the Counter Intelligence Corps never recovered in the eyes of the Headquarters Commandant, upon whom, unfortunately, they had to depend for logistical support after their arrival in North Africa. Calling this, "The bitter fruits of an untrained, non-directed group of excellent men ordered to be soldiers," Cameron added, "That they became excellent soldiers never erased the Gilbert and Sullivan operatic classification initially given this group."

Major Ellis soon arrived and, with "a firm military hand," instituted a training program and assured them that planning actually was under way and that they would be given concrete plans for their forthcoming operations upon reaching the Port of Embarkation.*

*Ltr from Col Cameron

After the bulk of the group left for Camp A.P. Hill, Colonel Parsons and a few of his key personnel remained in Washington to complete the Counter Intelligence Corps Plan for Western Task Force, then known as Task Force "A." As evidence of the feverish pressure of time, the Counter Intelligence Corps Plan was not completed until 40 hours before sailing time, and was rushed by Colonel Bob Harris, traveling by plane, to the various units at the embarkation ports.*

Although the experiences of the different groups varied, all of them during their brief time with units before embarkation, were given a certain amount of physical reconditioning work and training with weapons. They conducted security investigations and surveillances at the request of troop commanders and continued with these duties after embarkation with their units. On board they assisted in the enforcement of general security measures, dismantling privately owned radios aboard ship, enforcing blackout regulations and making certain that electrical devices such as electric shavers and diathermy machines were not used. They had the task of delivering maps to the various units on the ship. In addition they had much to learn about the subversive situation and the persons they could expect to find in the country to which they were going, information which, for security reasons, could not be given to them before sailing. Using the material delivered to them after they were on board, they set up a cross-index card system of approximately 5,000 cards of subversive suspects, arrest targets and friendly informants.**

War Diary Tells of Early Days

The War Diary kept by the Counter Intelligence Corps group assigned to the 2nd Armored Division, the only such diary of this period available to researchers, furnishes, via cryptic notations, interesting and tantalyzing glimpses of the Counter Intelligence Corps day by day activities, from 24 September, the day of their activation with Second Lieutenant Paul A. Heegaard-Jensen in command, to 29 November 1942.***

The early part of the diary carried the group through administrative details, drawing of equipment, eight-mile daily hikes, weapons practices, instructions in the use of landing nets, and orientation on the tactical situation abroad. A rumor that a private at Fort Bragg had heard, via the half-track radio, a broadcast that the Germans were prepared to meet the 2nd Armored Division at sea was tossed into the Counter Intelligence Corps lap from Washington. When traced to its source several days and 47 interviews later, the private admitted that he had "stretched the truth" in "intimating that he had heard

*Interview with William B. Parsons (Colonel, Reserve), 13 Sep 53.
**G-2 Annex to Final Report on Operation TORCH, Western Task Force (S)
***Counter Intelligence Corps Second Division War Diary (T-26, Unclass.)

the broadcast"; and furthermore, he didn't know how to tune in the half-track radio.

Western Task Force Counter Intelligence Corps Heads for North Africa

The 2nd Armored Counter Intelligence Corps group and a group who were to operate a headquarters in Safi, boarded the ship on 10 October and, after establishing rendezvous with the rest of the convoy in the area of Solomon Island in Chesapeake Bay, sailed on 24 October for the west coast of Africa. They did not know until they were well on the way just where they were headed, or the exact nature of their targets.

The diary for the period aboard the ship reveals that these men were working closely with G2 officers on security problems and on plans for intelligence activities after the landing. They surveilled a suspected major, searched for clandestine radios aboard, checked locations of explosives, practiced firing their guns and studied French and German.*

While the 2d Armored Division Counter Intelligence Corps agents tried to prepare themselves for the coming invasion, other agents were similarly engaged in other parts of the convoy.

Colonel Cameron's group was divided for the voyage, Colonel Cameron, Cuomo and George L. Belt going on the Ancon which carried half of the Division staff and some combat troops, while Richard N. Ryan and John R. Humphreys went on the Division Flag Ship. Training aboard the Ancon, Cameron wrote, was restricted to "briefing and scratchy Arabic language lesson records, a must for all personnel." The material brought to them on the eve of sailing set out certain objectives: Seizure of documents and personnel in the Miramar Hotel, the headquarters of the German Armistice Commission; the detention and interrogation of all suspects of counterintelligence interest found within the Division area; and as rapid a development as possible of contacts with pro-Allied persons in order to gather intelligence and counterintelligence information for the G2. Using these objectives, they were able to formulate some plans.**

Counter Intelligence Corps Planning Begins in England for Center Task Force

Meanwhile at Norfolk House, London, simultaneous with the Western Task Force planning in the United States, officials at Allied force Headquarters, with eyes fixed on the rapidly moving calendar, were preparing the Center and Eastern Task Forces for the invasion of Oran and Algiers. Counterintelligence responsibility for the Eastern Task Force was given to the British, and for the Center, to the United States.

*For excerpts from Diary, see Appendix 2.
**Ltr from Col Cameron.

In September 1942, plans were drawn for the attachment of Counter Intelligence Corps personnel to tactical units on the pattern of the Field Security Police of the British and Canadian Armies, and authority was established for the Counter Intelligence Corps Detachment, II Corps Headquarters, by letter dated 20 October 1942, subject, "Counter Intelligence Corps Detachment."*

Behind the three foot thick walls of historic Longford Castle where II Corps had set up its headquarters, Colonel Benjamin A. Dickson, G2, and his staff turned in feverish haste to planning the mission of this newly-adopted child of the combat arms. "The II Corps G2 was a tall, brilliant and temperamental Philadelphia mainliner," wrote General Bradley in A Soldier's Story. "Known in the Army as Monk, Colonel Dickson had been graduated from West Point in 1918. After service in Siberia during World War I, he resigned from the Army. In 1940 he was hustled back into uniform and assigned to War Department Intelligence."**

In this planning as well as in subsequent operations in North Africa, the Counter Intelligence Corps leaned heavily upon the British, who passed on the results of their own four-year campaign against the same kind of administrative difficulties which plagued the Counter Intelligence Corps, in which they had won the cooperation and the esteem of all echelons of command.*** Brigadier E. E. Mockler-Ferrymen, British Assistant Chief of Staff, G-2, at Allied Force Headquarters, and Lieutenant Colonel S. S. Hill-Dillon, also British, Assistant Chief of Staff, G-2, under whose immediate supervision Allied Security Intelligence operated, were the authors of many recommendations which were forwarded almost verbatim to the United States War Department.

A paper prepared by Colonel Hill-Dillon during this planning period is particularly revealing as to British influence upon the Counter Intelligence Corps, as well as to the desperate shortage of men to perform the planned mission.**** "Experience had proved in the various theaters of war that a body of men specially charged with counterintelligence or security duties and who work with the various formations is absolutely necessary," he wrote. "In the British forces this want is cared for by Field Security Sections consisting of one officer and 13 other ranks. One section is usually attached to each Divisional headquarters or higher formation and a varying number of sections to GHQ according to circumstances. Important ports and lines of communications headquarters also have sections attached to them."

---

*History of the 202nd Counter Intelligence Corps Detachment (C-26) (R)

**A Soldier's Story, by General Omar Bradley, p. 46-47

***Memorandum for General Strong, subject, "The Counter Intelligence Corps in European Theater of Operations and North Africa," 15 Feb 43 (R-27, P 344-349) (R)

****"Training and Organization of Counter Intelligence Personnel," dated 3 Oct 42, by Lt Col S. S. Hill-Dillon, Allied Force Hq. (C-35, British Most Secret)

CONFIDENTIAL

Colonel Hill-Dillon pointed out that the U.S. allotment of four men to the Division Headquarters, 13 to Corps and 50 to Army was inadequate and that even to meet this quota it had been necessary to draw men from other units which would be demanding their return upon completion of the TORCH assault.

"It therefore appears a matter for immediate consideration," he wrote, "whether men from the Counter Intelligence Corps or possibly from some other source in addition should be formed into units, trained in accordance with the lessons learned from recent war experiences, and attached to formations for security duties."

He continued with a recommendation that a section of one officer and 10 enlisted men be assigned to each Division, Corps headquarters and Army headquarters and a company to each Force headquarters, all of these units to move with their respective outfits, while similar Port and Lines of Communications Sections, especially trained for their work, would remain static. "This would ensure," he pointed out, "that if a formation moves into a new Theater it will have its C.I. organization with it, without depleting the static layout in the old Theater."

Only 30 Counter Intelligence Corps Men in England

As Colonel Hill-Dillon pointed out, the handful of Counter Intelligence Corps men in England could not possibly be stretched out to cover the planned mission. In all England there were only 30 Counter Intelligence Corps enlisted agents and officers assigned to General Eisenhower's forces and 10 who had arrived from the United States and were awaiting shipment to Iceland. Many of the documents concerning this period either have been destroyed or are hidden almost beyond recall in the archives, but research revealed a number of cables signed EISENHOWER, asking for additional Counter Intelligence Corps agents for ETO forces. Each was answered from Washington with assurances that the men were being assembled as rapidly as possible and that all future combat units leaving the United States would be equipped with Counter Intelligence Corps troops; no additional men, however, would arrive in time for "Special Operations," meaning Operation TORCH. A series of cables from ETO headquarters requesting authority to assign to "Special Operations" nine of the 10 men tagged for Iceland met with steady refusals, evidently since the Counter Intelligence Corps mission in Iceland, discussed in another section of this history, was considered by the War Department as more in line with the type of duty then thought to be the Counter Intelligence Corps sole mission.

On 18 October 1942 the following cablegram was dispatched from Allied Force Headquarters, signed EISENHOWER.*

"All CIC personnel in this theater (exclusive of Iceland) and their names and grades are as follows: Headquarters 8th Air Forces: 1st Lt Charles H. Ovsley; Headquarters 2nd Corps: 1st lt Leonard M. Bessman, Sergeants Harold G. Murphy and Charles E. Conick; Headquarters 5th Corps: S/Sgt John T. Ryan, T/Sgt Gilbert S. Meidrum; Headquarters 8th Ground Air Support Command: Capt Edward L. Ray; Headquarters ETO: Capt Murray C. Falkner, Major Kirby M. Gillette, 2nd Lieutenants James M. Eichelberger and Lyndon B. Allen, Technical Sergeants Frank M. Kearns, Bertram R. Russell and Martin G. Heilman, Master Sergeant Reginald M. Johnson, S/Sgts Paul S. Cooper, Miles H. Copeland, Jr., William L. Jenkins, Jr., Jules A. Nolin, Theodore R. Loney, Oscar Stradinger, George N. Landes, Charles E. Rose, Sergeants William W. Jackson and Robert H. Comfort; Headquarters Allied Forces: Captain Vincent J. Thill. The following Counter Intelligence Corps agents were commissioned 2nd Lieutenants AUS, October 1st: James R. Gardner, Alexander W. G. DePourtales, Edwin B. Smith, Harry L. Amerman. These officers not on duty with the Counter Intelligence Corps but are now on duty with G2, this headquarters. Also commissioned, on October 1st, was Lt Eichelberger shown above. With the exception of Lieutenant Allen and Ovsley and Major Gillette all of the above are scheduled for transfer to Special Operations. Reference your radiogram 1929 WXGRD minimum requirements for Special Operations are 27 men and 9 officers. Unless the Iceland Detachment now awaiting decision in our 3608 (now in London) are released to me as the situation requires the shortage of 9 men cannot be overcome. The assignment of 40 men and 10 officers in question is requested as follows:

40 men and 4 officers to this Headquarters
1 officer to the 8th Air Forces
4 officers to Headquarters, S.O.S.
1 officer to 5th Corps

Request 4 Pfc clerk typists be included among the 40 enlisted men."

Nine Diverted From Iceland

The War Department relented, granting permission for nine of the men destined for Iceland to be added to the TORCH forces, with a reminder that the number would be subtracted from the 40 men being prepared for shipment to the ETO. Accordingly, a cablegram signed EISENHOWER on 21 October 1942 indicated that the following nine enlisted men had been added to the history-making "Special Operations"; Milo M. Jensen, Watson P. Osenbaugh, James E. Cole, David S. Horner,

*Radiogram #3717, 18 Oct 42, from London to AGWAR (CM -IN -07756 -MIS Journal No 151, Oct 18, 1942 (R-27, p 591 (R)

Leonard E. Hanson, Paul V. Derguven, Rudolph P. Gollomb, Donald C. Bucher and James L. Anderson.*

While the 30 men mentioned in the first cablegram were assembling in England, no one had dreamed of the tactical combat role they were to play. The first two, , had arrived in a semi-undercover role with the first U. S. troops in Northern Ireland in January 1942. On 14 July, 15 enlisted men and five officers, under command of Major Gillette, arrived in England, and although assigned to Allied Force Headquarters, were sent by error to Cheltenham. For a month they had busied themselves at making security surveys and investigating one case of suspected sabotage, all the time wearing the uniform and insignia of their rank while the problem was being untangled through correspondence between Washington, London and Cheltenham.**

Security of Invasion is the Counter Intelligence Corps Task

By early October, with the invasion of North Africa barely a month away, these men were settled in quarters separate from the rest of the Army, wearing civilian clothes and concentrating their efforts on preventing opportunities for security leaks. Several agents were dispatched to various places in England, but the majority remained in or near London, charged with the security protection of vital headquarters and secret field exercises and investigations of both civilian and military personnel with the U. S. Army. They also had to find time for a certain amount of training for their coming mission.***

Security was critically important, not only to deny information to Axis agents but to keep the information from the pro-Ally DeGaulle forces in London, a specific order from Washington to Eisenhower because both Americans and British had reason to suspect leaks from DeGaulle's headquarters. General Eisenhower has referred to this invasion as "a most peculiar venture of the armed forces in the field of international politics; we were invading a neutral country to create a friend.**** There could be no leaks to allies where discretion as well as loyalty was not proven.

During this period there was plenty of security checking by the Counter Intelligence Corps of American personnel occupying sensitive positions. Eisenhower had relieved an American officer for a minor security breach. Without their knowing it, he had his personal staff checked and tested.***** Even the top planners were not immune from

*****Crusade in Europe, p. 76

taking security risks. Counter Intelligence Corps agents would have spent a nervous evening had they known that during the height of the North African planning, the high staff made a quiet trip one night to a movie producer's office in London for a private showing of "The Road to Morocco."*

Widely diverse backgrounds were found among these Counter Intelligence Corps men: a Paris journalist, an immigration inspector, an auto salesman, a Sorbonne instructor, a Swiss auto racer, an attorney, and a Rhodes scholar. Seven spoke French fluently, two German, two Spanish and Norwegian; others had command of Italian, Danish or Dutch.**

At the last moment Crosby Lewis was added to the Counter Intelligence Corps roster, a happy addition as it turned out. In A Soldier's Story, General Bradley described Lewis as one of the "group of brilliant and versatile young officers" whom Colonel Dickson had drawn into his operation. The son of an Episcopal rector of Philadelphia, Pennsylvania, Lewis had joined the Canadian Army in 1939, shortly after the outbreak of war. Soon after the United States entered the war, he left the Black Watch as a sergeant major to join the American Army in England as a private. Upon the landing in North Africa, he was awarded a battlefield commission.***

To augment the small contingent of Counter Intelligence Corps men available for the invasion, a platoon, selected from the 1st Infantry Division, was sent along with the Counter Intelligence Corps agents, to the British Intelligence School at Matlock for training with the British Field Security Detachment. These men were indicated in invasion orders as "specially trained personnel." Training at the British School consisted of reconnaissance methods, road blocks, seizure of documents and methods of transmitting them back to headquarters, and enforcement of military security discipline. In addition they received a certain amount of training in interrogations and other subjects given in the Intelligence School in Washington, D. C.; however, the greater portion of the training was geared to field conditions, a factor which had received no attention there.****

Only four Counter Intelligence Corps men were committed to the assault forces: Bessman, Murphy, Conick and Lewis, each with a number of "specially trained personnel" to assist them. Bessman and Lewis were attached to the 1st Ranger Battalion, Conick to the 18th Infantry Regiment and Murphy to the 16th Infantry Regiment, all units then under command of the 1st Infantry Division. The other Counter Intelligence Corps men committed to "special operations" were to come in about 10 days later.*****

Invasion Mission Outlined

Drawing heavily upon the experience of the British in their use of the Field Security Police, Field Orders for Center Task Force contained specific missions for these "specially trained personnel" during the initial stages of the landing:*

"In order to prevent sabotage, espionage and other subversive activities, Axis agents and sympathizers will be captured as soon as possible. They will be confined, guarded and segregated as other Prisoners of War. Their headquarters, offices and quarters will be searched for documents, ciphers, code and wireless apparati and other matter containing military information. Where possible the aid of Allied sympathizers will be solicited in connection with the search.

"Priority for capture:

"1. As first priority and of utmost importance is the capture of the members of the German and Italian Armistice Commissions.

"2. German, Italian and Japanese consular personnel.

"3. Other Axis agents.

"4. Axis sympathizers - see names listed in Appendix B (copies furnished specially trained personnel)."

The Field Orders continued with the assignment of "specially trained personnel": one officer to Headquarters Center Task Force, one to the 1st Infantry Division and one to British Liaison, 1st Infantry Division; and four enlisted men to Armored Combat Command B, six to Headquarters Center Task Force, 14 to 1st Infantry Divison and one to British Liaison, 1st Infantry Division.

"Specially trained personnel" were to work with their assigned units in the three invasion areas, Arzeu Bay, Les Andalouses and Mersa Bon Zedjar to prevent escape of Axis agents on roads out of Oran. "Suitable detachments," accompanied by "specially trained personnel," were to seize and to search certain specific objectives. One officer and eight enlisted men were to accompany detachments to the Grande Hotel, the Continental Hotel and the Hotel de France, which were being used as headquarters and quarters for the German Armistice Commission; and four enlisted men were to go with detachments to the Italian Consulate and the Hotel Miramar which housed the Italian Armistice Commission.

The orders directed that two of the "specially trained personnel" were to be dispatched to each of the two railway stations to prevent departure of Axis agents by rail. "It may be necessary," the orders

*301-3.9, Field Orders, TORCH Operation, 1st Infantry Division (Departmental Records Branch, Alexandria, Virginia) (S)

read, "to dispatch additional parties of combat troops, accompanied, if necessary, by specially trained personnel held initially in reserve, to other points determined from questioning captives or as suggested by Allied agents. In the event of serious and prolonged opposition by the French, it may be necessary to use them for searching French Military headquarters, and for controlling the French population. It must, however, be kept in mind that their main duty is to round up and destroy the German and Italian subversive organizations in the occupied area.

"Lieutenant Bessman and remaining specially trained personnel from Headquarters Center Task Force will be held in reserve initially by 1st Infantry Division and committed to action only when needed."

This tantalizing statement winds up the Intelligence Annex to the Field Orders:

> "Agents are to perform certain missions prior to H-Hour. Detailed instructions for recognition later."

Section 2

THE COUNTER INTELLIGENCE CORPS IN ITS FIRST INVASION

For the 75 Counter Intelligence Corps agents crowded on the decks of the dark army transports along with the 112,000* other combat troops of the three task forces on the night of 7 November 1942, there was plenty to think about. Many were convinced that this tactical employment was not part of the Counter Intelligence Corps mission -- that this was a mistake which they hoped they would live to see rectified.** Few, if any, realized that the next day these agents were going to prove the worth of the Counter Intelligence Corps in combat and that this expanded mission would mark a new era in the Corps. From that time on, Counter Intelligence Corps agents would be in the assault waves of nearly every significant landing until the peace was won.

At the moment, as the 110 ship convoys escorted by 127 warships*** steamed toward the dark 800-mile coastline, there were other things to think about. For the 70 agents of the Western Task Force under Major Ellis, and the four of the Center Task Force operating directly under Colonel Dickson G2 of II Corps, there were vital missions to be accomplished in the morning when H-Hour signalled the start of D-Day.**** There were many things to worry about; in fact there were dangers which they, with their limited knowledge, had not even dreamed. General Marshall had said that success depended, above all, on secrecy.***** Had the German Armistice Commission at Casablanca and Oran been warned and escaped? Had the coastal and air defenses recently been improved as intelligence reports, via Berne, Switzerland, had started?****** Had Axis agents, peering through the barbed wire that alone separated the Gibralter airfield from Spanish territory really believed the deception stories that the huge stocks of gasoline and scores of new planes were for the relief of Malta?******* One of the transports had just been torpedoed.********

Then, particularly for the Western Task Force, there was the weather to think about, and those 50 foot swells as the Atlantic hurled itself violently against the rocky coast off Port Lyautey, Fedala, and Safi where the actual landings would be made. Would the French be friendly or would the code signal "Play Ball" flash through the Armada

---

to indicate that actual hostilities had started?* Was Robert Murphy, American underground Chief in North Africa, right when he warned General Eisenhower that there was a grave danger of assassination by Axis espionage agents?**

Counter Intelligence Corps agents in the convoy realized more keenly than many others the security danger that results when their convoy met and passed an inbound neutral merchant ship. But word had been sent through Allied intelligence agencies, and before the crew and passengers of the merchant ship could talk to anyone, the ship was intercepted and escorted to New York. Crew and passengers were kept out of communication until the North African invasion had been successfully made and the landings well secured.***

Western Task Force Moves In

The Counter Intelligence Corps agents who awakened shortly after midnight as the Western Task Force reached its rendezvous looked out across an amazingly calm sea to shore lights plainly visible along the rim of the continent which had not had a major invasion in centuries. The weather worry was over. This was to be one of those seven non-consecutive days of a month when the 50 foot swells were modified by 10 foot swells from the southwest which made a safe but choppy, seasick sea. Major General George S. Patton, Jr., commanding the Western Task Force, noted in his diary, "God is with us."****

As the sky lightened there was still no sign of an enemy alert. Counter Intelligence Corps agents could feel pleased with their part in the well-kept security. In fact the secret of the landings had been so well kept that afterward French gunnery officers said that they had thought the invasion was merely a raid.***** Members of the German Armistice Commission did not learn of it until six o'clock in the morning, shortly before they were captured.******

But "Play Ball" was signalled. The Safi Garrison Commander ordered "immediate opening of fire" when the first war vessel was seen entering the port, barely two hours after he had received the code message "Danger," flashed from the Moroccan Navy,******* and at 0703 the heavy cruiser Jean Bart, newest warship of the French Navy, opened fire

from its mooring in the Casablanca Harbor.* As the agents were heading toward Casablanca, 16-inch shells of the new U.S.S. Massachusetts were screaming over them and into the Jean Bart, and other guns of the convoy fleet were targeting French light cruisers and destroyers. Meantime, on radios that functioned poorly and sometimes not at all,** Colonel Percy Black, General Patton's G2, was trying vainly to get his reports back to Brigadier Mockler-Ferrymen, General Eisenhower's G2, at the Allied Command Headquarters at Gibralter.

Although 360 men were killed and more than 1,000 wounded in the invasion*** the Counter Intelligence Corps contingents made the landings without injury and moved forward with the first wave combat reconnaissance troops to search enemy headquarters, command posts and prisoners, and carry out other assigned missions.

Counter Intelligence Corps Carries Out Its Mission

Only fragmentary records of Counter Intelligence Corps activities during this period are available -- evidently there wasn't much time for writing reports. But, through these fragmentary reports and the citations awarded, a partial picture of Counter Intelligence Corps during these busy days can be rounded out.

Although plans had called for the Division teams to go forward with their units and the headquarters teams to remain as static detachments, it actually did not work out that way, since the fighting ceased even before their initial missions had been completed, and the groups were rapidly shifted around to take care of the immediate security needs.****

The headquarters detachment, commanded by Major Ellis, and the 3d Division team, commanded by Lieutenant Cameron, landed at Fedala under heavy fire. After they were safely ashore, their ship, the Tasker H Bliss, was sunk by a German submarine, taking down with it all their clothing, which had been loaded on a half-track still aboard the ship.***** The first citation, a Silver Star, went to Major Ellis for returning from shore to save the lives of two men who had been wounded and thrown out of the landing boat by the intense fire from a French shore battery.******

Since Cameron had been separated from two of his men for the 16-day voyage and knew nothing of their plans, he arranged to get himself, Cuomo and Belt on a boat that was carrying certain key Division personnel

to the Flag Ship at 0400 on 8 November, before the actual landing. Arriving at the Flag Ship, however, he learned from Colonel Walter that Ryan and Humphreys had just left in one of the landing boats--objective Hotel Miramar. Cameron and his two remaining men had to wait their turn in the landing boats, which did not come until about 0800. Since the route to the Miramar ran parallel to the waterfront and was blocked by French and Goumier soldiers, it took them two hours to work their way to the hotel. Arriving there at 1000 hours they found Ryan and Humphreys, a Sergeant and a Pfc, commanding the Hotel. Although the Armistice Commission members had fled at the first shot they had taken all others in the building prisoner, and when one of our naval guns scored a direct hit, Ryan had herded the prisoners to the basement and, leaving Humphreys in command of them, had returned to the lobby to protect the official papers in case any of the Commission members returned for them.

A G2 observer, who arrived while Ryan was holding the hotel, started off in pursuit of the Commission, and shortly after Cameron's arrival returned with several members who had been captured by 3d Division soldiers as they were attempting to flee north to Rabat. In all, nine members were captured and three were killed. Another who was wounded was captured about a month later as the result of the acute observations of a CIC agent. Agent Cuomo, who by this time was assigned as resident agent at Port Lyautey, became ill and was hospitalized at a French hospital in Rabat. While there, he learned that the French authorities were keeping incognito a very seriously wounded German. When Cuomo reported this, Cameron recalled the report that a German Captain from the Commission had been wounded while running a road block at Rabat. The Western Task Force G2 instructed Cameron to remove the Captain to Casablanca. The French doctors at the hospital declared that he could not be moved, but with the word of an American doctor that he could be moved without danger, Cameron overrode the French doctors, and giving them no chance to appeal to higher French authorities, whisked him out by ambulance. The reason for the French desire to protect him was not apparent.

It was learned that additional Armistice Commission papers could be found in four buildings in Casablanca and, since the Counter Intelligence Corps "efforts had been sufficiently rewarding to the G-2," they were given a jeep for Detachment transportation and prepared to move in on the heels of the planned assault on Casablanca on November 11. At the last minute, the French forces capitulated and the Detachment was able to move in with the advanced regimental elements and confiscate considerable personal and official property and German mail.*

The papers captured by the Counter Intelligence Corps at Casablanca and at Fedala were considered a valuable prize, and included the list of the names and aliases of the French Intelligence Service,

*Ltr from Col Cameron; Interview with William B. Parson (Col, Reserve), 13 Sep 53; Commendation CIC (B-9); and History of the 305th CIC Detachment (UNCLASSIFIED) (L-1)

compiled by the Italian Secret Service, and German lists of French collaborators.

Ryan was awarded a Silver Star and a battlefield commission and Cameron received the Legion of Merit.

The Counter Intelligence Corps was not through with the Miramar Hotel. Three days after it was taken over as U. S. Headquarters, Counter Intelligence Corps agents discovered that it had been wired with listening devices by the French, who had been able to monitor it throughout the German occupation; the French had "neglected" to remove the wiring after our arrival. They also discovered, about a month later, that the French had an elaborate system by means of which they were able to monitor any telephone in the area, also a carry-over from the German occupation days; however, they were unable to establish that any information gained was going to Vichy. Some time later, agents discovered that a radio transmission beam at the Casablanca airport had been left open on a night of a heavy German bombing raid, and was believed to have led them in. While this was under investigation, the suspect was killed in an airplane accident.*

Working with the French police, Lieutenant Spingarn led a team of agents who quickly rounded up 77 Italians in the Fedala area, thus preventing them from becoming a danger to the security of the American Army during the assault.**

In the Port Lyautey area, Lieutenant Hammond's team and the headquarters detachment under Lieutenant Cornell landed with the 60th Infantry Regiment in three assault waves, two of which were under fire. However, according to a report written by Colonel Parsons who took command of the entire detachment shortly after the invasion, these groups were prevented from functioning in compliance with the instructions which had been issued by the G2 Section. Members were employed as Prisoner of War interrogation personnel and were instructed to act under the specific orders of unit G2's without consideration of their assigned mission. As a result, according to Colonel Parsons, the Counter Intelligence Corps did not effect the same results as in the Fedala and Safi areas "where they were permitted independent action in accordance with the pre-determined Counter Intelligence Plan."***

In the Safi Area, Counter Intelligence Corps teams led by Lieutenants Heegaard-Jensen and LaBranche landed under fire and immediately took over the Postal, Telephone and Telegraph offices. They cut all wires leading from that city, and, at a later date, placed all

*Interview with William B, Parsons (Colonel, Reserve) 13 Sep 53

public utilities back into operation. They arrested 10 Italians, picked up numerous suspects for questioning, including all members of S.O.L. (Societe de L'Ordre Legionnaire, often called Brown Shirts), and captured a wireless transmitter during the combat phase. Although the S.O.L. members were released, four were later re-arrested in collaboration with the French.*

On the third day of the fighting, Lieutenant Heegaard-Jensen, accompanied by Benjamin, Fox and Funk, traveled through the enemy lines 70 miles west of Safi to pick up Van Ruyn, a German agent who controlled the Arab chieftans in the area, and on the way back detoured to disarm a fort at Oulidia and capture 8 prisoners, 10 automatic rifles and machine guns and 25 rifles. For this Heegaard-Jensen was awarded the Silver Star and Sergeant Benjamin the Legion of Merit, posthumously. Benjamin died on 8 March 1943 as a result of an automobile accident near Rabat, the Detachment's only serious casualty during the North Africa campaign.**

Captain A. L. Howes was awarded the Legion of Merit and Staff Sergeant James P. Furness the Silver Star, bringing the awards won by the men of Western Task Force CIC during the first three days to four Silver Stars, three Legion of Merit awards, and one battlefield promotion.***

Diary Gives Fragmentary Picture of Invasion

The War Diary of the 2d Armored Division CIC Detachment, mentioned previously, gives a tantalyzing glimpse of the crowded days from 8 November to the end of the month -- tantalyzing to the present day reader because these men were too busy to write the complete story.**** This was a period of investigations of flashing lights, rapid making of contacts, hurried searches of buildings and rounding up of suspected collaborators.

Exaggerated Reports Cause Concern

Certain extravagant reports of exploits of Counter Intelligence Corps agents with the Western Task Force have caused concern to some of the men who were there, especially the report that 100 enemy agents were

1567

captured during this period.* As Major Stephen A. Spingarn phrased it in a letter written in December 1944 after he had become Chief of Fifth Army CIC in Italy; "It is believed that these exaggerated claims of counterespionage achievement, which are widely known to be thoroughly watered, can only serve to cast doubt upon the very real achievements which have been made in this and other theaters.... It is the considered opinion of this officer...that not only were there not 100 agents captured by CIC...during the period named, but it is doubtful if five documented cases could be furnished in which CIC captured an enemy agent.... French counterintelligence agencies did capture a good many agents and in some cases the CIC did assist the French, but this officer knows of some instances where the French caught and executed spies before the CIC was aware of their capture...."

Another critical analysis was written at the same time by Gerald J. Weber, who, a corporal when he went in with the Western Task Force at Fedala, later received a battlefield commission and a Bronze Star and, by the end of the war had risen to captain and was placed in charge of the Sub-detachment at Salsburg. "CIC agents were inexperienced and inept when they arrived in French Morocco, lacking training of any sort for the actual work of hunting down spies," he wrote. "Experience taught them a great deal, working with European civil and police authorities, working with foreign military agencies, learning how the job of spy-catching might be done, all of which was of great value to them when they were in a position to really begin work in the field of counterespionage.

"What CIC was really able to do in French Morocco," he continued, "was a good job of political and economic reporting. An immense amount of material was gathered on personalities and politics in Morocco, and something of the general picture of international or at least foreign, politics.... The experience taught CIC something about the psychological factors that must be faced by a counterintelligence unit in wartime. They learned what hysteria, rumor and fancy can do to distort simple and innocent facts into grave security cases. They learned that a small light shining from a house a hundred miles inland could not be a signal to enemy submarines. They learned that the way to find out about an unusual phenomenon was to go directly and look into the matter, and not to lie in the woods for a week watching it from afar and making theories about it."

Lessons Learned from Operation TORCH

In summarizing the lessons learned from Counter Intelligence Corps use in Operation TORCH, with Western Task Force, Colonel Parsons

*Ltr to Chief, CIC, AFHQ, subject, "Article on Counter Intelligence Corps Operations in North Africa in MID, War Department Publication, "Military Reports of the United Nations," #12, dated 15 Nov 43, from Stephen J. Spingarn, Major, Chief, CIC, Fifth Army, dated 7 Dec 44; and attached statement by Gerald J. Weber, Special Agent (L-9) (R)

pointed out a serious handicap which continued to be the theme song of many Counter Intelligence Corps reports for a long time:

"The absence of approved Tables of Organization for Prisoner of War teams and Counterintelligence and Censorship personnel has proved a distinct handicap, absolutely preventing the promotion of deserving individuals or replacement of personnel. It is recommended that the T/O for a Task Force Headquarters, now approved by the Chief of Staff as a guide only for limited distribution, be approved and that similar tables be prepared for a reinforced Corps operating alone.... Without a Table of Organization, Counterintelligence sections...have no means of procuring or replacing either organizational or personal equipment."*

Lack of the proper planning and issuance of equipment was pointed out. The Counter Intelligence Corps had no assigned vehicles and had to depend upon "liberated" civilian cars for transportation. And then, Colonel Parsons added, they had to be very careful where they were seen in these cars lest someone with higher authority decided to "re-liberate" them. Yet the Western Task Force CIC Detachment carried in with them 25 pounds of moulage! There were no radio monitoring equipment and no directional finders, which made it impossible for the Counter Intelligence Corps to bring to fruition their investigations of the many rumors of clandestine radio transmitters. At one time it seemed very probable that messages were being sent to Vichy from the Jean Bart, but this could not be authenticated because of the lack of equipment.**

Colonel Parsons also stressed the need of training Counter Intelligence Corps agents and the training of Divisional staffs in the use of agents. The necessity for combat training was pointed out by Parsons as it was by many other officers in the months to follow. "Officers who are not highly trained in the tactical doctrine, organization and equipment of our own army, or who have not had extensive duty with troops," he pointed out, "are of no value to the G2 Section."

Colonel Parsons made further recommendations which were to become monotonous in their repetition, chief among which were the need for linguists and the importance of selecting Counter Intelligence Corps agents on the basis of general background rather than on the basis of police experience.

The confusion resulting from a number of intelligence agencies operating in the same area, independently and often at cross-purposes, was recognized in the recommendation that "all intelligence activities in any area should be under control of the Army G2." He pointed out that all these agencies were operating independently in French Morocco:

*Lessons Learned from Operation TORCH, Western Task Force, 24 Dec 42 (I-79) (S)
**Interview with William B. Parsons (Colonel, Reserve), 13 Sep 53

British Army, U. S. Army, U. S. Navy, Office of Strategic Services (OSS), Office of War Information (OWI) and Consular Agencies. His recommendation was not adopted and, although the Counter Intelligence Corps later was able to set up excellent liaison with most of the other Allied intelligence agencies throughout the war, there was always a certain amount of duplication of effort.

Perhaps the biggest lesson learned in North Africa, Colonel Parsons pointed out, was that the United States must not rely upon other countries to furnish intelligence. Americans were unprepared to evaluate information from old-world sources, long schooled in "double-dealing" and professional spying, and we made some errors because of our lack of training and experience. Some friction developed with the British, who doubted our ability to handle intelligence situations and wanted to have all information channeled through them, even in the Western Task Force area where the British had no troops. We were unwilling to give up this control, Colonel Parsons explained; this was a testing ground for the rest of the war, and we had to learn to deal with the complex situations to be met in a field that was new to us.*

Center Task Force Moves In

The Center and Eastern Task Forces left England in convoy on 25 October, separating just before reaching the Straits of Gibraltar. Both parts sailed on into the Mediterranean, overtook slower cargo convoys sent on ahead and continued on toward Malta, as part of a well-planned maneuver to outwit the enemy. At sundown on 7 November each section wheeled southward, the Center Force at attack in three areas near Oran, the Eastern to hurl its strength against both sides of the city of Algiers as well as the port itself.** Here, too, the code "Play Ball" was flashed when French shore batteries greeted the invaders with deadly fire. No official records of Counter Intelligence Corps activity with the Center Task Force are available, but part of the story has been reconstructed through interview with Leonard Bessman, who, with Crosby Lewis and several of the "specially trained personnel," landed with the headquarters section at Arzeu Bay, about 15 miles west of Oran, at H plus four hours on D-Day. They first seized four known enemy agents whose names had been given them in advance and then proceeded to Oran for their next target. Conick and Murphy who, accompanied also by "specially trained personnel" had been given similar initial assignments in their invasion areas, joined them in Oran and the whole group rushed to the Grande Hotel which advance information had indicated was the headquarters for the German-Italian Armistice Commission. In the hotel, which had been guarded by combat soldiers until their arrival, they found about 20

*Interview with William B. Parsons (Colonel, Reserve), 13 Sep 53
**Pictorial Record, U. S. Army in World War II, Office of Chief of Military History, D/A, p. 13

members of the Commission, who, seeing that flight was impossible, had changed from uniform to civilian clothing. Their claim to diplomatic immunity was disregarded; they were searched, interrogated briefly and turned over to proper authorities for shipment to England with other PW's. Numerous documents were seized during these first hurried days, but, as Bessman explained, they were moving so fast that those who seized them never learned the extent of their value.

Soon after the invasion, the soldiers who had been borrowed from the 1st Infantry Division returned to their units, and the remainder of the Counter Intelligence Corps agents who had been left in England arrived in North Africa. The Detachment set up travel controls, assisted the French police in tracking down suspected persons and attempted to develop military secrecy discipline among U. S. troops. They soon learned that another special assignment had been planned for them.*

Section 3

THE COUNTER INTELLIGENCE CORPS MISSION PROVES FRUSTRATING

By mid-November Counter Intelligence Corps agents with Western Task Force and with II Corps had finished their work in the actual invasion of North Africa. With a few glowing achievements to their credit and many lessons learned for future use, each group turned to planning its immediate missions which were highly different in nature. Agents who went ashore at Oran with II Corps were to go on (their numbers slightly augmented) through the mud, the setbacks, and the final success of the Tunisian campaign, while those attached to Western Task Force settled down to the anomalous role of a counter-intelligence agency in a liberated country where the strange turnings of political fate made it necessary sometimes to treat with respect enemies who should have been friends and to refuse to help those who really were friends.

This difficult and confusing situation is outlined in a Counter Intelligence Corps report sent to War Department G2 in February 1943:*

"The military, naval and civil administration cadres in North Africa are filled by appointees who either received their jobs from the Fascist Vichy French government after the Armistice in 1940 or who were esteemed worthy by that government of retaining their positions by reason of a long record of reactionary politics." This applied, the report charged, to nearly all in authority, from Darlan on down to mayors, judges and other civil servants in the villages. Whether their collaboration had been for personal gain or because of political convictions, these men, who were acceptable to only about a quarter of the population, were recognized as standing for "ideals which were diametrically opposed to those for which the Atlantic Charter states that British and American soldiers fight."

Darlan's support, the Counter Intelligence Corps reported, was alleged to be found in minority organizations, many of whose members had been on the automatic "pick-up list" prior to the invasion. Principal among these minority organizations, all targets of CIC, were the following:

1. The Parti Populaire Francaise (P.P.F.), Doriot's party.

2. Legion d'Anciens Combattants, Veteran's party under Petain.

*Memorandum for General Strong, subject, "The Counter Intelligence Corps in European Theater of Operations and North Africa," dated 15 Feb 43. (R-27; #344-349) (R)

3. Societe de L'Ordre Legionaire (S.O.L.), a group of "strong arm" men or "Brown Shirts," recruited from the Legion d'Ancien Combattants.

4. The Legion Tricolore, set up by Laval to fight the Allies, particularly Russia.

5. The "colons," wealthy agriculturists who aided the German and Italian Armistice Commissions in the systematic pillage of the country.

6. The Italians who, until 1939, could legally hold membership in the Fascist Party and who had coveted Tunisia as an Italian colony.

7. The Falangists, who had supported Franco and the Axis cause since 1936 and who similarly coveted Oran as a Spanish province.

On the other hand, the Counter Intelligence Corps report charged, the Jews, the Free Masons, the old-style Republicans of the Herriot tradition, and the DeGaullists, the four groups that had furnished the advance information that had made it possible for the TORCH operation to proceed so successfully, had been repudiated by the Allies as politically unsafe, and many of their members had suffered internment because of their part in aiding British and American forces. "...laws forbidding Jews to own property and to practice their professions are still in effect. One can still be prosecuted for listening to an American or British broadcast. On 22 December 1942, a man was brought before the court of Oran charged with being a Free Mason."

Darlan's assassination was observed by a "florid program of elegy" by our Psychological unit, thereby causing the population who had welcomed his removal to "regard us as ingenuous," the report stated, and pointed out that the appointment of Giraud as High Commissioner, followed as it was by the arrest of 12 DeGaullists, had made the Allies' cause even more unpopular.

"The situation is intolerable for all the pro-Allied elements," the Counter Intelligence Corps report continued. "It places British and American forces in a ludicrous position, divides them among themselves and offers ample opportunity to their enemies to contrive disaffection, sabotage, and armed insurrection. Insurrection is in many quarters considered quite possible in the event that the war on the Tunisian front should take a turn for the worse. Such an insurrection would be led by men whose identity is known to the Counter Intelligence Corps, but whom we cannot touch because of the narrow jurisdiction allowed us. Similarly we have not been allowed to investigate reports of arms caches and illicit radio stations."

That this almost intolerable situation was known to those with the responsibility of making the big decisions was little comfort to the Counter Intelligence Corps agents who, as was mentioned previously, found one of their principal missions to be that of political reporting. Merits of the "deal" with Darlan as one of military expediency has been discussed by many writers, but regardless of the high-level reasons, the Counter Intelligence Corps was faced with the consequences.

Counter Intelligence Corps Units Deployed for Static Mission

On 14 November, Western Task Force moved its advanced CP into Casablanca and the Counter Intelligence Corps Detachment established its headquarters in a girls' school immediately behind the police station, making use of French police personnel and files. Two days later all Counter Intelligence Corps personnel were relieved from their units and assigned to Western Task Force. Cameron was appointed Executive Officer and also Officer-in-Charge of territorial coverage from Rabat to the Spanish Morocco border. Since the group that had landed with the 60th Infantry Regiment in Port Lyautey were to be added to Cameron's detachment which was to have its headquarters in Rabat, and incidentally had not been heard from since the invasion, Ellis and Cameron drove to Port Lyautey to deliver the orders transferring the men. There they found the detachment in a small beach house, doing nothing, while the Chief of Staff and the G2, accompanied by Military Police, were out on a raid based on a report that an enemy agent was in hiding nearby.

"When they returned," Colonel Cameron wrote, "Major Ellis presented the orders relieving the CIC personnel from the 60th Infantry Regiment. This was effected, but not before some unpleasantness took place between us and the Chief of Staff, Neither the G-2 nor the Chief of Staff held CIC in very high esteem. Once again, the absence of training and initial guidance as to specific missions had paralyzed the Detachment."*

During the next several months Counter Intelligence Corps agents were deployed throughout French Morocco to meet such counterintelligence situations as might arise because of the many ports subject to sabotage, the long Spanish Moroccan border and a large population of unknown loyalty. This deployment further served to coordinate action, insure dissemination of information and provide a unified policy of liaison with French authorities. Personnel were placed in Casablanca, Marrakech, Safi, Rabat, Port Lyautey, Souk el Arba and Petitjean and later were further deployed to provide coverage for all of French Morocco except those areas covered by the Atlantic and Mediterranean Base Sections and a large part of Algeria.**

*Ltr from Cameron

**95 TF-3-2, G2 Annex, Operation TORCH, prepared by Lt Col Parsons, dated 24 Dec 42 (R)

Daily Counter Intelligence Summaries written during November and December 1942 give evidence of the rapid change of Western Task Force Counter Intelligence Corps mission from an active counter-espionage role to the static one of protecting the security of American troops and reporting the political situation.*

With the dissolution of Western Task Force in Janaury 1942, Counter Intelligence Corps personnel were assigned briefly to 1st Armored Corps, and then, on 9 February 1943, were attached to the newly formed Fifth Army. At about this time, on 4 February, the North African Theater of Operations (NATOUSA) was created as separate from the European Theater of Operations (ETO), but the Counter Intelligence Corps assignment to NATOUSA did not come until a little later.

Section 4

II CORPS REORGANIZED FOR TUNISIA CAMPAIGN

In December 1942, Colonel Benjamin A. Dickson, II Corps G2, reorganized the available Counter Intelligence Corps personnel into a Field Security Detachment.* Its mission was to go with II Corps into Tunisia where Allied Forces had been bogged down by the winter rains, after racing for the area almost immediately after the 8 November landing. German reinforcements shuttled in by the Luftwaffe during this slow-down had set up a bridgehead protecting the Bizerte-Tunis area and extending southward to cover the bases into the coastal plain leading to Sousse, Sfax and Gabes.** The town of Sfax, on the Tunisian coast, became a key point; if it could be taken and held, it would not only break the enemy's communications line but would prevent Rommel's army from joining up with the rapidly increasing German army in the Tunis-Bizerte sector.***

Colonel Dickson had only a handful of Counter Intelligence Corps men to draw from. He had the original four who had gone in on the invasion, Bessman, Conick, Lewis and Murphy; and four men who had arrived from England about 10 days after the invasion: Second Lieutenant James R. Gardner, Technical Sergeants Bertram R. Russell and Rudolph P. Gollomb, and Staff Sergeant Oscar Stradinger. Colonel Dickson added an Italian linguist, Master Sergeant Alfred J. Rapetti from the G2 Section; Privates George Abdo, Syrian-Arabic linguist, and Paul Paone, German linguist, both from Corps Headquarters Detachment, as drivers and interpreters; and Frank Leposa, driver-mechanic. After the defeat at Faid, they picked up a straggler, a native Algerian soldier who spoke both French and Arabic, and kept him, with official sanction, throughout the campaign. During the final weeks in Tunisia, Sergeant Clark B. Keeler and Technical Sergeant Alan F. Dinehart were added.****

These men he placed under command of Captain Horace Miner, described by General Bradley in A Soldier's Story as "a quiet, pipe-smoking professor of anthropology from Ann Arbor, Michigan, who had trekked across the Sahara from a native hut in Timbuktu to get into the war." Colonel Dickson closely coordinated the activities of these men who were described by General Bradley as "brilliant and versatile."*****

*****A Soldier's Story, by General Omar Bradley, p. 48

1576

The Counter Intelligence Corps contribution in Tunisia was unique. Counter Intelligence Corps agents roved the battlefront as Field Security teams, sometimes ahead of forward reconnaissance elements. They collected combat intelligence information, penetrated enemy lines to organize Arab nets, directed Pyschological Warfare operations, arrested enemy agents, and settled labor disputes -- all in addition to their regularly recognized duties, which included the responsibility for the security of Corps Headquarters, adequacy of the guard and password system, checking of civilians living near the CP, especially during the latter phases, and the handling of classified documents. On all Headquarters moves, they searched the old site for any documents which might be of use to the enemy, and at the first CP were responsible for camouflage security, using an artillery Cub plane for checking it.

Some of the Counter Intelligence Corps Tunisia activities were deleted from its future combat role as being too far removed from the Counter Intelligence Corps basic mission and to expensive in personnel -- two agents were captured and one was killed in Tunisia -- but these activities provided the basis upon which to plan the Counter Intelligence Corps combat mission.*

Horace Miner, now a Lieutenant Colonel MI Reserve, and Acting Head of the Sociology Department at the University of Michigan, has stated that one of the problems in planning the Counter Intelligence Corps role in Tunisia was the overwhelming concern of combat officers with defeating enemy combat troops and their reluctance to provide space for a unit which could not contribute directly to this goal; while its complementary factor was that there was practically no civil population in southern Tunisia to necessitate the use of agents for routine rear echelon security duties.

Miner added: "In the brief period in Oran when the Central Task Force was being reorganized into II Corps for movement to Tunisia, the Counter Intelligence Corps found that some of the civilians with whom highly placed Corps officers had become familiar (delicately put) were very bad security risks. Insistence upon this danger antagonized General Fredendall who initially refused to take any Counter Intelligence Corps agents to Tunisia with him." But Colonel Dickson had recognized the utility of the Counter Intelligence Corps, Miner continued, and finally secured the General's approval by stressing the possible use of the Counter Intelligence Corps in obtaining combat intelligence. Even then, the approval specified that the Counter Intelligence Corps unit must be called a "Field Security Detachment,"

*202-20.2 13157 G2 Report, Battle of El Guettar, 0 Mar 43-8 Apr 43 (Departmental Records Branch, Alexandria, Va.) (S); History of the 202d CIC Detachment (K-26) (R); and Letter from Horace Miner.

the name given to the British equivalent of the Counter Intelligence Corps. "Thus, for the Tunisian campaign, the CIC was carried on the II Corps roster under a unit designation which had no U. S. recognition," Miner said.

Miner paid tribute to Colonel Dickson, who not only directed the Counter Intelligence Corps in its first protracted campaign, but saw to it that they were not tied down with headquarters duties. "His explicit doctrine as Corps G2 was to serve the Divisions. As a result we continually detailed personnel to the lower echelons where they reported directly to the G2's and S2's, who came to find them very useful. This practice, I believe, created the demand for division detachments."*

Leonard Bessman also credited Colonel Dickson with being the person who visualized the Counter Intelligence Corps in an expanded role, and pointed out to General Fredendall the possible usefulness of the Counter Intelligence Corps, not only in achieving security after the taking of a town, but also in escorting reconnaissance companies and in locating enemy information of combat nature as well as counterintelligence. He also stressed their value in training troops of all echelons in the protection of our own documents of intelligence value.**

Colonel Dickson's theories on reconnaissance turned out to be well founded, Bessman explained. Early in the campaign, it was discovered that division reconnaissance units were not probing deeply enough to bring back reports of much value to commanders. On several occasions one or two Counter Intelligence Corps agents would go far beyond the reconnaissance platoon and bring back information at variance with the platoon's report. Invariably it would be learned that the Counter Intelligence Corps information was the more accurate. As a result of this it became almost usual practice for a Counter Intelligence Corps agent to accompany each reconnaissance platoon, not only because they were willing to probe deeper, but because they were more accurate and more detailed in their observations than the ordinary reconnaissance soldier, including in their reports such things as conditions of utilities and communications, and the presence of booby traps and mines as well as an appraisal of the possibility of enemy presence. The specialized selection of Counter Intelligence Corps agents and their training paid off in this combat phase.***

*Letter from Horace Miner
**Interview with Leonard Bessman
***Ibid

According to Miner, transportation for the unit was obtained by devious means. At first they had no assigned vehicles, but on arrival in Tunisia were given a three-quarter ton truck. "More than once," Miner wrote, "this rather inappropriate vehicle moved into disputed territory along with or ahead of reconnaissance forces." Their vehicle was obtained when General Patton personally approved a proposal by Crosby Lewis that he be given a half dozen native Goumiers, with jeep and trailer, to try to ambush an enemy patrol whose movements he knew. "The enemy abandoned the patrol, and the Goumiers rejoined their unit," Miner wrote, "but the jeep remained with the Detachment." While detailed to the 1st Infantry Division, Charles B. Conick and Oscar Stradinger captured an Italian motortricycle, thus Miner explained, "completing our final T/E!"*

For the Counter Intelligence Corps first combat engagement in Tunisia, Miner, Bessman, and Rapetti, with Leposa as driver, went forward to join the reconnaissance unit of a 1st Armored Division Task Force for a raid on the enemy strong point at Sened Station on 1 February. On the way the battle-wise CO of the unit moved them off the road into the desert, thereby escaping a disastrous Stuka attack on the armored infantry moving up the road a hundred yards away. On their arrival in Sened Station they took over a PW as a guide to avoid enemy mines and booby traps. The Task Force set out defensive minefields and withdrew that evening, but Miner and his team remained to search enemy headquarters, which paid off with the discovery of several codes and other valuable documents. A strafing attack on the following morning forced them to withdraw briefly, but they returned to continue their search of enemy mail and the interrogation of civilians for information on enemy tank strength until one hour before an enemy counterattack recaptured the area.** A cryptic entry found in the G2 Journal probably refers to this mission:

"0630A - 31 Jan - Capt Miner called at 0630A; Arrived OK - everything working out all right."***

The story of II Corps' early setbacks in Tunisia, its ill-fated attempt to push through to Sfax on the Gulf of Gabes, its defeats at Faid Pass and Kasserine Pass in February 1943, have been well recorded. The Germans were meeting success in their efforts to prolong the conflict in North Africa, although they had abandoned hope of final victory there. Counter Intelligence Corps teams operated with 1st Armored Division and the attached infantry units which bore the brunt of the fighting in this sector.

---

*Letter from Horace Miner

**History of 202d CIC Detachment (K-26) (R); and Letter from Horace Miner

***Red Vault - II Corps - Journal and File, G2 (Departmental Records Branch, Alexandria, Va.) (S)

Murphy and Collumb were up front with Combat Command "A" of the 1st Armored Division when the German Tiger tanks overran our forces at Faid Pass, raced through Kasserine Pass and on through the flat bowl that leads toward Tebessa and Thala. On 18 February, Murphy was killed and Collumb was taken prisoner, the Counter Intelligence Corps first serious combat casualties in World War II.*

A few days later, Miner and Bessman joined Combat Command "B" of the 1st Armored Division, which moved secretly to the west of Kasserine Pass, from where a counter-attack was to be launched. They took up their position at the crest of the only road over a range of hills behind which the Combat Command was assembling and stopped all forward-moving Arabs who might reveal to the enemy the concentration of armor. Those who tried to by-pass the road block were held in custody until after the attack was launched. During the attack they took action to stop the Arabs from building fires in the hills around the artillery positions, which they feared might serve as signals to the enemy positions, Bessman and Miner took their three-quarter ton truck up to the forward infantry line and then proceeded on foot, taking some prisoners, making unit identifications and searching captured positions for documents, which were transmitted to the S2. Native Algerian French soldiers, who had been left behind at the time of the first defeat, began straggling through the lines. All of these were interrogated, not only as a security measure, but also to obtain the information they had picked up about the enemy on their journey.

After Rommel was driven back, Bessman was detailed to find and arrest two Arabs who had stripped and abandoned an RAF officer who had avoided capture after being shot down behind enemy lines. One Arab managed to escape, but Bessman brought the other back for trial.

About this time an Arab line-crosser, who had been sent back by an infantry unit, was turned over to Miner for interrogation. The man admitted that he was a radio agent, trained at Colonel Fiedler's espionage center in Tunis, and detailed his mission, his code and the signal he was to use to indicate if he should be operating "under control." Bessman then took the three-quarter ton truck on up to join the reconnaissance unit of a new infantry division at the front which had been ordered to assist him in recovering the agent's radio in a village beyond our most advanced troops, but which was not known to be held by the enemy. "After a day of watchful waiting during which the reconnaissance unit refused to move into the town," Miner wrote, "Bessman took the truck in unescorted -- an uneventfully." Miner described this as the most striking example of the use of "this rather inappropriate vehicle."**

Early in March 1943, a rejuvenated II Corps, with Major General George S. Patton in command, was assigned the mission of launching a

*History of 202d CIC Detachment (K-26) (R); and Murphy's file in CRF
**Letter from Horace Miner

diversionary offensive at El Guettar while Montgomery's Eighth Army delivered the knockout blow on the Mareth Line. According to General Bradley:

"Soon after his arrival, General Patton called a conference of division commanders at Djebel Kouif to outline his plan for the offensive. Terry Allen's 1st Infantry Division, reinforced with the 1st Ranger Battalion, was to recapture Gafsa and push east through the mountain corridor at El Guettar on the road to Gabes. With the fall of Gafsa, the 1st Armored Division, with a regiment of infantry from the 9th, was to advance over terrain from which it had been expelled in the Kasserine attack, clear the pass at Maknassey, and threaten the coastal plain from that gateway. The remainder of the 9th was to be shifted south to assist the 1st Division when it stumbled into the hornet's nest that lay in the mountains beyond El Guettar."*

A further idea of the scope of the Counter Intelligence Corps achievements in Tunisia and its plan of operations, modeled after the British Field Security Police, can be obtained from the G2 Report for the Battle of El Guettar, from 8 March to 8 April 1943.** This plan was followed throughout the Tunisian campaign. The Field Security Detachment, according to the report, was attached to the G2 Section, with the primary mission of handling counterintelligence and security, with a secondary mission of combat intelligence. During the Maknassey - El Guettar offensive, one officer or non-commissioned officer of the section always remained at Corps Command Post, with direction of the activity of the Psychological Warfare Officer as part of his duty. The others operated as field parties of two members each. Each field party was a self-contained unit, carrying its own rations and bedding.

One field party, known as an "independent party," working closely with the Derbyshire Yeomanry, went out on special missions to employ Arabs for espionage and to assist reconnaissance units. Three field parties were attached to the 1st Armored Division and two to the 1st Infantry Division. One was withdrawn from each of these for attachment to the 9th and the 34th Infantry Divisions after these joined the offensive. These parties operated, in theory, under the G2's of the Divisions to which they were attached. In actuality, they operated more often directly under the G2 of Corps who shifted them around as they were needed.***

The independent party, headed by operated as an espionage section and, in addition to performing special missions themselves, organized an Arab espionage and counterespionage

network, securing their agents through the Gendarmerie and through the Caids and Kalifs of known anti-Axis sympathies. Confidential funds, access to special native markets and certain Quartermaster supplies were authorized as payment to the Arabs for their information. According to a plan worked out in February: "Initial requirements of QM supplies will be: 12 suits underwear, wool 2 piece, medium; 12 suits underwear, wool 2 piece, small; 24 prs socks, wool; 24 mattress covers."*

One of Crosby Lewis' missions south of Faid between 1 and 4 March was described by General Bradley: "Lewis learned of Dickson's desperate need for enemy Order of Battle intelligence. He darkened his skin with shoe polish and in company with an Arab set off across the enemy lines. Several days later Lewis reported back to Dickson with the information. Monk (Colonel Dickson) dressed him down for having gone AWOL and awarded him the Silver Star."** On this mission Lewis also arranged to make the Caid of Sidi Bou Zid responsible for the loyalty and movement of Arabs in the desert no-man's land between Faid Pass and Kasserine Pass.***

Dealing with the Arabs was always a touchy problem, at which Counter Intelligence Corps agents seem to have been adept. When the Allied push brought the fighting to Gafsa in mid-March, Conick, aided by a soldier from the Division who could speak the language, set up an office at Feriana where he developed information on minefields and the enemy evacuation of Gafsa from Arabs coming from the area.****

The field parties moving on Gafsa were provided with detailed plans of action before they were sent to the Division to which they were attached for special operations. They entered captured towns and positions with the first reconnaissance units and sent back enemy information through intelligence channels, thereby making it available to front line troops while in process of transmission to Corps.

The G2 Report credits the Counter Intelligence Corps with accomplishment of the following combat missions:

a. Enemy Command Posts, Observation Posts, communication centers, bivouacs, gun positions, vehicles and trenches were searched for documents, which were analyzed and the resulting Order of Battle information checked against observed enemy losses in materiel.

1582

b. Civilians in captured areas were interrogated to secure information of mine fields, enemy strength, equipment, dispositions, intentions, supplies, espionage, and location of enemy CP's and officers' quarters.

c. Espionage as well as interrogation of Arabs coming into our lines from enemy territory revealed enemy dispositions, armor, fortifications and activity.

d. Enemy technical materiel was retrieved from American troops, the location of fallen aircraft signalled to the Air Service Command, location of enemy fuel and ammo dumps to Ordnance.

e. Demolitions, mined areas, gun positions, road and terrain conditions were observed and reported.

According to the G2 Report, the Counter Intelligence Corps security missions included recommendations for the control and disposition of Arabs moving through the lines and transmission of such regulations to the Arabs through their leaders; recommendations for and supervision of regulations for the handling of Allied transients, the establishment of road blocks and the use of civil passes. They arrested persons on previously prepared "pro-Axis" lists; and arranged with French authorities for the trial and execution of spies; and for the disarming of the Arabs. They checked the camouflage of Command Posts; reported breaches of security of communications and documents and checked the Corps CP after each move to see that nothing of value was left to the enemy.

Civil relations missions performed were listed: securing of civil records; securing assistance of Arab leaders and giving them directions; evacuation of French citizens from front line towns; reporting instances of looting by American troops; and obtaining information from local gendarmes.*

When the II Corps attack was launched from El Guettar in two prongs, Miner went with the 1st Armored in the northern thrust toward Maknassey where he added to his mission a count of abandoned enemy artillery, including unit and caliber, a welcome bit of Order of Battle data to Colonel Dickson. Moving into the hills on the right flank of the drive, south of Sened Station, he narrowly escaped capture, but was able to report the location of a bypassed enemy infantry company supported by artillery. The company put up strong resistance on the following day before surrendering to a battalion attack.**

The "hornet's nest" mentioned by General Bradley in his book was the frantic effort of the enemy to shake off II Corps harassment of his flank while fighting for his life at the Mareth Line. II Corps

**Letter from Horace Miner

diversionary offensive was successful because it caused the enemy to divert panzer corps forces, thereby easing the strain on Montgomery's Eighth Army. But it was a painful experience for II Corps and its Counter Intelligence Corps agents, as they advanced over steep rocky hills, filled with crevasses where the enemy could hide, with every passable gap carefully planted with anti-tank mines. But they threw back the attack and moved on north to join in the final asault on Bizerte. General Patton departed to plan for the invasion of Sicily, and General Bradley took over II Corps.

Miner wrote of the capture of Bessman on 7 April. "Ordered to search for documents at Bordj el Hafey, which the southern thrust was to have captured, Bessman rode into a strong enemy force, General Patton having decided to bypass the position at the last minute. Bessman's jeep was drilled through by an armor-piercing shell. He brought the enemy under automatic pistol fire, covering the withdrawal of the driver to warn Colonel Dickson, who Bessman knew was to follow him shortly. Finally wounded by machine-gun fire, Bessman was taken prisoner, but Colonel Dickson was warned in time."*

For this Bessman was awarded the Distinguished Service Cross "for extraordinary heroism against an armed enemy."**

"On 7 April 1943," the citation reads, "Lieutenant Bessman attempted to enter El Hafey Bordj in advance of armored reconnaissance elements for the purpose of securing documents and other identifications in the area vacated by the enemy. He found a strong natural position, held by enemy machine guns, two field pieces and a tank. With great presence of mind, he sent his driver to the rear with information of the situation while he engaged with rifle fire, after calling upon them to surrender. He maintained a fire fight against overwhelming odds for at least two hours, enabling his messenger to warn friendly troops of the presence of this enemy force, which was in position to do great damage to any force approaching it on the Gafsa-Gabes road. Lieutenant Bessman never rejoined his unit, but has been reported as missing in action. His conduct was in accordance with the highest standards of the military service and reflected great credit upon himself and upon the Army of the United States."

An excerpt from Ernie Pyle's column shortly after this sheds further light, not only on this episode, but on the Counter Intelligence Corps operations as well:

"Northern Tunisia - (by cable) - As is bound to happen in wartime, your close friends sometimes disappear.... The closest friend I've got so far is Lt Leonard Bessman, a lawyer from Milwaukee.... We have almost definite proof that Bessman was captured and not killed....

*Letter from Horace Miner
**G. O. #33, Hq N Af TO, U. S. Army, 13 May 43 (Bessman's 201 file)

I've mentioned Lennie Bessman before in these columns.... His bravery was a byword among us long before he was captured. It was a bravery based upon idealism -- the invulnerable kind of bravery -- and it was inevitable that sooner or later he would die or fall prisoner.... He was up forward of our advance troops, for that was his job, and suddenly he found himself cut off, with a German tank in front of him and a machine-gun next on his side. Lennie jumped out of his jeep, pulled his .45 and yelled at the heavily armed enemy, "Come on out and I won't shoot!"*

The words, "up forward with our advance troops, for that was his job," gives a fair idea of how far removed was the Counter Intelligence Corps actual performance in combat from the textbooks at the school in Chicago.

But Bessman was to be heard from again. Writing of him in A Soldier's Story, General Bradley said, "Another of Dickson's most promising young officers was Captain Leonard M. Bessman of Madison, Wisconsin. After graduating from the University of Wisconsin, Bessman joined the Marine Corps in 1929 to fight as a private in the Nicaraguan campaign. Commissioned after having enlisted in the Army in 1941, Bessman was wounded and captured by the enemy while on reconnaissance with Dickson in Tunisia. In Italy he broke out of a PW camp to spend six months with partisans in the hills before making his way back to Allied Lines."**

In telling of this experience many years later Bessman explained that he and his driver ran into the enemy armor in a pass which, he had been told erroneously, one of our reconnaissance forces had gone through several hours before. He was wounded and captured while providing cover fire for the escape of his driver. His first feeling, he explained, was relief that he had left his Counter Intelligence Corps credentials and badge at Corps Headquarters. As a result the enemy assumed that he was an ordinary infantry Lieutenant, and, since they realized that they were doomed in North Africa, evidently considered that anything he could tell would be only of passing interest. They therefore respected his refusal to answer any questions beyond the routine, authorized ones. "They did try to get me to talk over the radio, assure me that my voice would be heard by my parents," he said, "but I merely laughed and they laughed too and said, 'You know better,' and I said, 'We all do.'"

Bessman made two unsuccessful attempts to escape before he was flown to Italy and hospitalized in a prison camp there. After his recovery he was taken to an officer prisoner of war camp.

*Ernie Pyle's column, undated, from Bessman's 201 file
**A Soldier's Story, by General Omar Bradley, p. 40

With the Armistice in September 1943, about five and a half months after his capture, the camp was taken over completely by the Germans. When Bessman learned that preparations were being made to transport them to Germany by rail immediately, he and two other lieutenants promptly began to survey the situation to find the best means of escape. The camp was surrounded by two barbed wire fences, about 15 feet apart, but the gate to the inside fence was left unlocked for the use of the sentries. That night they chose a time when two sentries had met in the area of the gate and had turned to go in opposite directions. They were able to slip through the gate and climb the outer fence and escape to a wooded section. They heard shots which they later learned were directed at them, but managed to escape to the protection of some Italian farmers. They had previously heard that most of the Italians, farmers particularly, were sympathetic to the Allied cause, and they found this to be true. For five and one half months they lived in the hills and in caves and were fed and cared for by the Italians, who also gave them civilian clothes.

They were discouraged by the Italians in their plans to break through the lines, because the area, a static one, was under constant patrol by the Germans and any person not in German uniform would be apprehended immediately. Finally the Italian underground informed Bessman and his two companions that a plan had been worked out. They were to go to a little canal and ask by name for a former American Italian who had been deported to Italy because he had been arrested for smuggling Chinese from Canada to the United States and who was now heading a unit in the underground. From then on they were passed from guide to guide, and, often accompanied by women, were taken finally through the lines, by way of a cemetery. In the meantime their party had been augmented by a few British officers and soldiers and a few civilians, until, with their two guides, they were a party of 12.

Their narrowest escape came on the last night, which they spent in the trap door attic of a farmhouse, in which two British officers already were hiding. A few minutes after their arrival German troops raided the house, but fortunately did not notice the trap door to the attic.

The following day they were taken to a British airborne unit to whom they were able to give considerable information concerning enemy ammunition dumps, gun positions and supply routes they had observed. The British immediately sent over bombing and fighter planes to attack these installations.*

Bessman was returned to the United States where, records have revealed, it was ruled by War Department officials that under no circumstances would he be permitted to return to the Theater because

*Interview with Leonard Bessman at NCICA Convention, Chicago, August 1954

of the danger of recapture.* However, a few months later, he was in Europe with the First Army CIC Detachment, where he was specializing in testing a German escape route near the front lines.

Lewis goes on Mission with Arabs

A scrap of paper pasted in the G2 Journal for 21 April 1943, and headed, "By telephone from Lt Crosby Lewis to SPEEDY2 (SPEEDY was the signal code name for II Corps) Via S2, 894th TD (Tank Destroyer Battalion) and G2, 9th Infantry Division," gives further evidence of the Counter Intelligence Corps activities on the battle front:

"To Colonel Dickson from HECTOR. Will confirm tomorrow reliable report enemy holding line J-324053 to J-335067 behind two separate minefields. According to local Arabs no enemy patrols in valley of Oued Sedjenane since before 13 April. Reconnaissance confirms only two possible crossings of Oued Sedjenane east of J-2083 are bridge at J-2303 and cement and stone ford at J-3306, latter impassable 40 hours after heavy rain. Am in liaison with SLIPPERY."**

This Lewis mission is further reflected in the coldly impersonal words of the official Operations Report for the period 20 April to 27 April, and the imagination must be called into play to see the dirty Arab costume, the blackened face, the rocky, barren mountains and the flies. Lewis was given the mission, according to the report, of obtaining information about the enemy from the local Arabs in the Oued Sedjenane Valley. This mission was hampered by the fact that the Arabs had been evacuated behind the lines and that contact was made with the enemy within 24 hours after he arrived in the area; however, "he was able to locate the extensive minefields in the area and to inform the units committed of their limits."***

The shift of II Corps to Northern Tunisia for the final drive on Bizerte and Ferryville on 23 April involved new problems for the Counter Intelligence Corps, as operations were now in an area densely populated with both French and Arabs. The Counter Intelligence Corps operated a civilian control system from an office in Beja until it was moved to Ferryville at the end of the campaign on 9 May. With the decision to evacuate all Arabs from the area except those required for the vital harvest of crops, the problem of determining which ones were good security risks became a consuming one; also, since the

*Bessman's file in CRF
**Red Vault -- II Corps Journal and File - G2, 13-30 Apr 43 (Departmental Records Branch, Alexandria, Va.) (S)
***202-59.2, Hq II Corps Office of CIC Corps Operations Report, 20 Apr 43, (Department Records Branch, Alexandria, Va.) (C)

movement of those permitted to stay was carefully restricted, espionage missions became less effective during the period.*

The successful attack toward the final objectives developed into fast moving, open warfare, and a team headed by Miner entered the French Naval post of Ferryville with an armored reconnaissance unit. Here a number of Counter Intelligence Corps targets had been assigned, including the Naval Headquarters, post and telegraph offices, police station, prison and enemy headquarters. As the only Allied troops who remained in the town, the Counter Intelligence Corps team was soon faced with a tense situation. Since the police were unable to deal with looting and riots against collaborationists, they had to call for infantry assistance until order was restored. On 10 May, the day after the Germans had surrendered throughout the II Corps sector, the French Admiral La Fleche, former Vichy commander in Ferryville, staunch Nazi collaborationist who had been active throughout the German occupation in suppressing Free French activity and resisting the Allies, returned to the city to command the Naval Post. ... ordered the Free French flags run down from public buildings and threatened the loyal chief of police with removal. His reappearance brought the dock workers and civilians to the verge of revolt, and it was evident that a quick decision was necessary. Miner made the decision and arrested the Admiral, accomplishing it without interference from his followers by picking him up early in the morning as he left his mistress' apartment. He then persuaded the dock workers to return to their work of maintaining our supply lines. For this and for his action at Sened Station, Miner was awarded the Legion of Merit.**

James R. Gardner headed the field part that entered Bizerte on 8 May ahead of the 9th Infantry Division, while enemy machine gunners and snipers were still active. He secured valuable records of pro-Axis organizations, siezed civilian mails, made contact with French government authorities and returned to report the situation to Division, thereby winning both a Bronze Star and a Purple Heart.

The Tunisian campaign ended 102 days after the invasion of North Africa. With its ending, II Corps participated in the first unconditional surrender of Axis forces to the American Army, and read with pride a letter of commendation from Brigadier General K. W. D. Strong, Assistant Chief of Staff, G-2, Allied Force Headquarters:

---

*202 - 0.3 (12052) II Corps Report of Operations, Capture of Bizerte and Surrounding Territory, 23 Apr-9 May 43 (Departmental Records Branch, Alexandria, Va.) (U); History of the 202d CIC Detachment (K-26) (R); Interview with James R. Gardner; and Letter from Horace Miner

**History of the 202d CIC Detachment (K-26) (R); and Letter from Horace Miner; and Ltr Hq II Corps, Subject: "Rear Adm Normad de la Fleche," dtd 25 May 43 (K C Depot - 6 - 10 - 283 (S)

"The activities of the Counter Intelligence Corps Section, II Corps, have been followed with keen interest by this office during past and current operations in Tunisia. Despite the lack of appropriate field training, adequate equipment and sufficient personnel, the section has borne casualties and other hardships with fortitude and has performed its mission with exceptional efficiency. As the first United States CIC unit to undergo extensive field service in this Theater, you have established a splendid example for other sections to follow. It affords me great pleasure to forward this letter of commendation."*

In commenting on our intelligence activities in North Africa, General Bradley pointed out a situation that has been noted by certain military leaders during every time of stress in which the country has found itself:

"In their intelligence activities at AFHQ, the British outstripped their American colleagues. The tedious years of prewar study the British had devoted to areas throughout the world gave them a vast advantage which we never overcame. The American Army's long neglect of intelligence training was soon reflected by the ineptness of our initial undertakings. For too many years in the preparation of officers for command assignments, we had overlooked the need for specialization in such activities as intelligence. It is unrealistic to assume that every officer has the capacity for field command. Many are uniquely qualified for staff intelligence duties and indeed would prefer to devote their careers to those tasks. Yet instead of grooming qualified officers for intelligence assignments, we rotated them through conventional duty tours, making correspondingly little use of their special talents. Misfits frequently found themselves assigned to intelligence duties. And in some stations G2 became a dumping ground for officers ill-suited to line command. I recall how scrupulousy I avoided the branding that came with an intelligence assignment in my own career. Had it not been for the uniquely qualified reservists who so capably filled so many of our intelligence jobs throughout the war, the army would have found itself badly pressed for competent personnel.**

Evidence of the courage and ingenuity of the "uniquely qualified reservists" of II Corps CIC is seen in the awards won by this small group: Distinguished Service Cross, Bessman; Silver Star, Lewis; Legion of Merit, Miner; Bronze Star, Gardner, Stradinger and Conick.***

---

*Ltr, Allied Force Hq, file B-369.513, Subject: "Commendation," to CO CIC Section, from Brig Gen K. W. D. Strong, ACofS, G-2, dtd 1 May 43 (K-26)

**A Soldier's Story, by General Omar Bradley, p. 33

***Decorations, Citations and Awards (A-5)

II Corps CIC Detachment, later redesignated the 202d, went on to Sicily and Italy. By the end of the fighting in Italy on 2 May 1945, the 202d had been in combat for a record-making total of 620 days; this was the Counter Intelligence Corps veteran outfit. Deactivation came on 26 June 1945, at Cormona, Italy.*

Captain Miner, Lieutenant Lewis and Sergeant Keeler, with Privates Abdo, Leposa and Paone as driver-interpreters, remained with II Corps for the invasion of Sicily. Lieutenant Gardner was assigned to Eastern Base Section and Dinehart and Stradinger, now commissioned a Second Lieutenant, to I Armored Corps, which actually was a "cover" name for Seventh Army, used during the planning stages for deception purposes. Russell became CO of the 3d Infantry Division CIC and Conick CO of the 9th, both having been commissioned as Second Lieutenants.**

The remaining members of II Corps went up to a bivouac area at Relizanne, near Oran, where they were joined by several new members, to prepare for the jump-off to Sicily. Roy Tozier, one of the newly assigned members, told of a significant incident during this waiting period. One morning, after a brief warning from Colonel Dickson, Brigadier General William B. Kean, General Bradley's Chief of Staff, came to inspect II Corps CIC. "The inspection went well," Tozier recalled. "The men were as clean as the dust permitted, and the guns were presented properly. When the inspection was over, General Kean said, 'At ease,' and made us a little speech which I won't forget:

"General Bradley has asked me to come over not only to inspect you, but to talk to you. I remember some of you from Tunisia, and I hope to get to know the others who have come as replacements. General Bradley is proud of the work you did in Tunisia, and he expects even more of you in the coming operation. We're glad to have you with us. Good luck!

"The sieve of my memory may have missed a few words or a comma," Tozier wrote, "but, essentially, that is what he said. I wonder if you can imagine what that meant to us. We were a strange group of college men who might have been officers in other branches of the service, but most of us had chosen to be corporal and sergeant-agents. After the message from General Bradley, there was no doubt in our minds that the CIC was the best of all possible places to be."***

***Letter from Roy Tozier

Section 5

CONSOLIDATION OF ORGANIZATION AND MISSION

While II Corps men were fighting in Tunisia, their activities and accomplishments were closely studied by Counter Intelligence Corps and G2 planners at AFHQ, who were charged with defining the Counter Intelligence Corps new role of counterintelligence for rear echelon areas and field security with combat troops. The problems of organization posed by this dual role threatened at times to overshadow all of the Counter Intelligence Corps accomplishments and lessen its future usefulness.

As for the static mission, the Counter Intelligence Corps had managed by the end of January 1943 to get its feet well on the ground, but planners knew that unless certain problems were solved quickly, by firm organization and definition of mission, even this gain would be lost when the Counter Intelligence Corps teams who had been committed to the invasions of Sicily and Italy moved out.

The static mission continued to be mainly that of political reporting, but agents were also obtaining good experience in hunting down enemy agents, sifting rumors, and setting up effective security measures. A general counterintelligence situation report for the static area of North Africa for the first half of January 1943* reports increased efficiency in the interchange, evaluation and dissemination of information and the establishment of closer liaison with French Security Militaire officers in all districts. Border and visa control for the Spanish Moroccan border instituted in cooperation with French authorities and resulted in considerable intelligence information.

The friendliness between Franco's Spain and the Axis and the proximity of Spanish Morocco made it necessary that an alert be maintained against a constantly rumored influx of Axis spies. It was reported that enemy agents were entering French Morocco under cloak of Spanish diplomatic immunity, not only for espionage purposes but with the mission of persuading various leading Arabs to organize native revolts. One widely circulated rumor of an anticipated native revolt caused the French to close the port of Casablanca to all natives on the night of 10 March, with the loss of 3,400 man-hours work.**

Increased friendliness of the native population was noted, but French groups who were dissatisfied with the regime in French Morocco were continuing to expect the removal of all leaders who manifested collaborationist sympathies before 8 November 1942.

---

*Counter Intelligence Summary, Hq I Armored Corps, ACofS, G-2, CI Section, 27 Dec 42 to 15 Jan 43 (L-9) (R)

**Counter Intelligence Summary, Hq Fifth Army, 25 Mar 43 (L-9) (R)

Security awareness was increased by various means. Among these was the interception of indiscretions of U. S. personnel in discussing classified military and naval information, via a monitoring unit operated by three Counter Intelligence agents in the offices of the commercial telephone exchange in Casablanca.*

Recommendations Sent to War Department

But Counter Intelligence Corps and G2 officers at AFHQ, feeling that experiences in North Africa had proved that the Counter Intelligence Corps mission had expanded far beyond that previously visualized, were busy trying to define this mission within the limits of what they knew would be expected of them by field commanders and sending forward to the War Department recommendations for changes in organization and training to meet these demands. Certain problems which continued to harass the Counter Intelligence Corps throughout the war were outlined in a letter to the Chief, CIC, dated 15 February 1943, written by Lt Edwin B. Smith, who had been vouched for by AF Hq as a person well acquainted with the situation there.**

"Partly because the CIC is a function of Command, there has been a persistent failure to adhere to War Department policy. The several detachments within the Theater have been regarded by the G2's or the Headquarters Commandants of their respective units as private property to be housed, equipped, assigned and relieved of duty without consultation of higher authority.... Many intelligence officers have no knowledge of the existence of the CIC, and many G2's and Chiefs of Staff have an inaccurate concept of its mission. There should be thorough instruction in the subject at the Command and General Staff and Intelligence Training Center schools, and there should be a positive program to inform responsible officers already in the field. Much of the mystery surrounding the CIC will be dissolved by the early distribution of the basic field manual accompanied by a cover letter from the War Department."

The manual to which he referred had been drawn up by Major Wise and Colonel Sheen before CIC embarked on its first combat mission in November 1942 and, with Wise piloting it through all the necessary branches of G2 and G3, had finally been accepted as a tentative Field Manual on 20 November 1942. Prepared before the Counter Intelligence Corps had spent one day in a combat zone, it contained sufficient guiding material and information to serve as a basis for a working detachment; yet it still had not been distributed to the persons who needed the information.***

*Counter Intelligence Summary, Hq I Armored Corps, ACofS, G2, CI Section, 27 Dec 42 to 15 Jan 43 (L-9) (R)
**Memorandum for General Strong, subject, "The Counter Intelligence Corps in ETO and North Africa," dated 15 Feb 43 (R-27; 344-349) (R)
***WD Basic Field Manual, MI, CIC (Tentative), 20 Nov 42 (R) (C-56)

Recommendations also stressed the need for acquainting finance officers with the policy of funds for Counter Intelligence Corps expenditures, a policy which had been promulgated by the War Department, but of which finance officers were uninformed. Transportation difficulties were outlined. In the field the Counter Intelligence Corps Detachment was required to operate semi-independently of the headquarters to which they were attached, and yet had to depend upon these units for transportation which often was not forthcoming. A Table of Basic Allowances, the recommendations stated, would eliminate this problem.

Pleas for linguists were sent forward with statements ranging from, "It is believed that future operations will require that CIC detachments be composed of personnel at least 80 per cent of whom speak the language of the particular country involved," to "CIC personnel who do not speak the language of the country in which they are to operate are valueless."

With the Counter Intelligence Corps experiences in North Africa as a basis, changes in the curriculum at the school in Chicago were recommended. It was pointed out that subjects taught at the school were aimed at static conditions in the United States and could not be applied to battle conditions where the Counter Intelligence Corps team had to operate in a forward position as a highly mobile, if noncombatant unit. Subjects dealing with such topics as the Civil Service Act, laws of search and seizure, burglary and warrants, the making of plaster casts and moulages, and military correspondence should be dropped in favor of some training in armed and unarmed combat, map reading and Order of Battle Intelligence.*

Records reveal an unusual spirit of cooperation at all levels between the Counter Intelligence Corps Detachments and Britain's counterpart, the Field Security Section, and at Allied Headquarters the two organizations shared the same office and pooled their personnel and equipment for maximum efficiency. Counter Intelligence Corps reports from this period readily recognized the superiority of training and operation of the British units.

The Mediterranean Base Section was set up to cover the ports of Oran, Nemours, Arzeu, and Mostagnem, and plans were made for the establishment of additional Port Sections for the protection of shipping until footholds could be gained on the continent. However,

*Consolidated CIC Monthly Situation Summary, ETOUSA, to ACofS, G2, WD, (U), Washington, D. C., 8 Feb 43 (R-27, -- 351-364); and Ltr, subject, "CIC ETOUSA," to Chief of CIC thru ACofS, G2, WD, Washington, D. C., 28 Jan 43 (R-27, pp 365-395) (R)

early in March 1943, Brigadier Mockler-Ferryman outlined the need for certain static Counter Intelligence Corps units in addition to these Port teams.* These units were a necessity, he pointed out, since the Counter Intelligence Corps detachments assigned to units of Fifth Army would move out when Fifth Army was assigned a fighting mission, a plan which then was well under way. A static organization should be in operation so that "the subsequent commander responsible for the territory may have at his disposal personnel acquainted with local conditions who will remain in the area irrespective of the moves of units necessitated by operations of war." This organization, to be known as the Moroccan-Algerian Detachment, was to be allotted five officers and 40 men, to be increased by ten men as soon as sufficient personnel became available. However, it was not until 1 August 1943 that such a detachment, known as the Border Control Detachment, was established to continue operations after Fifth Army left North Africa for Italy.

Needs for the tactical units again were considered with the conclusion that an "irreducible minimum" would be one officer and five enlisted men per division; two officers and 11 men per Corps; and five officers and 40 men per Army Headquarters. At the time of Brigadier Mockler-Ferryman's recommendations mentioned above, Counter Intelligence Corps personnel in North Africa totaled 29 officers and 150 enlisted men. These included the original Western Task Force and II Corps men, 40 men who had arrived in February from the United States under command of Captain Floyd C. Snowden, a few who had been locally recruited, mainly from G2 staffs, and a few who had come in with other units. These men were now distributed as follows: Allied Force Headquarters, two officers, seven enlisted men; Fifth Army, 17 officers, 96 enlisted men; II Corps, two officers, five enlisted men; VI Corps, two officers, 11 enlisted men; Mediterranean Base Section, four officers, 14 enlisted men; and North Africa Air Force, two officers, 17 enlisted men. His estimate of an "irreducible minimum" was 60 officers and 390 enlisted men.

In about mid-March 1943, with the arrival of a detachment of 27, under command of 1st Lieutenant John Rubsam with 1st Lieutenant John Crystal as executive, the Atlantic Base Section was set up to cover the ports of Casablanca, Fedala, Port Lyautey, Safi, Mogador and Agadir. Later the Eastern Base Section was set up to carry part of the load along the Mediterranean coast. This detachment was under command of Captain Ralph Powers, who later was to become CIC Chief for AFHQ and to win a Legion of Merit award for his work in both positions.**

**Decorations, Citations and Awards (A-5)

Lack of Control a Handicap

Records of this period are confusing. Almost the only conclusion that can be drawn is that the situation itself was confusing. Each Counter Intelligence Corps Detachment and sub-Detachment in the outlying areas seemed to be working away at what it considered to be its mission, cooperating with or wrestling with its G2 control according to the personalities involved, obtaining transportation through the generosity of unit motor officers and tapping other sections for necessary supplies. Counter Intelligence Corps units had been supplied with equipment for fingerprinting and moulage making, handcuffs, listening and recording devices, cameras and developing facilities -- all the equipment that a highly specialized investigative unit in the United States could need. Those concerned declared that much of this equipment was of no value in a combat or near-combat situation, and actually represented a burden, especially when it had to be moved from place to place in borrowed jeeps.*

An illustration of the state of confusion and the need for overall policy planning may be seen in a report written by Major Wise in March 1943, based upon an interview with an agent returned from North Africa for hospitalization. One difficult problem in his particular detachment was concerned with clothing. Each morning they would line up in the street for roll call in uniform and then go into the house to change into civilian clothing for their day's work. All members of the detachment were required to stand frequent formal inspections, regardless of the press of investigative duties at the moment. If a surveillance were underway, it had to be dropped -- and often was lost -- because of these inspections. Pay presented another problem: each month an agent was sent out from Casablanca to obtain the signatures of all the personnel spread out over the whole western part of North Africa. According to the report, agents were forced to spend much of their time on work having no relationship to their mission, including frequent duty as chaffeurs for headquarters officer personnel. Agents were greatly frustrated by the soft-pedalling of cases because of political considerations, and especially by the iron-clad rule that the names of all confidential informants must be furnished to headquarters, with little provision for protecting these names from persons who had no connection with intelligence matters.**

Fifth Army CIC units were deployed all over Morocco and Algeria from Safi to Oran; there were units with the Atlantic and Mediterranean Base Sections, with the North Africa Air Force and with VI Corps; and Counter Intelligence Corps men with II Corps were in the thick of the fighting in Tunisia. Planning was under way for the invasion of Sicily. Yet there was no centralized Counter Intelligence Corps

*Report of the General Board, USFET, G2 Section, Study #13, Nov 45 (I-89 (R) and interviews with James R. Gardner and John McDonough

**Memorandum for Colonel Roderick, 10 Mar 43, signed by Major Hugh D. Wise, Jr. CIC Depot, 6-12-310)

authority in the Theater and no administrative means of shifting agents as needed or of stabilizing their mission. It was keenly felt at Allied Force Headquarters that, from the lessons learned during the North African invasion, the Counter Intelligence Corps must assume the mission of counterintelligence regardless of previous concepts of the Counter Intelligence Corps as a static investigative organization.*

An interesting and humorous sidelight on the confusion of this period is furnished by Roy Tozier, now of San Francisco, who was one of the 27 who arrived in March for the Atlantic Base Section. On a bitterly cold night, 28 February 1943, they were loaded on a truck and taken aboard the "Andes" in New York Harbor. "No one told us where we were going," Tozier wrote, "but because we had been issued mosquito netting and because we knew that some Americans were in North Africa, we deduced we were going there!" After their arrival in Casablanca they learned for the first time that they had been preceeded by the Western Task Force CIC Detachment, the group that had made the landing on 8 November 1942. It was here also that they learned that some Counter Intelligence Corps men were with combat troops in Tunisia and that they too would go into combat in the next operation. Among his group, Tozier humorously added, "was Bill Tyng, son of the last of a long line of missionaries in China. Bill had been chosen for the Counter Intelligence Corps because he spoke perfect Mandarin Chinese. So he was sent to North Africa and he couldn't speak French. He worked hard to learn French and succeeded. When he mastered French he was sent to Naples where he laboriously learned Italian, fell in love and married a charming Italian girl. It was then -- and only then -- that he was sent to the Orient, leaving his bride in Italy."**

Early in February 1943, Colonel Hill-Dillon and his American assistant, Lieutenant Colonel Roy A. Stephens, joined in an appeal that Colonel Sheen, former Chief of CIC, who was then on duty as a Counter Intelligence Staff officer in the ETO Headquarters in London, be sent to North Africa to help in establishing some kind of uniformity among Counter Intelligence Corps detachments and in coordinating their activities under Allied Force Headquarters.*** Colonel Sheen, an aggressive and practical staff officer, long a visionary of forward area counterintelligence as a Corps mission, arrived in Algiers on 15 March 1943 and, after 60 days temporary duty at AFHQ, was assigned permanently, and is credited with establishing administrative order out of chaos.

1596

CONFIDENTIAL

Colonel Sheen immediately made a tour of Algeria and Morocco where he saw at first hand the countless problems; inadequate T/O's,* where there were any T/O's at all; financial inequalities -- in many places Counter Intelligence Corps agents who were separated from their units were unable to obtain commutation of rations; unequal division of French linguists; lack of transportation; little provision for promotions; and misuse of the Counter Intelligence Corps by G2's and other authorities. Upon his return to Algiers, Colonel Sheen set up four goals in order of their urgency: the creation of a central Counter Intelligence Corps authority which would unify the Corps within the Theater; a directive establishing the mission and organization of the Counter Intelligence Corps in the tactical operations then being planned; the establishment of a training school in North Africa to instruct Counter Intelligence Corps personnel in the combat counter-intelligence mission and to prepare them for life in the field; and a definition, in the form of a directive from higher headquarters, of the unique functions of the Counter Intelligence Corps in its static role in the North African Theater.

Certain Goals Attained

The first of these he accomplished on 20 April 1943 with the establishment of the North African Theater of Operations, United States Army, (NITOUSA),** Counter Intelligence Corps Detachment to which all Counter Intelligence Corps personnel in the Theater were assigned, although remaining for duty in their present stations. From then on, all Counter Intelligence Corps personnel arriving in the Theater were assigned to this Detachment, which had the authority to place them on detached service with combat or service units anyplace in the North African Theater. This Detachment soon acquired the permission of the Theater Commander to issue its own travel orders. Major Edward L. Ray, Jr., who had come to North Africa with invasion forces as Commanding Officer of the Counter Intelligence Corps group attached to Allied Force Headquarters, was placed in command, with Major Vincent W. Thill as Executive Officer.

With this initial step out of the way, Colonel Sheen, accompanied by Major Ray and Lieutenant Hoegaard-Jensen, who had been selected to command the projected Field Training School, visited the Tunisian front to examine at first-hand the activities of Counter Intelligence Corps agents there who were operating as a Field Security Section with II Corps and to consult with Field Security Personnel of the British Army. This trip, which took the party to advance posts observing the to-be-famous Hill 609 and the tremendous British artillery barrage before Enfidaville, furnished the basis for a formalized tactical counterintelligence mission, which was put into practice by the Counter Intelligence Corps a few months later in Sicily and the Italian mainland.

*Tables of Organization

**Ltr: Hq NATOUSA, File - AG - 322.099/046 A-M- Subj: "Constitution and Activition of CIC Det NATOUSA," dtd 20 Apr 43 (C)

Upon the return of the party to Algiers, there began a period of feverish activity during which the headquarters of CIC Detachment NATOUSA was set up in a two room villa at 55 Rue Foureau Lamy, a few hundred yards from Allied Force Headquarters in the St. George Hotel; a CIC Tactical Directive and a Table of Basic Allowances for Tactical Units were published, and a Field Training School was launched. It was in a very real sense a race against time, for the headquarters of Force 141, assigned the task of planning the invasion of Sicily, had asked and had been promised, that when the United States troops embarked for the operation against Sicily, every division and every Corps would be provided with a fully trained Counter Intelligence Corps unit, in addition to a section for the Seventh Army itself and two separate Port Sections attached to the Army headquarters.

With the publication on 10 June of a NATOUSA CIC Tactical Directive,* based upon the War Department (Tentative) Field Manual, first published on 20 November 1942, and broadened in scope by lessons learned during actual field operations in North Africa, and a Theater Table of Basic Allowances,** the Counter Intelligence Corps achieved a status upon which future planning could be built. The directive set up a Theater T/O under which promotions could be made, and provision for reinforcement of sections by the Detachment Commander when the situation demanded it. A Divisional section was defined as one officer and five enlisted men; a Corps section, two officers and 11 enlisted men; and an Army section, five officers and 45 enlisted men. Each section would operate under the general supervision of the Assistant Chief of Staff, G-2, of the unit to which it was attached. This directive furnished the basis for a very similar one published on 27 July 1943 in London for the European Theater.***

The Counter Intelligence Corps Mission Defined

Both directives stated the mission of the Counter Intelligence Corps as the prevention and detection of covert activities which might endanger the United States and Allied Forces. The ETOUSA directive states, "CIC Sections will not be used on Combat Intelligence missions," while the NATOUSA directive qualified with, "except those bearing on Security or in cases of emergency." This provision was subject to wide interpretation throughout the war.

**Ltr, Hq NATOUSA, AG 400.34-2 B-M, subj, "CIC Tables of Basic Allowances for Division and Corps," dated 6 May 1943 (C-35) (R)

***Ltr, Hq ETD, file AG 322 MGB dtd 17 Aug 43, subject, "The Counter Intelligence Corps, ETOUSA," dated 27 Jul 43 (R-27; #192 and R-27; #72-78) (R); and Ltr, Hq ETO, Maj F. A. Calvert, Chief, CIB to Col L. R. Forney, MIS, W/D, 22 Jun 43 (R-27, p 257) (R)

The only other major difference between the two directives was that while the ETOUSA directive assigned certain duties to the Counter Intelligence Corps "at the completion of the initial attack," in NATOUSA CIC was assigned to those duties "during the attack." Armed with maps showing enemy headquarters, important offices and public utilities in the target area; instructions as to the disposal of captured documents; and lists of suspects and persons known to be friendly to the Allied cause, Counter Intelligence Corps agents were to perform the following missions, either "at the completion of" or "during" the initial attack:

1. Search enemy headquarters, billets and personnel and seize significant documents.

2. Arrest known enemy agents and dangerous sympathizers and place less dangerous suspects under surveillance.

3. Contact and cultivate known friends to be used as informants.

4. Inspect public utilities, enemy supply dumps and all other installations requiring protection; and arrange for adequate guard.

5. Seize telephone exchanges and radio stations, including their records, and arrange for their protection against sabotage until they are turned over to authorized signal or communications personnel.

6. Stop all civil communication by mail, radio, telegraph or telephone except those of a local emergency nature.

7. Insure that all mail in local drop boxes is impounded and turned over as soon as possible to Field Censorship teams.

8. Transmit to the Provost Marshal all information within his purview, such as civilian controls, adequacy and extent of cooperation of civil police, and the extent of disorder, looting and sabotage.

9. Advise concerning the seizure of civilian arms.

10. Stop publication of all newspapers and other periodicals.

11. Familiarize themselves with local political, social and religious affairs and the character and associates of leading personalities.

12. Take necessary measures to prevent looting and destruction of enemy documents and materiel by our own troops.

During a period of withdrawal, the Counter Intelligence Corps was to search evacuated headquarters, bivouac areas, ammunition dumps and supply depots for documents or materiel which would be of value to the enemy, and if unable to safeguard such materials, destroy them by the most effective available means. They were further to check the control of refugees along routes used by troops to eliminate the possibility of enemy infiltration.

The Counter Intelligence Corps general duties included advisory responsibility for the security of headquarters, bivouac areas, supply lines and depots and water supply; the investigation of all cases of possible subversion or harmful rumors within the armed forces; and security education through periodic lectures.

Division Sections were to advance with the units to which they were attached, turning over to the Corps Section all information and responsibility concerning the area to the rear of the Division. The Corps Section would then occupy the area until the arrival of Army CIC Section, which, in turn, would hand over the jurisdiction to a permanent or static section upon the arrival of the Army Service Forces. No section would relinquish counterintelligence and security control over a town or area until relieved by the section attached to the next higher echelon.

Counter Intelligence Corps personnel were authorized to wear brassards on their left arms, bearing the letter CIC, and were not to be used for guard, fatigue or other normal company duties.

An interesting addition was made to this directive in July 1943, illustrating a reluctance to dispense with a Counter Intelligence Corps agent's services even in case of capture. The captured agent was directed to organize security with the PW camp; assist the Escape Committee within the camp or to organize one if none was in operation; and help maintain morale of fellow prisoners. He was to assist the senior officer or non-commissioned officer in the camp and to pass on to him any instruciions he may have received from "A" Force representatives, "if he is satisfied with the reliability of such officer." All Counter Intelligence Corps agents were also instructed by this directive to establish contact with personnel who had escaped from enemy hands and arrange for their passage to the nearest official intelligence officer responsible for interrogation.* Later, in plans for the invasion of the Continent, the Counter Intelligence Corps was given the assignment of such interrogations.

*Ltr AG 350.09-2 GBI-AGM, Hq AFHQ subj., "Counter Intelligence Corps," dtd 25 Jul 43. NOTE: "A" Force, mentioned above, is believed to be the same organization that later was known as "Special Forces," whose responsibility was with their underground activities. (KC Depot 7-6-58) (SECRET)

The publication of a Table of Basic Allowances by Headquarters NATOUSA on 6 May 1943 gave to Counter Intelligence Corps Sections their own transportation, three jeeps per Division Section and five per Corps Section, each equipped with SCR 536 radios, and armed them with cal .45 pistols, M-1 rifles with bayonets, Thompson sub-machine guns, hand grenades, and TNT with fuses and detonators. Additional equipment such as lock-pick sets, hand cuffs, binoculars, and field desks were alloted.

The Field Security School which opened at Aine El Turk under command of Lieutenant Heegaard-Jensen* had, of necessity, to limit its course to 20 days, since it was desired to send as many men as possible through it to meet the demands of the coming Sicilian and Italian invasions. Since the Counter Intelligence Corps had to be able to operate with and live with the Infantry, basic familiarity with Infantry weapons was included in the course, as were a physical hardening program and practical field training in map reading, first aid, scouting and patrolling, booby traps and anti-personnel mines. Lecture and discussion time were devoted to the Counter Intelligence Corps Field Security mission, the Corps relationship to other intelligence agencies, the British F.S.S., the O.S.S., O.W.I., and O.N.I.; enemy espionage and sabotage organizations; enemy Order of Battle; security of sea and air ports. Basic techniques such as searching individuals and enemy Command Posts, interrogations, securing of a town from a communications standpoint, identification of enemy documents, the use of TNT, and security lectures to troops were included. For some of the subjects, outside experts were brought in to lecture and answer questions. In no case was anything like absolute mastery expected. Time was short; counterintelligence in the field was a last-minute addition to the mission of the Corps, and experience was left to be the final instructor.

Writing about this school from memory ten years later, Roy Tozier, who was to move on to Sicily and Italy with the famed II Corps CIC Detachment, recalled that at Aine El Turk, which was popularly called CIC-By-The-Sea, located on a plateau overlooking the Mediterranean, they were instructed in detecting booby-traps, bayoneting dummies, boxing, codes for use in case of capture, document interpretation and pistol shooting. "But chiefly," wrote Tozier, "we made sand hikes. We walked a million miles in that sand, sinking in slightly above the knees each step. Apparently someone had the idea that the Counter Intelligence Corps needed toughening. Ridiculous. We had fought our way through some of the toughest stag lines in some of the best universities." Later, writing of Sicily, Tozier added, "Actually Sicily was our school. The only part of the curriculum of CIC-By-The-Sea that helped us were those blank sand hikes."**

*Ltr, "Training Program for CIC School to Open near Oran on 5 May 1943," to Sheen, from Heegaard-Jensen, 29 Apr 43 (Z-8) (R)
**Letter from Mr. Roy Tozier, August 1953

With the publication in May 1943 of a directive outlining the functions of the Counter Intelligence Corps in its static role in North Africa,* Colonel Sheen achieved the last of his first four objectives, but the task of educating unit commanders on how best to utilize the Counter Intelligence Corps in the accomplishment of the over-all mission was still ahead, as were the procurement of sufficient personnel to meet field team requirements and a recognition by the War Department of the changed mission of the Counter Intelligence Corps. As time went on, an increasing number of Field Commanders came to rely upon Counter Intelligence Corps teams for the accomplishment of specific missions, but the procurement problem remained acute, and certain echelons of the War Department did not come to see eye-to-eye with Colonel Sheen on the use of Counter Intelligence Corps for field security.

No "Meeting of Minds"

At the same time that Colonel Sheen was bombarding Washington with requests for additional personnel, for more basic combat training for CIC agents, and for changes in the curriculum at the Counter Intelligence Corps School in Chicago to meet the combat counterintelligence requirements, similar requests were being sent forward by Brigadier General James C. Crockett, Assistant Chief of Staff, G-2, at ETO headquarters in London.

In a letter to Major General George V. Strong, Assistant Chief of Staff, G-2, War Department, in July 1943, General Crockett pointed out that the original concept of the Counter Intelligence Corps as "a party of highly trained investigators somewhat on the lines of the F.B.I.," while satisfactory in the Zone of the Interior and the Communications Zone, did not meet the need in the combat zone, where the call for such investigators was limited. "Our own experience in North Africa and study of British experience in other theaters," General Crockett wrote, "indicates the necessity for a counterpart of the British Field Security Detachments. These Detachments must be composed of selected personnel, well-trained as soldiers, who must also have counter-intelligence training. They are not under-cover agents but aid in security education of troops prior to combat and perform specific counter intelligence missions of a positive rather than investigative nature in the Combat Zone.... CIC Detachments attached to Division and Corps Headquarters should... be thoroughly trained as combat soldiers in order to perform field security duties in the Combat Zone. Counter Intelligence Corps Detachments with divisions in this Theater have been performing less and less the duties of special investigators and more and more the duties of field security." General Crockett further stated that the allocation of

*Ltr, Field Office, CIC, AFHQ, subject, "Tactical History of CIC in Theater," dtd 15 Feb 44 (0-5) (U); and ltr NATOUSA, subj., "Counter Intelligence file AG 322-097 (BM, dtd 4 May 43 (C) (KE Depot 7-6-55)

of one officer and five men per Division and two officers and 11 men per Corps, for which Colonel Sheen in North Africa was begging, would be inadequate for operations on the Continent and asked that an additional pool of one officer and nine men per Division be set up at Army level to supply reinforcements to Divisions when needed.*

General Strong's answer to General Crockett detailed a number of steps that had been taken during the previous two or three months: the existence upon a minimum of eight weeks basic training; the establishment of a weapons course at the preliminary training schools in the Service Commands, intensification of physical training, the addition of a number of courses at the Advanced Training School at Chicago, and the opening of a CIC Staging Area in Baltimore. But the call for more men was firmly refused. "Due to the limited overall strength of the Counter Intelligence Corps," General Strong wrote, "it is not practicable to increase the size of the CIC Detachments attached to Divisions. Actually CIC Detachments with Divisions are being reduced to one officer and three enlisted men." General Crockett's case for the training of CIC in field security work was met with, "Every effort is being made to improve the CIC personnel in investigative, military and physical training. It is not believed that the CIC can properly do the much needed counter intelligence job with its limited personnel if it has to carry the field security load too."**

Letters to Colonel Sheen were written in stronger words. A letter from Colonel H. R. Kibler, Chief, Counter Intelligence Branch, on 8 July 1943 reads, "Requested increases in the authorized strength of the Counter Intelligence Corps have not been favorably considered by other General Staff divisions.... no immediate prospect exists for an increase in that strength.... Since the mission of the Counter Intelligence Corps is a rear echelon mission of neutralizing enemy agents, and does not involve combat intelligence or combat counter-intelligence, the personnel being sent to you will not be picked for their capabilities in combat nor will they be specifically trained for combat duties. It is the desire of the Chief, Military Intelligence Service, that Counter Intelligence personnel be used to accomplish the mission indicated above rather than combat duties."*** Colonel Kibler stated that 70 enlisted men, including 15 Italian linguists, were slated for shipment to North Africa within 60 days, but implied that would be all. Colonel Sheen's most recent request

*Ltr from Brig Gen James C. Crockett, ACofS, G-2, Hq ETO, to Maj Gen George V. Strong, ACofS, G-2, WD, Washington, D. C., 6 Jul 1943 (R-27; #229-230 (S)

**Ltr from Maj Gen George V. Strong, ACofS, G-2, WD, to Brig Gen James C. Crockett, ACofS, G-2, ETOUSA, dtd 14 Jul 43 (R-27; #69-70) and (R-27; 218-219) (S)

***Ltr to Col Sheen from Col Kibler, subj., "CIC Personnel," file MID 322.999 CIC (7-8-43), dtd 8 Jul 43 (R-11; #357-362) (R)

had been for an additional 180 men to bring the Theater T/O to its full strength of 437 men.

Colonel Sheen did not give up. "Regardless of the opinion of other General Staff Divisions of the War Department," he wrote on 25 July, "this headquarters is confronted with a serious problem in providing the minimum security (counterintelligence) measures essential to the protection of static installations, extended lines of communications, and tactical Air Force and Ground Force units, from the covert activities of the enemy. The only medium through which this task may be accomplished is personnel. At the moment of writing this letter we are receiving urgent requests from the Commanding General, Seventh Army, for additional CIC personnel to serve in Sicily."*

Colonel Sheen pointed out again the handicap suffered by the lack of a War Department T/O which was denying advancement to qualified enlisted men who were being offered commissions in other branches of the army. He attached a copy of the directive mentioned above and pointed out the sections pertaining to the use of the Counter Intelligence Corps as ordered by the Theater Commander, with the added comment, "Enemy agents do not confine their activities to our rear areas."

The interchange of letters continued without, as Colonel Kibler expressed it, a "meeting of minds."** In August 1943, Lieutenant Colonel Hugh D. Wise, Jr., then Deputy Chief of the Counter Intelligence Corps, left Washington for a tour of the ETO, North Africa, the Middle East, Iceland and Greenland, in an attempt to iron out some of the problems that beset Counter Intelligence Corps Detachments and charged with the responsibility of getting the Counter Intelligence Corps activities back in line with the War Department's conception of the Counter Intelligence Corps mission.***

The flow of recommendations continued -- recommendations for a Basic Field Manual to establish uniformity of mission and command; for changes in training to meet the changed mission of the Counter Intelligence Corps; for Tables of Organization to allow uniformity and deserved promotions; for Tables of Basic Allowances to ease the transportation and supply problem; and, above all, for linguists. Much was done to help the situation, both at War Department and at Theater level, but none of the problems were completely solved. Changes were made in training, but they came after the flow of CIC

agents to the combat areas had slowed to a trickle. The Basic Field Manual was still under consideration as this was written, eight years after World War II had ended.

Sheen Makes His Report

In a report to the War Department* in November 1943, shortly after his return to the United States for a short period of temporary duty, Colonel Sheen reviewed the lessons learned in North Africa and the steps taken to profit from them, and made numerous recommendations for immediate action that should be taken at WD level as well as for future planning. In general he classified the handicaps under which American Military Intelligence had been operating since its "resurrection" in 1940:

"1. Lack of appreciation of the importance of intelligence and counterintelligence due to the ignorance of these subjects on the part of a vast majority of officers of the Army;

"2. Untrained and unqualified commissioned personnel selected and assigned to duty as G-2's and S-2's, Ground, Air and Service units. In this connection it is the writer's opinion that graduation from the G-2 course at Fort Leavenworth does not constitute proper training of a G-2.

"3. Lack of support to the A.C. of S, G-2, War Department, from other General Staff divisions, especially the G-1. This situation exists in lower echelons as well;

"4. Entirely too much attention devoted to the subject of combat intelligence and not enough to counterintelligence, field security and the higher conceptions of strategic intelligence in the training of G-2 personnel;

"5. Antiquated methods of operation;

"6. Inadequate collection, faulty evaluation, and inadequate dissemination of intelligence, all as a result of the five handicaps listed above."

All of these factors, Colonel Sheen said, contributed to the fact that the counterintelligence situation, as it existed in North Africa, was "one of almost utter confusion." This state of confusion was enhanced, he said, by the operations of the following uncoordinated Allied intelligence organizations: "British Intelligence Service; the French Intelligence Service; the Office of Strategic Services (OSS); a partially trained, loosely organized American Military Intelligence Service; the American Consular officials, who, prior to the invasion,

*Ltr to ACofS, G-2, WD, Washington, D. C., subj., "Report of Counter-intelligence," dtd 19 Nov 43, signed H. G. Sheen, Lt Col, GSC (SGF Library Files)

had performed certain intelligence functions, and who wished to continue such activities; the North African Economic Board; the Office of War Information (OWI); Psychological Warfare; and Joint Intelligence Collection Agency." Each of these was attempting to counter attempts at espionage and sabotage from a myriad of organizations operated by the German, Italian, Spanish and Vichy governments.

Through the cooperation of Lieutenant Colonel Bill-Dillon, British Counterintelligence Officer at AFHQ, British and American security reached "a solid foundation of mutual respect and confidence," Colonel Sheen said, and intimate liaison was established with the French Securite Militaire (SM). Cooperation with other American intelligence organizations, however, was practically nil; and, in the case of OSS, and to a lesser degree, Psychological Warfare, their activities were such as to be a menace to U. S. Intelligence. Since the problems which arose in connection with OSS are treated at length in another chapter, Colonel Sheen's remarks are omitted here. Psychological Warfare, in direct contradiction to AFHQ orders that no civilians would be hired without G2 clearance, continued to employ numerous individuals who were carried on the G2 and French suspect lists. This was particularly dangerous since their work was of such nature that these employees could come into possession of highly secret information concerning future operations. In one case Psychological Warfare employed in their headquarters at Algiers a native who later was taken into custody by the Counter Intelligence Corps, turned over to the French and executed.

Colonel Sheen pointed out that experience had proved that there can be no rigid dividing line between positive intelligence and counterintelligence, and since the two are so interdependent, military intelligence should be so organized as to permit each to make use of the other. Based on experiences in field operations in North Africa, Colonel Sheen recommended that "serious consideration should be given to the organization of a unit within the Army which could be designated as an 'Intelligence Battalion,'" to consist of a headquarters and service company, a Signal Intelligence Company, Engineer Topographic Company, a Counter Intelligence Corps Company and a Prisoner of War Interrogation Company. Such a battalion, he pointed out, would be considered as Army troops and attached to the Corps Hq for service under Corps G-2, or in such manner as the situation might require. This battalion could be organized merely by utilizing already existing units and their equipment and placing such units into one organization under a single commander and under the control of the one man who needs their services most -- the G-2.

"The G-2 of any tactical unit is the only staff officer who must deal with unknown elements," he stated. "G-1, G-3 and G-4 at all times deal with known Tables of Organization, known Tables of Basic

Allowances, known supply, known terrain, etc. On the other hand, the G-2 deals with the enemy, his order of battle, his capabilities, his equipment, and his covert activities. This fact is not sufficiently appreciated by commanders and staff officers until after the first engagement with the enemy."

Colonel Sheen made numerous recommendations concerning matters previously treated in this chapter, such as need for linguists, need for training officers in other branches of the Army in the mission of the Counter Intelligence Corps, and increases in Tables of Allowances. In addition, he concluded his recommendations with the following, which has been made by many officers since:

"That the AC of S, G-2, War Department, convene a board of officers to study the organization of military intelligence in comparison to the intelligence services of other powers and to submit recommendations for the establishment of a permanent intelligence corps. Until our military authorities recognize the importance of intelligence, and authorize the establishment of a permanent corps of professional specialists in this field, the United States Army will continue to suffer from mediocrity in one of the fundamental factors of success in battle."

The Counter Intelligence Corps Ready for Sicily

By the end of June 1943, on the eve of the jump-off to Sicily, the NATOUSA CIC Detachment consisted of 42 officers and 207 enlisted men,* considerably short of the "irreducible minimum" of 60 officers and 390 enlisted men set by Brigadier Mockler-Ferrymen in March 1943. These men were spread thin to cover the static situation in North Africa as well as to provide CIC teams for combat in Sicily and Italy. Major Edward L. Ray, Jr., was in command of the Headquarters Detachment of three officers and two enlisted men; Captain Floyd C. Snowden, Fifth Army Detachment, eight officers, 44 men; Captain Murray C. Falkner, NAAF Detachment, three officers, 16 men; 1st Lieutenant James M. Eichelberger, AFHQ Detachment, one officer, five men; Major Maxwell J. Papurt, Atlantic Base Section, two officers, 15 men; Captain Ralph W. Powers, Eastern Base Section, three officers, 11 men; Captain Clarence E. Read, Mediterranean Base Section, three officers, 11 men; Captain Robert W. Tucker, Force 141, two officers, two men; 1st Lieutenant Paul A. Heegaard-Jensen, I Armored Corps, three officers, 11 men; 1st Lieutenant Jack B. Cameron, Port Section "A", I Armored Corps, two officers, 11 men; 1st Lieutenant Harry G. Costello, Port Section "B", I Armored Corps, two officers, 11 men; Captain Horace Miner, II Corps, two officers, 11 men; and VI Corps, Master Sergeant Arthur J. Ruston, seven enlisted men. Each of the combat divisions

*Roster, CIC Detachment, NATOUSA, 30 Jun 43 (R-11, p 374) (R)

was assigned one officer and five enlisted men with command as follows: 1st Infantry Division, Second Lieutenant James E. Ray; 3rd Infantry Division, Second Lieutenant Bertram R. Russell; 9th Infantry Division, Second Lieutenant Charles B. Conick; 2nd Armored Division, Second Lieutenant Robert R. LaBranche; 82nd Airborne Division, Second Lieutenant Albert J. Kummer.

The school at Aine El Turk was in command of Captain Kenneth G. Crowell, with a staff of three officers and five enlisted men. In attendance were 20 enlisted men, most of whom were to be assigned to units for the invasion of Italy.

Changes in personnel continued during the regrouping and reorganizing for the invasions of Sicily and Italy and for static coverages of areas liberated and conquered. In May 1943 Colonel Parsons had left for the United States to command the Advanced Counter Intelligence Corps School in Chicago, and Captain Snowden had taken command of Fifth Army CIC. In July 1943, Captain Snowden left to attend the field training school and later to command the Island Base Section in Sicily. Captain Stephen A. Spingarn became commander of the Fifth Army CIC Detachment, which was charged with planning operations for AVALANCHE, the invasion of Italy.

The Counter Intelligence Corps had finished its first trial in a long and increasingly responsible combat role. Official reports agree that these first agents were inadequately trained, their missions ill-defined. Thrown into their role in the last moments of invasion planning, they had substituted courage for the combat training they had not received, intuition for the missions no one had anticipated, and resourcefulness for a Table of Basic Allowances. In spite of all its organizational difficulties and frustrations, the Counter Intelligence Corps in North Africa had won one Distinguished Service Cross, five Silver Stars, five Legion of Merit awards, and three Bronze Stars, plus the warm commendations of most of the commanders and G2's under whom they had served. But there was little time to think of honors won; Sicily and Italy were just ahead.

Appendix 2

Excerpts from Diary of 2d Armored Division

CIC Detachment, 10 October - 23 November 1942

10 October: Transferred this day from Newport News, Va., where Detachment boarded the "Duck" -- U.S.S. Harris, formerly the President Grant, Dollar Line steamer. Picked for rations and administration by 1st Bn, 47th Inf, aboard ship.

19 October: (At sea en route Solomon Island) Arranged for housing men on hurricane deck. Holds too crowded. Arranged for mess of EM at non-com's mess. Day spent in ship orientation.

20 October: Letter directed to ... requested baggage search of Major ... formerly Quartermaster at ... Task Force "A" suspect.

21 October: Surveillance, Major ... 24 hours ... G2 re password. Lt LaBranche made ship survey of location of explosives ... Recommended guard be placed at all holds; forbid personnel from entering without pass. Army mail stopped from going ashore.

23 October: Required men to clean all guns; obtained ammunition issue. Study of Intelligence Plan.... Conference with Colonel Forde, G2; conference with Colonel Koch, Chief of Staff. Surveillance, 24 hours.

24 October: Surveillance. Discussed Prisoner of War plan with Major Hurley. Conference Colonel Koch re radio equipment. Cleaned guns. Shot Tommy-gun and .45. Acquainted men with tactical situation. Lecture on first aid. Special guard orders changed; 2 hours tour of deck after dark. Ship's guard on its toes.

29 October: LaBranche lectured on "Booby Traps." Surveillance. Further study of Intelligence Plan. French lesson. Studied German with Cokenias. Fox, Benjamin discovered fire in pantry. Gun cleaning. Exercise. Conference with General Harmon. Conference with Colonel Nelson, Signal Officer. Surveillance. Bridge game with SUBJECT.... Conference Major Chaffin to arrange landing. General orders issued empowering CIC to commandeer troops upon identification of agent.

1 November: Surveillance. Report that radio was sending from some ship in convoy. Conference Colonel Koch. Messages sent on 500 to 600 frequency. Conference Chief Signal Officer; learned that only two radios could send on this frequency. 177 Army radio and T.B.W. naval radio. Former ruled out because it must be generated by gas engine; latter hand generated. Must be on deck, however. Arranged

to have all radios taken up. Reported presence of two radios to Chief of Staff. Suggestion made that all plug entries be taped to prevent use of electric shavers. Reported that X-Ray and diathermy machines used vs. orders. Re-check of all radios. Check with Lt Craig re emergency radio with low frequencies.

4 November: Conferences with Colonel Forde and Colonel Koch re Intelligence Plan. SUBJECT kept under surveillance at all times; to be prevented from leaving ship at H-Hour.

8 November: CIC Detachment arrived at Safi; hit beach at 1000. Check on ; no such person or address. No one heard of Van Ruyn. Contact made with , Cafe Paris. Benjamin, Fox made contact Hotel de la France; has an American wife. Other agents made contact. Checked utilities -- not functioning. Lt Jensen shot out lights on hill. (3 for 3)

9 November: Agents made other contacts. Mitchell contacted Spanish refugee, soldier deserted who, for 200 francs, gave dope on Spanish and Italian situation. Picked up , member of S.O.L., pro-German. Arrested him after questioning. released by Colonel Nason of 2nd Armored Division (QM). Bombing at 0600 -- no agent hurt; two soldiers less than 100 yards away killed. Planes shot down. Checked at P.T. and T.* Contacted ; obtained information re Van Ruyn.

10 November: Benjamin, Fox, Funk and Jensen picked up Van Ruyn and wife who lived 70 miles NW of Safi. Group also disarmed fort at Oulida en route -- captured 10 automatic rifles and machine guns, 25 rifles, 8 prisoners. Van Ruyn, German agent, influential with Arabs and great friend of G.A.C.** brought to Safi for questioning. Pistol taken from Van Ruyn. M. Bedollet, described as ex-aviator, "most dangerous member of S.O.L." arrested in raid on airport. Two rifles, two pistols taken. W/T*** dismounted. Released by Colonel Nason.

11 November: Sniped at but no damage. LaBranche, Cokenias and McDonough moved into Post Office and took over communications. Enemy at Tlela (Souk), 16 miles west of Safi. Communications reported not cut. Matter taken up with Colonel Koch who ordered them out at front lines. More sniping at our pole climbers. Lines finally cut. LaBranche contacted M. Deburon (hardware store) who has 12 French (still fighting) who wanted to surrender. Arranged meeting. Benjamin made contact with men in Medina. Surrendered at 1000. Deburon gave list of S.O.L. Deshays, president of S.O.L., arrested.

---

*Post Telephone and Telegraph
**G.A.C. - German Armistice Commission
***W/T - Wireless transmitter

Appendix 2 (Cont'd)

House searched for W/T. Released after questioning and all members of S.O.L. rounded up.

12 November: 10 Italians arrested and taken to Marrakech. Only those listed as suspected (10) retained....; others released after questioning. Van Ruyn questioned. Admitted entertaining G.A.C. Denied influence over Arabs despite fact that some 300 chiefs owe him money. Van Ruyn intimate with Auer, German Consul. Contacted M. Coliac, Governor General. Picked up M. Douard for questioning. He is a member of S.O.L. and adjutant to Mayor. Other members of S.O.L. questioned and released. Everybody finally slept.

13 November: LaBranche established C/S* net. Contacted Attias, American protegee. Jensen, Benjamin to Casablanca.

14 November: LaBranche and detachment continued censorship of mail, handling communications. Benjamin, Jensen conducted investigation in Mazagan, mid-way between Safi and Casablanca. Arrested Italians. Determined members of S.O.L.; others who are subversive.

15 November: Jensen, Benjamin completed investigation in Mazagan. Everything under control; garrison friendly. Only Spanish consul suspected of espionage. LaBranche instructed to report to Casablanca for duty. Colonel Randall said to get rid of Van Ruyn. Completed report on Safi and Mazagan. Questioned Governor re city officials.

16 November: LaBranche to Casablanca accompanied by Van Ruyn and wife. Assembled intelligence on Mogador, 100 miles south of Safi. Report re Mazagan forwarded to Casablanca.
, who had been hiding out in Medina, arrested. Radio and W/T at his home dismantled. and Axis agent imprisoned at Marrakech. Benjamin, Cokenias and Jensen to Mogador. Seven prisoners imprisoned there. CIC interceded for release of two Englishmen, Cecil Broom and Mr. Gordon; released. Four French "Trouble-makers" imprisoned. and his son, Italians (suspected agents) imprisoned. , very friendly. Called General Martin at Marrakech and insisted we parlez with him. Obtained list of S.O.L. members and other pro-Axis persons.

17 November: Finished up in Mogador. Broome and Cohen, head of Elmaleh and Co. very helpful. Returned to Safi. Wrote report on Mogador. On return noted that French are complaining that they are unable to hear Allied newscasts because of radio interference.

18 November: Agents spent day checking on cause for radio interference that did not exist prior to invasion. Leads developed re Van Cotten, alias Kotten, secretary to Baldovini, Chief of Police. Report that Van Cotten is German SS agent.

*C/S - Countersabotage

Appendix 2 (Cont'd)

19 November: McDonough and Cokenias sent to MP station next to police station to develop leads to Van Cotten. Radio intercepter located on top floor Municipal Service Building behind skull and X-bone insignia by Agents Mitchell and Funk. M. de Johanie, Mayor, had key. Said interceptor had not been used since 1939. Both lying because there was no dust on knobs of machine. Mitchell reported re Spanish situation. Incorporated same into base report. Further information sought by Emilio, Spanish priest and agent suspect.

20 November: Captain Bassec, French Liaison Officer from Marrakech garrison, heard of our activity and insisted we accompany him to meet General Martin in Marrakech. Lt Jensen, Lt Isenberg accompanied Bassec. Met General Martin and apprised his G2 officer, Captain Ducredique, Deuxieume Bureau, and our Intelligence re Safi sector. Also advised that M. Coddacioni Durpois (De Gaullists) were going to paint "V" signs all over Safi; straightened out right of men to wear "V's." Martin explained that France has never been strong because of political disunion; that no more would he permit De Gaullists, Leftists, Free Mason, Legion Francais des Combattants, S.O.L., etc. That there was only one thing now -- France. Explained to him the activities of Douard in spreading anti-Ally propaganda and our suspicion of Van Cotten. General Martin advised he would send De Credique to Safi.

21 November: Accompanied Captain Bassec and De Credique to Safi. Interviewed Governor. De Credique went into action. The painting of Safi, as previously we were advised, took place. Codaccioni and Durpoix arrested. Van Cotten arrested and put in enforced residence at Marrakech. Douard given 24 hours to leave town. Lantenois, labor boss and assistant head S.O.L., called to Marrakech for conference with Governor. Inquiry made into illegal use of radio interceptor; advised that same might be used to drown out Axis propaganda. Further leads on Spanish situation.

22 November: On 20 November, villa one block south of Hotel Maraba, belonging to one Sego, flashed light signals from 2130-2200 in direction of Municipal Service Building. MP's stopped signalling; house placed under surveillance. Many repercussions re arrests. Had to pacify Codaccioni's and Durpoix's wives. It is believed that, since the arrest of the two ring-leaders on either side of the fence, there will be less trouble from here in.

23 November: Obtained new list of suspects; checks with old intelligence. Located 13 deserters from French Army. Attempted to get Colonel Randall to issue orders to prevent executions; no luck yet. Checked guards at all installations. Guards stationed at power company, dock, phosphate buildings, water plant and three bridges

Appendix 3

Excerpts from Counter Intelligence Summaries

Western Task Force

16 November: A rectifier-transformer, believed to be a part of a radio transmitter, was seized at the German Consulate. Searches of other Consulates were halted ... Acting upon a report from the U.S.S. Augusta, lights producing a silhouette for ships in the harbor and coming from an office building in the Place de France were extinguished ... Jacques Arnould, manager of the Hotel Majestique, was placed in custodial detention and documents found proving his pro-German sympathies and offering his services to Germany. Umberto Lumbroso, Italian national, and Charles Fornari, known to the Deuxieme Bureau as pro-Axis sympathizers, employees of the Hotel Majestique, also were placed in custodial detention... Charles Burzynski, German National, reputedly dangerous, employee of the Hotel Majestique, was arrested.... Information from a reliable source indicated that General Bethouard, pro-Ally, arrested because of his intervention in favor of the Americans, is held in prison at Meknes by order of General Nogues.... It has been reported that the P.P.F. and S.O.L. are hindering the recalling of Frenchmen into the Army and are endeavoring to form fifth columns.

18 November: Lists of French political prisoners are being compiled, and the possibility of detrimental action by General Nogues is under investigation in cooperation with the Deuxieme Bureau... Information from a source believed reliable indicates that Katrina Lieffrigg, German agent, is in Morocco, and attempts are being made to locate her.

19 November: French officials have provided this office with documentary evidence of the anti-American activities of General Nogues and his cabinet.... A French intercept station at Rabat is reported to be intercepting all American and British wireless messages and, according to the French Director of Communications at Rabat, is attempting to break the codes. Mr. Klein, director of Aeronautical radio for the French at Rabat, is reported to be disseminating information through the radio stations at Agadir and Fez, which are not under American control.

24 November: German and Italian activity in Spanish Morrocco, especially in regard to the activities of the German and Italian Armistice Commissions and the German Intelligence Service, is being intensified.... Attempts by French civilians to cause American soldiers to adopt the German attitude toward the Jews have been noted particularly in public bars. These attempts in part seek to make the

SECRET INFORMATION

Appendix 3 (Cont'd)

soldier ask himself, "What am I fighting for, and what am I getting out of it?" .... Information from a source, reliability unknown, indicates that German propagandists are leading the Arabs to believe that all Americans are Jews and later will take away what they have given to the country.

25 November: Reports of native discontent persist, including one statement that the French cut the sugar ration of the natives one-half immediately after the American forces landed .... Reports of use of bars and beer parlors by Axis agents as a source of information and of loose talk in such places by American soldiers and sailors continue. Surveillance by CIC agents has succeeded in substantiating parts of these reports.

27 November: Investigation has disproved the report that sniping of American troops by Italians was continuing at Fedala.... There are no confirmed reports of sniping, no snipers have been caught, and no victims of sniping have been brought into the Fedala hospital.... Information from a reliable source indicates that the directors of the Spanish Falange at Casablanca have decided to cease all political activities, at least for the present. Various arms which were known to be in the hands of the Falange are now reported to be in the Spanish Consulate.

28 November: Reliable information from a source believed reliable indicates that a large number, possibly 25 per cent, of the Arab population of Casablanca have left the city as a result of fear induced by German propaganda.... The CIC Detachment at Safi has assisted the French police in securing direct evidence that two Frenchmen at Safi had misappropriated large stores of U. S. Army uniforms and foodstuffs. Prosecution is being undertaken by a Military Tribunal.

30 November: Reliable reports indicate that the Toulon occupation and scuttling of the French fleet have resulted in more cordial relations between the French and Americans. This was held true in regard to cooperation in matters of Counter-Intelligence.

3 December: Complaints continue of unrest and violence at French labor camps, which has increased since the arrival in Morocco of American troops. Workers and prisoners at the camp continue to expect liberation by the American authorities.... Information from a source believed reliable states that a German radio station is operating in Spanish Morocco, near the French Moroccan border. It is believed that the principal purpose of the station is to jam Allied broadcasts.

Appendix 3 (Cont'd)

7 December: Several copies have been received from various sources of a pamphlet published by the 5th Section of the Legion Francaise des Combattants. This pamphlet directs the members to watch the activities of everyone helping the Americans, to make a list of all persons in the de Gaullist movement, and to continue the activities of the Legion. This tract also states that "The Germans have not lost the war yet." .... Pro-American Frenchmen cannot understand why collaborationist French leaders have been left in power in North Africa. Pro-American citizens are afraid to show their sympathies because of their leaders, and pro-Axis sympathizers see no reason to change their beliefs in view of the acceptance by the Americans of French leaders with pro-Axis views.

9 December: Reports from sources considered reliable continue to indicate that dissatisfaction exists among the civilian population, particularly the natives, in regard to the cut in the sugar ration for December. As mentioned in previous reports, the ration was cut in half for the month of December, and rumors were circulated that the decrease was caused by the presence of the American forces.

11 December: Reports....indicate that the drunkenness of American soldiers is being used as a basis for anti-Ally propaganda....in the form of a whispering campaign, with statements such as, "These are the men who will be fighting the Germans in Tunisia." According to reports the whispering campaign is being conducted by members of the Legion Francaise des Combattants in bars, stores and private homes.

12 December: Increased discontent among the pro-Ally French civilians has been noted and reported by reliable sources. According to these reports, in many cases French civilians favoring the Allied cause have suffered more since the landing of the American troops in French Morocco than they did before. In many cases persecution by the French authorities has taken the form of imprisonment or eviction from dwelling places. It is also claimed that pro-Ally citizens have been discriminated against in the matter of ration coupons, but reports in regard to this matter are not deemed as reliable as the reports in regard to imprisonment and eviction.

16 December: Information from a source considered reliable states that the German Intelligence Service at Melilla, Spanish Morocco, has received a supply of American Army uniforms.

17 December: According to a reliable source, members of the S.O.L. are continuing to agitate for the formation of a separate Corps within the French Army, composed exclusively of their members, instead of mobilization of the individual members of S.O.L. into existing French army units. The formation of such a corps is strongly opposed by members of the Fighting French groups.

Appendix 3 (Cont'd)

19 December: A reliable source states that the "Centre Propaganda de la Revolution Nationale" of Casablanca is continuing the spreading of P.P.F. literature and propaganda coming from Vichy. It is being distributed to soldiers, both French and American. Women are being used as undercover agents.

CHAPTER 2

CIC IN SICILIAN CAMPAIGN

Plans Made for Campaign

While a permanent definition of the Counter Intelligence Corps mission was being sought at higher levels, the work of the 80-some agents who were to accompany the Seventh Army in Operation HUSKY already had been outlined in the Allied Force Headquarters directive of 10 June 1943.* Implementing this assignment on the beaches and in the ports of southern Sicily was the first concern of officers commanding the CIC tactical sections. In detailed sets of instructions they applied the directive's principles to a statement of the anticipated situation on the Sicilian shores - the counterintelligence targets, the means for securing them, the opposition and difficulties that could be expected. These projected views of conditions that would confront CIC represented the integration of knowledge derived from three sources. A small amount of intelligence on invasion areas was available. Tactical counterintelligence experience had been gained in Tunisia and in amphibious dress rehearsals along the North African coast. Lastly, CIC representatives were holding a series of conferences with other intelligence agencies and with staff officers concerned with tactical planning.**

The most complete CIC operational plan to be found in records of the campaign is one developed by 1st Lt Jack B. Cameron for his Port Section "A." Though intelligence was sketchy here, as it was in all sectors, Port Section "A" was to land near the Sicilian port of Licata equipped with thorough instructions and target designations. The plan called for the section to split into five teams to expedite completion of its missions. It specified civic offices, factories, utilities, and communication centers that were to be seized and gave instructions, as specific as possible, for handling each area and each type of target. Pertinent geographic, political and commercial background information on the island and the port was included. A variety of other considerations, including communication procedures, the handling of captured documents, and cautions regarding booby traps, were covered.*** Appended to the outline were a city plan and aerial photographs of the Licata area, marked with objectives. The finished plan was approved by G-2, and was favorably received by the CO of the 3d Infantry Division's 15th Regiment, to which the section was attached until the landings.****

**"CIC Operations in Sicily," November 1, 1943, Hq, CIC AFHQ (RESTRICTED)

***"CIC Port Section 'A' Mission, JOSS Force," June 19, 1943, by 1st Lt Jack B. Cameron (RESTRICTED)

****Letter, June 19, 1943, by 1st Lt Jack B. Cameron, to Lt Col H.C. Lyon, G2, ETO, Subject, "CIC Port Section 'A' JOSS Force, Operational Plan" (RESTRICTED); and Letter, September 15, 1943, by Capt Jack B. Cameron, to Chief, CIC, AFHQ, subject, "July Situation Summary, CIC Port Section 'A'" (RESTRICTED)

During the four weeks before D-day, all section commanders concentrated on completing and reviewing the first detailed CIC plans for an invasion. Agents were required to study them again and again; Lt Cameron, for example, insisted that each man memorize his instructions so that "if maps and directives are lost in landing he can still accomplish his assigned mission."* Full-scale invasion rehearsals held in late June, by the 1st and 45th Infantry Divisions near Oran and by the 3d Infantry Division near Bizerte, enabled CIC to test some phases of its plan for tactical operations.** As July 10 drew nearer, and especially after agents boarded ships in the staging ports, counterintelligence duties were already being carried out. Steps had to be taken to provide security for the invading forces. General Bradley, who commanded II Corps in Sicily, has explained:

> "With the massing of landing craft in North African ports and the training of troops in amphibious tactics, it had become impossible to conceal from the enemy agents signs of preparation for a Mediterranean invasion. Instead we could only hope to keep the four vital secrets of our plan: (1) our objective, (2) the date, (3) the strength and composition of our forces, and (4) the tactical methods we intended to employ."***

In the closing days of the pre-invasion phase, CIC sections, both those aboard ship and in the African base sections, had an important role to play in keeping these secrets from the enemy.

CIC Handles Pre-invasion Security

The American components of the HUSKY fleet were mounted in three regions. JOSS Force, which included the 3d Division and a combat command of the 2d Armored Division, was in the Bizerte area. The 1st Division and attached units of DIME Force were at Algiers. The 45th Division, newly arrived from the United States, was to sail with CENT Force from Oran. Assault forces of the British Eighth Army crowded into ports dotting the Mediterranean from Tunisia east to the Levant coast.**** At each of the American ports CIC cooperated with G2s in establishing and enforcing security regulations. The most complete available account of CIC activities at that time describes the work of the JOSS Force Sections and the Eastern Base Section around Bizerte.

To prevent information leaks, the Eastern Base Section, under Capt Ralph W. Powers, arranged for a variety of security measures, including the arrest and detention of all suspects, the establishment of road blocks to check traffic and prohibit unauthorized individuals from entering or leaving the embarkation areas, and the security of all

*"CIC Port Section 'A' Mission, JOSS Force," June 19, 1943, Lt Cameron
**Omar N. Bradley, A Soldier's Story, Henry Holt and Company, New York, 1951, p. 118; and extract from "Intelligence Information Bulletin Number 1," November 1943, Office of the AC of S, G-2, ETO (RESTRICTED)
***Bradley, A Soldier's Story, p. 119
****Ibid, pp 123, 124

communications. Agents made spot checks to insure that these measures were being carried out. Tactical sections - the 3d Division section and Port Section "A" - gave lectures and ran security checks on personnel and equipment up to the time of the invasion itself. In the African ports they cooperated with the base section in establishing over-all security.* The lectures given during this period served both to encourage security consciousness and to make CIC known among the troops. Lt Cameron reported that his security talks reached every soldier in the 15th Infantry Regiment.** Their value was to be demonstrated by the success of CIC activities in Licata.

The duties of other sections were basically similar during this period. The following statement by Capt Horace M. Miner summarizes his section's work at the II Corps command post in Relizane, Algeria, and at the embarkation ports:

"The CIC Section supervised the security measures for the Corps CP including the issuance of passes to classified personnel, the guard system, security of documents, maps and models.... Intensive investigations were made of pro-Axis individuals and possible agents.... Breaches of security were investigated, the extent of compromise determined, and measures taken to limit the spread of compromise and stop recurrences."***

On the morning of 15 June 1943, II Corps CIC received word that numerous enemy parachutists had been dropped into North Africa; the whole area from Oran to Benghazi was alerted. II Corps CIC Agents went immediately to II Corps units within this area to determine whether the latter were properly briefed on the situation and prepared for it. The Agents reported that at II Corps Headquarters, Headquarters Company, and the 202d MP Company all precautions had been taken, but that the 53d Signal Battalion, 62d Engineer Company, and 401st Engineer Company were unaware of and unprepared for the emergency. A second check, made on the next day, indicated that all had doubled their guards and issued appropriate special orders.

The CIC Agents informed guards on bridges and at a traffic control post near Relizane of the danger, and they similarly informed the French Commandant of it.****

In the coordination of CIC planning with that of other units, a special task was assigned to the second port section of the Seventh

---

*Extract from "Intelligence Information Bulletin Number 1," November 1943, ETO

** Letter, September 15, 1943, Capt Cameron, "July Situation Summary, CIC Port Section 'A'"

***Report of Operations of II Corps CIC Section the Sicilian Campaign," by Capt Horace Miner. (RESTRICTED)

****Headquarters, II Corps, Office of the CIC Section report dated 16 June 1943: found in folder entitled, "Detachment, Tactical, II Corps (Intelligence Reports)" KCB BX 25102 (6-10-283). (SECRET)

Army's CIC. Port Section "B," in the invasion of Sicily, was to handle security problems, not only of the port of Gela but of the entire "over-the-beach" supply program. During mid-June, 1st Lt Harry G. Costello, Jr., and his executive officer, 1st Lt Mario E. Broa, worked closely with the 1st Engineer Special Brigade, the organization responsible for the supply operation. The unique nature of the program demanded a clear statement of security problems and recommendations. To meet this requirement, Lt Costello drafted a proposed order for the brigade, outlining security measures for the entire operating area, vital points, materiel, communications and military information, and pointing out the importance of individual and unit cooperation with CIC. Costello later reported that the directive "was accepted by the S-2, and I understand it has been published in order form."*

Agents Sail for Sicily with Task Force

Finally, on the afternoon of July 5, CIC teams began to sail for Sicily as part of the largest amphibious force in history.** The decision to attack the Axis homeland that summer had been made at the Casablanca conference six months before. By then the defeat of the Axis in Africa was considered a certainty, and Sicily was selected as the best target within available means that could contribute substantially to Allied goals.*** Resources were insufficient for a cross-channel assault from England or even an invasion of southern France; but some attack was necessary both to contain Axis armies that could otherwise be used in a new offensive against Russia and to maintain the momentum of the western Allies' drive.**** General Eisenhower, then the theater commander, has pointed out that the Chief reasons for selecting Sicily were: its conquest would clear the Mediterranean for Allied shipping; and it could be defended against a possible counter-attack without absorbing too much strength.***** Further, it was important to deny Sicily's air bases to the Axis and to use these bases for bombing missions against Italy and the Balkans; and it was expected

that the invasion might directly bring Italy nearer to surrender.* Between February and June, planning staffs worked out the details of the assault.**

When the Allied fleet set off for Sicily, it was not known what strategic maneuvers would follow that campaign. The size and even the event of an expedition into Italy was not established,*** though at the TRIDENT conference in Washington that May it had been decided "to extend Allied influence in the Mediterranean to the point where Italy would be forced to withdraw from the war."**** Before long Sicily would become, in retrospect, a major Allied victory and the stepping-stone to the continent. But as task forces rode a stormy Mediterranean, past recently fallen Pantelleria to rendezvous areas near Malta, the immediate goal was the conquest of a mountainous triangular island, some 10,000 square miles in area, populated by four and a half million Axis subjects, and defended by an estimated 12 or 13 enemy divisions.***** For the Counter Intelligence Corps, Sicily would have proved by mid-August the importance of its combat mission and have provided an education that would guide CIC teams throughout the world. But as transports loaded with airborne troops roared over the darkened armada approaching the beaches the night of July 9, CIC men awaited anxiously the first test of their ability to carry out counterintelligence missions in all phases of a combat campaign.

CIC Invades with Assault Troops

Before dawn on the 10th, the assault waves of the American Seventh Army - the I Armored Corps that had officially become an army at sea - stormed beaches over 69 miles of southern Sicilian shoreline. The 3d Division, a combat team of the 2d Armored Division and the 3d Ranger Battalion struck beaches on both sides of Licata; the 1st Division landed east of Gela as 1st and 4th Ranger Battalion hit that port itself; and the 45th Division, with the 753d Tank Battalion, made landings on each side of Scoglitti. To the east, the British Eighth Army, the other arm of the Allied 15th Army Group, established beachheads throughout the southeastern corner of the island.******

CIC agents rode with the first waves of assault troops at each American invasion point.* Thus, counterintelligence functions were undertaken immediately as agents rushed to secure pre-designated targets. In this instance the fulfillment of the Corp's mission was facilitated by the first-wave landings; but it might be noted that the wisdom of risking casualties in this way, with the corresponding danger to the entire CIC mission, was debated. Lt Costello reported that for Port Section "B," "the placing of part of the section in the first wave was the result of an order by the force commander," and added, "I am not sure...that such a procedure would always be wise."**

Infantry stormed through seacoast towns on D-day, with CIC playing its part according to the instructions it had received in Africa. Inland, troops of the U.S. 82d Airborne Division - and, in the British sector, their 1st Airborne Division - fought to reorganize and to repulse any attacks against the beaches. Winds of near gale proportions had seriously deflected the airborne landings and scattered paratroopers across the entire front. Despite heavy losses, the airborne troops were able to delay enemy countermeasures. Further, the storm helped the invaders gain surprise. Axis air reconnaissance did not venture out and, in General Bradley's words, "the coastal divisions relaxed, certain that we would never sail in such a sea.***

As beachheads broadened, Counter Intelligence Corps agents moved into the ports. In the Licata area Lt. Cameron had landed with assault troops at H-hour plus 45 minutes. Operating out of 15th Infantry headquarters, he began searching abandoned enemy positions. When the rest of Port Section "A" debarked four hours later, after being delayed by mechanical difficulties to its LST, it was dispersed as planned in five teams.****

After counterintelligence targets were seized in Licata, Lt Cameron was able to announce that "all CIC missions were accomplished according to plan and schedule."***** He credited the success primarily to arrangements that had been made earlier with the CO of the 15th Infantry. An entire company was placed immediately at the section's disposition for security-guard duty at CIC objectives. Moreover, as a result of the security and CIC-introductory lectures Cameron had given, CIC received assistance throughout the regiment and was able to move freely in the combat zone.******

******Ibid; and Letter, September 15, 1943, Capt Cameron, "July Situation Summary, CIC Port Section'A'"

Second Lt Bertram R. Russell's 3d Division section near Licata with the 7th Infantry had advanced inland with the combat troops. Because it lacked its own transportation the section's operations during the first six days were limited almost completely to the performance of routine civil affairs and counterintelligence duties in the towns of Narck Palma and Canicatti. Even after the group acquired a jeep and was able to move on, its activities were continually restricted by insufficient transportation.*

Counterintelligence in Gela

At Gela, three members of CIC's Port Section "B", Lt Mario Brod and agents George B. Somers and Thadeus J. Stefanik, rode the first assault wave with the 1st Ranger Battalion under Col Darby; the remainder of the section with Lt Costello, followed two hours later.** Costello said, "the first group was able to accomplish a considerable amount of valuable work" but he did not elaborate on their activities.*** He described the section's primary problem:

> "Upon landing, it was found that there was a tremendous amount of confusion and that there were a thousand different jobs to be done, each one of which seemed equally important. As a consequence, it was found necessary to simply do one job at a time, attempting to evaluate the important tasks as best we could. In our case, it was impossible to draw up any systematized, refined plan of operation before reaching the town. That is, it was impossible to lay out definite tasks for definite teams, because the advance intelligence was so meagre."****

Despite these difficulties, much was done during the first three days. Port Section "B" searched enemy CPs and billets, and forwarded documents through G2 channels. Information of immediate tactical value was given to the Special-Force commander and to the G2 of the 1st Division. It included maps showing the disposition of coastal and mobile defense units and of mine fields, and considerable information on the enemy order of battle. From the interrogation of prisoners of war, Lt Brod obtained data on enemy units and mine fields. Inside Gela, agents seized civic offices, Fascist headquarters and communication

Walter, AC of S, G-2, 3d Infantry Division, to Letter, August 6, 1943 from AC of S, G-2, AFHQ, subject, "Activities of the Counter Intelligence Corps (RESTRICTED); and "Daily Activities Report," July 16, 1943, Hq, Seventh Army CIC Section, by 1st Lt Paul A. Heegaard-Jensen (RESTRICTED)

**Roster, CIC Detachment (NATOUSA, June 30, 1943, See Appendix 1, this chapter

***"Informal Report of Experiences in Operation 'Husky'," July 16,1943 Lt Costello

****"Informal Report of Experiences in Operation 'Husky,'"July 16, 1943, Lt Costello.

centers, placed them under guard, and preserved their records. CIC continued to run security checks on these installations after they were turned over to representatives of the American Military Government of Occupied Territories (AMGOT) and the Signal Corps. Town officials were taken into custody; informants were recruited; parish priests were utilized to gain the cooperation of the populace and to read proclamations. Town-criers and posters were also used to promulgate military regulations. Road blocks were set up, weapons collected, pillaging stopped, brothels checked. Part of Port Section "B" began to handle security aspects of the supply program in the area.*

Other CIC units landed near Gela. The 1st Division section commanded by 2d Lt James E. Ray, had been given the assignment of providing tactical security for its division.** However, reports of its activities during the invasion phase are not now available. The Seventh Army CIC section, under 1st Lt Paul A. Heegaard-Jensen, also was active in the area. It cooperated with Port Section "B" in securing Gela; and it sent agents forward with combat units of the 1st Division and the Rangers, and, farther west, with the 2d Division.*** The Seventh Army section's roster at that time listed three officers and 11 enlisted men (although the theater table of organization for an army section called for five officers and 45 EM).****

The 2d Armored Division CIC Section, under 2d Lt Robert R. LaBranche, debarked at Gela behind the 1st Division. Since Joseph M. Mitchell had been injured and hospitalized in Algeria, Lt LaBranche had but four agents with him in HUSKY. During the first few days they operated with a reconnaissance battalion in the Gela region before shifting west to join their own division pushing inland. *****

The 2d Armored Division section also handled civil-affairs and intelligence matters in Gela and the neighboring towns of Butera and Niscemi. An example of the work they pursued in the first days is found in resumes of activities in Butera. Agents entered the town July 14, immediately after its occupation. They searched civic buildings and former military positions. Mail found in the post office, along with maps and records taken from an Italian CP, were forwarded to G2, Seventh Army.

Adkinson, subject, "Counter Intelligence Corps Operations in Sicily" (RESTRICTED); "July Monthly Summary of Activities, 2d Armored Division." August 6, 1943, by 1st Lt Robert R. LaBranche (RESTRICTED) See App 1 for roster.

Documents from Fascist headquarters were given to AMGOT representatives. CIC stopped the populace from looting the town bank, and placed a guard over the water supply. Civil control measures were taken over by AMGOT the afternoon of the 14th, but CIC representatives remained in Butera for three more days. Besides helping to maintain order, they arrested the town's leading Fascists, had them imprisoned, and searched their homes. Information on local pro-Fascists was obtained from the mayor. With the aid of Carabinieri (civil police), CIC collected civilian firearms and turned them over to AMGOT.*

Third Port Area Attacked

The 45th Division CIC Section debarked near Scoglitti early on D-day. First Lt Rupert W. Guenthner and Agent Frank A. Messina supervised the interrogation of about 90 Italian prisoners, by order of Lt Col Francis J. Reichman, the division's AC of S, G-2. In nearby Mogli the section captured documents pertaining to enemy personnel and supplies, and in Scoglitti they searched abandoned CPs. Guenthner, Messina and Langford Baldwin (one of two agents from the II Corps section working with the division unit) attempted to enter Vittoris, but withdrew under fire. On the morning of the 11th, however, they entered the town and seized documents that included an Italian signal code manual from a radio station and list of local party members from Fascist headquarters. A riot by anti-Fascist civilians at this headquarters was quelled. As the 45th Division advanced against minor opposition, CIC group moved on to towns and airports farther inland.**

Four teams of two agents each from the II Corps CIC section also landed under fire in the Scoglitti sector. On D-day Capt Horace M. Miner and agent Clark B. Keeler, operating as a team, sent to Colonel B. A. Dickson, the II Corps G2, the first reports he received on the location and identification of enemy units, their reaction to the landing, and the location of a lost parachute battalion. The executive officer, 2d Lt Crosby Lewis, and Agent Lloyd Fangel were attached to II Corps headquarters, as were agents Peter W. Princi and Lewis V. Sevier. Langford Baldwin and Bernard H. Golden comprised a team operating with the 45th Division section. On the morning of the 11th, Capt Miner stopped remnants of an infantry battalion retreating before an enemy counterattack, assumed command, and led them back into battle until one of their own officers was contacted to take over. II Corps agents

remained active in the 45th Division area till July 18 when the balance of the section landed at Gela with transportation and other equipment. After reorganizing, the section operated throughout the II Corps area, cooperating with sections attached to the 1st and 45th Divisions.*

The remaining tactical group, the 82d Airborne Division CIC, did not jump into Sicily with its division, but landed behind troops making the amphibious assault.** Second Lt Albert J. Kummer commanded the section. The detachment was forced to operate independently of division headquarters, for the 82d was widely scattered. Units that had jumped on D-day were returning through U.S. lines all over the front; and the balance of the division, parachuting into Sicily on D-day plus 1, had been caught in American anti-aircraft fire and suffered heavily. Information on the CIC section's activities is limited, though it is known that some two weeks after D-day, it was responsible for the surrender of an entire Italian company. When the unit returned to North Africa near the end of July, it had suffered three casualties. Kummer, Stevens and Sloan had been wounded, Kummer seriously, when their jeep hit a mine.***

In addition to having sections attached to the components of the Seventh Army, CIC also was represented at 15th Army Group headquarters. A NATOUSA roster of June 30 listed a "Force 141" CIC section, comprised of Capt Robert W. Tucker, 1st Lt Marion E. Porter, Agent Thomas L. Tipton and Agent Friedrich H. Geiger. Force 141 had been the top-level planning staff for HUSKY, until it became part of General Alexander's 15th Army Group on May 15. It has not been ascertained how long the CIC section remained active, though it evidently was disbanded before August 5, the date of another CIC roster.****

All beachheads were linked and were expanding rapidly during the first week. The enemy had made but one concerted counterattack. It came near Gela on D/1, when the Hermann Goering Panzer Division hurled itself against the 1st Division. The Germans broke through almost to the beaches; but the 1st, supported by a strong naval bombardment, stubbornly held and finally threw them back, inflicting heavy losses including the destruction of more than 30 tanks. General Marshall called the attack "the most critical momemt of the invasion."***** After the panzers were repelled, American forces had little difficulty in preparing for the coordinated offensives across the island.

Throughout the first phase of the campaign, the Counter Intelligence Corps had followed the pre-invasion directives closely. The fact that these directives served as flexible guides, rather than unyielding dicta, contributed to the success of the agents' activities. Lt Costello pointed out, and the observation was repeated in an AFHQ CIC summary, that, while the "main categories of action" for CIC teams must be fixed in advance, within their scope are "numerous incidental things...which cannot be foreseen" but which CIC must be prepared to handle.* All sections had concentrated on seizing targets and documents of counterintelligence interest. But they also had spent much time - and were to continue to do so - gathering information of tactical and strategic value, and performing military government functions.

After finishing its initial work in Gela, Port Section "B" was divided into two groups. While one sub-section, under Lt Brod**, moved north with the 1st Division, Lt Costello and the rest of the unit began working with the intelligence section of the 1st Engineer Special Brigade to provide security for the coastline logistics program. Between Licata and Scoglitti the "over-the-beach" method was being used to supply American forces. Ships anchored offshore discharged their cargoes into 2½-ton amphibious trucks, nick-named "ducks," which hauled the material directly to ammunitions and food dumps.*** Despite the magnitude of the security problem, and the small number of agents to handle it, the threat of sabotage was largely overcome. On August 2, Capt Heegaard-Jensen reported that, "No act of sabotage has been committed although one case of suspected sabotage is being investigated."****

General Patton's Seventh Army consisted of the II Corps, with the 1st and 45th Infantry Divisions, and a hastily improvised provisional corps on the west. The latter corps included the 3d Infantry and 2d Armored Divisions, the re-organized 82d Airborne and two Ranger battalions. After the steady advances of the first week, which carried II Corps up to the center of the island, the western arm opened an all-out offensive. Porto Empedocle and Agrigento fell July 17; the provisional corps then stormed across the western end of Sicily in lightning thrusts that culminated July 22 with the fall of the key north coast port and naval base of Palermo.***** During the advance, CIC sections often entered towns with, or even before, the infantryman.

****Report of CIC Activities for the Period Embracing 10 July 43 to 31 July 43 August 2, 1943, Hq Seventh Army CIC Section, by Capt Paul A Heegaard-Jensen (RESTRICTED)

*****Bradley, A Soldier's Story, pp. 106, 139; and Marshall, Biennial Report, July 1, 1943 to June 30, 1945, p. 162.

When the confused days of the landings were past, CIC Agents were able to work toward a simple and understandable goal. Their basic mission has been described by Lt Brod as "establishing in occupied enemy territory all possible measures to insure the elimination of enemy activity in that occupied territory."* Such a mission he described as passive in nature; concurrent with it, however, was the active role of "obtaining, from both friendly and unfriendly sources, military information of all categories." Because CIC Agents were often the first conquering officials to enter a town, Agents of the Corps often were forced to assume, by default, other tasks which properly were within the province of Civil Affairs.

The rapidity of the offensive prevented CIC teams from undertaking thorough investigations. Divisional sections strove to remain with assault troops, in accordance with the AFHQ directive of June 10. Uncompleted investigations were handed over hurriedly to the Seventh Army section, and civil-affairs matters were passed on to AMGOT. Sometimes, however, several days passed before Seventh Army CIC or AMGOT reached a town; then, security work had to be started anew. Confusion and duplication of effort resulted inevitably from the continual change-overs.** The problem manifested itself throughout the campaign, and it affected all phases of CIC work. For example, its effect on one function, the arrest and evacuation of Fascists, was discussed in some detail by Lt Brod:

"...because of insufficient liaison and coordination of activities between divisional, corps and army CIC sections, and between all sections and the AMGOT authorities, prompt evacuation of arrested Fascists has not resulted. Furthermore, in many instances Fascists arrested by one section have been released by another without adequate consideration of the original basis of arrests;...in some instances Fascists have been released by AMGOT authority without authorization of the CIC section which originally made the arrest. This lack of coordination...frustrates the efforts of the CIC in the removal of security hazards presented by Fascist elements, and further results in baffling and confusing the general population as to the general basic policy of the Allied Government with relation to the Fascist regime."***

---

*"Discussion of the CIC Mission in the Sicilian Campaign Covering Period from 10 Jul to 3 Aug 1943," by Lt Mario E. Brod; extracted from "Section, Tactical, 1st Inf Div"; KCD BX 25101 (7-6-54) (CONFIDENTIAL)

**"Report of CIC Activities for the Period Embracing 10 July 43 to 31 July 43," August 2, 1943, Capt Paul A. Neegaard-Jensen; "CIC Operations in Sicily," November 1, 1943, G2, CIC AFHQ; and Letter, August 14, 1943, by Lt Col H. M. Forde, AC of S, G-2, 2d Armored Division, to AC of S, G-2, AFHQ, subject, "Activities CIC 2d Armored Division" (RESTRICTED)

***"Discussion of Counter Intelligence Corps Missions in the Sicilian Campaign Covering Period from July 10, 1943 to August 3, 1943," by 1st Lt Mario E. Brod (RESTRICTED)

The problem could not be solved readily, but several suggestions for eventual remedies were offered. Opinions varied, but in general the need for more agents, assigned in such a way as to insure continuity of investigations, was recognized. Second Lt Charles B. Conick, commanding the 9th Infantry Division CIC (active later in the campaign), suggested that agents attached to divisions remain in towns for a week or two before passing on duties to static teams. He pointed out that this could be done either by increasing the division sections' strength, by increasing the size of the corps sections and interchanging personnel between divisions and corps, or by attaching agents from higher echelons to divisions as towns fell.* On the other hand, the consensus was that division units should concentrate on tactical missions, and that corps or army sections should handle town security, eventually turning towns over to a static section. Capt Miner pointed out that additional personnel would be needed, both to permit complete initial coverage by the corps sections and to expedite early entry of the static groups.** To offset partially the demand for more town security agents at corps or higher echelons, Lt Col H. M. Forde, AC of S, G-2, of the 2d Armored Division, suggested reducing the strength of divisional detachments to two or three men.*** Others, however, saw the need for greater tactical security at this level.

From Seventh Army CIC headquarters, Capt Hoegaard-Jensen recommended a thorough remodeling of the table or organization - one which would provide sufficient personnel for all security functions, but which, in doing so, would require a considerable increase in Counter Intelligence Corps strength. He proposed that "at least 200 agents and officers" be attached to an army. A team of one officer and two enlisted men would work with each division, charged with tactical missions. Each CIC corps headquarters would have two officers, 10 agents and two clerks, army headquarters would consist of three officers, 10 agents and four clerks. At army there would also be at least 40 teams of an officer or senior NCO and two other agents; their function would be to enter a town immediately after its capture, and to remain there until complete coverage had been provided and they were relieved by static CIC units. Corps and army sections would do security work in large cities, as well as coordinate the activities of subordinate teams.****

CIC Agents First Soldiers in Agrigento

Divisional sections handled town security and civil-affairs matters throughout Sicily. During the provisional corps' offensive in the second week of the campaign, a singular example of resourceful action by CIC as the first Army unit to enter a city occurred in Agrigento, a provincial capital with 33,000 population. CIC Port Section "A," following completion of the first security measures in Licata, had divided into two groups: one, under 1st Lt Jack B. Cameron, began functioning as a tactical unit with the 3d Division; the other, led by Executive Officer 1st Lt Arthur H. Van Kirk, remained in Licata to handle port security. After being driven back by gunfire in an earlier attempt, Lt Cameron's sub-section entered Agrigento early on the morning of July 17 as combat forces by-passed the city. They were the only Americans there, and the citizens of Agrigento were rioting and looting on a large scale. However, the rest of the section rejoined the assault group in the city, and by the time the first AMGOT officials arrived that afternoon, CIC had the situation under control - principally through imaginative utilization of city officials.* Cameron reported that the following civil-affairs work was accomplished during CIC's operations in Agrigento:

"a. Rioting stopped and looting reduced to a minimum.

"b. Nine remaining members of the Carabinieri were rounded up and placed on police duty.

"c. The fire chief and 04 firemen were put to work collecting the dead.

"d. Public health doctors, civil and military, were brought in, and a general estimate of the situation as to patients, medical supplies and hospital facilities was obtained.

"e. Chief engineer of air raid and anti-aircraft emplacement was brought in, and statistics (on anti-aircraft) positions were obtained.

"f. Chief aqueduct engineer was found and directed to survey and repair all water facilities.

"g. The Vicar General for the Province of Agrigento was contacted and his proferred services were accepted in calming the civilian population.

"h. Food and fuel warehouses were located and placed under guard."**

*"Monthly Report, CIC Port Section 'A,'" July 31, 1943, Capt Cameron; (R) Extract from "Intelligence Information Bulletin Number 1, "November 1943, ETO (R); and "Daily Activity Report of all CIC Sections, Seventh Army," July 14, 1943, Lt Hoegaard-Jensen (R)

**"Monthly Report, CIC Port Section 'A,'" July 31, 1943, Capt Cameron (R)

In addition, Port Section "A" gained valuable combat intelligence from documents found in evacuated German headquarters. Necessary security measures, as indicated by CIC surveys, were recommended, a variety of other counterintelligence functions were performed. A battalion of soldiers was obtained to guard vital public installations and Fascist party buildings. Counterintelligence responsibility was taken over by agents from the Seventh Army CIC section on July 20; and on the 23d, Lt Cameron's sub-section moved on toward Palermo. Meanwhile, the other half of Port Section "A" extended its security operations to Porto Empedocle.*

In agrigento the advantages of having specially assigned tactical troops as a security guard again became apparent, as they had in Licata. According to Cameron, "Security dropped off more than 50% when Army guards were not used; and to depend on whatever units that happened to be in the area to supply guards was poor security, for the ability of such units to make men available to CIC hinged on the fluctuations of the immediate tactical situation.** Lt Brod, of Port Section "B," remarked that the nature of Counter Intelligence Corps work seemed to warrant the assignment to each CIC section of a platoon of soldiers who could relieve agents from routine patrol and guard duties, allowing them to concentrate on missions for which their special talents were needed.*** In Sicily, Carabinieri sometimes were recruited to keep watch on captured materiel, but there were times that no guards could be posted. And Cameron pointed out that, as Allied forces moved into Europe, friendly assistance could not be so readily obtained, and the increasing threats of sabotage would make the use of American Army guards all the more imperative. ****

Brod indicated another need for security guards - the hazards presented by abandoned munitions dumps:

"In Enna, three children were killed in playing with hand grenades at a dump discovered by CIC personnel. The existence of some 15 such dumps made impossible their proper safeguarding, and, aside from the fact that rumors immediately spread about the population that the American troops had intentionally left explosives around maliciously, a further security threat presented itself in that the various munitions... were available to any sabotage elements who wish to avoid themselves /of them/*****.

For the safeguarding of documents, a seal device was successfully used, in the absence of sufficient guards. In more than 200 cases where impounded mail and other documents could not be transported promptly, they were placed in a sealed room. The seal on the door was accompanied by a warning that anyone breaking it would be shot. It was reported that no seals were broken except by proper authority.*

CIC In Palermo; Town Security Duties

When the first American soldiers entered Palermo July 22, splitting Sicily in two and trapping the remnants of the Italian forces in the west, they met but token resistance in the city, and large segments of the populace greeted them as liberators.** The 3d Division CIC section moved into Palermo that afternoon with a front-line patrol and immediately began fulfilling security functions. Civil control assistance was obtained from the Carabinieri; the small amount of looting going on was stopped; and a curfew was established.***

The 2d Armored Division section arrived the morning of the 23d to assist in the overwhelming task of attaining security in Palermo, which, with a population exceeding 400,000, was the largest city on the island. The 2d Armored CIC took over a former German field police building as headquarters and billets. From this and other buildings, agents secured documents left behind in the enemy's hurried departure, including mail, information on the location of military units, special orders and training manuals. Among the many duties they performed their first day in the city were the recruitment of informants, the arrest and interrogation of Fascist officials, the introduction of security steps and the establishment of a working liaison with AMGOT.****

The next day the Port Section "A" group took over port security in Palermo. It searched the port area, impounded records, and initiated security precautions and investigations. The section worked closely with the Office of Naval Intelligence (ONI). Together, CIC and ONI directed the establishment of a guard system in the shipyards and interrogated mariners regarding mines in the harbor. The CIC unit gave captured

****Security Notes No. 4, October 19, 1943, Office of the AC of S, G-2, AFHQ, subject, "One Day in the Work of the Counter Intelligence Corps" (RESTRICTED); "July Monthly Summary of Activities, 2d Armored Division," August 6, 1943, Lt LaBranche; and Letter, July 30, 1943, by 1st Lt Robert R. LaBranche, to AC of S, G-2, 2d Armored Division, subject, "CIC 2d Armored Division Operations in Palermo" (RESTRICTED)

records to ONI officials and recruited technicians to assist them in repairing damaged vessels.* The latter step was necessary because the enemy had scuttled dozens of ships in the harbor and destroyed many installations in trying to prevent Allied use of the port. Later on the 24th, members of the Seventh Army section arrived and coordinated the operations of the various sections, as civil-affairs authority was transferred to AMGOT.**

Work in captured towns was perhaps the major Counter Intelligence Corps effort in Sicily. Besides giving outstanding performances in the development of security in large cities, as exemplified by their operations in Agrigento and Palermo, CIC combat teams laid the groundwork for the establishment of military government in almost every sizable town in the Seventh Army area. Although methods of securing towns were left largely to agents' initiative, reports from all sections demonstrate similar patterns of procedure. Town security work, with modifications set by local conditions, consisted principally of the following steps.

Investigation of local government officials' reliability was undertaken, and the cooperation of political and law enforcement agencies usually was recruited to help maintain order, since not enough U.S. soldiers were available to handle the problem. CIC questioned officials, particularly the mayor and the police chief, for information on political and military matters. Carabinieri were utilized to guide agents to enemy military installations and Fascist headquarters, which were searched for information of intelligence value. Informant nets were established. Known Fascists and anti-Fascists were interrogated. In some instances Fascists were interned and removed to rear areas, though more often, when they did not appear to be direct security threats, they were placed under technical arrest and threatened with imprisonment in case any evidence of sabotage or espionage arose. CIC frequently posted proclamations containing instructions for curfews, the collection of arms, ammunition and radio sets, and restriction of civilian activities. The proclamations also listed penalties for sabotage, espionage, looting, disorder and giving aid to enemy soldiers. Village priests and town-criers were called on to announce military regulations. CIC agents searched and guarded installations of security significance; they ran security surveys. All possible preliminary steps were taken to facilitate the work of AMGOT teams, which might arrive a day or a week after CIC's entrance. Pertinent

captured records were passed on to AMGOT, as well as recommendations concerning the possible future use of town officials.*

The II Corps Offensive

While the provisional corps was racing to Palermo, General Bradley's II Corps, on the American eastern front, had driven northeast from its Gela and Scoglitti beachheads, and swerved north through the geographical hub of the island. On July 23 its advance elements reached the north coast.** CIC agents had moved with attacking troops across the island. The 1st and 45th Division sections and Lt Brod's port sub-section, working under the coordination of the II Corps CIC, made preliminary searches of towns, performed civil-affairs duties and carried out combat security missions.

The II Corps section, which was to operate in a total of 28 towns in Sicily, was several times the first CIC unit to arrive in towns, particularly larger ones, though division sections normally made the initial entry. Corps CIC handled almost all investigations of Fascists in the area, although in the 1st Division sector the two division-level teams operating there handled some of the investigative work, when, occasionally, they found time for more than cursory security measures. The Corps section also had a military counterespionage and countersabotage mission to perform. Whenever the Corps CP was moved, CIC remained behind to ascertain that no documents of value had been left, breaches of security drew official reprimands. All persons entering the CP area were investigated by CIC. A system of identity checks on roads in the Corps sector was organized. Cases of wire sabotage were investigated, and in two instances all Italian deserters in the area were taken into custody. CIC also assisted in the capture of German soldiers returning to their own lines.***

**Bradley, A Soldier's Story, pp. 134 - 146

***"Report of Operation of II Corps CIC Section during Sicilian Campaign," Capt Miner (R)

Early in the campaign II Corps and 45th Division agents had seized a number of valuable documents from the Comiso and Biscari airports, which were among II Corps's primary tactical objectives in the first phase of HUSKY.* The G-2 of II Corps, Colonel B.A. Dickson, described the CIC action at Biscari in a letter:

> "On 14 July Capt Miner entered Biscari airport with enlisted men while the field was threatened by armored counterattack and strong pockets of enemy resistance remained behind. By his prompt action a German air operations room was preserved intact, with operations maps and a short wave radio transmitter, and valuable photographic equipment was saved from the grenades of the troops who later mopped up the area."** However, the collection of documents and equipment during most of this offensive, Miner reported, was left largely to other intelligence agencies, for the mobility of CIC teams was affected adversely by their inability to secure their full allotment of vehicles.***

The lack of transportation was one of CIC's principal problems. The theater table of basic allowances had allotted three reconnaissance trucks, or jeeps, to each division section and five to corps, but in Sicily, divisional sections often had only a single vehicle. In at least two cases sections were immobilized by a complete absence of transportation. The 45th Division unit was halted for two days when its truck broke down, and, as was mentioned earlier, the 3d Division CIC section operated without transportation its first six days on the island. Almost every CIC commander called attention to the urgent need for more vehicles, as their work continually was hampered by the shortage. The difficulty of obtaining space for vehicles in the invasion waves - a problem for all Army Units - was a primary cause of the deficiency. But the failure to alleviate it appeared due, in part, to confusion regarding organizational procedures. An AFHQ CIC post-campaign summary pointed to the failure of certain sections to requisition their authorized transportation. Reports from section commanders and G2s suggested they were not aware of the

***"Report of Operation of II Corps CIC Section during Sicilian Campaign," Capt Miner (R)

allowance, as several recommendations were made that three, or even two, jeeps be allotted to CIC divisional sections for future operations.*

Activities of the II Corps CIC Section in Termini Imerese, screened by them on 25 July 1943, seem typical of the Section's procedure in such operations.

Once in town, the agents immediately hunted out officials of the local Carabineri (CORR), whose assistance proved of value in all phases of the subsequent work in town.

In Termini Imerese were three post offices, one of which, however, was only a sorting house, and deemed to be of no CI interest. Mail in the other two was impounded; the buildings were locked, and the key was given to the local CORR. Telephone, and telegraph offices were similarly searched and left guarded. All out-going lines were immobilized.

CORR guards secured banks, the railroad station, and various food stores. The Podesta was given control of available food stocks.

PNF Headquarters were searched thoroughly. As was usually the case, most of the important documents had been destroyed. There was found, however, a photograph of members of the Squadristi which was used as proof against those who had previously been named by local informants. Thirteen members were arrested.

Other arrests were made. Two top party officials were apprehended. Nine of the local black marketeers were taken in by the Carabineri, who were given a free hand to arrest whomever they deemed fit for such treatment.

As the agents prepared to leave, they published regulations which would control the population until the military would be in a better position to resume this responsibility. Sunset to sunrise curfew was imposed. Road-blocks were placed at three principle exits of the city, and guards placed there were given copies of the CIC Black List. **

**II Corps CIC Section, Memorandum, Dated 25 Jul 1943; Found in Folder entitled, "Det, Tactical, II Corps, (Intelligence Reports)," RCD BX 25102 (6-10-274). (CONFIDENTIAL)

The 45th CIC Detachment seemed to have a different method. Lt Guenthner in his report stated that the detachment usually operated in two sections, one of which would contrive to enter a town or city at the earliest possible moment after it had been captured. He went on to describe in detail the manner in which his agents usually operated within the towns. First interviewed usually was the mayor from whom information of a general nature concerning political, religious, and social set-up of the town was obtained. The mayor, in addition, would be queried about the political beliefs of the leading town officials. He would be told that the town organization would be kept intact if possible. The mayor would then introduce the agent to the other town officials. Next interviewed usually was the Chief of Police. His force, if not sufficiently large already, was augmented by armed civilians. He was, in addition, charged with two specific tasks: he was to take personal responsibility for all weapons turned in by local residents, and also was personally responsible for the enforcement of any regulations issued through the Mayor's office.

The local Fascist Secretary was then located, and informed that as of the entry of the Americans he was a man without a party. He was ordered to produce a list of all Party members under his jurisdiction. Next, he was taken to his office where the CIC agents examined all documents available, and impounded those of importance.

The Postmaster was located, and told to suspend operations. All mail was impounded. Other communications leading out of town were searched out and immobilized.

Enemy installations were hunted up, then checked. The Black-List personnel listed by higher headquarters) were asked for, and local citizens were encouraged to add more names to this list of the suspected.

Obviously, this neat pattern was subject to a variety of changes--the most obvious being when citizens refused to accept orders from the mayor or police chief. Since the CIC function was, in theory, restricted to town security, civil administration matters were, whenever possible, left to AMGOT.

Lieutenant Guenthner reported that certain changes were indicated if his detachment was to carry on such work to the best advantage"*

During these same fast days of mid-July, the Division CIC Detachment was screening towns often at a rate of one a day.

On 18 July 1943, members of this detachment were caught in an air raid in Barrafranca. The CIC Agents took charge of the burial work; local citizens were queasy about digging for bodies in the ruins.

*45th CIC-Det; Report, Subject; What CIC Learned and Is Learning in Sicily;" dated 11 Aug 1943; extracted from "Correspondence, G-2 (AFHQ) To." RCD BX 25103 (7-6-70) (CONFIDENTIAL)

The agents also caught two American soldiers and an Italian soldier, all in civilian clothes, who were given to the MP's.

On 19 July the section was scheduled for work in Villerosa, but as this city had not yet fallen, the agents were forced to bivouac in the vicinity.

Now running behind schedule, the section entered Villerosa with the combat forces, and then, on the same day, moved on to Enna. The next day found the Agents in Alimena, and by 23 July they had moved on to Petraila.

Unfortunately, there is not sufficient space here to properly describe work in these cities. Each presented a new situation and new problems; but, when seen in relation to the overall picture, no one town was of great importance in itself.*

Lt Brod, in charge of a section of Port Section "B," reported that during the period 21 July to 26 July his group arrested 39 Fascists--Party officials, terrorists, and officers and members of the semi-secret Questura. As Fascists were arrested, anti-Fascists were liberated. Nine Arabians, jailed by the Germans for having assisted the British in Africa, were released, but they were allowed board and lodging at the Enna jail until arrangements were made for their transportation home to Africa. Eventually they were shipped with a load of PW's, but they were provided with special passes to keep their priviledged status known and advertised.

The section also encountered a score of miscellaneous prisoners--some Fascist and some anti-Fascist--who were handled individually in accordance with the situation.**

CIC Capture Valuable Documents

Although, as Capt Miner said, there were periods when CIC was unable to concentrate on the seizure of enemy documents, the fulfillment of this mission remained, nevertheless, one of the chief contributions of the Corps to the success of the Sicilian campaign. And, despite Miner's statement that, in the II Corps area, "only the 1st Division...produced outstanding results" in capturing, documents,*** Col Dickson reported

*1st Division, Memorandum Dated 24 July 1943. Folder: "Detachment Tactical II Corps (Intelligence Reports)." KCD BX 25102 (6-10-274). (UNCLASSIFIED).

***"Report of Operation of II Corps CIC Section during Sicilian Campaign," Capt Miner.

that "the Corps CIC Detachment has been the instrumentality through which Corps G-2 received captured documents of immediate value and accurate observations of forward situations."*

The most important Counter Intelligence Corps seizures were those listed in the Seventh Army section's summary of activities for July. Without specifying the sections, or places, Capt Heegaard-Jensen announced the following successes:

1. "By D + 2, CIC sections had obtained overlays of all mine fields in Sicily. This information was relayed through channels to the parties immediately concerned with the neutralization of these mine fields."

2. "Other information of immediate tactical value, ranging from the copy of the order of battle of enemy units operating in Sicily to the order of battle of units operating in the Balkans, has been obtained and forwarded through channels to the Order of Battle Section, G-2 Headquarters Seventh Army."

3. Fascist Party records, when not of immediate value to CIC, were turned over to AMGOT or to Advance Documents sections.

4. "A complete code of German radar units has been forwarded to AFHQ."

5. "This office [has records of] a complete prison system effected by the Italian Prisoner of War Group, including their informant system, the location of all prisoner of war camps in Sicily and Italy, guard precautions, rules and regulations regarding the maintenance of the prisoner of war stockade."

6. "Over 200 sacks of confiscated mail have been turned over to... Seventh Army. Mail was seized immediately upon entrance in each of over 200 towns that have been covered by CIC personnel. Mail that is not yet turned over is in safe keeping until such time as it is picked up."

7. In addition to documents, communications equipment as captured. "Thirteen wireless transmitters, eight of them intact, have been seized....Four radar units have been seized, and equipment and documents pertaining to their use have been forwarded to AFHQ. One crystal wireless transmitter, in operating condition, has been turned over to OSS for their use.**

(On October 8, Capt Heegaard-Jensen reported that by then 30 wireless transmitters had been picked up).*

Specific recognition of CIC's work in this field came in a letter, dated 23 August 1943, from Capt B. B. Shewbridge of the Advance Documents Section to Lt Col H. G. Sheen of the AFHQ, G2 section. It read in part:

"During the recent operation in Sicily, much valuable battlefield information was made readily available through the splendid cooperation of the CIC Section, Seventh Army....The Advance Documents Section wishes to express its admiration and appreciation for this tactical and operational foresight on the part of CIC personnel, and for the benefits derived therefrom."**

While screening the town of CIC agents came across who, among other things, had been charged with coding and decoding for the .*** When interviewed by Peter Carpentieri, 2d Lieutenant in the II Corps CIC Section, explained in detail the construction of the code which his office had been using, unchanged, for the last two years. He also produced the code book, which, until the CIC arrived, had been seen by no one in the past two years save himself and the safe.

stated that subjects of the utmost secrecy were usually handled verbally. The code was used for secret telegrams which dealt usually with economic problems, information on personalities, morale of the people, reaction to Fascist laws, etc.****

Final Phase of "HUSKY" Begins

With the conquest of western and central Sicily in its last stages, II Corps turned east to attack German units defending the northeast corner of the island. The British Eighth Army, after its landings in the southeast, had pushed north to the foothills of Mount Etna, where it was stopped by powerful German resistance. Whereas Italian troops in the west had fought sporadically and surrounded in large numbers, the Germans, having shifted east, appeared determined to hold what Col Dickson called the "Etna stellung." Near

**Quoted in Counter Intelligence Corps Information Bulletin No. 2, "Counter Intelligence Corps Operations in Sicily" (R)

***As yet unidentified

****The mechanics of the code, quite complex, are fully described, and a sample telegram is inclosed in the document which is the source of these paragraphs: Headquarters, II Corps Report, Subject: "Fascist Code System, dtd 25 Jul 43, found in folder, "Detachment, Tactical, II Corps (Intelligence Reports)," RCD EX 25102 (6-10-273). (C)

the end of July the 45th Division began a drive east along the north coast, with the 1st Division moving forward on its right flank. General Montgomery's British and Canadian forces increased pressure from the south and southeast.*

Resourceful CIC agents carried out their mission in a variety of ways. On 29 July 1943, the 45th Division CIC Detachment was held from their target of Tusa by enemy machine gun fire. Having a few hours of free time, Agents Robinson and Moseley of the Detachment swam out to a small ship lying deserted in the harbor of Cefalu. The ship had no transmitter; hence, it was no immediate threat to security. It carried a smashed anti-aircraft gun (with no ammunition), and ten objects which apparently were depth charges. It was seaworthy, and had a diesel engine ready to start. Agents Robinson and Moseley suggested that a guard be placed aboard. The guard was placed, and later reported that he had stopped a civilian from swimming to the boat.**

This was one of the last times that Agent Robinson was able to serve actively. Shortly after this day he contracted infantile paralysis, and he died while the campaign was yet in progress.***

In the small town of Pollizzi Generosa about this time, the II Corps CIC gave another example of its resourcefulness in performing non-CIC missions. Col Dickson's summary of the section's work was as follows:

> "On 25 July, following a report from a patrol of the 1st Division which had briefly entered Polizzi Generosa that there were riots in the town, Capt Miner went there, organized a civil guard of 150 men and restored order. Numerous German soldiers remained in the country about the town, stealing from and killing farmers and townsfolk, and presenting a threat to friendly communications. Capt Miner posted his civil defense force at night at the entrance to the town to defend it and also led a patrol which captured three German soldiers in the region."****

The patrol that captured the Germans consisted of agents Roy G. Tozier and Lewis V. Sevier. Tozier gave a humorous account of the incident. Warned by civilians that enemy soldiers were nearby, the three-man search party set off:

****Quoted in "Operation of II Corps CIC in Tunisia and Sicily," Sep 1953, Horace Miner

"Miner and Sevier together went one way. I went another. I was unlucky. I saw two soldiers some 300 yards away. I guess they weren't any more anxious to fight than I was, so they threw away their guns and, with hands raised, started toward me. In the meantime, I had done considerable shouting to Low and Miner. They joined me about the same time the Germans did. Miner spoke to the men briefly in German, learned there was another one in the valley, so he said I should guard the two and he and Low would find the other. That was fine with me. I parked myself 20 feet away from them, parked my .45 in my lap, and tossed them two cigarettes and matches. I remember feeling slightly smug at that point....Then I had a horrible feeling. I remembered that I had not inserted a bullet in the chamber of my .45. And, since they were professional soldiers and I was an erstwhile major in philosophy, I couldn't shame myself by letting them know how careless I had been. So I tossed them more cigarettes, smiled, and said something profound like 'This ist a schoen tag, isn't it.' Horace Miner was fairly flattering in his remarks about my picking up the German, and I have never told him how I guarded them with a gun which was not ready to be fired. I was awfully glad when Miner and Sevier came back with the third German."*

Lieutenant Guenthner and his swimming Agent Moseley had themselves several bad hours toward the end of July. They entered Polizza Generosa for what was supposed to be a routine screening, but such was not the case. The mayor and police chief informed the two agents that only one American officer and a handful of soldiers preceeded them, and they left as quickly as they had come. The officials stated further that many German soldiers roamed the outskirts of the town, terrorizing citizens, and demanding food at pistol point.

In addition to this threat from the outside, there was appreciable civil unrest. Mobs roamed; store windows were being smashed; homes looted.

The six-man police force had been unable to stem the turmoil; the Mayor asked for American soldiers to do the job. Capt Miner was summoned. He remained in town while Lt Guenthner and Sgt Moseley rushed off to find spare MP's at Caltavature.**

As the Allied closed in on the Etna Stellung, the 45th Division met its first stiff opposition at San Stefano; its offensive was slowed for several days. Here, Lt Lewis of the II Corps CIC and his driver, Pvt George Abdo, won commendation for heroic action by moving under fire ahead of troops to secure documents from a command post. Abdo was

*Letter, July 1953, by Roy Tozier
**45th CIC Det, Daily Rept, 25 Jul 43. Found in folder "Correspondence File", RCD BX 45121 (1-27-224). (CONFIDENTIAL)

killed when their jeep struck a mine; he was awarded a Silver Star posthumously. Lewis continued into the town, organized civil defense against the return of enemy patrols, took steps to notify friendly forces of the mine field and provided valuable information to the CO of the advancing combat unit. He subsequently received a battlefield promotion to 1st Lt.*

After the fall of San Stefano the 3d Division replaced the 45th, which was scheduled for rest and refitting in preparation for the Italian invasion.**

On 29 July 1943 Lt Carpentieri and Sgt Keeler (of the II Corps Section) were sent to AC of S, G2, 3d Infantry Division to establish an informant system. It was desired that information be obtained concerning: enemy strength and troop disposition; terrain features; condition of roads; relations between troops and civilians; and miscellaneous tactical information.

Carpentieri and Keeler found that in the areas of heavy combat best results were obtained by sending civilians into the enemy zone. Local priests and Carabinieri officials often served, and great effort was made to recruit former soldiers for the work, since they would be able to describe and evaluate their observations.

When enemy resistance was low, however, it was found difficult to send civilians into their zone; the boundaries were so vaguely drawn that the line-crossers had trouble finding their targets. Under such circumstances it seemed best to obtain information from civilians migrating from enemy-held areas, civilians in freshly evacuated towns, PW's and deserters.

Although Lt Carpentieri was well pleased with the success of his mission, he had one recommendation for such operations in the future. He reported that few civilians could accurately describe the locations of points of interest which they had observed. And, by the same token, their judgment of distance was often quite poor. Lt Carpentieri therefore suggested that anyone entrusted with such a mission in the future should be given (or have access to) a set of aerial photographs.***

The II Corps "espionage section" worked often with advance units of the 3d Division. 2d Lt Peter F. Carpentieri (of II Corps G2, assigned, because of his linguistic abilities, to work with CIC on this

mission) and Agent Clark B. Keeler passed numerous civilian agents into enemy territory and interrogated refugees crossing the front lines. As a result of their activities, valuable tactical information was procured and furnished to the G2s of the 3d Division and II Corps, including data on roads and road-blocks, mine fields, artillery positions, and enemy strength, disposition, movement, and morale.*

Troina Falls; II Corps Drives on Messina

To the south, the 1st Division drove toward Troina; this salient of German resistance became, in General Eisenhower's words, "one of the most fiercely fought smaller actions of the war."** Reinforced by fresh troops from the 9th Infantry Division who recently had landed at Palermo, the 1st, after a week's siege, marched into the ruins of Troina - and the enemy's defeat in Sicily became imminent.*** The extent of destruction in the town is reflected in Lt Brod's statement that, after his CIC unit entered behind front-line troops, most missions during the first two days were accomplished on foot in view of the impassability of the streets...."**** After Troina fell, the 9th Division Division replaced the 1st on the front, and its Counter Intelligence Corps section, under 2d Lt Charles B. Conick, undertook investigations in towns along the line of advance.*****

The section's duties, accomplishments, and problems were along the same lines as those of the CIC sections that had landed on D-day. But, operating in the last two weeks of the campaign, the 9th Division CIC faced a new difficulty. Conick said, "This section found that because of the lateness of the campaign and the dissolution of the Fascist Party by the abdication of Mussolini, papers and records of value had already been destroyed prior to the arrival of the section;" in some towns, however, "a great deal of help was derived from records that had not been destroyed but had been kept either by the Carabinieri or the Fascist Secretary."****** These records were eventually turned over to AMGOT. Conick reported that excellent cooperation was received from AMGOT, Military Police and the various unit commanders with whom CIC worked. Recommendations concerning the retention or disposition of public officials were made, and "in every case these were followed by

the AMGOT officers, and changes were made according to the CIC investigations."*

Along the north coast the 3d Division was pushing toward Messina. Its CIC section, under 2d Lt Bertram R. Russell, had left Palermo 31 July and moved into the area formerly covered by the 45th Division section. CIC advanced with the 3d Division through towns from San Stefano to Messina. Carabinieri again provided valuable aid to the Corps in establishing order in fallen towns. Reliable and cooperative, they maintained patrols, enforced curfews and other military government regulations, collected weapons, and guarded municipal buildings and counterintelligence targets. Lt Russell reported that the identification CIC gave the Carabinieri armbands marked "Civil Police," were "respected not only by the civil populace but also by the U. S. troops who moved through the town." The advance of the division was too rapid to permit complete investigation of influential Fascists. A few were arrested, however, after consultation with AMGOT, and interned in local jails.**

The Arrest of Fascists; Sicilian Campaign Ends

During some periods of the battle for Sicily, particularly those in which American forces were not advancing so quickly, the investigation and arrest of prominent Fascists and enemy agents by CIC played an important part in the maintenance of military and civil security. Afterwards, Capt Hoegaard-Jensen reported that, "The CIC...as of 25 September 1943, arrested 771 individuals, 24 of whom are classified as enemy agents and will stand trial on that basis. Seven saboteurs were arrested by the CIC and signed confessions.... In addition, the CIC penetrated and completely exposed the Italian intelligence systems operating on the Island of Sicily."*** He stated also that several prominent leaders and a number of agents of Fascist organizations were arrested and interrogated by CIC, and evacuated to Africa, and that some were employed by CIC as double agents and informants.****

Most of those whom the Corps arrested were Fascist political and police officials, potentially a major threat to security. Many were shipped to North Africa in accordance with an order from General Patton, CG of the Seventh Army, that all leading Fascists and persons considered dangerous to the Allied cause be evacuated. But some individuals, who had been arrested only because, by their office, they had symbolized Fascism to the people, but who were not regarded as serious security

****Ibid

risks, were later released. And in some instances, where no capable replacements could be found, former party members were kept in civic offices, under the supervision of the Military Government."*

Pressing on to Messina, the 3d Division, together with elements of the 45th utilized a series of three minor amphibious landings in breaking the last lines of resistance by German rear-guard units defending the retreat across the Straits of Messina to Italy. By 15 August the Allied drive had become a race; on the 16th combat troops sped past the Cape of Milazzo; and on the morning of the 17th the meeting of American and British forces in Messina marked the close of the fight for Sicily. The following day the II Corps and 3d Division CIC groups began work in Messina that continued till British counterintelligence, which was to have jurisdiction over the eastern half of the island, assumed control.**

The 3d Division CIC had stayed with front-line elements until the finish. Lt Russell gave the following account of the section's entry into Milazzo that day before the campaign ended:

> "Troops had by-passed the Cape of Milazzo but, because of the possible documents and material of intelligence value that might be found there, the CIC entered the town. Of the several thousand inhabitants, only two were found in the town.... [They] led the CIC men to caves along the beaches where thousands of civilians went wild with joy at the sight of American uniforms. As was the usual case, many were eager to denounce several of their group who had been actively engaged in Fascist activities, but the important discoveries at the spot were not Fascist leaders but rather numerous coastal gun positions, a transmitting set in the home of an Italian officer, and documents from the headquarters of a coastal regiment. Italian prisoners were also numrous, too numerous in fact to be handled by two CIC men. These were effectively disposed of, however, by lining them up in a column of twos and starting them off down the road in the direction of the P. W. enclosure under cover of a white flag. Counterintelligence functions were carried out until CIC personnel were sent out from [II Corps] to relieve the division men."***

The mopping-up of resistance pockets in the west had been completed earlier by the 2d Armored Division and other units. With the cessation of hostilities and the establishment of defense areas for

***"Field Security (Counter Intelligence) with a Division in Sicily," by 2d Lt Bertram R. Russell (R)

units of the Seventh Army, which became responsible for the occupation of the four western provinces of Sicily (Palermo, Agrigento, Caltanissetta and Trapani), CIC sections turned to the accomplishment of their static mission - although initial investigations of by-passed villages and towns had yet to be completed in the following weeks. Later, a permanent static section was formed from Port Sections "A" and "B" and two additional port sections dispatched from North Africa. CIC sections attached to tactical units then relinquished their civil security responsibilities and directed their efforts to military security matters.*

Although combat activity had trailed off by late August, CIC work continued through the month. Agents Mosely and Messina of the 45th CIC Detachment were told of an underground organization operating throughout Sicily. A Sicilian had been located who claimed to know the exact locations of local "Communication Stations" used by the net. He had been told of other stations in Termini, Palermo and Messina -- some of which were connected with the Italian mainland. Afraid to escort CIC agents to the entrances of this "underground," he was induced to lead his good friend, Private Labelle (American) there.

Private Labelle, in turn, took agents Moseley and Messina to the "underground entrances," which proved to be, appropriately, manhole covers over the sewer system west of Trabia!

The Sicilian expected to be paid for this information; Private Labelle admitted that he wanted only publicity for his part in the work. During the conversation that followed discovery of these "underground entrances," Private Labelle admitted that he had been arrested several times for being AWOL from his organization. The manhole covers were replaced. The case was considered closed.** Indeed, even many important CIC investigations seemed at the time similarly unrewarding. A British officer at Porticello, for instance, called the 45th CIC Detachment to inform Lieutenant Guenthner that he had observed lights flashing near his billet. Agents Messina and Joy were sent to investigate. Upon their arrival in Porticello, the Agents were told that there were no British officers in the town. Some British soldiers, all enlisted men, were located a few miles off; they, in turn referred the CIC agents to the town of Aspra, where a Flight Lieutenant was living. This officer said that it was not he who had reported the lights, but that such lights did exist.

Agents Messina and Joy set off to discover what they could. They found the following violations of blackout regulations: a devotional light shining from a home in Aspra; several lights in homes at Saint Nicola; a light shining from a convent between Saint Nicola and Porticello; an Army truck with headlights ablaze; a civilian car in the same condition; numerous lights in homes about Flavia; lights in

doorways, windows and slits in the blinds -- all in Ponticello; lights from diverse sources in Saint Elia; bright lights from all the windows of a key radar station on the tip of the peninsula at Zaffarano; and miscellaneous other violations.

All concerned were warned.

In Porticello, incidentally, the two agents met a group of Carabinieri officials who, similarly, were attempting to have blackout regulations obeyed.*

Liaison Established with Other Units

The assumption of civil security duties by CIC during the combat period brought it into frequent contact with the Military Government teams. Although some difficulties arose between the two groups, partly because of misunderstanding of each other's missions, and partly because of the inability of AMGOT to provide early coverage of towns, increasingly profitable relations were developed over the weeks. Thus, Capt Heegaard-Jensen who had complained early in the campaign of a lack of cooperation by AMGOT, spoke by early August of the complete cooperation being achieved in some instances. Furthermore, it was suggested that with close coordination at higher levels, and with a greater mutual appreciation of the other organization's jurisdiction and functions, the problems that continued to arise could be alleviated more readily.**

CIC also established successful liaison with various intelligence organizations, including the other Army G2 branches, the Office of Naval Intelligence, the Psychological Warfare Group, and British Intelligence representatives.*** But with one group, the Office of Strategic Services (OSS), considerable difficulty was experienced during the Sicilian campaign. According to Major Edward L. Ray, Jr., CO of the NATOUSA CIC Detachment, OSS men "worked independently and at times at cross-purposes with the CIC"; he added, "their accomplishments in the CI field are believed to have been negligible if not nil."****

****Letter, 7 Oct 43, by Maj Edward L. Ray, Jr., to Chief, CIB, G-2, Hq, ETOUSA, subject, "CIC Operations" (R)

Capt Neegaard-Jensen reported that OSS had been directed by both Col Oscar W. Koch, ACof S, G-2, Seventh Army, and Lt Col Thomas C. Young, Jr., Counterintelligence Officer, 15th Army Group, to carry out counterintelligence functions under the CIC section commanders but that they had failed to cooperate with CIC.* It was not until later campaigns on the continent that the two agencies learned to work together in combat operations.

The accomplishments of its units in Sicily did much to strengthen CIC's reputation, first recognized by some military men in North Africa, as a necessary part of the army's combat team. The Seventh Army's G-2, Col Koch, stated: "I consider the work done by the Counter Intelligence Corps during the Sicilian campaign to have been of inestimable value,"** and the substance of his statement echoed in lower echelon intelligence channels. Col B. A. Dickson said: "The CIC detachment attached to II Corps during the operations in Sicily has performed a great variety of missions in a highly commendable manner and proven themselves indispensable both to divisions and corps..."***

Agents Gain Awards, Commendations

Individual agents were commended for their work in Sicily. Shortly after the campaign, Col L. R. Forney, Chief of the Army's Counter Intelligence Group, said of the commanding officer of the Seventh Army CIC sections, "From the standpoint of services rendered, Capt Neegaard-Jensen is probably the most distinguished officer in the entire CIC."**** In reporting his recommendation of Capt Miner for a battle promotion (which failed because of the lack of a T/O vacancy) Col Dickson said:

> "Capt Miner, as detachment commander, is to be commended and is deserving of the highest praise for the manner in which his unit has functioned. He has already been recommended to CG NATOUSA for promotion to the grade of major, and it is believed that this rank is not only richly deserved in this case but is needed for the position of corps CIC Detachment Commander in view of the relative rank of both combat unit commanders and AMGOT officials with whom he transacts business."*****

*****Letter, 9 August 1943, Col Dickson, "Activity of the Counter Intelligence Corps"

A complete list of awards won by Counter Intelligence Corps agents in Sicily has not been compiled. However, in the II Corps section alone, several CIC men later were honored for actions performed, in whole or in part, on the island. Norbert B. Wittrock was awarded the Legion of Merit for services in Sicily and Italy; Lt Crosby Lewis won the Bronze Star Medal for services in support of combat operations in Tunisia, Sicily and Italy (in addition to the battlefield promotion mentioned earlier); and Clark B. Keeler received a Bronze Star for action in Sicily. A Purple Heart was given Daniel J. Sullivan after he was injured slightly when the II Corps CP was bombed in early August.* Records of other units are not so complete in this respect. But a memorandum by Col H. R. Kibler, Chief of CIC, on 4 September 1943, stated that twelve agents who took part in the Sicilian campaign were recommended for the Legion of Merit.** It has not been determined how many of these awards were given, or to whom.

Although its men possessed the other qualifications required for their specialized missions, CIC was hindered by a shortage of Italian-speaking agents. Interrogating through interpreters made an agent's work more difficult, and where interpreters were novices the effectiveness of CIC investigations was lessened considerably. Section commanders and G2s insisted that more CIC linguists were needed - at least one per team. In the meantime, methods of finding more capable interpreters should be sought. Italian civilians and American soldiers had been used experimentally, but the former were obvious security risks, the latter had not shown satisfactory linguistic or intellectual abilities, and neither group produced individuals with the technical training of skilled interpreters. A more thorough effort to obtain CIC linguists was to be made for the invasion of Italy.***

Sicily ended as a political and military disaster for the enemy. Mussolini had been forced to resign; Italy was looking for a way out of the war as unrest and dissatisfaction spread; and Axis armies had suffered 167,000 casualties, compared to 31,000 for the Allies.****

CHAPTER 3

CRITIQUE: NORTH AFRICA, SICILY

New Problems Arise

Any hopes that Maj Edward L. Ray and his staff at Allied Force Headquarters may have had that the reorganization brought about by Lt Col Gordon Sheen in the spring of 1943 had solved all of CIC's major problems were soon dispelled. From the time the tactical troops left North Africa for the invasion of Sicily until well into 1944, headquarters found a new problem arising almost every day or, worse still, had to meet a recurrent problem that had been considered solved. Many of these were administrative, arising normally, but frustratingly, from the integration of a new type of organization with a growing and changing mission into a framework already established.

Part of the difficulty arose through the fact that CIC's mission, administration, and "ground rules" were promulgated in Washington, while the actual operations were controlled by the G2 of the command to which each detachment was attached, many of whom had no knowledge of the importance of any type of intelligence. Many of these problems seemed to those who had to struggle with them to be the result of a misunderstanding of CIC's mission so great as to cause a deliberate intention to nullify the organization.

To recount these difficulties at length would be pointless, but a few of them are important for historical purposes, to illustrate how some were solved and how others depended for their solution, then as now, upon an understanding by the other services of CIC's needs and mission.

"Assigned" or "Attached" to Theater?

One of the early causes of consternation was a cable, on 28 June 1943, from the War Department announcing that all CIC personnel in the Theater "or hereafter arriving" would be "assigned" to MIS, WD, and "attached" to NATO for duty.* There followed a flow of cables and letters to the War Department and to the Chief, CIC, in an attempt to straighten out the administrative difficulties caused by this change.

"Urgently request that your message. . . . be reconsidered," one cable signed "Eisenhower" read. "If members of CIC are assigned to WD and only attached to this headquarters, we will be handicapped in administering here matters which necessitate prompt action, including replacements for casualties by promotions in the battlefield,

*Cable No 1353, from MIS, WD, to CG, NATO, Algiers, dtd 28 Jun 43 (S&F files, R-11, p 413) (C)

1656

disciplinary matters and similar functions ordinarily looked upon as belonging to the Commanding Officer locally.*

Letters and cables followed at a rapid pace without any real clarification of this situation or of numerous problems attendant upon it, such as promotions, transfers into and out of CIC, and a Table of Organization for the Theater.**

War Department Cooperation Necessary

Major Ray appealed to Colonel Sheen, as the highest ranking officer in the theater who was familiar with the situation there as well as being acquainted with the problems in the office of the CIC Chief, to make a trip to the United States to attempt to reach some solution for a situation which "has become intolerable."***

"The difficulties have been numerous," Major Ray wrote. "They have stemmed principally from other staff sections in this headquarters who are not familiar with the ramifications of Counter Intelligence and its methods and, unfortunately, from the War Department itself. It has been possible to overcome, one by one, the hurdles placed in our way locally, but the lack of cooperation from the CIC Branch, MIS, War Department, has brought us to a dead stop. The War Department is too remote from this theater to be familiar with our needs. Cables and letters are important to close the gap. Perhaps it is our fault, but somehow we have been unable to impress the War Department with the urgent need of certain measures which it alone can take to correct serious conditions confronting us here. For the large part no answers are even returned to us acknowledging our reports or requests or clarifying issues or correcting conditions."

Major Ray pointed out that the cable mentioned above had brought up so many fundamental issues that "it is impossible to know which way to turn to accomplish certain ends that are most vitally needed."

In spite of Major Ray's urging, it was not until October that Colonel Sheen was sent to Washington, shortly after Lt Col Hugh Wise, Assistant Chief, CIC, was sent by the War Department to North Africa. His report will be discussed later.

***Memo for Col Sheen, subject, "CIC Detachment (Prov), NATOUSA," dtd 2 Jul 43 (KC Depot 7-6-68) (C)

CIC Assigned to AFHQ.

On 26 August 1943, AFHQ inactivated the CIC Detachment NATOUSA and activated the 2670th Headquarters Company, CIC (Provisional) and assigned it to Allied Force Headquarters. A short time later they dropped the word "Provisional," illegally as it turned out. For purposes of simplicity the unit was to be called CIC, AFHQ. Major Ray was designated Chief, with Major Vincent J. Thill as executive and 1st Lt Bertram G. Knowles as adjutant.*

This change from NATOUSA to AFHQ was necessary, it was explained in a letter in September 1943 from Major Ray to the Chief, CIC, in Baltimore, in order that CIC would be with the highest headquarters in the Theater. At that time AFHQ controlled three commands: the 15th Army Group, comprising all tactical units; the Mediterranean Air Command, consisting of the North Africa Air Force (NAAF) and Military Air Transport Service (MATS); and Headquarters, NATOUSA, which operated all Base Commands in the Theater. In his letter Major Ray explained that, although he recognized that the "assignment" rather than an "attachment" was contrary to CIC policy as approved by the War Department, he was helpless to do anything about it. The confusion was tremendous. If CIC were "attached" to the Theater, all Morning Report records should be submitted through the Chief, CIC, to the Machine Records Unit in the Military District of Washington. However, since the Theater considered them "assigned," their records were going through the NATOUSA Machine Records Unit. This situation was further complicated by the fact that CIC was still considered by War Department as "belonging" to NATOUSA instead of to AFHQ.**

Major Ray also pointed out that with the dropping of the word "Provisional" the way was now clear for assigning personnel newly arrived in the Theater to the Company, thereby disposing of a serious problem. His optimism was short-lived, however, when he discovered less than a month later that: "The word '(Provisional)' will be included in the designation of all units which have been or shall be organized in this theater and which were not or shall not have been 'constituted and activated' under specific War Department authority."***

Assistant CIC Chief Visits North Africa

As mentioned previously Colonel Wise went from Washington to North Africa and Sicily in the fall of 1943. Between 12 September and 29 September, he visited nearly every CIC Detachment and talked with many persons concerned with CIC, both in the Corps and on the G2 staffs. There seems little doubt that his report of conditions, as well as Colonel Sheen's reports upon his return to the United States at about the same time, did much to straighten out the administrative difficulties between CIC, AFHQ, and CIC, MIS. In his report* Colonel Wise discussed some of the problems mentioned previously in this chapter and submitted numerous recommendations. He stressed the oft repeated need for linguists, stating that the War Department's failure to furnish an adequate number of men with language qualifications had materially reduced the efficiency of the Corps and, in some instances, almost rendered it useless. "It should be pointed out," he wrote, "that if CIC linguists are not furnished, the G2's and A2's will continue their present practice of securing their own linguists and using them to perform the mission which the CIC should perform but cannot perform due to language difficulties, and that the distinct danger exists of the collapse of CIC operations overseas." It was the opinion throughout the theater, he said, that the War Department policy concerning personnel with close foreign backgrounds "is erroneous and very serious."

Wise also requested the development of a procedure whereby misfits, both among officers and enlisted men, could be returned to the United States; most of these misfits, he added, represented "wash-outs" from the Service Commands during a period when it was not possible to prevent such action. He included recommendations concerning changes in the Special Equipment List, changes in T/O allocations, firmer promotion policies, changes in the CIC Training School curriculum, and much closer attention, at War Department level, to the peculiar needs of CIC and the education of officers of other services to these needs.

Three Types of Detachments in North African Theater

At the time of his visit he found three distinct types of CIC Detachments: those with static installations under NATOUSA; with Air Force installations under NAAF; and with tactical organizations under 15th Army Group. Headquarters CIC, AFHQm was responsible for placing Detachments on detached service directly to each of the Base Sections under NATOUSA; Atlantic, Mediterranean, Eastern, and Iceland Base Sections; to the Air Force installations; and to tactical organizations. Although it retained the power to move the personnel from section to section, it exercised no control over investigations or other activities. CIC Headquarters' only recourse in the case of

*Memorandum for the Chief, Counter Intelligence Corps, dtd 4 Oct 43, subj: "Visit to AFHQ, Algiers, and Hq NATO, Algiers, and certain CIC Dets in that area," by Major Hugh D. Wise, Jr., Asst Chief, CIC (S&F Library) (S)

improper employment was removal of the Detachment, an expedient which was not practical, Colonel Wise pointed out, because of the repercussions which would result.

Three officers and three enlisted men were stationed at AFHQ, CIC, and one officer and four enlisted men operated a field office directly under the Counterintelligence Section of AFHQ.

A Frontier Control Section composed of two officers and 17 enlisted men were distributed as follows: one enlisted man in Casablanca; two officers and six enlisted men in Rabat, the center of the French government; and ten enlisted men stationed at three border points of exit and entry. All of these men spent most of their time in checking files and documents, work which it was agreed was not a proper function of CIC, but there seemed to be no other personnel available. It was anticipated that these men would be relieved automatically with the expected early termination of American activities in the Theater.

The two officers and 17 men with NAAF were working primarily on problems of air field security and investigation of suspected cases of sabotage, and, although this detachment was over-strength at the moment, they would all be required as soon as the anticipated move to bases in Sicily, Sardinia and Corsica had been made.

One officer and four enlisted men with MATS were used exclusively in checking papers of persons entering or leaving the country. Since this work was admittedly not a CIC mission, efforts were being made to have them reassigned.

Approximately six officers and 30 enlisted men who were attached to the Eastern, Mediterranean and Atlantic Base Sections were engaged largely in port security work and in addition had certain area responsibilities in maintaining contact with civilians and French authorities. The Island Base Section, in Sicily, was composed of four port sections but, with the movement of tactical troops from the area, were expected to take over the static counterintelligence mission in Sicily.

CIC Detachments were with all tactical units then in Sicily and Italy. In his contacts with G2's and CIC officers of these units, he found that all were in agreeement that they needed additional CIC personnel and that CIC personnel were "absolutely essential for all tactical units in combat and that the performance of combat counter-intelligence and intelligence, as distinguished from reconnaissance patrol work, was an essential part of the mission." This use of CIC had been the subject of much correspondence between CIC, AFHQ, and CIC, War Department, without an agreement being reached.* The only outstanding disagreement, he learned, was as to the echelon to which CIC

*Reference Chapter 1, "North African Campaign"

detachments should be assigned, each one desiring their assignment. From Army Group down to division, each desired the assignment of CIC, with the privilege of deploying agents down to lower units as needed.

Chief of Staff Settles Trouble with G1

Although Colonel Wise in his report did not go into the desperate need in the Theater for changes in the T/O allocation, he doubtless discussed it with AFHQ officials, since there was at that time a profound disagreement between the G2 and the G1 at AFHQ, which had to be resolved before the War Department could act. It finally was resolved by the personal decision of the Chief of Staff at AFHQ, in CIC's favor.

The correspondence concerning this episode is enlightening, and it is evident that tempers flared high. One memorandum from Major Ray to Colonel T. E. Roderick, Deputy AC of S, G-2, AFHQ, attributes the following comments to the G1:*

> "G-2 is the most confused and overstaffed staff of this headquarters."
>
> "Until G-2 cleans its own house it can expect no help from us."
>
> "G-2 has many conflicting, snooper agencies that only get in each other's way."
>
> "CIC already had too many men in this theater. Its job becomes less important every day as the front has narrowed. No need to leave anyone behind in North Africa. It's more economical to let sabotage occur than ship additional personnel over."
>
> "General Strong tells you he'll increase your T/O when he sends additional personnel, but you can't count on that. I know how he operates."

After additional discussion of the attitude of the G1, Major Ray concluded his memorandum, "The fact remains, however, that if the CIC is to meet the responsibilities delegated to it by the Commander-in-Chief, it must receive additional personnel being especially trained for this Theater by the War Department. Fifth Army is crying for men, G-2, AFHQ, is fully aware that additional personnel is needed, and G-2 War Department, fully concurs and is going all-out to make the men available. Yet, G-1, AFHQ, refuses, with hardly a hearing, to support our needs."

In a personal letter to Colonel Sheen, written while Sheen was on his way to Washington in October 1943, Major Ray elaborated further on

*MEMORANDUM to Col Roderick, Hq CIC, AFHQ, from Maj Ray, dtd 21 Oct 43. (C) (KC Depot 7-6-81)

the difficulty. He explained that in answer to an AGWAR cable of 3 September requesting CIC's troop requirements for the immediate future, CIC requested 25 officers, 165 investigators, and 60 clerks for shipment during the months of November and December. However, the requisition had been turned down by G1 with the statement that the temporary T/O set up on 30 August would be the permanent T/O for the Theater, ignoring the fact that this was intended to be only temporary to take care of personnel en route to the Theater or scheduled to be en route in the immediate future.

"Now G-1 says that it will be our final T/O regardless of what the War Department amends it to be, that it (G-1) will permit no additional CIC personnel in the Theater, that we already have enough to 'cover all of Europe,' and that we'll have to find a way to get rid of the non-CIC personnel the Company is now carrying, such as the five officers and the interpreters," Major Ray wrote. "Indications are strong that our trouble stems from a personal antagonism between certain high-ranking officers in G-1 and G-2 and that we're being made the goat. Naturally, this last observation is no more than speculation, but it's based on more than a guess."*

In his appeal to the Chief of Staff to override the G1's refusal to accept additional CIC agents, Colonel Roderick flatly stated: "The work of counter-espionage, counter sabotage and military security now the duty of the Counter Intelligence Corps cannot be performed in this expanding theater with the presently contracting number of personnel." He emphasized the necessity of maintaining CIC agents in North Africa to protect military installations against covert enemy activities, and pointed out that the "existing T/O for the Counter Intelligence Corps in this theater has purposely been made elastic by the War Department so as to expand and contract automatically by exact grades as shipments arrive or depart from the theater."**

Colonel Roderick climaxed his argument by attaching a report of a survey made by Colonel Oscar W. Koch, AC of S, G-2, Seventh Army, which indicated that, with one exception, every tactical unit in Sicily had rated its CIC Detachment as "indispensible." Most of them asked that their detachments be permanently attached and especially that they be made available "during planning phases." The one exception, the 9th Infantry Division, indicated that CIC was "of some value" and that their value would be greatly increased if they were permanently attached, thereby "eliminating the CIC channel in the chain of communication and eliminating an apparent feeling on

**Ltr from Col Roderick, Office of AC of S, G-2, AFHQ, to Chief of Staff, AFHQ, subj: "Recommended Revision in the T/O for the CIC," dtd 8 Oct 43 (C) (KC Depot 7-6-82)

the part of the Counter Intelligence Corps personnel that they are not a part of the division."*

What To Call Detachments a Problem

Even the seemingly simple matter of naming the various detachments assumed harassing importance. AFHQ gave the various units four digit numbers and specified that they were to be known as "Sections," but since the Special List of Equipment for CIC allocated materials by "Detachments," the order had to be rescinded and the old terminology resumed. Then Fifteenth Army Group issued an order, without reference to AFHQ, CIC, giving a new set of names to the Detachments under its control.** AFHQ CIC then issued an order legitimatizing Fifteenth Army Group's order, but when the AFHQ Adjutant General learned about it, the order was rescinded on the basis that only the highest headquarters in the Theater was authorized to create numerical designations. In a letter to Major Stephen Spingarn, CO of the Fifth Army CIC Detachment, concerning the confusion among the detachments who scarcely knew from day to day what to call themselves, Major Ray explained that the situation probably would continue: "When I was in Italy I mentioned the difficulty. . . /but the CIC Officer for Fifteenth Army/ . . . still insisted the Detachments were to be called by the titles he had given them. . . It was hardly worth making an issue on the matter, so I left it at that. We've had to have him sit on matters far more important and I didn't want to stir up a hornet's nest on this matter. So carry on the way you have been. You certainly can't use. . . /this unauthorized/ . . . designation when requisitioning equipment. . . . It would have no weight whatsoever and would cause further repercussions. . . . If you hear of other Detachment commanders who are confused about the numerical designation matter, will you please clear it up informally?"***

The matter of the naming of Detachments was not resolved until August 1944, at which time it was directed that Detachments with Infantry Divisions were to be called by the Division number; with Armored Divisions by the Division numeral preceded by "50"; with Corps by "20" and with Armies by "30."**** Before this occurred, however, all detachments under Fifth Army had been instructed to include the name of their Division or Corps in their letter heads and mailing addresses as well as the arbitary number given them, in order

to avoid the mix-ups which, even in official mail, had occurred with regularity.*

Many Hurdles Overcome

As Major Ray had explained in his letter to Col Sheen in July,** CIC was able to hurdle much of their local difficulty brought on by lack of understanding of their mission and the necessary peculiarities of administration. Most of the G2's and CI Officers of the tactical units had come to rely heavily upon their CIC Detachments and to recognize that certain requirements such as the omission of insignia of rank, relief from routine military housekeeping duties, and greater individual freedom of movement were not specified in order to give preferential treatment to CIC agents, but in order to permit them to carry out their assigned responsibilities.

However, there were a few die-hards who seemed intent upon placing every obstacle in CIC's way--and unfortunately, some were in a position to carry their harassment to a frustrating degree. The most implacable of these was the CI Officer for Fifteenth Army Group, previously mentioned as having insisted upon renaming the detachments operating under Group, contrary to AFHQ directives. In refutation of a long list of charges made against CIC by this CI Officer, Major Ray, in November 1943, outlined to the AFHQ CI Officer the history of the difficulties encountered. He pointed out that, prior to the invasion of Sicily (Operation HUSKY), the Colonel had arbitrarily taken over the task of planning CIC operations on that mission and had announced that he would set up his own field training school, assemble his own personnel and set up his own TBA, in spite of the fact that Major Ray's headquarters had been established for that purpose. As the time for the invasion was drawing near, Major Ray wrote, the Operations section of Force 141 (HUSKY Planning section) came to Major Ray and, explaining that "it was apparent that no CIC section would ever be prepared for HUSKY" if the matter were not taken out of the Colonel's hands, appealed to Ray and his staff to take over.

"In the limited time left we were able to place trained sections with all the units sufficiently in advance of D-Day. Operations Section Force 141 was profuse in its thanks for what we were able to do and professed wonderment that we were able to pull the chestnuts out of the fire at such a late date," Ray wrote. He then told of a meeting of all CIC agents on the island at the end of the campaign, at which the Colonel in a speech excoriated the CIC, charging them with being "incompetent blunderers."

*Ltr, Hq CIC, 5th Army, to all Detachments, subj: "Designation of 5th Army Detachments," dtd 20 Jun 44 (C) (KC Depot 6-7-130)
**Memo to Col Sheen, subj: "CIC Detachment (Prov), NATOUSA," dtd 2 Jul 43

This speech caused Colonel Koch, AC of S, G-2, Seventh Army, to rise and "commend the CIC for its 'inestimable' contribution to the operation and extend the congratulations of the Commanding General," Major Ray said.

Difficulty Seen as Desire to Control CIC

Chief among the charges made by the Fifteenth Army Group CI Officer which Major Ray found it necessary to refute were that CIC agents, by wearing U.S. insignia in place of chevrons of rank, were "endeavoring to pass themselves off as civilians and officers," and that CIC's channels of communication had caused an "administrative muddle" of great difficulty to G2's. Major Ray labeled as "ludicrous" the charge that agents pretended to be officers and pointed out that the civilian "cover" was in line with War Department and AFHQ policy. As for the second charge, he had not found a single G2 who voiced any objection to CIC channels.

Major Ray interpreted the whole difficulty as a result of the desire of the Fifteenth Army Group CI Officer to usurp complete administrative control of all agents with units operating under Group, with the privilege of transferring them from unit to unit at will. This, he explained, would bring a return of "the chaotic conditions existing before the CIC was drawn into one organization," a situation which was "too fresh in our minds to permit any consideration being given to such a proposal." Major Ray appealed for "a strong letter to clarify AFHQ policy regarding the CIC."*

Unfortunately, in spite of repeated issuance by AFHQ of policy statements concerning CIC, the campaign did not cease. Late in December, Major Ray reported, when Major Thill went to Italy for an inspection trip among the CIC units there, he at first was refused permission to visit the Fifth Army Detachment and subordinate units; finally the decree was relaxed to the extent that he was permitted to discuss with G2's and Detachment Commanders "only certain limited matters pertaining to administration, supply and personal problems."

"It is completely beyond my comprehension how. . . a lower echelon can assume the authority to dictate to a representative of the Commander-in-Chief that he cannot discuss certain matters with subordinates of his own organization," Major Ray wrote in reporting the situation to Colonel Nichols. "Under the limitations imposed, Major Thill was not permitted to discuss some of the most important subjects he went to Italy to review, such as relations between the CIC and G2's; whether the CIC was being properly employed, liaison between CIC Detachments, etc."**

CIC Agents Have No Place to Eat

Even obtaining food for CIC agents became a pressing problem. In a desperate appeal to AFHQ for a Theater ruling permitting CIC agents to eat in junior officers' messes as did all civilians assigned to the area, Major Ray, in June 1943, tersely outlined the difficulty. "CIC personnel of ABS /Atlantic Base Section/ work in civilian clothes and therefore cannot mess with other enlisted men. Until recently they have been eating in restaurants in the town until two of the men became hospitalized as a result of malnutrition. Captain Tucker then arranged for his men to eat at officers' mess until Colonel Wanvig /AC of S, G-2, ABS/ heard about it and stopped it immediately, saying he would have no EM, whether in civilian clothing or not, messing with officers. Now the men are picking up what they can as before. Can G2 do anything about this?" he wrote.*

In November 1943 a similar appeal was made by the CO of the Mediterranean Base Section /MBS/ Detachment, Captain C. E. Read, who pointed out that his agents, by having to eat in local restaurants, were not getting proper food and that conditions in the restaurants were such as to endanger their general health. Although no records are available to indicate how the difficulty at ABS had been resolved, Captain Read's letter stated that "since such commands as AFHQ, EBS /Eastern Base Section/, ABS and Fifth Army. . . are making facilities of Officers' messes available to CIC personnel, therefore establishing a precedent. . . it is the opinion of this officer that your office could be instrumental in having a directive issued from higher authority. . . which would clearly set forth authority to permit CIC personnel the use of facilities at Officers' messes."**

Theater Ruling Defines CIC's Status, Privileges

All these pleas finally resulted in the publication of a letter on 30 December 1943, over General Eisenhower's command line, which left no doubt as to the intention of the Theater's highest headquarters as to the use and treatment of CIC.*** This letter was addressed to all commands down through Corps and Base Sections, with instructions that it should be reproduced in sufficient copies "so as to insure delivery to all echelons of command and include divisions."

This letter constituted such an important victory for CIC and is believed to be such a significant landmark in CIC's history that it is included here in full:

---

*IOM to G2 AFHQ, dtd 4 Jun 43 (U) (KC Depot 6-2-30); and Memorandum for Lt Col Sheen, subj: "Messing Facilities for CIC Personnel," signed Ray, dtd 28 Jun 43 (C) (KC Depot 7-6-67)

**Ltr, Hq CIC AFHQ, MBS Section, signed Capt C.E. Read, to Chief, CIC, AFHQ, subj: "Mess Facilities for CIC Personnel," dtd 15 Nov 43 (C) (KCD 6-9-249)

***Ltr, file AG 350.09-2 GBI-AGM, AFHQ, subj: "Counter Intelligence Corps," dtd 30 Dec 43 (C) (KC Depot 1-29-225(1))

"1. Information has been received that some Counter Intelligence Corps detachments are being employed on functions other than those for which their personnel were trained and furnished this theater by the War Department.

"2. There have been instances where Counter Intelligence Corps personnel have been used for routine guard duty, for traffic checks, for interrogation to secure tactical information from prisoners of war, and for investigations concerned solely with criminal activities.

"3. It is again emphasized that these trained specialists will be used only for counter intelligence purposes including measures connected with counter sabotage, counter espionage, and counter subversion.

"4. It is deemed essential that Counter Intelligence Corps personnel wearing civilian clothes or the uniform prescribed for civilians be addressed and referred to as 'Mister,' not by military title, except for necessary administrative purposes, and that they be extended the same facilities and afforded the same treatment as civilians.

"5. Successful operations of the Counter Intelligence Corps frequently depend upon the rapid and concerted action of several Counter Intelligence Corps detachments or elements thereof. Therefore, coordination between personnel of the Counter Intelligence Corps detachments, especially tactical, attached to separate commands will be encouraged."

PX Officer Reminded of Ruling

One can only imagine the feeling of relief with which the above letter was greeted by both the CIC and the G2 staffs at AFHQ because it should have disposed of the major causes of local harassment. Perhaps the rude awakening from that relief was a determining factor in the firmness of a letter written on 16 January 1944 by Lt Col Earle B. Nichols, Assistant G2, AFHQ, to the Army Exchange Service. In this letter he "invited" attention to paragraph four of the 30 December letter and pointed out that CIC agents, until recently, had been barred from the Casablanca Officers' PX, which was also patronized by civilians, and "even now, are allowed to purchase supplies only at a specified hour each week when the PX is not open for normal business." Colonel Nichols left no doubt but that this practice would cease immediately.*

Hostile Colonel Continues His Program

Records seem to indicate that throughout the Italian campaign, generally unit commanders, G2's and other persons in a position to help or harass CIC, were brought into line, either through first hand acquaintance and dependence upon its agents, or through diplomatic liaison backed up by the undoubted authority of the 30 December letter. However, not so with the Fifteenth Army Group CI Officer, who continued his activities without any indication of cessation. Late in February 1944, Major Stephen Spingarn, CO of the Fifth Army CIC Detachment, reported that before the "S" Force moved on Rome, this officer had ordered all CIC agents to remove the U.S. insignia which identified them as civilians, and even after higher authority reversed his order, made it a point to acquaint all members of the "S" Force, Americans, British and Italians, with the fact that CIC agents were enlisted men "and should be treated as such." After the "S" Force had concluded its assigned work, he had insisted upon keeping four CIC agents with the skeleton force remaining, although continuing to criticize CIC continually. These four men, Spingarn said, were merely answering telephones and performing routine clerical work. On one occasion, according to Spingarn's report, the Colonel, in the presence of another officer, demanded to know the rank of an agent, and when the agent properly referred him to his commanding officer, "flew into a rage, and after browbeating the agent," called Spingarn and told him that "if the man were a private he had the fatigue duties of a private. . . and if he were a sergeant he had the appropriate fatigue duties. . . ."

Major Spingarn attributed the whole problem to one officer's "complete disregard of the various AFHQ directives covering the use and treatment of CIC agents and his apparent desire to degrade the status of this organization and our men. . . . It seems to me that this is a test case involving the whole status of CIC in this theater and I hope very much you can find means of dealing with it effectively."*

When, on 1 March 1944, this Colonel was replaced by Major Vincent Thill, there can be little doubt that there was general rejoicing throghout CIC in Italy. "This will be a great break for all tactical CIC in Italy, for we'll have a staunch friend in a very key position where we can make the lives of all of you ever so much easier," Major Ray wrote to Lt Crosby Lewis."**

Lack of Promotion Policy Affects Morale

Officer promotions, always a difficult situation as a morale factor, became an increasingly difficult problem during the period, as it seemed impossible to obtain any set policy. One example taken from an abundance of correspondence on the subject will illustrate this difficulty. In a letter written on 13 November 1943, Colonel Kibler, War Department CIC Chief, commenting that he had noted from a recent AFHQ roster that two CIC officers had been promoted, stated: "These promotions were accomplished without reference to this Division. Your Headquarters is not authorized to promote CIC personnel, and recommendations for promotion of Officers assigned to your Headquarters should be forwarded to this Division for approval. Information is furnished that in the future, promotions of CIC commissioned personnel without previous reference to this division will result in action to relieve the Officers promoted from the Counter Intelligence Corps."**

"If this Theater has been deprived of its authority to promote officers within authorized strength, it is wondered why notification was not given," Major Ray wrote in reply, requesting clarification of present policy and referring to a War Department letter of 28 July 1943 which "authorizes promotions of CIC personnel in this Theater to be made in the normal manner providing the Theater's CIC allotment is not exceeded," and to TM 30-215: "Promotion and demotion of officers serving under commanders who have been granted authority to promote and/or demote on their own initiative will be made in conformity with existing War Department instructions, regulations and policies without reference to the Assistant Chief of Staff, G2, War Department." Pending clarification of policy, Major Ray included in his letter a recommendation for promotion of a 2d Lieutenant to fill a T/O vacancy created by the death of an officer.**

When, on 25 December 1943, during a period when all had been informed that promotions were frozen, AFHQ received a WD cable announcing the promotion of a 2d Lieutenant who had not been recommended, Ray wrote a letter of protest, citing the fact that there were in the theater four 2d Lieutenants who "were more deserving by all the standards usually considered." Two of these men had had extended combat duty and three of them had been in the theater well more than a year longer than the promoted officer and outranked him by four and one half months. Pointing out the morale factors, he "urgently" requested answers to the following questions "at the earliest practicable moment":***

*WD MIS, file MID 322.999 CIC 11/11/43, from Kibler to CO, CIC Det, AFHQ, thru AC of S, G2, AFHQ, subj: "Promotion of CIC Commissioned Personnel," dtd 11 Nov 43 (C) (KC Depot 6-12-312(1))
**Ind to Kibler's ltr, 11 Nov 43, signed by Ray, 23 Nov 43
***Ltr Hq, CIC, AFHQ, to Chief, CIC Branch, CIC, MIS, War Department, subj: "Promotions," dtd 27 Dec 43 (C) (KC Depot 7-7-92)

"1. Can we expect the freeze order to be lifted in the near future?

"2. Will future promotions be made by the War Department or by the Theater in accordance with TM 30-205 and War Department letter AG 320.3 (15 Nov 43) PO-M-B, dated 22 November 1943?

"3. If they are to be made by the Theater, is approval of the War Department necessary, provided, of course, vacancies exist? Paragraphs 23.d and 24.c state that such approval is not necessary.

"4. If promotions are to be made by the War Department, will the recommendations of the Theater Detachment Commander be sought?

"5. What is the policy regarding battlefield promotions of 2d Lieutenants when no 1st Lieutenant vacancies exist? In this Theater a 2d Lieutenant may be given a battlefield promotion even when no 1st Lieutenant vacancy exists, provided the total number of Lieutenant vacancies is not exceeded. It would be extremely dangerous to the morale of this organization if CIC personnel were to be the only ones in this Theater not covered by this policy. Our personnel work and live under equally trying and dangerous conditions as others in a combat unit. It is urged that they not be discriminated against in the matter of battlefield promotion opportunity.

"6. What is the policy regarding battlefield commissions for enlisted personnel serving with combat units? The same principle applies to this subject as to battlefield promotions."

In a reply dated 27 January 1944, signed by the Adjutant General, it was explained briefly that the promotion in question was made on the basis of a Service Command allocation made before the officer left for North Africa in August but had not been acted on until 22 December; and that "new Tables of Organization for the Counter Intelligence Corps are under consideration and it is anticipated that on the approval thereof the authority to promote will be restored to the Theater."*

Some Officers Not Considered CIC by War Department

An administrative mix-up concerning the status of three CIC agents who were commissioned in England before the invasion of North Africa, five who were commissioned near the end of the North African campaign, two who had come to North Africa as officers, and two who had been taken into CIC because of outstanding abilities and who were at that time commanding Detachments, seemed impossible of solution. Each monthly information report sent to the Office of the Chief, CIC, carried

*Indorsement to Basic Communication, AG 210.2 (27 Dec 43) OB-S-B-2, to Commanding General, US Army Forces, North Africa, signed by the Adjutant General, dtd 27 Jan 44 (C) (KC Depot 7-7-92)

the names of these men. Regularly there would come from the Chief a letter stating that these men were not carried by the War Department as CIC, and, just as regularly, Major Ray would answer, "Why?" As for the ten who had been dropped from the WD roster, Major Ray never was able to learn the answer, but, in mid-August 1943 he was informed by a letter from Colonel Kibler that a screening within the Service Commands of officers who had shown the least adaptability, five vacancies had been found and "promptly alloted" to CIC, AFHQ. The seven additional spaces desired were not available, and the total strength of CIC as set in May 1942 had been reached; AFHQ's allocation of 255 men would stand.*

In answer to this letter and to a cable** which followed it, Major Ray, on 29 August 1943, again expressed his lack of understanding as to how the mix-up could have occurred. He again expressed his bewilderment at the removal of these men from CIC roles and at the statement that the Theater, the most active one in the world from a counterintelligence viewpoint, would receive no more men, although there were approximately 5,000 in the Corps.*** Referring to a statement in the cable that "eight 2d Lts were formerly CIC enlisted men but were relieved from the Corps without authorization of G2, War Department, to accept commissions," Major Ray stated, "None of these eight 2d Lieutenants was relieved from the CIC, at least by any authority overseas. If they were relieved it must have been by the War Department without any notification given us or them."

Ray suggested that perhaps three of the officers in question "were stricken from the CIC, War Department, roles on the technicality that to accept their commissions they first had to be given honorable discharges from the Army. In their case," he wrote, "they were discharged from the Army at 1000 hours, 30 September 1942, and appointed at 0800 hours the following morning. It is hardly conceivable that the period of 14 hours covering their change in status from enlisted men to officers could be the cause of their being released from the Corps, especially in view of the fact that only three of the five men were released." Two others, he pointed out, commissioned on the same orders and carried on ETO and later AFHQ rosters in exactly the same manner, had never been challenged by the War Department.

The five commissioned in North Africa received their commissions as a result of superior work and because of the need for CIC officers, he explained, and had not been "relieved from the Corps without

*Ltr file MID 322.999 (8-18-43) from Chief, CIC, to Lt Col E.C. Sheen, AC of S, G-2, AFHQ, dtd 18 Aug 43 (S) (KC Depot 6-12-314)

**Cable 5444 fr MIS, WDGBI, CIC/CIG Br, to CG, AFHQ, dtd 17 Aug 43 (C) (S&F Library files R-11, p 143)

***Ltr fr Ray, Hq CIC, AFHQ, to Chief, CIC Branch, CIG, MIS, WD, subj: "CIC Personnel," dtd 29 Aug 43 (KC Depot 6-7-102) (S)

authorization of G2 War Department," as stated in the cable. The other two officers had been in CIC prior to leaving for overseas, had come to North Africa with CIC Detachments, had continued to work for CIC exclusively, and had never been dropped from AFHQ-CIC rosters.

Ray appealed, as he had on numerous occasions, for the appointment to CIC of Captain Horace Miner and 2d Lt Crosby Lewis. Lewis had joined II Corps CIC Detachment in England as a private and, as one of the four agents who went in on the invasion of North Africa at Oran, was given a battlefield commission. Miner, a Reserve Officer, had come to North Africa as a member of the G2 staff, had joined CIC just before the Tunisian campaign and, as Commanding Officer, had led the Detachment through that campaign. "It is no exaggeration," Ray wrote, "to state that the pioneering of Captain Miner and Lt Lewis gave birth to the present concept of the tactical CIC that has proven itself so brilliantly in Sicily. The CIC has a debt to these two officers which mere appointment to the Corps, itself, cannot repay. Refusal of appointment, however, would be a slap in the face to them both, to whom the Corps owes so much."

This letter brought no results; in fact the problem became more acute. On 20 February 1944, Ray wrote in a personal letter to Colonel Wise that unless Lewis were appointed to CIC immediately, CIC would lose him completely. The others were being carried by CIC, AFHQ, but Lewis had been assigned to II Corps through an arrangement with the G2, and, Ray wrote, "The G2 is having his T/O troubles and will have to release Lewis completely if we cannot pick him up. We cannot pick him up in our Company unless he is a member of the CIC, for overstrength assignments are no longer allowed here." If this should happen, CIC would lose the man who "has had more tactical CIC experience than any CIC officer in the Theater or in the world, for that matter," an event that would be doubly regrettable, he explained, in view of the extreme shortage of CIC officers in the Theater. With the necessity for drawing officers to staff Detachments for forthcoming operations, there would soon be Detachments without even a Commanding Officer. "This is not only undesirable, but actually impossible in view of the fact that it takes a Commanding Officer to sign for property," he wrote.*

This letter to Colonel Wise and a cable to the War Department brought the authorization, on 29 February 1944, for Crosby Lewis,

*Ltr from Ray, CIC, AFHQ, to Lt Col Hugh D. Wise, Jr., Asst AC of S, G2, CIC Branch, CIC, MIS, WD, dtd 20 Feb 44 (C) (KC Depot 6-7-97); and Ltr from Ray, CIC AFHQ, to G2 (CI) AFHQ, subj: "Table of Organization," dtd 19 Aug 43 (C) (KC Depot 7-6-76)

after approximately 16 months of constant operational work under combat conditions, to become a full-fledged member of CIC.*

CIC Again "Assigned" to Theater

Welcome news arrived in a War Department letter dated 15 November 1943:

All CIC personnel in the North African Theater were to be dropped from assignment to War Department and assigned to CIC, AFHQ.** Discussing this decision, which had been reached soon after his return from his inspection trip to North Africa, Colonel Wise, eleven years later was able to throw some light on the reasons behind the reluctance, at War Department level, to take this important step. It had been felt that greater control over the use--and misuse--of CIC could be maintained if they should remain assigned to MIS, WD. As Colonel Wise explained it, "As long as both the CI Officer and the CIC Detachment Commander are 'strong,' all is well." He pointed out that after Colonel Sheen left North Africa, all the battling for CIC, even at policy level, had to be done by Major Ray, a function that actually was in the province of the CI Officer. Although Major Ray found a receptive audience in the Counter-intelligence Branch at AFHQ, it still was Ray who had to make the plans and carry them on up instead of having the plans promulgated in the proper echelon. Finally, recognizing the almost impossible administrative difficulty encountered at AFHQ, and recognizing that the situation gradually was coming under control, the decision was made to assign rather than attach CIC personnel to the Theater.***

The 15 November letter also stated that an initial Table of Organization of 52 officers and 459 enlisted men was approved; and, to complete these numbers, 11 officers and 171 enlisted men would be sent by February 1944. The T/O was to be increased automatically in the future by the exact grades of personnel arriving in the Theater with air and ground units.****

Although this T/O helped considerably in the matter of personnel, it offered little assistance in promotions, which was an exceedingly sore point. While the T/O was under consideration, Major Ray had written: "The provision whereby the T/O is automatically adjusted upon the arrival of new personnel from the United States is of no value in the matter of promotions inasmuch as the amendments will

merely provide for the additional personnel in the grades in which they arrive.*

Furthermore, the information that among those arriving were several captains, majors, and master sergeants and that 13 technical sergeants and 25 staff sergeants were included was viewed with alarm. This would mean, Ray pointed out in a letter to the Chief, CIC, that the newcomers would have to be placed in positions of lesser responsibility than persons whom they outranked while they were becoming accustomed to the great differences in work in a theater of operations from the work in the Zone of the Interior. He had been able to get almost no promotions for his men, and he expressed the fear that some of the newcomers would be "in grades higher than they held when individuals in the Theater knew them. . . almost invariably the case with shipments from the United States. . . . This creates a feeling of understandable resentment against the Corps and even against the newly arrived personnel and presents a morale problem of major magnitude."**

OSS Threatens CIC's Mission

During this period another persistent problem which had become felt in North Africa, and was not to be solved to any degree of satisfaction until just prior to the invasion of Normandy, became a source of major irritation. This problem centered about the intrusion of the Office of Strategic Services (OSS) into the field of counterintelligence in direct violation, at least in the opinion of CIC and G2 officers at AFHQ, of the intent of the War Department.

In his report to the War Department after his return to the United States in November 1943, Colonel Sheen stated that OSS promised to become a "dangerous element in the field of counterintelligence in a theater of operations unless effective measures can be taken by the War Department to insure that this organization is placed under the control of the AC of S G2." The main part of OSS, he said, was sent into Italy without the knowledge of the Commanding General of Fifteenth Army Group or any other person in authority, and even their presence there was discovered only when they had to appeal to the Seventh Army CIC Detachment for rations, gasoline and other supplies, no arrangements having been made for their logistical support.***

***Ltr to AC of S, G2, WD, Wash., D.C., subj: "Report of Counterintelligence," dtd 19 Nov 43, signed H.G. Sheen, Lt Col, CSC (S) (S&F Library files)

Colonel Sheen pointed out that he was levelling his criticisms exclusively at the counterintelligence operations of the organization and not at their assigned mission of espionage, with which he was not fully acquainted. OSS personnel, he stated, had been employed because of linguistic qualifications and backgrounds of previous travel, but had been found by experience to "lack proper perspective, intelligence evaluation and, . . . understanding of military staff appreciation of any given situation." This had resulted in the accumulation of much erroneous information; in fact, it had been observed by G2, AFHQ, he said, "that approximately 90% of OSS reports containing counterintelligence information have been flagrantly false." The Commanding Officer of OSS in North Africa, Colonel Sheen said, seemed to be an extremely capable officer, but he was "handicapped by the assignment of unscrupulous and inefficient amateurs whose activities, if continued unhampered, will seriously endanger future military operations."

One of Colonel Sheen's chief criticisms was their failure to investigate or control properly the persons they employed. He gave the example of two persons employed by OSS who, representing themselves to the French Securite Militarie as officers of the United States Army, were making an investigation of the morale of French military forces in Morocco. Upon investigation by CIC it was learned that they were Portuguese and were using OSS funds to further the ends of Communism in Morocco. OSS dismissed the two men as a result of CIC's report, but the OSS official in Casablanca, who hired them without investigation or control, remained in his position.

Colonel Sheen told of a conference held by G2 officials with General William J. Donovan, OSS Chief, in September 1943, at which, in spite of all arguments, General Donovan insisted that his agency "should be given exclusive rights in the entire field of intelligence."

Early in October 1943, Major Spingarn reported that CIC had established excellent relations with Military Government and with all Allied Intelligence agencies with the exception of OSS. He claimed that OSS had "repudiated or half-repudiated" the agreements made by their authorized representative in North Africa, since replaced. General Donovan, in answer to Spingarn's appeal, ". . . said that they would honor any 'reasonable' promise made. . . , but that I must not come to expect as a right what had been given as a gift.

"I get the definite impression," Spingarn wrote, "that OSS is fumbling in the dark, and is not operating effectively. They seem to recruit people off the streets without any adequate check. Within the past week they have found one German parachutist and one alleged German agent in their midst and turned them over to us. The latter had worked for them for a week when they became suspicious of him 'because he seemed to be listening too carefully to their conversations.' He appeared considerably the worse for wear when they turned

him over to us on 8 October. They had apparently beaten a confession, or rather three or four different confessions, out of him that he was a German agent." Spingarn added that the Special Force (SOE) operating under G2, Fifth Army, with only a fraction of the personnel that OSS had, were operating much more intelligently and effectively.*

Later in October Major Spingarn again reported: "The OSS continues to blunder along. I believe that only General Donovan's name and prestige are carrying them here. Their agents continue to steal and loot, and I continue to get reports that my agents are responsible because they dress their Italian rabble in the uniform which everyone identifies with CIC. Their native agents go about Naples making an open secret of their connection with OSS, and asking chance acquaintances if they want to work as spies for U.S. Intelligence. Yesterday OSS sent me a note asking me to catch one of their agents who had absconded (while under OSS guard) with U.S. military equipment, including firearms."**

This report and numerous others in similar vein from CIC Detachments operating in Italy caused Major Ray to write to all Detachments reminding them that full use should be made of CIC brassards as a means of clearly identifying CIC from OSS personnel, since he had "noticed with increasing alarm the placing of blame on the CIC for actions of representatives of OSS."***

One incident was reported illustraing OSS laxness in the issuance of passes, which was particularly embarrassing because it presented U.S. Intelligence in an unfavorable light to the British. Late in November 1943 British security officers picked up two men attempting to pass through the lines who claimed to be working for two men employed by U.S. Forces. Upon investigation it was discovered that the two alleged employees were in possession of passes signed by the OSS commander authorizing them to work behind enemy lines to secure information for Fifth Army. OSS officials denied issuing the passes and informed the British that the men were working for CIC. CIC investigation revealed the following: OSS had kept no records of the persons to whom passes had been issued or even the number issued; the person whose signature was on the passes had left the theater; one of the persons had an authentic letter of commendation for his work from OSS; OSS had rescinded all passes about a month prior to the incident but had failed to notify other organizations; one of them had

worked briefly for CIC, having been loaned to them by OSS. CIC's conclusion was that the haphazard way in which OSS issued passes without records made it impossible to prove or disprove the validity of the passes in question, but since the men concerned were viewed with great respect by trusted informants, it was believed that the passes had been issued by OSS as claimed.*

Even more embarrassing was the case of another Italian, arrested by the British FSS (Field Security Section) on charges of giving information to the enemy, withholding information from the Allies, illegal possession of weapons, falsely pretending to be acting under MG authority, and engaging in looting and blackmail. This man also carried an OSS pass, and, although he had been arrested twice before on similar charges and turned over to OSS, he had been immediately released each time without any investigation of the charges.**

As a result of all these difficulties, Major Ray appealed to AFHQ for a directive "limiting American Army counter espionage activity to the CIC and restricting OSS activity to its proper place; namely, behind enemy lines."*** He sent a copy of his memorandum to the Chief, CIC, since, he explained, the same situation could be expected to arise in other theaters. "On the basis of information received from the European Theater," he wrote, "it appears that OSS is gearing itself to assume the high-level American counter espionage authority when and if an invasion of France is undertaken."****

In his request for a clarifying directive, Major Ray explained that since the U.S. Army in the beginning had been forced to lean heavily upon the British, there had been a tendency toward the acceptance of the British Intelligence framework for our own Army and to consider the CIC as the American counterpart of the British FSS. While the CIC had adopted many of the tactical missions of the FSS, CIC's training and mission for a static counterespionage situation had been far different. In the British Army all cases that promised to be important ones were taken over by a higher level organization, the SI(b). This had led to the attitude that there should also be a higher-level U.S. counterespionage organization, although the War Department had never envisioned such a thing, and had given to CIC the complete mission.*****

*****Memorandum to G2 (CI) AFHQ, dtd 5 Dec 43, etc.

"A new American organization has recently entered the counter intelligence picture--the befuddled X-2 amateurs of the OSS, who, backed by high political influence, are injecting themselves into the American counter espionage framework on the level of the SI(b). . . . " Major Ray wrote. "It has been my observation that OSS counter espionage 'experts' are rank amateurs with little or no counter intelligence experience and but little training. Their main recommendation is their seemingly inexhaustible supply of funds and the veil of mysticism under which they have enshrouded themselves. The bluff seems to be working."

Major Ray went on to point out the lack of basic investigative training of the OSS "amateurs" and their complete lack of any experience in the investigative field. "The sending of a layman to an X-2 or SI(b) school might be compared to giving advanced invasion training to a soldier who has never had basic military training. He becomes subjected to the latest and most advanced technique in fighting and upon completion of the course is accepted as an authority. But he still hasn't learned to fire his rifle." He suggested that such additional high-level training as was deemed essential for counter intelligence operative should be given to CIC agents who had mastered the basic techniques and many of whom had had several years' experience in the work, including more than a year in overseas operations in England, North Africa, Sicily and Italy.

"Are these men," he asked, "to be the 'infantrymen' of the counter intelligence effort . . . while the less qualified men of the OSS supply the 'heavy artillery'?"

Citing the War Department directive setting out CIC's mission, Major Ray stated that "this development threatens to relegate the best qualified and trained counter intelligence personnel in the American Army to an inferior position and certainly circumvents the official policy of the War Department."

Although Major Ray did not get the directive from AFHQ, his never-ending struggle with the situation and his recurrent lucid reports may well have influenced the decisions which placed each organization in its proper sphere during the planning for the invasion of the continent.* Records also indicate that, in the latter phases of the campaign in Italy, the two organizations managed to resolve much of the friction and to work in comparative harmony.**

AFHQ Detachments Kept Informed

It was Major Ray's task also, while fighting for CIC's place in the sun, to keep his detachments, now spead all over North Africa,

*See Chapter 5, "Preparation for OVERLORD"
**See Chapter 4, "Italian Campaign"

Sicily and Italy, well informed on policy changes; arrange transfers from one detachment to another when personality problems arose, as they often did; pass on criticisms to those involved and soothe the ruffled tempers that resulted from those criticisms;and carefully and objectively consider every request and suggestion made by any member of the detachment--and records for this period indicate there were thousands.

He kept up correspondence with all of his detachments, chatty, informal letters, sometimes a "pat on the back," sometimes a tactful, but firm, suggestion for change; he also passed along to all detachments the interesting "we did it this way" suggestions that came in. The abundance of correspondence between Major Ray and his detachments would seem to qualify him for the title of champion letter writer of all CIC.

Typical of one of these letters is one written to Major Floyd Snowden in Sicily, on 29 December 1943. "Your very optimistic references to conditions within your Detachment and respect for it on the part of others was very welcome. I'd like to say that what you say conforms to other independent reports that have reached us. I have heard some very complimentary things about you. . . . the CIC is clicking better all the time, due mostly, no doubt, to the fact that its prestige is rising after many months of bitter struggle and that it is making a greater contribution to the war effort than ever before. I'll make the statement while knocking on wood that we no longer have any of the really critical problems we had to face while we were establishing ourselves as an important factor in the scheme of things in this Theater. It's gratifying how many of the G2's who were almost hostile to us before have swung around and now appreciate us and let us go ahead with our job.*

Any ideas that could help CIC Detachments to increase the respect of their G2's were passed on immediately. A typical one submitted by the CO of a Division Detachment and relayed to all other detachments recommended "that CIC agents contact combat troops immediately prior to an attack, preferably through platoon leaders, to check whether they have in their possession letters, diaries, or other documents which would be of value to the enemy and to give them a last minute warning that if captured they must reveal only their names, ranks and serial numbers." He asked that all detachments try this out and let him know of the results.**

As the brief Sicilian campaign slowed to a halt in mid-August 1943, the various participating detachments sent in a plethora of recommendations designed to improve future operations. As Port Section "B" of the

*Ltr from Ray, CIC, AFHQ, to Maj Floyd Snowden, CO, CIC Det, IBS, dtd 29 Dec 43 (C) (KC Depot 6-2-36)

**Ltr from Hq CIC, AFHQ, signed Ray, to CIC Sections with 3d, 34th 36th and 45th Inf Divs and 1st Armd Div, subj: "Security Precaution with Troops Prior to Combat," dtd 20 Nov 43 (C) (KC Depot 1-29-229)

1st CIC Detachment commanded by Lt Mario Brod saw it, operations were hindered by four factors: lack of personnel--especially of men trained to meet the particular problems of particular areas; lack of linguists (none of the five members of this detachment spoke the local dialect); lack of available guards; and lack of time to carry through a mission. Brod recommended that Division detachments be increased to two officers and 10 enlisted men; that a Military Police platoon of 25-30 men be made available for guard and police duties; that more effective liaison be maintained between Corps and Division detachments; that bomb disposal and munitions collection units keep CIC informed of their projects; that neither the Military Police nor Civil Affairs issue passes without CIC sanction; and that three jeeps and a trailer (or the equivalent), each with its own driver, be issued to each six-man detachment.*

II Corps CIC Detachment pointed out certain weaknesses in the relay system and recommended that Corps Detachments be reinforced so that Corps personnel would be available to enter a town almost simultaneously with the Division Detachment. In this way Division Detachments could secure posts and communications and move on, while Corps personnel would wait for the arrival of permanent static detachments, in the meantime performing counter espionage and counter sabotage work.**

A similar recommendation came in a critique of the work performed by the 2d Armored Division Detachment from Colonel H. M. Forde, AC of S, G-2. While praising the work accomplished by this Detachment, Colonel Forde also stressed what had to be left undone because of lack of personnel, lack of linguists, shortage of transportation and deficiencies in basic military training. He recommended a large pool of CIC agents, retained under control of the Theater Commander, from which agents could be assigned to move into a town immediately after the Division Detachment. "Much of the good work of the CIC Detachment during the active operations was undone because it was considered necessary for them to accompany the advance. This resulted in great inefficiency, loss of time and, occasionally, confusion and near riots," Colonel Forde wrote.***

Lt Col R. W. Porter, Jr., AC of S, G-2, 1st Infantry Division, was unstinting in his praise of the Division's CIC Detachment: "The CIC Section is absolutely necessary when operating in hostile territory. . . . The Sections attached to the 1st Infantry Division have done a splendid job. This result has been obtained primarily

because all officers and men have met the situation realistically." Handicaps listed were similar to those previously mentioned; in addition, Colonel Porter recommended more training in political ideologies of the enemy; better radio and telephone communication with Division Headquarters; better delineation of the demarkation line between responsibilities of AMGOT, Military Police, local military commanders and CIC; and the sending of an MG liaison officer with the CIC Detachment in the initial occupation so that policies established at the outset could be merged with those subsequently found advisable.*

Most of the recommendations that poured in during this period followed the general pattern of those mentioned above. In addition,45th Division CIC recommended that agents actually advancing with the troops be issued one M1 rifle and one Thompson submachine gun per vehicle and, for use at close quarters, each agent should be armed with the .45 Caliber pistol; and that the "Walky-Talky" radio with its maximum range of five miles should be replaced by a more powerful radio powered by a vehicle.**

Among the comments of which CIC had a right to be proud was one from Colonel Oscar W. Koch, AC of S, G2 of Seventh Army: "Indispensible"; and one from Colonel B. A. Dickson, AC of S, G2, II Corps, "I would rate the personnel of the II Corps CIC as superior."***

All was not praise, however, and Major Ray was called upon occasionally to exercise all the tact and leadership at his command to pass on criticisms to his Detachments with suggestions for correction even when the basic criticism was felt to be unjust. One of these situations arose when Colonel Dickson wrote, "Extremely favorable expressions of the work of Division CIC Detachments have been received from three of the four Divisions which have served in II Corps. The performance of the CIC Detachment with the 45th Division was not

entirely satisfactory; this is believed due to the failure of the officer commanding that Detachment to grasp the full implication of his mission and to fulfill it."*

Subsequent correspondence and reports seem to indicate that much of the fault, at least, seemed to stem from the oft-repeated difficulty: lack of understanding of the G2 as to how CIC should be utilized. Since this division had come directly to Sicily from the United States, neither the CIC Detachment nor the G2 had gone through the sometimes painful indoctrination process in North Africa during which CIC Detachments learned their mission and their relationship to their tactical organization and their G2 learned how they could be of greatest help and the peculiarities of CIC administration so necessary to their performance.

In a burst of indignation at the treatment they were receiving, the CO requested that he and his entire detachment be reassigned. In violation of directives, he said, they had been assigned all types of company duties from digging latrines to standing guard [while still in the United States], even after working on investigations all day; they had been assigned numerous missions not authorized by directives, such as counting destroyed vehicles and locating abandoned guns and equipment, and they had been charged with the supervision of the C/S (Counter Subversive) system. Just before San Stefano, the CO reported, the G2 directed that the CIC Detachment, in some cases the first Allied soldiers to enter a village, go forward by foot, although there were available no reconnaissance reports of the enemy except that the areas were heavily sown with anti-personnel mines. Objection that such a venture on foot, with such a small number of men, would endanger their lives unnecessarily received no consideration, although during the first days of the operation three men on such a mission had a narrow escape when they were caught in enemy rifle fire at 200 yards.**

Recognizing that much of the tedious and varied effort to make G2 appreciate CIC and its role must be performed by the CIC Detachment itself, Major Ray suggested that the G2 tactfully be referred to the AFHQ directives; he also arranged for intercession through Seventh Army G2 and reported the matters to the AC of S, G-2, AFHQ, as another argument for a positive statement from that Headquarters. To the harried CO of the 45th Division Detachment he wrote, "Unfortunately the same conditions, to one degree or another, have confronted the

majority of CIC Sections placed with tactical units in the United States, but most of the difficulties have gradually been overcome after tedious indoctrination of the G2's. Your Section has not been able to receive the benefit of this because of the fact you went into action straight from the United States."*

In reporting this situation to the Chief, CIC, WD, Major Ray cited it as an "instance /which/ bears out our previous observation that greater pains should be taken in the United States to indoctrinate all G2's in the proper use of the CIC before units leave for foreign service. This should be done not only in justice to CIC personnel sent with tactical units, but to assure that the CIC mission will be effectively performed."**

Merger in the United States Creates Theater Problem

After struggling for many months to obtain application of theater rotation policies for themselves, CIC agents in the North African Theater were suddenly faced, early in January 1944, with a situation which made the large majority of them decide they didn't want rotation. This was the arrival in the Theater of War Department Circular #324, 14 December 1943, which removed CIC from control of G2, War Department, transferred, with a few exceptions, all CIC agents in the United States out of the Corps, decentralized counterintelligence functions to Service commands and merged them with those of the Provost Marshal.

In effect this meant that, since there were no stateside detachments to which they could be assigned, personnel rotating from overseas theaters automatically would be eliminated from the Corps upon their arrival and be assigned to replacement depots for ultimate disposition as rank and file casuals. This dampened the enthusiasm of most agents for a trip home.

Along with the decision to merge CIC with the Provost Marshal's forces in the Service Commands, there also was the decision to "materially reduce" the personnel in the Office of the Chief, CIC, War Department. In a letter to Major Ray on 17 January 1944, Colonel Wise said that this decision had been reached since, by the following month, "The major job of procurement, selection, equipment, distribution and shipment of an enormous organization will have been completed," and there would remain only "the staff functions of policy and general

*Ltr Hq CIC Det, NATOUSA, subj: "Functions of the CIC," to CO, CIC Section, 45th Infantry Division, dtd 11 Aug 43 (C) (KC Depot 1-29-232 A)

supervision and the relatively small operational job of seeing that replacement personnel are procured for us, prepared and shipped overseas."*

How short-lived was the belief that the problems of overseas procurement and training had ended is discussed in another section of this history. However, it is interesting to note here that, in spite of all their harassing problems, or perhaps because of them, Major Ray and many of the officers and agents operating under AFHQ had long been thinking in terms of post-hostility needs, which would call for special planning and additional personnel procurement. It seems probable that Colonel Wise was merely "quoting" from decisions made at higher levels, since he had discussed the matter at AFHQ during his visit in October 1943, and it was obvious that the end of hostilities and the return of CIC agents to the United States along with other combat soldiers, would leave the organization incapable of taking part in any large scale occupation activity, unless large numbers of agents were ready to be sent to the theater in their places. This wholesale exodus could be mitigated, Major Ray wrote in December 1943, by permitting CIC personnel to revert to civilian status for employment in Europe at the earliest possible moment after the end of hostilities. Major Ray had learned through conversations that many of his men would be willing to remain almost indefinitely if their status could be changed so that they could drop the various ruses "now used to conceal their enlisted status from important civilian and official informants who would reveal nothing if they knew they were dealing with enlisted personnel."**

Stressing the urgency for immediate planning, Major Ray pointed out that, without a prepared plan "ready to be put into operation immediately upon the collapse of Germany--which conceivably can come at any time--the CIC will flounder around without a specific function other than its loosely defined mission, and a state of affairs reminiscent of our early tribulations in overseas operations will occur." It was thought that several other agencies, such as OSS, AMG and JICA, would actively seek the recognition of being the U.S.'s chief CI organization--in fact, there was "talk even today of AMG establishing its own political intelligence investigative branch. By background, experience and training, CIC was better equipped to take over the "vast field. . . of political intelligence, which will be the successor of what we refer to today as civil security," he stated.***

In his reply written on 17 January 1944, the only assurance that Colonel Wise was able to give him was that, "Your problems with

respect to post hostilities activities are receiving some consideration and thought now, but final respect to the establishment of broad policy, etc., will be delayed for at least another forty-five days."*

New Theater Directive Clearly Defines CIC's Place

24 February 1944 was an important day for the Counter Intelligence Corps. On that day Allied Force Headquarters published a new directive, clearly defining CIC's mission, responsibilities, and privileges. It embodied all the salient features of previous directives which had been published bit by bit to overcome difficulties as they had arisen. Protection of identities, freedom of action, assistance by other units, channels of communication--these and many more necessary provisions--were now written into one document which firmly established CIC.**

AFHQ Plans to Move

By the end of 1943 plans were well under way for moving AFHQ Headquarters from North Africa to Italy and for the gradual phasing out of CIC in North Africa, as the need for static detachments to protect Allied supply lines decreased. With this anticipated move, the question arose as to whether AFHQ CIC should assume operational control over static CIC operations in Italy, then under the Peninsular Base Section. In setting forth the pro's and con's of such a move at the request of the AC of S, G-2, Major Ray advised against it. Although pointing out that theoretically such centralization was considered desirable, certain problems in communications and supply would somewhat offset the advantages. Also, and Major Ray's memorandum seems to indicate that this may have been his main reason, problems that had earlier plagued the Detachments with the Base Sections had largely disappeared. Two of the G2's had been replaced, he explained, "by better qualified officers," one G2 had a "change of heart about the CIC and is now employing the section to good advantage," and another "...[although] he leaves much to be desired from the ability standpoint, he has not hampered the work of the CIC Section." Major Ray seemed to feel that the situation had better be left alone.***

In April the Atlantic, Mediterranean and Eastern Base Section CIC Detachments were assigned to NATOUSA,**** and counterintelligence

in Sardinia became the responsibility of the Air Force CIC Detachment there.* At the end of July Allied Force Headquarters made their long contemplated move to Italy, where CIC AFHQ was renamed the 428th CIC Detachment. Agents of the Headquarters CIC Detachment, after gathering up many Secret and Confidential documents left by the movers, followed.**

By the middle of October 1944 the remainder of the CIC personnel in North Africa, eight agents, had been assigned to USAFIME and were expecting also to leave by the first of January.***

But Major Ray did not live to see the phase-out from North Africa, or to enjoy for long the recognition at practically all echelons that CIC had grown to full stature as an integral part of the Army, full proof of which can be seen from the planning for CIC's mission in the invasion of Europe.****

Later in May 1944, Major Ray suffered a cerebral hemorrhage, and after return to the United States, died later that year.***** Major Ralph Powers became Chief of CIC, AFHQ.******

APO 512

AG 350.09-2 GBI-AGM 24 February 1944

SUBJECT: Counter Intelligence Corps

TO: General Officer Commanding-in-Chief, Allied Central Mediterranean Force.
Commanding General, Force 163, APO 512.
Commanding General, Fifth Army, APO 464.
Commanding General, Seventh Army, APO 758.
Commanding General, Mediterranean Allied Air Force, APO 650
Commanding General, Twelfth Air Force, APO 650.
Commanding General, Fifteenth Air Force, APO 525.
Commanding General, II Corps, APO 302.
Commanding General, VI Corps, APO 306.
Commanding General, Mediterranean Base Section, APO 600.
Commanding General, Peninsular Base Section, APO 782.
Commanding General, Eastern Base Section, APO 763.
Commanding General, Atlantic Base Section, APO 759.
Commanding General, Island Base Section, APO 550.
Commanding General, Northern Base Section, APO 306.

1. Letter of this headquarters, dated 10 June 1943, AG 371.2-3 GBI-AGM, Subject: The Counter Intelligence Corps; letter of this headquarters, dated 12 August 1943, AG 350.09 GBI-AGM, Subject: Counter Intelligence Corps; letter of this headquarters, dated 30 December 1943, AG 350.09-2 GBI-AGM, Subject: Counter Intelligence Corps, are rescinded.

2. The following instructions relative to the organization, functions and operations of Counter Intelligence Corps detachments, this theater, are based upon TM 30-215, Counter Intelligence Corps, dated 22 September 1943, together with experiences gained in overseas Counter Intelligence Corps operations.

3. ORGANIZATION:

a. Counter Intelligence Corps personnel within the jurisdiction of this headquarters are assigned to the 2678th Headquarters Company, CIC (Prov), Personnel are placed on detached service by the commanding officer thereof (Chief, CIC, AFHQ) in detachments with tactical units, Air Forces and Base Sections, and other organizations as required.

b. The number of personnel comprising a detachment is determined by the Chief, CIC, this headquarters, based on the mission of the detachment and personnel available.

1687

Ltr, Allied Force Hq, AG 350.09-2 GBI-AGM, dtd 24 February 1944, (Cont'd).

c. The employment of Counter Intelligence Corps detachments is a basic function of command and is an operational rather than a staff intelligence activity. Command is vested in the commanding officer of the Counter Intelligence Corps detachment. While the general directions of Counter Intelligence Corps activities rests with the commanding officers of the organizations to which Counter Intelligence Detachments are attached, the detailed planning and execution of Counter Intelligence Corps duties are the responsibilities of the detachment commanders.

d. Counter Intelligence Corps detachment commanders may place personnel under their command on temporary duty by verbal orders with other detachments for limited periods when the situation demands, without specific authorization of the Chief, Counter Intelligence Corps, this headquarters. The approval of the Assistant Chiefs of Staff, G-2 or A-2 of the organizations concerned, is necessary in each case. Personnel thus temporarily transferred will be returned to their permanent detachments immediately upon completion of their mission.

e. Recommendations concerning promotions and demotions of Counter Intelligence Corps personnel and appointment to and release from the Corps will be referred to the Chief, Counter Intelligence Corps, this headquarters.

4. MISSION.

a. The mission of the Counter Intelligence Corps is to furnish appropriate commanders with personnel carefully selected and trained for investigative functions incident to the prevention or neutralization of the activities of enemy agents.

b. These trained specialists will be used only for counter intelligence purposes including activities connected with counter espionage, counter sabotage and counter subversion.

c. Counter Intelligence Corps personnel will not be used for combat intelligence missions, staff functions, traffic checks, routine PW interrogations, or for work which is properly a function of the Provost Marshal or Headquarters Commandant. Investigations of the black market and traffic in blue seal currency will not be undertaken by the Counter Intelligence Corps unless there is definite reason to believe counter intelligence implications exist.

5. OPERATIONS.

a. All Counter Intelligence Corps detachments normally have the following duties and responsibilities:

1688

(1) Investigation of reports of enemy espionage, sabotage and subversive activity.

(2) Investigation of harmful rumors and suspected enemy propaganda.

(3) Investigation of disaffection and subversive cases and security violations within the armed forces.

(4) Arrest of known enemy agents and dangerous enemy sympathizers.

(5) Performance of security surveys of military headquarters and installations and recommendations for proper security measures. However, Counter Intelligence Corps personnel will not be used to accomplish the actual protection of such installations or the implementation of the recommendations made. The function of the Corps in this connection is advisory.

(7) Establishment of informant nets through all levels of society and endeavor.

(8) Observation of civilian morale and relations between civilian and military personnel.

(9) Observation of local political and economic conditions. In this connection, it is emphasized that, while the Counter Intelligence Corps must be aware at all times of local political and economic conditions, it will confine its role to that of observer. Key personages in the civil and economic life of an occupied area will not be arrested by the Counter Intelligence Corps without the concurrence of local Allied Military Government or Allied Control Commission representatives, except in emergency cases requiring immediate action.

(10) Delivery of security lectures to troop units.

b. Counter Intelligence Corps detachments serving with commands whose jurisdiction include sea ports will undertake such investigative security duties and functions in respect thereto as are assigned them by the command officers of the responsible organizations. In this connection, care will be exercised that the responsibilities of existing United States or allied security agencies do not overlap, and that the demarcation is clearly established.

Ltr, Allied Force Hq, AG 350.09 GBI-AGM,
dtd 24 February 1944, (Cont'd)

c. Counter Intelligence Corps personnel serving with the Air Force will normally confine their activities to the security of Air Force Personnel and installations and will not concern themselves directly with territorial security matters. An exception to this is when no other Counter Intelligence Corps detachment or Allied security agency has been delegated territorial security responsibility, in which event the Air Force detachment will expand its usual activities as deemed necessary. In areas where another Counter Intelligence Corps detachment or an Allied Security agency exercises territorial control, close liaison will be maintained and counter intelligence information freely exchanged through direct channels of communication.

d. (1) In addition to the duties and functions of all Counter Intelligence Corps detachments enumerated above, tactical detachments serving with Field Armies, Corps and Divisions will perform special tactical functions:

(a) Tactical Counter Intelligence Detachments will:

1. Search evacuated enemy headquarters and seize significant documents.

2. Inspect public utilities, enemy supply dumps and all other installations requiring protection and arrange for an adequate guard.

3. Seize the telephone exchanges and/or radio stations and arrange for their protection against sabotage until they are turned over to authorized signal or communications personnel as provided in operational orders. Personnel from the nearest Signal Corps unit should be called in to assist and to perform such rehabilitation as may be needed without delay. The records of such installations are of prime importance and should be secured, carefully guarded and turned over to the Signal Corps personnel.

4. Stop all civil communications by mail, radio, telegraph and telephone except those of a local, emergency nature such as calls for medical assistance. In halting civil communications, no damage should be done to any telephone, telegraph or radio equipment.

5. Insure that all mail in civilian post boxes and drop boxes is impounded and returned as soon as practicable to Field Censor teams for examination.

6. Transmit to the Provost Marshal or Military Police Commander all information coming within his purview such as civilian controls, adequacy and extent of cooperation of civilian police, and the extent of disorder, looting and sabotage.

7. Advise concerning the seizure of all civilian arms.

8. Stop publication of newspapers and other periodicals.

9. Take necessary measures to prevent looting and destruction of enemy documents and material by our own troops.

(b) Commanding officers of tactical Counter Intelligence Corps detachments attached to higher echelons will coordinate the activities of detachments serving with lower echelons to the end that proper Counter Intelligence Corps coverage is maintained at all times throughout the area.

(c) When establishing offices in towns and cities, tactical Counter Intelligence Corps detachments will clearly identify them by posting signs bearing the letters "C.I.C.".

(d) In operations, tactical Counter Intelligence Corps personnel will wear brassards on the left arm bearing the letters "C.I.C." Troops will be advised of the significance of the brassards and instructed to cooperate with personnel wearing them.

(e) Tactical detachments will take steps to inform all troops, especially the Military Police, of the existance, purpose and functions of the detachments to the end that full and immediate cooperation will be forthcoming from all when needed.

1691

e. Specialized Counter Intelligence Corps detachments will be formed from time to time whose duties and functions will be enumerated by the commands with which they are serving.

6. GENERAL

a. Freedom of Action. It is essential to the effective accomplishment of the Counter Intelligence Corps mission that the personnel of the Corps be encouraged to exercise its initiative to the fullest extent and that it be permitted to operate with minimum restrictions upon its movement or channels of communication. In the accomplishment of its missions it will not be delayed by the observance of standard customs and prohibitions. The freedom of movement of this personnel when on assigned missions will not be hindered at any time of day or night by the Military Police or other military agency. Counter Intelligence Corps credentials and badges will be honored at all times.

b. Assistance to Counter Intelligence Corps. Members of the Counter Intelligence Corps are authorized to call on all military and civilian personnel within this command for any assistance they may require in the performance of their assigned duties.

c. Civilian Clothes. Counter Intelligence Corps personnel are authorized to wear civilian clothes or the uniform prescribed for civilians serving with the armed forces. Normally, personnel in detachments serving with tactical units will wear the civilian uniform, while personnel in detachments serving with the Air Force or Base Sections, or in special detachments, will wear civilian clothes.

d. Protection of Identities. It is deemed essential that Counter Intelligence Corps enlisted personnel wearing civilian clothes or the civilian uniform be addressed and referred to as "Mister", not by military title, except for necessary administrative purposes, and that they be extended the same facilities and afforded the same treatment as civilians serving with the armed forces. Unless unavoidable under combat conditions, such personnel will be billeted, messed, hospitalized and draw PX supplies under the same conditions prescribed for civilians.

e. Office Space. In order to facilitate the closest possible contact with informants, it is essential that Counter Intelligence Corps detachments have office space apart from the headquarters to which they are attached.

f. Coordination. Successful operations of the Counter Intelligence Corps frequently depend upon the rapid and concerted action of several detachments or elements thereof. Such teamwork can only

be properly developed by close and constant liaison between the commanding officers of detachments and individual contacts, where feasible, between other personnel of such detachments. To accomplish this coordination, the Chief, CIC, this headquarters, will maintain close contact with the officers in charge of detachments of his command and will require those officers to maintain close liaison among themselves at all times.

g. Channels of Communication. Counter Intelligence Corps intelligence and operational reports will be forwarded through G-2 channels, information copies being sent to the Chief, CIC, this headquarters, as required by him. Direct communication with the office of the Chief, CIC, this headquarters, will be employed for all administrative, training, technical and organizational reports or communications. Lateral communication between Counter Intelligence Corps detachments is authorized.

h.

i. Commutation of Rations and Quarters. In all cases where Counter Intelligence Corps enlisted personnel would otherwise have to pay for meals and/or billets from personal funds, commutation of rations and/or quarters is authorized in accordance with AR 35-4520, dated 24 February 1943, or subsequent amendments thereof. Appropriate orders to accomplish this purpose will be issued by the commands to which Counter Intelligence Corps detachments are attached.

j. Per Diem. Counter Intelligence Corps personnel may be placed on per diem status when necessary in the performance of assigned duties, as provided in Section II, Circular Number 62, Headquarters, NATOUSA, dated 17 April 1943.

k. Civilian Clothing Allowance. Payment of civilian clothing allowances to Counter Intelligence Corps enlisted personnel is provided for in Paragraph 26, TM 30-215, Counter Intelligence Corps, dated 22 September 1943.

Ltr, Allied Force Hq, AG 350.09-2 GBI-AGM
dtd 24 February 1944, (Cont'd)

1. The standard form of Counter Intelligence Corps reports will not be altered except on authority of the Assistant Chief of Staff, G-2, or the Chief, CIC, this headquarters.

7. EQUIPMENT AND SUPPLIES.

a. Equipment and supplies for Counter Intelligence Corps detachments will be requisitioned by them on authority of and in accordance with War Department letter, AG 400 (27 Nov 43) OB-S-SPDDL-M, dated 29 November 1943, Subject: Special List of Equipment and Supplies for the Counter Intelligence Corps; and Headquarters NATOUSA, letters AG 400/305 D-O, same subject, dated 2 January 1944 and 14 January 1944.

b. Investigative equipment and supplies for Counter Intelligence Corps detachments will be requisitioned by the Chief, CIC, this headquarters, from the War Department upon request of detachments in accordance with War Department letter AG 400 (27 Nov 43) OB-S-SPDDL-M, dated 29 November 1943, Subject: Special List of Investigative Equipment and Supplies for Counter Intelligence Corps.

8. Sufficient copies of this communication will be duplicated by lower echelons so as to insure distribution to all echelons of command, to include divisions.

By command of General WILSON:

U. S. ARMY INTELLIGENCE CENTER

FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

SECTION I

AVALANCHE IS STRANGE INVASION

Early on the morning of the 9th of September 1943, the United States Fifth Army, supported by the British X Corps, disembarked on beaches along the Gulf of Salerno, in an operation known simply as AVALANCHE.

CIC men, like the thousands of other Allied Troops, felt the strangeness of this invasion. The ground on which they stood belonged to Italy and Italy was a co-belligerent, not an enemy. The evening before the landings, Marshal Badoglio had gone to the Rome broadcasting station and announced, " . . . The Italian Government has asked General Eisenhower, Commander-in-Chief of the Allied Forces, for an Armistice. This request has been acceded to. In consequence all hostility by the Italian Armed Forces against the British and American forces must now cease."*

First CIC Men Ashore

As the first CIC men attached to the 36th Infantry Division and VI Corps felt their landing crafts touch bottom at 3:30 A.M. at Paestum, it was a question whether the AVALANCHE was descending upon the Germans, or upon themselves. The Germans had suspected an amphibious operation against the Naples and Salerno areas, and reaction was swift and vigorous. Within hours tank attacks were made and the German "88's" began spotting Allied troops.

Any hope of many of the incoming men that the attack would be a surprise was rudely dispelled when "a loudspeaker voice on the shore roared out in English 'Come on in and give up. You're covered.'"**

The majority of the CIC men wading ashore through the chill water, torn bodies, and disabled vehicles, were already combat veterans having participated in both the North African and Sicilian invasions. At this moment the apprehension of spies and the interrogation of suspects became of decidedly secondary importance. Like any of the other "Willy's and Joe's" around them, their first concern was self-preservation.

The intensive training in amphibious landings and infiltration work proved its value as there were no CIC casualties. Amid the shot and shell, chaos and confusion, Captain John Hammond, Commanding Officer of the 36th CIC Detachment, gathered his group of four agents*** together, and they rushed for the semi-protective covering bordering the beach.

---

*Italy in the Second World War, by Pietro Badoglio, Oxford University Press, London, 1946, p. 75

**Clark, Mark W., "Calculated Risk" (Harper & Brothers - New York 1950 page 186)

***Rosters of Detachments which participated in Italian campaign attached as Appendix I.

A similar experience was shared by VI Corps CIC under the command of Major Kenneth G. Crowell. In a military sense, a Corps is not supposed to land until a Division has established a beachhead; but this situation found them as part of the initial attack.

Both CIC units reached a point several hundred yards from the water and attempted to camouflage themselves as protection against the small arms and artillery fire. Fortunately, the Allied heavy weapons were in position at 0600 "just in time to beat off a dangerous German tank assault on the Beachhead."*

With the arrival of the Allied artillery, the accomplishment of the CIC mission became possible and each man started on his own particular task. CIC teams spread out over the area. They filtered back to Allied rear area to insure that no force, enemy or civilian, could be mustered there. They questioned and searched all captured enemy soldiers and civilians and sent all combat intelligence disclosed to G2 for interpretation and evaluation. In a number of cases, reports of Germans being in rear areas were investigated and, if the number of Germans was small, CIC went after them instead of waiting for a combat patrol.

By the evening of D-Day, the CIC Detachments of the 36th Division and VI Corps made contact and established a joint CP at a farmhouse near Paestum. For ten days following the landing, the CP was maintained and the assignments of agents of both detachments were well coordinated to avoid duplication in their efforts.**

One thing these CIC men had in common with the men of the Division and Corps to which they were attached: they were among the first Americans in the war to put foot on Hitler-held Continental Europe.

Beachhead Operations

The detachments participating in the original landings continued to push ahead with their assigned divisions and corps. Agents of the VI Corps Detachment often found themselves to be the first troops to enter small Italian towns and villages. Their operations while searching abondoned German CPs, bivouac areas and billets brought them under enemy shell fire almost daily, and occasionally the shifting tide of battle left the agents behind enemy lines. Despite these hazards, hundreds of civilians that crowded the highways were interrogated for tactical and counterintelligence information, German soldiers in civilian clothes were apprehended, cases of lights flashing in the pre-dawn gloom were

*Mark W Clark, Calculated Risk, page 190

**Ltr to Major Ray, Chief, CIC, AFHQ, from Maj. Kenneth G. Crowell, 206th CIC Section, Hq VI Corps, Subj., "Informal Activities Report of the 206th CIC Section in Operation AVALANCHE, dtd 29 Sep 43 (SECRET) (KCD 7-6-42)

investigated, and "unfinished business" left by Division CIC Detachments was completed.

A significant event in these early days of the Italian campaign was the establishment of contact with General Guiseppe Pavone, the recognized leader of the Anti-Fascist movement in Southern Italy. General Pavone immediately proved valuable to CIC in its operations. He revealed the names of Italians, friendly and unfriendly, who would be of interest to CIC, and he volunteered, together with his chain of associates, to notify CIC of any enemy agents or unidentified individuals in the Salerno area. At a time when CIC activities were hampered by a lack of trained linguist personnel, the aid received from General Pavone and cooperative local Carabinieri was particularly welcome to the busy agents of VI Corps CIC. Within two weeks after D Day, these agents had managed to institute counterintelligence measures in more than fifty cities and towns along the beachhead.*

On 10 September, the 45th CIC Detachment, under command of 1st Lieutenant Rupert W. Guenther landed on the Salerno beachhead, to be joined the following day by Fifth Army CIC led by Major Stephen J. Spingarn. One week later, the 3d CIC Detachment, commanded by Lt. Bertram R. Russell, landed and immediately went into action.

The demand for combat intelligence often outstripped the counter-intelligence requirements in these first weeks after the invasion. To meet this demand, CIC agents entered towns with the first wave of Infantry troops. Although frontline dangers were faced time and again by the agents, no casualties were incurred during the beachhead operations.

All CIC units engaged in the battle to secure the beachhead were continually plagued by the shortage of two vitally needed items; interpreters and transportation. Enlisted OSS personnel serving with CIC detachments were often utilized as linguists and accompanied CIC teams on their missions. Their services were not sufficient. Major Spingarn, in an informal report to Major Ray, claimed, "I continue to press my urgent request to you for that Italian speaking group <u>with</u> jeeps . . . I honestly believe that if we can get them we can really put CIC on the map over here. OSS is bringing in Italian agents by the droves and, frankly, the competition is pretty tough. I <u>NEED</u> those Italian agents."**

---

*Ibid

**Memo for Major Ray from Major Stephen J. Spingarn, dtd 17 Sep 43 (SECRET) (KCD 6-8-148)

By the 20th of September, a bridgehead had been secured at Salerno and from Taranto the Allies were forming a firm base which was rapidly growing in strength.*

On 21 September, the 34th CIC Detachment, with Captain John L. Rubsam as Commanding Officer, arrived at Salerno with the 34th Infantry Division and began combat operations. The early days in Italy were days of experimentation. This was a new CIC unit, in combat for the first time. On the 30 mile journey from Salerno to Naples, this CIC Detachment gathered its experience -- experience that was to make it one of the most effective detachments in the Italian campaign.

CIC's Duties Varied

Meanwhile, the 45th CIC Detachment, under command of 1st Lt Rupert W. Guenther was occupied with its primary mission, affording security to all towns occupied by American troops.

A systematic procedure was followed similar to that of most of the detachments. At the earliest possible moment, a CIC section would enter a town and contact the Mayor. He was interviewed for "information on the town, its social, political and religious factions; its officials and their trustworthiness."** The Mayor was instructed that the town would operate as normally as possible, that its officials would retain their positions, and that law and order must be maintained.

The next official in importance within the city government was the Maraschello of the Carabinieri, or Chief of Police. With his help, the following action was initiated:

"a) Curfew established.

b) Arms ordered collected.

c) Gatherings or meetings prohibited.

d) Dead burned or buried by sunset.

e) Public office holders still hiding in the mountains were ordered to report immediately.

f) All communications closed down and guards posted.

---

*Field Marshall The Viscount Montgomery of Alamein, El Alamein to the River Sangro, E. P. Dutton & Co, Inc, New York 1949, page 161

**Guenther, Rupert W., Ltr. to AC of S, G-2, 45th Inf Div, Subject - Counter Intelligence with a Division in Combat, dated 29 Oct 43 - T-17 (0)

g) Banks, post office, provincial and municipal offices which contain records guarded.

h) All Carabinieri uniformed immediately.

i) Houses of prostitution closed.

j) No movement in or out of town by the people.

k) All quarters and offices occupied by the Germans checked.

l) All offices containing provincial and municipal records checked."*

Unfortunately this procedure was not always accomplished in so simple a manner. To begin with, the Mayor was not always in the good graces of his townspeople. For the most part, he had been appointed by the Fascist system and while he often was not a strong Fascist, he still had not dared challenge their authority. CIC agents learned that the European petty officials were adept at changing their politics overnight and as a result, the Mayor was blamed for everything.

The mayor was not the only person thus honored. Other Fascist-appointed officials, of whom there were many in every town, were accused of being devout Fascists, helping the Germans, being German spies, hoarding grain, and improperly administering the city. All such reports had to be investigated to separate "useful" public officials from dangerous subversives.

Soon after landing, both CIC and the American Military Government (AMGOT) discovered that at times they had to deal with distasteful people. As in North Africa, there now were times when unwanted officials were left in office, at least temporarily, simply because there were none to replace them. These officials knew the citizens of the town, knew the rationing and allocating procedures and in general, knew the mechanics of city government. Unless they either were incapable or appeared sympathetic to the enemy, they generally were left in charge. CIC, acting at this time for AMGOT, had the prerogative of removal.

An interesting sidelight when CIC took over a village, was the search for the town Fascist secretary. In the great majority of cases, he had already destroyed his papers and either had hidden in the mountains or had turned to a civilian occupation for sustenance - always proclaiming to be a loyal Badoglio follower.

*Judson, Clarence H., Jr., Memorandum for the Officer in Charge - 20th CIC Section - IIq. VI Corps, Subject, "Activities Report for 1, 2, 3 October 1943." (T-57, page 67 (a))

On the road to Naples, the CIC detachment attached to the 45th Infantry Division, entered many small towns and gave each a complete security coverage. At this early period of the campaign and while still far south on the "boot", CIC was not plagued with enemy line crossers or stay-behind agents as the battle line was continually fluctuating. Instead, the main objectives were the complete screening of civil officials to be left in charge of the towns once CIC moved on, and the rounding up of all enemy soldiers and all pro-German civilians for the purpose of extracting any intelligence of use to the G2.

A good example of the security afforded one of these small towns occurred on 20 September, when Agents George T. Moseley, Frank A. Messina and Walter Joy of the 45th CIC Detachment, entered the town of Campagna. This town was a rural trading center with a normal population of 11,000 and with no industries. The three CIC Agents reported they found the Vice-Mayor, Roberto Rocca, as the Mayor himself was "indisposed." From Rocco they found that there were 15 Carabinieri available for duty; no military installations in town, and the electricity and postal service were out of commission. The Vice Mayor told the agents that the Fascist Party had been completely dissolved and there were no suspects except one, Dr. Bortichelli, who had acted as an informer for the Germans.

After this initial information had been extracted, the agents reported that: "A German Regimental Command Post was formerly located at a crossroads about 6 kilometers south of town. The Commander was named Schultz. There were two German Divisions in the vicinity, one heavy armored and the other light armored. Both had retreated to the east.

"170 Austrian Jews have been interned for more than a year in the town, guarded by 12 special Italian police. Were released when the Germans retreated and they fled to the hills . . . . . anxious to serve with our Armed Forces."

The CIC report continued: "Vice Mayor instructed to have population turn in all arms to Chief of Police. Carabinieri to be armed with these and sent out to round up and arrest any Germans in vicinity dressed in civilian clothes. Two of these were taken yesterday and turned over to the troops.

"Dr. Bortichelli, above named suspect, had fled to the hills, was still there, and not available for questioning.

"Questioning of Italian civilians on the road east from Eboli to Contursi, led to a former German ammunition dump . . . . . The dump was found to be under guard by our troops."*

*Ltr., Subject, "Report on Town Security of Campagna", by Agents Moseley, Messina, Joy, to AC of S, G-2, from Guenther, Rupert W., 1st Lt., Commanding Officer, 145th CIC Section, dtd 20 Sep 43; "Situation Summary", file 345 - 59.2 (9699) (Departmental Records Branch - Alexandria, Virginia) (u)

This story was repeated many times on that journey from Salerno to Naples. It was like a well acted and well directed play; the plot and action were the same - the characters and names the only difference.

Naples Found in Ruins

Naples, according to the many pre-war travel folders, was a city combining both old world and new world charm, from the ancient and staid Place Garibaldi to the ultra-modern apartments overlooking the beautiful bay. On the 1st of October, when the British X Corps, the American 82nd Airborne Division and the CIC Detachment for the fifth Army entered the city, it was found that this charm, like so many others, was a thing of the past.

Debris and wreckage were everywhere, a grim reminder of the 120 bombings by the Allied Air Force and destruction by the Germans before leaving. Through the misty rain that fell on Naples that day, agents of the Fifth Army CIC viewed the burned-out houses, the sunken ships and - everywhere - the stench of the dead and dying.

It wasn't until the afternoon of the 1st of October that the Italian inhabitants of this grim city emerged to search for food, hoping against hope that these "allies" were of a different breed than the hated Germans.

These first Italian citizens were a pitiful lot - ill clad and dirty. The years spent under Fascist rule had so broken them that they had ceased to care for anyone save themselves and their families. It was not until they had suffered the indignities and burtalities commensurate with German rule, that the Italian Underground became their salvation and started each individual citizen on the road to freedom. General Eisenhower summarized Italy's tragedy in his report on that campaign. "For three years we strained to break their spirit," he wrote. "We . . . . . succeeded only too well."*

Fifth Army CIC Enters Naples After a Rugged Month

The Fifth Army CIC Detachment, later called the 305th CIC Section, had an illustrious and battle-torn career. As the men of this Detachment drove through the debris littered streets on 1 October 1943, they realized that their first objective had been reached. For the next three weeks the Fifth Army CIC was in charge of counterintelligence in Naples. This city of a million was the largest city up to that time that had ever been handled by a CIC Detachment. But the agents of the 305th CIC had looked forward to these labors for almost a month.

The bulk of the Detachment had embarked for Italy at Oran on 1 September 1943, under the command of Major Spingarn.

*A Soldier's Story, Gen. Bradley, Omar N. (Henry Holt & Co. - New York 1951) page 169

As a security precaution, they were divided between the U.S.S. Charles Picz and the U.S.S. Scott. A small rear echelon of four agents was left behind to bring on transportation and other equipment which could not be taken in early convoys.

After suffering a number of air attacks en route and watching a German radio-controlled bomb strike the U. S. Cruiser Savannah within a few hundred yards of their ship, the men landed near Paestum on the Salerno beachhead on 11 September 1943 (D plus 2).

Since the beachhead was still under heavy fire and aerial attack, the Fifth Army CIC made foxholes their base of operations.

The intense fighting of this period can perhaps be best judged by the fact that on one occasion a German attack almost captured the Army Advance CP which at the time was forward of the Division and Corps CP's, and Army CIC personnel were placed in the line to defend it. On another occasion, Major Spingarn and two agents found themselves momentarily trapped outside the town of Battipaglia after they had driven their jeep in advance of the combat troops. A terse account of their predicament reveals the nearness of disaster. "The Infantry had not yet come up. German tanks were discernable just ahead. At this point two German tanks came forward, reaching a point about 400 yards from us, one on the road, the other on the left. They had spotted us and opened fire on us with machine guns and 88 mm. cannon. A slight hummock, perhaps a foot high, saved us from the machine gunning, but the bullets were only eight or ten inches over us as we flattened out, and we did our best to bite our way into the ground." Escaping and ultimately reaching the town, the agents found it completely destroyed and evacuated.*

When the critical period passed and the Allied beachhead was secure, Fifth Army CIC Agents were able to pursue their primary mission without wondering whether they would be in the front lines that day, or providing security for the Allied troops on the beachhead and in the towns.

During these few days before the entry into Naples, CIC Fifth Army interrogated many escaped, wounded, and AWOL Italian and German prisoners and many Italian civilians. Statements obtained from refugees threw a great deal of light upon German activities and made the subsequent push into Naples easier for both the front line GI and the intelligence man as well.

One individual stated that at Castellammare, the Carabinieri was 100 percent pro-German and that there was no water or light in the town. Agent Merle V. Ploghoft interrogated a group of former Italian soldiers, who had passed through the German lines and from them extracted the

* Memo for Major Ray from Major Stephen J. Spingarn, dtd 21 Sep 43 (CONF) (KCD G-8-148)

information that the "Germans plan a determined stand at Bologna: they are moving out of Benevento certain named Italians have been helping the Germans; and civilians doing war work on the border have damaged German installations effectively."*

Plans Made for CIC in the Islands

On 26 September, Major Spingarn left on a four day trip to the Isles of Capri, Ischia and Procida. The purpose of the trip was to make a CIC survey of these islands and to establish Agent Donald M. Funk there. In the course of the survey, he contacted all the principal Allied officers on the three islands and in addition, spent a night with Senator Benedetto Croce at his villa at Capri, discussing the Italian political situation and anti-Fascist groups. Senator Croce was regarded as Italy's greatest living philosopher and writer. Unquestionably accepted as the leading spirit of the anti-Fascist group, he was a key figure in Italy's fortunes after the Armistice with the Allies. Marshal Badoglio appointed him a minister without portfolio when reorganizing his cabinet, for his "name was known and honoured by everyone."** Major Spingarn also had a conference with Colonel Tito Zanibona, the great Italian hero of World War I, who had spent 16 years in prison, the result of an attempted assassination of Mussolini on 4 November 1925.

On 30 September, Major Spingarn returned to the town of Maiori with instructions from Colonel Edwin B. Howard, AC of S, G2, Fifth Army, to get into Naples as quickly as possible after its capture. Along with the main body of the Fifth Army CIC scheduled to enter Naples were the attached British 312th and 97th Field Security Sections under Captain Cartwright.

Upon contacting Major Ketterson, G2 of the 82nd Airborne Division, and learning of the expected fall of Naples that afternoon, Major Spingarn and his group left immediately after lunch. A convoy of eight jeeps, four trucks and 14 motorcycles, containing 16 CIC Agents and 19 Field Security Police, wound their way over side roads and railroad tracks as the main highway was mined.

The group arrived in Naples at approximately 1630 hours with the advance elements of the 82nd Airborne Division. There were still small pockets of enemy resistance on the far side of town and occasional machine gun and rifle fire. Major Spingarn reported, "The reception by the residents of the city was tumultuous. At every stop the group was virtually mobbed by people with flowers, fruit, cheers and kisses."***

*"War Diary of Fifth Army Counter Intelligence Corps" (305th CIC Section) 1 September 43 to 6 January 44 (L-19) entry of 29 Sep 43. (S)

**"Italy in the Second World War", Pietro Badoglio (Oxford University Press, London, 1948) Page 149.

***"War Diary of Fifth Army CIC" (305th CIC Section) 1 Sep 43 to 6 Jan 44 (L-19), Entry of 1 Oct 43 (Secret).

After a short tour through the city surveying the damage and destruction, the group proceeded to search for a building for quarters and office space. Such a place was found at 207 Riviera and along with the British FSP sections, the Fifth Army CIC moved in.

The problem of transportation for CIC agents was also met in short order. Immediately after its arrival in Naples, the 305th CIC Section began to requisition civilian automobiles and accessories. Care was taken to properly acknowledge receipt of the vehicles, and a log of all civilian cars listing model, engine number, license number, name and address of owner was prepared at CIC headquarters.*

With the capture of Naples, a major objective had been accomplished. Salerno and Naples were of the past; Rome, the "Eternal City" lay ahead.

Fifth Army CIC Assumes Static Role

For the Fifth Army CIC Detachment, the push towards Rome was delayed. From the 1st of October and the fall of Naples, until the 24th of October, this Detachment was in charge of counterintelligence in the Naples region. This 24 day period played an important role in the work of CIC during the Italian campaign.

In the 22 days that had passed since the Salerno landings, CIC work had consisted mainly of moving ahead with the advancing armies and affording security to all captured towns. Naples offered the first chance for definite static counterintelligence work. Instead of pushing into a village, interviewing officials, setting up systems and then moving swiftly on, the 305th CIC Detachment could now give complete coverage. Informant nets could be initiated and the leads derived from these nets could be looked into with, in most cases, definite results.

On 2 October, the groundwork for the stay in Naples was laid. In the morning, Major Spingarn sent the attached 97th FSS to the port to make a security check. Agents Arthur J. Vincent and Bernard J. Grennan with four men from the attached 312th FSS, went to the Axis consulates to gather documents. In the afternoon a meeting was held for all Allied intelligence sections and all related sections then in Naples. These included the G2 of the 82nd Airborne, AMG, the Carabinieri and the Office of Strategic Services, and these representative organizations were given specified missions. Agent Gerald J. Weber interviewed one Niccolo Theodoli, journalist of Rome, and obtained an account of the events surrounding the German occupation of Rome.

On 4 October the names of liberal anti-Fascist group leaders and others who could be contacted for information were obtained. On the

*Ltr to Commanding General, Fifth Army, Attn: G-4 (Through AC of S, G2), from Major Stephen J. Spingarn, Hq 305th CIC Section, Subject: Requistion of Civilian Vehicles and Accessories, dated 17 Nov 43 (Conf) (KCD) 6-8-137)

basis of such simple leads as these, a good informant net was constructed.

By the 5th Of October, the original CIC functions had been completed and all that remained was to contact the Italian civilian officials and explain what was expected of them. The leaders of the Comitato de Liberazione, a leading anti-Fascist group, met at the office of the 303th CIC at the invitation of Major Spingarn. Major Spingarn read a memorandum addressed to them, "requesting specifically their opinion on military and political officials; a list of persons dangerous because of their closeness to the German and Mussolini regime; a list and opinions of anti-Fascist in the region; information on foreign consuls in Naples and on enemy aliens."*

With the combat phase of counterintelligence completed, the static situation now began. This meant the inevitable but all important paper work and filing; the interrogations and investigations; the searches and arrests.

At the Hotel Parco, Agents Vincent and Grennan found and seized a number of German and Italian documents. They also found - but did not seize - 1500 pounds of toluene (an explosive) in separate 100 pound blocks, in the hotel basement. All the blocks had been inter-connected and booby trapped in such a way that anyone tampering with one block would have detonated the entire 1500 pounds.

The "Axis file" at the Fifth Army CIC headquarters was visibly increased on October 6th as a result of a talk Agent Weber had with of the German consulate. gave the names of several individuals who worked for the Germans and also the names of German intelligence officers and espionage agents.

The Detachment rose in strength in early October by the arrival of three more agents who reported to the Detachment's new quarters at 2 Piazza Nicola Amore. The city of Naples had been divided into zones for the various military units, and the old location at 287 Via Riviera was within North Africa Air Force (NAAF) territory.

Bomb Explosion Gives CIC Additional Work

The first seven days of October had passed with nothing untoward occurring. Naples was slowly returning to a state of semi-normalcy. On the 7th of October, this state was rudely shattered when a demagnetization bomb, presumably laid by the Germans, exploded in the post office, killing 25 people, two-thirds of whom were Allied soldiers. Major Spingarn, Lt. Miles A. Tonini and Agents James P. Furniss, Alba B. Warren

*"War Diary of the Fifth Army CIC", (303th CIC Section) 1 Sep 43 to 6 Jan 44 (L-19) entry of 5 Oct 43 (s)

Julius R. Sagi and Gordon M. Messing met with the leading civil and police officials of the town and Province of Naples.

The CIC agents explained to them that "the work of the CIC is also countersabotage, and although these delayed bombs were probably not the work of saboteurs, it will be considered sabotage if anyone knows the presence of such devices and does not report them." The officials were told to send men all over the city for information concerning the bombs and to "put in a full day's work instead of the half-day many of them were working."*

Searches were organized and the bomb squads uncovered a number of explosives planted by the Germans before they withdrew from Naples. Unfortunately, they failed to uncover them all. On 10 October, there occurred an explosion in the barracks of the 307th Engineers, formerly the barracks of the Italian 31st Infantry, that produced 65 casualties, an estimated 30 of these being fatal. The explosives had been secreted in the cellar, so well hidden that two checks of the whole building had disclosed nothing. Sabotage was ruled out as the building had been under constant guard. These explosives, planted by the Germans before they withdrew, were a major headache for CIC in all the large Italian cities captured during the campaign.

On the day of the explosion, a notice from Fifth Army CIC appeared in "Risorgimento", the only newspaper that was functioning in the battletorn city. Civilians were urged to bring "information concerning the possible presence of spies or enemy agents of the occupied territory" to the CIC office. As an incentive, a reward of two thousand Italian lire was held out to potential informants. Fifth Army CIC was determined to leave no stones unturned in its search for remnants of the Fascist regime.

One of the highspots of the stay in Naples occurred with the arrest on 11 October of General Ettore Del Tetto, Italian Territorial commander of Naples, 19th Corps. CIC had received numerous reports concerning General Del Tetto, claiming that he had turned Naples over to the Germans around September 11 and 12, despite the desire of many Italians to hold out, and also that he was responsible for much of the damage and deaths besides releasing certain German officers captured by the civilian populace.

Acting on a report that a box with his name had been brought into the Vomero district, Army CIC men investigated and found the General's orderly. Questioning of the orderly in the CIC office brought to light the fact that Del Tetto was hiding in the Convenito della Palma, a slum district. Quick dispatch of agents, before the news of the orderly's capture reached Del Tetto, led to his arrest.

---

*"War Diary of the Fifth Army CIC" (305th CIC Section) 1 Sep 43 to 6 Jan 44 (L-19) (s)

Questioning of the General brought forth the information that he was extremely familiar with the terrain already won by the Allies, but that he had only sketchy information on the Pontine Marshes, the territory which lay ahead of Allied troops on the march to Rome. The arrest of Del Tetto received praise from the majority of the civilian population and from the newspaper "Risorgimento".

Liaison and Conflict

On the 12th of October, liaison was arranged with the Peninsular Base Section CIC, under command of Major Maxwell W. Papurt. This Base Section was entrusted with handling all security concerning installations in the Naples area, although the Army CIC Detachment continued to handle all counterintelligence work. Two agents were scheduled to be sent to Army CIC headquarters to familiarize themselves with operations so that when the Base Section relieved the Army CIC Detachment, no preventable stoppages would occur.

This early period saw the "growing pains" of OSS - a later period saw it develop into an efficient espionage agency. Major Spingarn, perhaps the greatest critic of the early OSS activities in Italy later reached a good working agreement with them.**

Fifth Army CIC Prepares To Leave Naples

In the last few days before the Army CIC Detachment turned over counterintelligence control to the Base Section in Naples, Major Spingarn's organization attempted to complete the security of the city.

*Memorandum for Major Ray, CO, CIC Det, AFHQ, from Hq 305th CIC Section, dtd 10 Oct 43 (Secret)

**History of the 305th CIC Detachment, Page 5 (u), (NOTE: Further discussion of this situation is included in Chapter 3, "Critique: North Africa, Sicily," and Chapter 5, "Preparation for OVERLORD."

A major headache was the issuing of civilian passes, signed sometimes in almost illegible handwriting by unauthorized local officials. In a memorandum to the Chief AMG officer, Spingarn requested that local officials be advised as to what authority, if any, they had in issuing these passes and that a clarification of authority be published in newspapers and by handbills.

The morale of the civilian population was immeasurably increased with the arrest of some of the major Fascists who associated with the Germans during the occupation of Naples. Renato and Carlo Guggenheim were two such eminent Fascists. Earlier in the month, Renato had offered his services to the CIC, but investigation of his car resulted in the discovery of an order from Colonel Scholl, German counterintelligence officer, exempting the car from requisition, and a search of a photographer's shop uncovered pictures of Guggenheim in the company of German officers.

After Renato's arrest, an informant said that "Marchesa Patrizi had come to her house . . . . . very distressed, and said that Colonel Kraege (AMG) had been very sympathetic to her request to intercede for the Guggenheims, but that the matter depended upon a third person (Major Spingarn)."* The Guggenheim brothers were interned for the duration of the war.

Investigation of wire cutting incidents was a leading CIC function during the campaign. Sometimes the wire was cut by the enemy; sometimes by ardent Fascists, and sometimes by civilians who did not understand the importance of such acts. The investigations of these acts were called for to such an extent that eventually the 305th CIC published handbills announcing that the penalty for wire cutting was death and assigning plain clothes Carabinieri to investigate any cases that occurred.

The middle of October marked the return of Count Sforza to the Italian mainland. Since Sforza had spent the previous 22 years abroad, uncorrupted in any way by the Fascists, political circles were of the opinion that he would be supported by the leaders of almost all parties if an election were held immediately. Most Italians believed that he was the man who could dispel the feeling of inertia and helplessness. For this reason, Major Spingarn arranged for a series of conferences between Sforza, the Italian political leaders and the CIC, sometime in November.

Base Section CIC Arrives in Naples

On the 23rd of October, Spingarn called a meeting of the heads of all the local and provincial offices at which time he introduced Major

*"War Diary of the Fifth Army CIC" (305th CIC Section) 1 Sep 43 to 6 Jan 44 (L-19) (s)

Papurt and Captain Lucien L. Picard of the Base Section CIC to whose jurisdiction the security of Naples was being given.

Major Spingarn did not hesitate to lay the situation on line before the Italian officials at this meeting. "I have gotten varying degrees of cooperation from you gentlemen, some good and some not so good," he stated, and then he added an important remark, "One thing I wish to make note of at this moment is that while I have received fairly good information from you gentlemen regarding less important people in the city, there has been a tendency on your part to 'whitewash' or exculpate the more important persons." No question could remain in the officials' minds that the American security officers were content only with the complete fulfillment of their mission. Within the first two weeks of its operations in Naples, the Base Section CIC backed up words with deeds, embarking on 137 new cases that ranged from espionage and sabotage to security checks.

By 7 November, Captain Picard, Executive Officer of the Detachment, was able to report on the basis of interviews with civilians of varied political opinions that sentiment among the natives of Naples was generally favorable toward the American troops garrisoned in the city. But the civilian attitude was less kindly disposed toward Allied occupation policies. Complaints that Fascists still remained in power and even held leading positions were voiced, and charges of British and American toleration of Black Market activities were lodged. This gauging of civilian morale had been requested by the CIC detachment at AFHQ as an appendix to regular counterintelligence functions of the Base Section.*

Army CIC Moves to Caserta

At 0930 on the 24th of October, the main body of the Fifth Army Detachment left Naples to take over their new headquarters at Caserta. Their stay in Naples had produced many important end results in this first instance of static CIC work in Italy. The performance of the Fifth Army CIC received "commendation from the Army G2 and from a British representative of AFHQ."**

Important lessons had been learned during the 24 day period; lessons that would be used in all captured Italian cities up until the end of the campaign.

Stiffening Resistance Slows the Allied Advance

The push toward Rome did not halt after the fall of Naples. The divisional CIC detachments and the VI Corps CIC Detachment followed in the wake of the advancing armies and gave security to the great number

*Ltr and Exhibits to Chief, CIC Det, AFHQ, from Capt Lucien L. Picard PBS CIC Hq, dtd 7 Nov 43 (Secret) (KCD 7-7-119 & 120)
**History of the 305th CIC Detachment, p. 5 (C)

1713

CONFIDENTIAL

of towns that fell before the Allied advance. As in the early days, officials were interviewed, buildings searched and informant nets established. The names and faces were different - the work and results were the same.

Then occurred the inevitable slowdown. The Fifth Army under General Mark Clark had pushed forward after the retreating Germans and by mid-October had crossed the twisting Volturno River. Defeated at this point, the Germans pulled back and formed what was referred to as their "Winter Line," a line that guarded the Liri and Rapido Valleys from the South. Mid-October to mid-November brought the first bad weather; the sleet and snow, the rain and hail, and as General Clark wrote in his book, "Calculated Risk", "The tired and muddy freezing men of the Fifth Army felt they were going up against a major defense position every day as they inched their way over the rugged terrain toward the Winter Line."*

Corps and Division Detachments Begin Static Coverage

With this slowdown of the Allied advance, the stage was set for the first static counterintelligence work to be performed by the CIC Detachments at Corps and Division level. In one respect, this slowdown was good for the CIC Detachments as it afforded them the opportunity to give long, complete coverage to the various towns and cities they reached, in this way gathering experience later put to use in such cities as Rome, Florence, and Milan.

To the average GI wading through the mud and icy sleet, the slowdown didn't make much difference. There was good reason for this, for before him lay such places as Mount Camino, Mount La Difensa, Mount Maggiore, the city of San Pietro Infine and a little town called Cassino.

During the last days of October, the VI Corps Detachment, commanded by Major Kenneth G. Crowell and consisting of 12 men, began to place more emphasis on static counterintelligence work. Landing at the Salerno beachhead on D-day, the Detachment had followed the advance, affording security in all captured towns and cities. This detachment having jurisdiction over the 45th, 36th, 34th, and 3d Division CIC Detachments, had up to this time, performed the same duties and missions as the divisional Detachments and yet did not have a systematic reporting procedure or very close liaison with them.

With the slowdown of the Allied advance in October, the divisional Detachments began sending certain suspects to the Corps Detachment for interrogation.** These divisional CIC Detachments, working for the most part at the front lines with their respective divisions, were in a superior position to apprehend suspected enemy agents and saboteurs.

---

*"Calculated Risk", Gen. Mark W. Clark, Pages 228 and 231

**Memorandum, Subj: Mercaldi, Angelina, Alife, Alleged Collaborator with Germans; from Maj K. G. Crowell, 206th CIC Section, dtd 24 Oct 43 (c)

Although the first actual enemy line-crossing agent was not captured until December 1943, the original system of sending certain suspected persons from Divisional to Corps level was thus set up in October and gave practice in the procedure that paid big dividends when the enemy later attempted a mass onslaught of agents.

One of the important cases investigated by the VI Corps CIC Detachment during these early days after the fall of Naples concerned certain people in the town of Montfalcione who were alleged to have informed the Germans as to the whereabouts of American parachutists.

Upon entering the town, special agents Arthur J. Ruston and Gabriel J. Paolozzi contacted Brigadier Ficarra of the Carabinieri. According to Ficarra, rumor was strong that Antonio Polcari and Antonio DeMagistris, both avid Fascists, had been the two persons guilty of the informing. Subsequent investigations brought forth information that Italia Nargi, a young prostitute of the town, had carried certain mysterious sealed letters between the two men. As Nargi reported during her interrogation, Polcari had asked her to carry those letters to DeMagistris and in return as payment, "I will give you a kilo of macaroni."* All three persons were arrested and interned for the duration of the war.

A certain feeling of distrust is inevitable between the troops occupying a nation and the people of that nation. This was especially true in Italy. Some changed from Fascists and Pro-Nazi adherents to Badoglio followers and pro-Allied adherents overnight. Therefore when Agents Warren R. Anderson and William N. Bower of the VI Corps CIC Detachment were instructed to investigate the delay of military traffic to the front due to bogged down civilian vehicles on the main roads, it was only natural that they should wonder if perhaps "the leopard hadn't really changed his spots."

Travelling on the main road from Montesarchio to Benevento, the two CIC Agents encountered several Italian civilian cars and carts which had broken down in by-passes, resulting in long delays of 105mm guns and other Allied heavy equipment moving to the front. In most cases, the Allied vehicles had to pull out the disabled Italian cars and carts and in one case, a 3/4-ton truck became stuck in attempting to pull out a wagon.

Agents Anderson and Bower questioned the occupants of these cars to ascertain whether their movement represented a casual one or a concerted attempt by enemy agents to clog the roads with civilian traffic. Deciding that the traffic jams did not appear to be enemy inspired, they called the matter to the attention of Major F. J. Armstrong, A.M.G. officer, Benevento Province, who stated that immediate steps would be taken to

*Memorandum to OIC, Subject, "Allegation that certain persons in Montefalcione had informed Germans as to whereabouts of American parachutists", from 206th CIC Section (U)

correct the situation.*

This was only one of the many non-glamorous, little known duties performed by the CIC Detachments in Italy, which constituted nothing more than the daily grind of behind-the-scenes counterintelligence. These investigations would never get the publicity nor acclaim that the larger cases later got, but in reality they were equally as important as they formed the foundation upon which the later structures of CIC investigations were built.

Base Section CIC Scores a Victory

Although assigned a static rather than a tactical role, the Peninsular Base Section CIC detachment was not without its individual victories. On 21 November, Agents William M. Lucaire and Carl F. Fiebig were dispatched to conduct a security survey of a Quartermaster Dump in the Aversa section of Naples. Among the many security deficiencies at this dump, the agents noted an absolute lack of anti-aircraft protection. On the day previous to the inspection, the dump had been strafed and bombed at will by German aircraft, and the raid had crippled the work of the installation for four hours. The morale of the civilian personnel was utterly shattered, and fewer than 5% of these workers returned to resume their duties. The agents stated in their reports that the area around the dump afforded excellent positions for anti-aircraft emplacements and recommended that at least six .50 caliber machine guns be placed to provide a crossfire against low flying enemy aircraft. Their recommendations were hastily carried out.

On the following day, enemy planes diving low over the depot for strafing never had a chance to open fire. A steady stream of .50 caliber rounds from the machine gun emplacements met the planes head on and riddled them. Several of the planes were blasted from the skies; the remainder, seeking refuge in higher attitudes, came into the range of 40 mm Bofors that had been trained on the area as part of the trap. A grand total of twelve enemy aircraft were destroyed, the depot was saved from attack, and most of the Italian laborers came back to the Aversa dump confident that they could work in safety. The strategy of CIC agents Lucaire and Fiebig had met with astounding success.**

Additional Detachments Arrive

During the latter part of 1943, other CIC Detachments made their appearance in Italy.

---

*Memorandum to OIC, Subject, "Delay of Military Traffic to the Front by Civilian Vehicles", dated 16 Oct 43, from 206th CIC Detachment (u)

**Memo for the OIC from agents William M. Lucaire and Carl F. Fiebig, Subject: Quartermaster Dump No. 560, dtd 21 Nov 43, (Conf) (KCD 7-7-126) Rpt. to Chief, CIC, AFHQ from Hqs PBS CIC Detachment, Subject: Incident at Aversa Quartermaster Depot, dtd 25 Nov 43, (Secret) (KCD 7-7-126)

On 9 October 1943, the CIC Section II Corps, commanded by Lieutenant Crosby Lewis landed at Paestum in the vicinity of Salerno. The Detachment proceeded immediately to Naples where they contacted the CIC Section of the Fifth Army and then spent the following six weeks in the area around Naples.

Up until the 27th of November, when II Corps assumed a tactical responsibility in the Cassino sector, the men of the Detachment performed the usual routine investigations and security surveys in their sector. Their findings however were not always routine. Lax blackout discipline, inadequate challenging by posted sentries, and mess gear and other bright objects exposed during daylight hours presented threats to individual unit security which agents of the II Corps CIC were quick to note.*

During December, the unit pioneered among the American forces in establishing effective civilian controls in the Minturno area.** It is generally believed that this was the first instance of such controls initiated and maintained by a CIC Section in Italy. Daily surveys of populated areas were conducted and contact with town officials, Carabinieri, and local inhabitants, often led to the disclosure of strangers in the Corps area of occupation. These surveys were backed up by the instituting of civilian road blocks and other front line control measures. Civilians of doubtful identity were passed immediately to PW collection points with a note stating their name and the area in which they had been picked up, along with the designation of the capturing unit. The prisoners and their identifying notes were then sent to Divisional PW cages where the suspects were screened and interrogated by CIC agents.

One group of three such suspects who confessed to being enemy agents had an interesting account to relate. All three men were Italians who had been selected by the Germans to serve as agents on a local tactical level. Their mission was to penetrate Allied lines and secure information concerning Allied order of battle, artillery installations in front line areas, and the location and approximate size of armored forces. The agents had been trained to recognize and identify Allied shoulder patches, and they were advised that a unit's kitchen could be a safe and effective place to gather information. The Germans completed the briefing of these agents by issuing them up to 8,000 lire and by giving them a password to be used in returning to German lines. Methodical interrogation drew considerable data from the three men about the nature and extent of the enemy espionage efforts on a tactical level, and the II Corps CIC agents were quick to use this data in constructing counter measures.***

*Ltr. to AC of S, G2, II Corps from 202nd CIC Section, Subj: Security of CP, Hqs. II Corps, and Attached Units, dtd 26 Oct 43, (Conf) (KCD 6-10-266).

**History of the 202d CIC Detachment, p. 4 (K-26)

***Ltr to Chief, CIC, AFHQ, from Hqs II Corps CIC, Subject: General Security Report, December 1943, dtd 2 Jan 44, (Conf) (KCD 1-25-176)

The II Corps CIC also instituted a careful check system to weed out ex-soldiers of the Italian Army whose presence in the Corps area constituted a security threat. On 14 December, Agents Princi and Stevens discovered a former Italian Major huddled in a shack five miles from the front. On-the-spot interrogation revealed that the ex-officer was awaiting the start of an offensive that would allow him to cross into German lines during the confusion of battle. He had gathered a number of documents to present to the Germans as proof of his loyalty to the Fascist cause. In the hands of the CIC agents, these documents became the tools for extracting a confession from a man who might well have become an espionage agent for the German Intelligence Service.*

The establishment of rigid controls was only one of the innovations made by the II Corps CIC Detachment which was to become a leader in the campaign ahead. When the campaign ended in May 1945, this unit had been in combat against the enemy a total of 620 days, thus making it the senior CIC combat detachment in the US Army.**

CIC with the 1st Armored Division.

By the end of October 1943, Army, Corps and Infantry Division CIC Detachments were represented in Italy. However, it was not until 28 October 1943, when the 151st CIC Detachment commanded by Captain John C. Crystal debarked at Bagnoli, province of Naples, that an Armored Division arrived with its own CIC Detachment.

This 151st CIC Detachment, which later became the 501st CIC Detachment, was attached to the 1st Armored Division; it had been activated on 17 August 1943, at Oran, North Africa, as part of the 2678th Headquarters Company, AFHQ.***

From its arrival until 30 November 1943, counterintelligence coverage was given the Division area, which at that time comprised several communes near Naples. During this period, the Detachment headquarters was located at Caivano, and the detachment commander lost no time in spelling out the role of CIC to the civil and police officials of the town. In a speech to these officials on 2 November, Captain Crystal stated, "We have come here as friends of the Italian people. We do not intend to interfere with your lives or affairs in any manner except in the suppression of Fascism and the protection of our troops

*Memo to the OIC from Agents Peter W. Princi and Harold Stevens, Subject: Interrogation of Bona, Vittorio Angelo fu: Ercole, dtd 14 Dec 43 (Conf)

from enemy activity." But he went on to add that "any propaganda, rumor mongering or the placing of any obstacle in the way of Allied military operations will be severly dealt with."*

Near the end of November, the Detachment moved to Camigliano and set up its headquarters there. In their monthly situation summary, the Detachment reported that "The area assigned to this Detachment is quiet. A network of informants is operating smoothly."**

In this same summary they reported that, "This Detachment has received excellent cooperation from both local and regional AMG officers . . . . . .

". . . Several cases of breaking of telephone wires have been investigated. No indications of enemy activity have been discovered."

". . . The civilian pass system within the Division bivouac area is functioning."***

During their brief stay in Camigliano, an Italian Colonel, who had been a member of the Special Tribunal for trying anti-Fascists, was arrested and interned by Special Agent Keirn C. Brown. Also, one Nicola Leonardi, an important Fascist official, was arrested and confined. These preliminary arrests gave the men in the Detachment good practice for the part they would play during the Anzio landings on 22 January 1944.

SECTION 2

FORCES REGROUPED FOR PUSH TO CASSINO

The situation in Italy during the middle of November was alternately static and fluid as the Allied forces regrouped their forces, preparing for the push through the German "Winter Line" and on to Cassino. The front line troops were constantly moving from sector to sector and the Italian terrain at times aggravated this condition.

General Eisenhower in his book, Crusade in Europe, tells a pointed story of the inconsistencies of the Italian countryside. The forward route of the 34th Division took it across the Volturno River three times, and one night when the assistant commander, Brigadier General B. F. Caffey was returning from the front, his jeep driver remarked" . . . that he simply could not understand such a 'crazy' country. Caffey asked him why he felt that way about Italy. The soldier's reply was a classic: 'Why, every durn river in the fool country is named Volturno."*

For the men of the 34th, 3rd and 45th CIC Detachments. this period just before the landings at Anzio became one of weary repetition with their main counterintelligence work the screening of loiterers and suspicious characters picked up in the Division area. Much of the work was dull but it gave needed training to the men. There was always the hope that one of these characters might turn out to be the suspect of the week, but it usually turned out to be an illiterate peasant soliciting laundry for his wife.

For about a month the Command Post of the 34th CIC Detachment was a tent perched in an olive grove on the side of a hill facing Cassino. Days were relatively calm, but the nights were one continuous artillery bombardment. During this period a large amount of combat intelligence was uncovered.

Vito Antonio Radogna was apprehended on 23 December 1943, and interrogated by Lieutenant LeMoine, French Liaison Officer with the 34th Division. The interrogation revealed that, "the Germans during the period 4 October to 17 October, forced 1200 Italian prisoners held by them in Cassino, to clear the trees and growth along the side of the ...Garigliano River, so as to give them a clear view ....they forced the Italians to dig holes for mines for both vehicular and anti-personnel types.**

---

*Crusade in Europe, by Dwight D. Eisenhower, Doubleday & Co., Inc, Garden City, New York, 1948, p. 203

**From CIC Detachment, 34th Inf Div., to AC of S, G-2, 34th Inf Div., Subject, "Civilian Report on Enemy Location near Cassino." (C)

Further interrogation also disclosed that the heavily wooded area nearest Cassino on the South side of the river contained numerous gun emplacements and that the Germans had an Observation Post on Monte Cassino which gave them a clear view of the entire valley. Radogna reported that while the Allies had bombed Monte Cassino many times, they had never, to his knowledge, bombed the strip of woods along the River which concealed so much German artillery.*

This material was supplemented on 30 December when Sara Lido was apprehended at a point between San Pietro and San Vittore and upon interrogation, gave the following information:

"There was a German CP in San Vittore ... a place where the townspeople used to get water has been mined...the Germans have nothing to eat, and have stolen bread and lard for sustenance...in November the Germans were fortifying a rock stronghold hill that lies between Cassino and Mt. Cassino."**

These reports were sent to the G-2 of the 34th Infantry Division and were used in the campaign to capture Cassino.

CIC Suffers First Fatality in Italy

On 5 November 1943, CIC suffered its first fatality in the Italian campaign. At approximately 1000 hours that morning, Agents Robert L. Pingley and Anthony F. Giordano of the 34th Division Detachment were driving a jeep about one mile northwest of Capriata enroute to Rocaravindola on a security assignment.

Suddenly enemy artillery shells started landing and almost immediately, their jeep was hit and overturned. Agent Pingley was thrown from the jeep and injured. Although the shelling had not stopped, he returned to help Agent Giordano, but Giordano was dead. Pingley removed Giordano's credentials, codes and personal effects and returned to the Division CP. For his gallantry and coolness under fire, Agent Pingley was awarded the Silver Star.

The 34th suffered its second death in February when the Commanding officer of the Detachment, Captain John L. Rubsam and his driver and interpreter, Joseph Musumeci, disappeared while on a mission.

These two men left the Detachment in a jeep at 0930 hours on 2 February to perform initial CIC coverage of the recently taken town of Cairo. When neither man had returned by 2400 hours, 3 February, an investigation was carried out by Agent Donald M. Funk of the Detachment.

*Ibid

**From CIC Detachment, 34th Inf Div., to AC of S, G-2, 34th Inf Div., Subject: Section Activities 29-30 December 1943 (C)

Funk learned that Captain Rubsam had stopped at the advance C. P. of the 135th Regiment on 2 February and had stated his intention of proceeding on to Cairo. Shortly thereafter, the town suffered an extremely heavy enemy bombardment; however, when Agent Funk made an extensive search of the town, no trace of the men could be found. Agent Funk searched all nearby roads over which the Captain and his driver might have travelled and finally found a tank Lieutenant who remembered talking with the Captain about some German Barracks near Cairo.

As Agent Funk reported in his casualty report to Major Spingarn, "It is the firm conviction of this Agent...that Captain Rubsam, solely in the interests of the Counter Intelligence Corps, and at great risk to himself, proceeded to the German Barracks...at which point he and Musumeci were either captured or shot by enemy patrols."*

Three months later Rubsam's body was found under a bridge near the town where he had evidently attempted to take cover from enemy fire. The body of the driver was never found.**

Two months prior to leaving for Anzio, the 34th CIC Detachment was situated just outside of Cassino in what later became known as the "Rome Corridor." The C.O. at this time was 2nd Lieutenant Leo O. Forkey who took over immediately after Captain Rubsam's disappearance. When the Division went back for rest and reorganization near Benevento, the Detachment went with it. On 26 March the detachment went to Naples and on 8 April, took the boat to Anzio.***

CIC's Problems Studied

To coordinate the operations of CIC Detachments in Italy and solve some of their individual problems, Major Edward L. Ray, Jr., Chief of the CIC, Allied Force Headquarters, made a trip to Italy in November 1943. He planned to contact each of the tactical sections from Division to Army and from them receive the overall picture of their part of the campaign.

One of Major Ray's first stops upon arrival was with the Fifth Army CIC which maintained headquarters at Caserta under Major Spingarn. He found that this section assumed security responsibility throughout the area to the rear of VI Corps and forward of the Peninsular Base Section. Security coverage was afforded towns by Army CIC teams that worked from their headquarters, an apartment in Caserta.

He also found that a sub-section of this Detachment, commanded by Lieutenant Harry L. Amerman, was billeted and messed with Fifth Army Headquarters, also in Caserta, and that this sub-section was charged

*Casualty Report to Maj S. J. Spingarn., C.O. CIC Det., Fifth Army, dtd 4 Feb 44 (C)
**History of the 34th CIC Detachment (K-1) (C)
***History of the 34th CIC Detachment Page 1 (K-1) (C)

with Army Headquarters security only, thus leaving the remainder of the Section to engage in general investigation work. Because of the work of this sub-section, Major Ray found that the Detachment enjoyed excellent relations with both Col. Howard and Major Blom, G2's (CI) of the Fifth Army.

Major Ray discussed a problem of immediate concern to both the Section and to AFHQ. This was the insufficiency of Italian speaking personnel; a problem that CIC ran up against many times during the campaign. Major Ray was cognizant of this problem because Major Spingarn had written him shortly before he left for Italy. Spingarn said, "I have at this minute received a phone call from Lieutenant Forkey who has arrived at Hq, CIC, PBS with eight agents. He tells me that only one of these men is fluent in Italian. I am frankly at my wits' end. I have absolutely no use for the men who don't speak Italian or aren't clerk-typists.....and none of the other Fifth Army CIC Sections want them either."*

The pressing demand for effective interpreters was occasionally broken, though not relieved, by humorous incidents. Captain Picard, Executive Officer of the Peninsular Base Section Detachment, received a note from an Italian citizen whose potential as a translator spoke for itself:

"I, Alfred de Gennaro, son of American Citizen, born in 1924, expose you as follows:

From four years ago I fight against Germany and Fascimo.

From four years ago I have organized any men, I have throwed messages to Italian people, I have pushed the Naples people against the Germany and Fascismo.

Now, after your arrive in Naples and as I have already given to you some information of value, I ask you of lend my work in the Allied Services.

"Moreover, I inform you what a my brother, american citizen, is officer of American Army.

With regards,

s/A. D. Gennaro"

This note underscored the difficulty that faced PBS CIC in locating civilians who were both willing and able to serve CIC in linguistic capacities at a time when investigations could be slowed down or stymied by language barriers.

*October CIC Situation Summary from AFHQ to Chief, CIC Branch, CIC, MIS, War Department, dtd 12 Nov 43, (Secret)

Major Ray found this linguistic problem to be acute with all other Sections as well, and especially with the VI Corps CIC Section where the unit had to rely entirely on attached IPW personnel for its interrogation work.* This problem was never completely solved during the campaign and was a major concern as late as April 1945, just before the final surrender.

CIC and the Division G2's

Another of the ever recurring problems faced by CIC from the landings in North Africa in 1942, until the final surrender in 1945, was uncovered by Major Ray during his visit. This problem concerned the apparent lack of interest in or knowledge of the importance of counter-intelligence work by the Division G2's.

In Italy, the CIC Sections of the 3rd and 34th Infantry Divisions were severly hampered by this lack of interest and an estimated 90 to 95 percent of their work was devoted to combat intelligence. In the CIC Section of the 3rd Division, Lieutenant Bertram Russell was directed to spend his time relaying G2 instructions to the OSS Agents with the division; seeing that they passed unmolested through the Allied lines; interviewing them on their return and preparing reports on what was learned.

As Major Ray wrote in his report, "The G2 has even asked for an additional CIC officer to help direct the infiltration of the OSS Agents."**

These unfortunate circumstances were balanced to a degree by the willingness of the G2's of the VI Corps and 45th Infantry Division, to "let the Section operate anywhere within division area and even behind where there is a CIC job to be done."***

The VI Corps especially was allowed to work freely and at its own discretion; and in this way it was able to maintain the closest liaison with division CIC sections and to be able to support them or replace them at a moment's notice.

The G2's who realized the value of CIC work were praised by Major Ray and conferences were arranged with those who did not. From these conferences, in most cases, a workable agreement was reached.

Major Ray found that little experience was available from the CIC Sections of II Corps or 1st Armored Division as they had just recently

*Memorandum to Lt Col Nichols regarding Tactical CIC Sections from AFHQ, Subj: Trip to Italy, dated 19 Nov 43 (T-57) (Conf)
**Ibid
***Ibid

arrived in Italy. Since the 36th Infantry Division had been in a rest area since ten days after the Salerno landings, little positive observation could be made.

In observing the Army, Corps, and Division CIC Sections, Major Ray gained first hand experience as to how a CIC Section was organized and the role they played in relation to their assigned Army unit. Before leaving Italy, he spent considerable time with the CIC unit at Peninsular Base Section, commanded by Major Maxwell J. Papurt.

The Organization of the CIC Unit at PBS

The mission of this Section varied quite noticeably from that of the other CIC Sections in Italy as its role dealt primarily with static counterintelligence. For this reason, it was organized into sub-sections or squads - each having a separate function. These main squads were:

Security Squad - A squad composed of three Agents who made investigations of and submitted reports on the safeguarding of military installations.

Liaison Squad - A squad composed of two Italian-speaking Agents who conducted liaison work with such Italian agencies as the Civil Police, Carabinieri, Questura, and the Directors of Prisons, and who checked their records for possible leads.

AMG Squad - A squad who worked exclusively on investigations requested by the Office of the Chief, AMG, for the district of Naples. This district included not only the city itself but also the province of Naples.

General Investigative Squad - This squad consisting of eleven agents, besides conducting the usual investigations in connection with espionage, sabotage, subversive activities, and disaffection, was charged with the imprisonment, interrogation, and release of persons interned for security reasons. In the first week of its deployment, this squad began to construct a system of confidential informants drawn from various sectors of Naples and varied business, political and social levels.

Naples Port Squad - A squad of four agents who worked under the direction of the Port Intelligence Officer and whose work consisted of security checks within the Port Area, control of merchant seaman,

passenger control, investigation of Port laborers, investigations of underwater harbor defenses, and all incidents within the Port.*

Because of the proper use of these squads, Major Ray found that CIC relations with AMG and S2, PBS, were excellent. The relations with AMG were so excellent that no one was appointed to office by AMG unless cleared by CIC. "In fact," according to Major Ray's report, "Captain Picard of Major Papurt's Section is a member of a five-man board which passes on all appointments."**

Observations and Conclusions.

Major Ray's visit to Italy was extremely fruitful as far as CIC was concerned, for it gave the higher echelons some idea of the problem faced not only by the Section commanders, but by the Agent in the field as well. Perhaps for the first time, the "upstairs" was aware that morale was suffering because enlisted men who had done and were doing an excellent job, were denied promotion and that, in some Sections, an outstanding job could not be done because certain uninformed individuals would not allow CIC to be used for counterintelligence.

One very interesting observation was formed during the trip, concerning a subject that became a point for discussion every time CIC men gathered. This observation, which was brought forth by all section commanders who participated in the Salerno landings, was to the effect that CIC personnel have no place in the early waves of an amphibious assault; can accomplish no useful counterintelligence purpose at this time, and are actually in the way.

In reporting on his trip to Italy, Major Ray said, "There is simply no CIC work to be done in the midst of the heavy fighting .....it is not until after the actual battle phase is approaching its end, or is completely over, that the CIC can do its own counterintelligence mopping up."***

Subsequent CIC history has shown that these words did not carry the weight that they were intended to carry. Up until the end of the

war, CIC men waded ashore, parachuted in and fought their way ahead, along with the front line troops.

Major Ray's visit to Italy came at a time when counterintelligence work was largely counter-subversive and directed against post-occupational enemy agents. Salerno, Caserta and Naples had fallen and little by little, key Fascist figures were uncovered, convicted and interned, thereby removing points of support around whom subversive groups might be expected to form.

Spy Catching Proves Difficult

From the standpoint of capturing enemy agents, however, there was varying success during the early stages of the Italian campaign. This may be attributed in part to the fact that the German Intelligence Services had been so taken by surprise by the rapidity of the Allied landings that they had not established post occupational networks; nor did they send any considerable number of agents into Allied territory for some time afterwards.* In part, also, this may be attributed to the fact that CIC had not yet widely established the system of controls which later were marked with such success in disclosing agents.

Major Spingarn reported in his History of the Fifth Army CIC Detachment,".....We had not yet learned that it is the stranger rather than the local resident who is most likely to be an enemy agent, and that systems of control for screening strangers must therefore be devised and perfected."

December marked the birth of an organization which helped CIC initiate these much needed controls. Establishment of the Fifth Army Refugee Interrogation Post (RIP), under the command of Lieutenant Melio A. Tonini of the Army CIC Detachment, provided an interrogation unit that was unsurpassed in "breaking" extremely difficult suspects. Located at the Fifth Army PW Cage, its principal task was the interrogation of civilian suspects picked up by forward security units (CIC or other Allied counterintelligence units) because they had crossed into Allied territory from enemy territory. For the most part, these suspects had not as yet been identified as enemy agents by the arresting units although there was a veil of suspicion surrounding them. From its inception in December 1943 until the end of the war, RIP, under the operational direction of G2, Fifth Army, interrogated thousands of suspects and held the enviable record of securing confessions from some 40 enemy agents previously undetected and unconfessed.

*History of the 305th CIC Detachment (L-1) page 5, (u)

Rumors and an Explosive Suitcase

The "Winter Line" stalemate nourished an unwholesome flock of rumors among the American troops. The II Corps CIC Detachment found that the most prevalent accounts dealt with the possibility of an armistice with the Germans on 15 December resulting from the Teheran conference of the Big Three Powers. When 15 December came and went without any end of conflict, the rumor died a natural death. New pieces of gossip soon sprung up in its place, and CIC agents were kept busy tracing to their source false reports of a VI Corps withdrawal.*

A flurry of excitement arose in the II Corps area on 21 January when a saboteur's suitcase replete with plastic explosives, explosive powder, detonators, time fuses, and other sabotage devices was unearthed. CIC agents Langford Baldwin, Bernard H. Golden and Harold J. Stevens who were dispatched to the scene identified the equipment as British-made, although the suitcase was of Italian manufacture. Through interrogation of civilians in the area, the agents learned that a large munitions dump had been maintained by the Germans near the place where the suitcase was found. The civilians also revealed that a group of German engineers engaged in destroying a railroad had camped at this place. Unable to develop further leads, the agents surmised that the suitcase had been buried by Germans with the intention of returning after the Allied occupation and using the equipment for sabotage purposes. But the agents did not rule out the possibility that the suitcase had been hidden by a clandestine British agent at a time when the German munitions dump was a prime sabotage target. The discovery of this suitcase was an exciting interval among the more routine investigations of alleged sabotage of telephone wires which frequently turned out to be cases of negligence on the part of truck drivers who cut the wires while turning their vehicles around.**

Liaison Brings 45th Division CIC a Plan

The fairly static situation in the winter of 1943-1944 gave CIC detachments in Italy a long-awaited opportunity to strengthen liaison with other Allied intelligence agencies.*** Contact with the Securite Militaire, a French Army counterpart of the CIC, showed agents of the 45th Division CIC an effective working plan for civilian controls. Securite Militaire agents of the 2d Moroccan Division, in cooperation with Regimental commanders cleared all civilians from the front line zone, an area that was extended from the line of battle back to the Regimental CP. Any civilians apprehended in this zone were regarded with suspicion and detained for interrogation by the Securite Militaire. A second zone was established that stretched rearward to a point well

*Ltr to Chief, AFHQ, from Hqs II Corps CIC, Subject: General Security Report, December 1943, dtd 2 Jan 44, (Conf) (KCD 1-25-176)

**Msgs to OIC from agents Bernard H. Golden, Harold J. Stevens, Langford Baldwin, dtd 24 Jan 44, (Confidential) (KCD 6-10-261)

***Rpt to Chief, CIC, War Department, Washington, D. C. from Hq 45th Division CIC, Subject: War Diary, dtd 2 Jan 44 (U) (KCD1-29-213)

behind the Division CP. Inhabitants of all towns within this area were prohibited from traveling without a written pass from the military government. Military police were authorized to stop any civilians on the roads or in the country and demand them to present their passes. If a civilian failed to produce his pass, he was immediately sent to the Securite Militaire for questioning. When interrogation revealed that the civilian was an established resident of a town within the French lines, he was taken there for identification by local officials and left by the SM on probation. But if the civilian was not properly identified or the investigation was incomplete, he was evacuated through regular IW channels. The CIC agents reported that the complete absence of civilians on the roads in the French division area strongly attested to the effectiveness of the Securite Militaire's control system.

Another important occurrence during this period of the seige on the "Winter Line," was the attachment to the Fifth Army CIC of the Italian counter-espionage organization known as Servigio Informazion Militaire SIM (CS). This unit, commanded by Major Cesare Faccio, proved itself invaluable. At first there was a natural distrust; this almost immediately disappeared when the Army CIC saw the efficiency of the Italian intelligence organization at work. Naturally the personnel of SIM(CS) could perform undercover missions much more easily since they had a knowledge of the details of the Italian national and local scene which only a native Italian could be expected to have. Due to his excellent work in commanding this unit, Major Faccio was awarded a Bronze Star Medal by General Mark Clark in November 1944.

Anzio Landing Planned to Speed Rome Advance

By mid-January the occupation of Rome seemed a forlorn and slight possibility -- at least in the near future. Although the Allied Armies were advancing, it was a step by step process with a battle at each step. On the 35 mile front, Fifth Army had forced the enemy back into his Gustav Line and reached the edge of the Liri Valley, the main corridor for the advance to Rome. Progress from this point was almost nil as the enemy defended the town of Cassino and the mountains surrounding it with his very finest troops. Something was needed.

This something had been discussed at the Christmas Day conference at Tunis. It concerned an amphibious landing at the seacoast town of Anzio, from which it was hoped a rapid advance could be made on Rome while the Germans were engaged in preventing Allied Forces from crossing the Rapido River and advancing beyond Cassino.*

On 21 January 1944, men and machines of VI Corps were loaded into landing craft, ammunition and rations were doled out, and each man received the last encouraging slap on the back and hopeful word, as the landing boats pulled out of Naples harbor and started for Anzio.

*Mark W. Clark - "Calculated Risk", pages 270-286.

Salerno and Anzio were like night and day. Where the waves of troops landing in the early morning light on the beaches at Salerno four and one-half months before had met intense resistance, the troops at Anzio landed virtually unopposed. This peaceful situation lasted for only a few days, however. While the Anzio landings were still in the planning stage, the major portion of the Fifth Army and British Eighth Army was scheduled to launch an attack on Cassino, thereby preventing the enemy from withdrawing his troops in that area and shipping them to the coast to oppose the Allied landings. This attack, launched all along the 35 mile front around Cassino, caused many casualties but also saved many lives at Anzio.

1st Armored Division CIC Hits the Anzio Beach

Regardless of Major Ray's early statements concerning the advisability of keeping CIC away from any landings until"...CIC can do its own counter-intelligence mopping up,"* the 151st CIC Detachment (later the 501st CIC) was ever present. This Detachment, which was attached to the 1st Armored Division, moved on 19 January 1944 to a staging area near Naples preparatory to going to the Anzio Beachhead. At this staging area a strict pass system was established to prevent leakage of information concerning the Division's future operations.

Major John Crystal, Commanding Officer of the Detachment, reported in a memorandum to Major Spingarn, "We boarded out LST with the rest of the Forward Echelon, Division Headquarters, on 24 January and landed in Anzio after a quiet voyage except for the inevitable air raids in Anzio harbor.

"We arrived at our bivouac area in the late afternoon and pitched camp in a magnificent forest park. A violent wind and hail storm made the first night miserable. The next few days we occupied by digging ourselves in and checking over the Division assembly area...."**

The Detachment found a complex refugee problem awaiting them. The Germans had evacuated all civilians from the towns of Anzio and Nettuno three months prior to the Allied landings, and these Italians, 12,000 strong, were crowded into the area surrounding the Division Bivouac. AMG had been operating to a limited extent before the arrival of CIC, and together they appointed overseers from the more reliable appearing civilians and gave these overseers certain elemental instructions relative to blackouts, travel, entry into camp areas, and other security problems. Major Crystal reported in his memorandum to Major Spingarn, "The usual crop of accusations were investigated and several notorious Fascists were turned over to VI Corps, CIC."***

*Memorandum to Lt Col Nichols - Trip to Italy - T-57 (C)
**Memorandum for Major Spingarn, CO, CIC Det., Fifth Army from 151st CIC Det. - 22 Feb 44. (c)
***Ibid (c)

On 29 January the three men who had comprised the Detachment during its landings on 25 January, Major Crystal, S/A John G. McDonough and the interpreter, Gino J. Mominni, moved to the PW collection point at the overpass at Campo di Carne. Three days were spent there before returning to the old bivouac area; three days in which jumping in and out of foxholes to escape the enemy artillery fire and interrogating harmless and confused characters were the main activities.

By 30 January, the 45th Division had landed on the Anzio Beachhead as part of the follow-up force to the initial invasion. Agents of the CIC Detachment concentrated on interrogating civilians in the beachhead area. Sizable lists of suspected Fascists and Fascist sympathizers were compiled from the questioning of voluntary informants in the Anzio-Nettuno vicinity. While the tactical troops fought inch by inch to secure the beachhead, the agents of the 45th CIC Detachment made certain that the enemy did not carry on espionage within the narrow strip of land held by the Allied forces.

The concentrated German counterattack which began on February 10th and which came close to pushing the Allied armies back into the sea failed to disrupt seriously the CIC operations. Up until the time they pushed forward and on up the "boot", the 1st Armored Division CIC Detachment kept at work expanding its list of informants, establishing liaison with the other detachments at Anzio, supervising security (a major problem because of the 12,000 homeless civilians) and like any of the other thousands of soldiers, trying to stay alive. Similar efforts were being carried forth by CIC units that ranged the length of the beachhead.

Anzio Called "One Continual Explosion"

Anzio, as everyone who was there agreed, was one continual explosion. The Germans introduced the "Anzio Express," a large cannon mounted on a railroad car and able to move swiftly from one sector to another; and there was the always dangerous "88". S/A Alfred A. Coppola was on the Anzio Beachhead with the 3rd Division CIC (replacing S/A Tony Panard who had been killed) when the Germans were daily bombarding the Allies.

There was little humor among the men at this time, but Coppola, in an interview, recalled one time when both humor and relief from the shelling were combined. For weeks the constant barrage had forced the men to remain in their bunkers and foxholes. The one satisfaction that the CIC men looked forward to was that Major Spingarn, the Fifth Army CIC Commander, was scheduled to arrive for an inspection tour and then "he could see what conditions they had to work under."

The day finally arrived and with it a bright warm sun that glistened in the Tyrrhenian Sea and a profound silence, unbroken by a single enemy plane or a single shell burst. When Spingarn arrived, most of the men were taking sun baths or pitching horseshoes in a setting not too different from that often seen at Hampton Beach, New Hampshire or Malibu

Beach, California. Spingarn's comment was, "So this is the living hell you were all talking about."* Many men wondered about the inconsistencies of war in the weeks that followed as they lay in their foxholes listening to the shells burst around them.

The whole of Major Spingarn's visit to the Anzio Beachhead was not graced with such favorable weather and lack of combat activity. Shelling and bombing by the Germans continued at a brisk rate, and the VI Corps CIC Detachment was forced to maintain its offices and billets underground in cellars. Before he left the beachhead, Major Spingarn gained a first hand awareness of the extreme hazards under which the CIC units were carrying out their operations.

CIC was well represented on the Anzio Beachhead for many months after the initial landings. At various periods, the CIC Detachments for the VI Corps, and the 3rd, 45th, 36th and 34th Divisions and the 1st Armored Divisions shared operations in the meagre territory claimed by the Allies.

After serving with the 36th Division for 100 days on the tactical line, Captain John G. Hammond, commanding the CIC Detachment attached to the Division, made some startling observations on the role of CIC in the beachhead battle. In the course of the 100 days' activity, the detachment had searched only one enemy headquarters, and this search was in vain; the commanding officer of the combat troops had gone through the headquarters thoroughly almost twelve hours before CIC arrived on the scene. Public utilities, enemy supply depots, and all other installations of counter intelligence value that were examined by the CIC agents totaled merely three. All had been completely demolished. This same picture was reflected wherever the agents turned since the intense fighting had left little more than a pile of rubble in the wake of the battle. As a result, ninety percent of the activity carried on by the tactical unit dealt with civilian controls, a mission generally assigned to CIC detachments at Corps level. During this period of short advances and small gains by the Allied combat forces, the 36th CIC Detachment spent almost half its time planning for coming events, and Captain Hammond summarized his report by stating that from his experience , "a CIC Detachment with a Division is not the most economical use of time and personnel."**

By the time the 34th CIC Detachment arrived, early in April, most of the civilians had been evacuated from the beachhead and the counter-intelligence work was further lightened. But problems did not vanish with the easing of the CIC workload; two major issues persisted

*Interview with Alfred A. Coppola - 134 Catherine Street, Wooster, Ohio at the Warwick Hotel, Philadelphia, Pa. NCICA Convention - August 7, 8 and 9.

**Memo for the Chief, CIC, AFHQ, from Captain John G. Hammond, 36th Division CIC, dtd 20 March 1944 (CONFIDENTIAL). (KCD 7-1-17)

throughout the Anzio operation. The first was that due to the large number of CIC personnel in a relatively small area, detachments found themselves investigating each others' informants. The second concerned personal safety, as the Germans situated on the mountain tops surrounding the beachhead could look down the muzzles of their guns and observe every Allied movement. It was a disconcerting thought to realize that as though playing a game of cat and mouse, the Germans could pick the Allied movements they wished to disrupt.

The 34th CIC Detachment combined ingeniuty and hard labor for their protection. Upon their arrival at Anzio, they built three dug-outs on the right side of a wadi, halfway between Anzio and the German lines. During the whole period, no shell came within a radius of a mile from the dug-outs. The feeling of semi-security that these dug-outs lent served as an advantage and an incentive during the next month as the personnel of the Detachment handled Divisional security controls and investigations.

Throughout this period the Allied forces were unable to break out of Anzio. The Fifth Army, reinforced by the 88th and 85th Infantry Divisions which had entered the lines in March and April, still attempted to capture Cassino and still faced fanatical resistance by crack German units -- notably the 1st Parachute Division, which "General Alexander termed the best German division on any front."*

The Round-Up of Enemy Agents Begins

Counterintelligence during this period of intense fighting was undergoing a decided and dramatic change. From the earliest landings at Salerno, CIC had excelled at such varied phases as affording town security and setting up civilian road blocks; however, because no enemy agents of any magnitude had been captured, there was still a question in the minds of some of the older intelligence outfits whether CIC was really a mature and capable counterintelligence agency.

In March and April 1944, the 88th CIC Detachment under the command of 1st Lieutenant Harry W. Riback answered the question and established a reputation for CIC as a top-flight counterintelligence organization.

The 88th CIC Detachment had moved into Italy in cary March 1944 and, as their first assignment, took over the sector held by the British 5th Division. Responsibility for 15 miles of coastline, plus rear and front line security, fell into the Detachment's lap. A system of soldier-manned Observation Posts along the coast was immediately set up, and patrols of soldiers on foot were arranged for inter-communication of OP's during the hours of darkness. The interior roads around the town of Mondragone were patrolled by a small force of Finance guards, SIM personnel and Carabinieri.

*Marshall, G. C., "War Report" - J. B. Lippincott Co. page 170

These security arrangements were established just in time. Within a few days, large numbers of civilians began arriving by boat from the town of Gaeta, then under enemy control. Among these civilians were the first bona-fide German espionage agents.

The initial group of seven agents landed on a stretch of coastline not yet patrolled by security forces on the morning of March 8, carrying handbags and other luggage including three complete radio transmitting sets. The Detachment first learned of their arrival when one of their number was stopped as a suspicious looking person by the Finance Guards on one of the inland roads around Mondragone. Taken immediately to the CIC office, he admitted under interrogation that he had been sent from Rome to carry out a specific espionage mission in Naples.

From this questioning it was possible to learn the anticipated movements of his six companions who were still at large. Four had escaped the area but within an hour were apprehended. The entire force of CIC agents, Carabinieri and Finance Guards were dispersed throughout the town of Mondragone and within a short time flushed the remaining two agents from their hiding place.

The capture of these agents revealed two additional radio sets and interrogation produced the exact codes, key frequencies and specific missions assigned as well as dates for transmitting the uncovered information to the German authorities. About $15,000 in Allied currency was found on the men.

During the eight week period in which the 88th CIC Detachment was active in this sector, more than 600 civilians who had escaped from German-held Gaeta were received and processed. These refugees came in large numbers along the coastline of the gulf of Gaeta by row boats, and CIC agents exercised great care in screening the civilians, probing their statements in order to turn up "cover stories" of enemy espionage agents. CIC thoroughness paid dividends to the very end of the operation. Just before relinquishing the Mondragone sector, the 88th CIC Detachment received a final group of refugees for screening. Lookouts posted along the sea coast had spotted a boat coming from the Gaeta area. As the boat neared to within 1400 yards of the land, it was caught and held in an offshore current. Two American soldiers set out to intercept the refugee craft in a rowboat, and led it to shore. Once the refugees had landed safely, they were taken directly to the Caserma in Mondragone where the 88th CIC Detachment had established its headquarters. Preliminary questioning revealed that of the 16 refugees apprehended, 12 were natives of Gaeta. The remaing four were labeled as strangers and immediately separated from the main body of refugees. A thorough search of the four men revealed about $5,000 in Allied currency. Suspicion increased when the interrogation of the Gaeta civilians disclosed that the four strangers had thrown two large haversacks and one package into the sea when the American patrol set out from shore. Agents from II Corps CIC arrived at Mondragone in short

1734

order to begin the interrogation of the suspects. Without cross questioning, the first suspect handled by the CIC agents revealed that he was a spy, trained at the German intelligence school in Florence and dispatched with the other three men on an espionage mission. All four agents had been assigned to different cities in Allied-held Italy where they were to transmit and receive radio messages and serve as contacts for German-stay-behind agents.*

These agents, along with the seven previously captured and a pair of short-range spies who had attempted to penetrate Allied forward lines, were the principal figures in this organized enemy effort to accomplish espionage missions in Allied territory. The experience at Mondragone taught CIC agents that the guise of a refugee was a likely cover for an enemy agent; from this time until the end of hostilities, refugee control took on an added importance that was justified many times.

This stay in Mondragone was also valuable for another reason as it gave an air of maturity to CIC and established the organization in the eyes of the other intelligence agencies. General Malcolm Smith of the British SCI personally commended the men of the 88th CIC for the action and said that at last CIC had proved itself a major intelligence organization.**

SECTION 3

ALLIES CAPTURE ROME AND DRIVE NORTH

The race to Rome began on 11 May 1944 when the US Fifth and the British Eighth Armies launched a coordinated offensive. Twelve days later, the VI Corps, under Major General L. K. Truscott, struck out from Anzio with the 3rd, 34th and 45th Divisions, the 1st Armored, 1st Special Service Force, 100th Nisei Infantry Battalion, and two British Divisions. A junction of the forces occurred on 25 May and ten days later the Italian capital fell to the Fifth Army, just two days before the Allied forces began the invasion of France.

CIC units in Italy had been primed throughout the long winter months for the drive to Rome. The Fifth Army CIC Detachment, under the command of Major Spingarn, had moved forward with each Army advance. Beginning in April, a system of control started to emerge by which civil movement was given complete coverage. Besides the strengthening of Carabinieri road blocks and coastwatching posts, new controls were initiated. Persons registering at hotels or boarding houses were subjected to security scrutiny as were persons obtaining new identity or ration cards. Spot checks were frequent and roving patrols of CIC personnel often supplemented the stationary Carabinieri check-posts along the highways.

During the push to Rome, a CIC administrative development of major importance occurred with the issuing of a new T/O & E for CIC. Fifth Army CIC was reorganized into three separate Provisional detachments with Major Spingarn in command of one and Lieutenants Melio A. Tonini and Harry Lee Amerman in charge of the other two. Spingarn, as senior Detachment Commander, exercised operational and administrative supervision over all three units. Although this new set-up was bulky and cumbersome (and was later remedied), it was a blessing in that it provided commission vacancies and opportunities for grade promotions that had long been neglected.

On 24 May, the bulk of the 305th CIC Detachment arrived at a concentration area near Naples, leaving behind only a skeleton force to cover the Army area. In Naples, the CIC agents joined a group of about 1,000 persons who had been drawn from nearly all the Allied intelligence, counterintelligence and related agencies. This group was designated as the Rome "S" Force, and its initial mission was to enter the city with the first troops in order to provide immediate intelligence and counterintelligence exploitation of personality and building targets. All of the "S" Force security personnel, British and American, were placed under Fifth Army CIC direction. At the end of May, this Force was moved by boat to Anzio where it was divided into sub-Task forces alerted to cover different sectors of Rome as soon as they entered.

While plans for the "S" Force were being drafted, the combat divisions pressed forward. Since the earliest landings at Salerno, the major goal

had been the Eternal City; the question was, who was going to enter first? The Texas rancher with the 85th Division and the Maine fisherman with the 88th, both knew the history of the City and to them as to all the weather-beaten, front line soldiers, it held the promise of untold pleasure. The CIC detachments serving with these divisions were faced with the problem of instituting security measures on the run. By restoring some semblance of order to the areas and towns captured and left behind in the forward sweep, the CIC units fulfilled their missions during these days of acceleration.

The 88th Division CIC under the command of 1st Lieutenant Harry W. Riback took the lead toward the final stretch in the dash to Rome. On 2 June, the detachment moved to Anzio, by 3 June it had worked up the coast line as far as Artena, and early in the morning of 4 June, it arrived in Breda. A few hours later, Lt Riback received orders from G2 to send one CIC team with an armored striking column, composed chiefly of troops from the 1st Battalion of the 350th Infantry Regiment. This column hastened into Rome on a secondary road to the east of strong enemy entrenchments on the main highway. By 2000 hours on the evening of 4 June, this force had swept through the environs of the city and penetrated to the heart of Rome. Among the leading vehicles in the entering column was the jeep carrying the CIC team, the first Agents to arrive in the Eternal City.* Several hours later, the Rome "S" Force, accompanying the leading elements of the Allied Armies moved into the city and began it operations**.

The "S" Force Missions.

Among the many missions performed by CIC personnel with the "S" Force during the 10 days or so of its operational existence in Rome were the arrest of some enemy agents and numerous suspects, the securing of valuable documents and technical material and the maintenance of a screening and interrogation compound and a detention center.*** On 17 June 1944, Fifth Army left the "S" Force and moved to Tuscania, where the Army CP was located, to resume its normal functions.

For its part in the Rome "S" Force, CIC received a letter of commendation from Colonel George S. Smith, Commander: "I add my commendation for the superior performance of duty by the CIC attached to "S" Force in spite of many difficult circumstances which had to be overcome. Individually and collectively the work of C.I.C. contributed greatly to the success of the command."****

---

*Ltr to Chief, CIC, AFHQ, from Hq 88th Division CIC, Subject: Correction of Report, dtd 17 July 1944 (Secret) (KCD 7-2-10)
**History of the 305th CIC Detachment - (L-1) p. 8 (U)
***Ltr to AC of S, Ge (CI) Fifth Army from CIC Fifth Army, dtd 25 July 1944 (Conf)
****Subj: Commendation, TO: CO, CIC Det. V Army, dtd. 14 July 44 (c)

CIC also received commendations from the various sub-task Force commanders. One of these, Lieutenant Colonel J. W. Pumpelly, Commanding "D" Group said, "The C.I.C. was excellent. The men were everywhere, into everything, and provided most of the reliable data coming into my headquarters."*

While the Fifth Army CIC Detachment was participating in the "S" Force attack on Rome, Division and Corps Detachments were on the outskirts of the city with their respective units. Perhaps a greater appreciation of the capture was felt by these men as they had watched the preliminary battles at first hand. Never far behind the front lines, these Divisional Detachments entertained a comradeship with the men of their division, knew and sympathized with their problems and extended themselves to provide security for Divisional rear areas. The knowledge that there were no Germans to their rear spurred the Divisions forward and hastened the capture of Rome.

The 85th CIC Detachment, under the command of 1st Lieutenant Maurice M. Morton, was one of these Divisional Detachments in the march to Rome. The Detachment had landed at Naples on 27 March and went into action on 10 April at Cellole. Its area included ten miles of open coastline south of Minturno which proved to be a favorite place for refugees attempting to land by boat from Gaeta. In one three-day period, more than 90 refugees were apprehended and questioned by the Detachment, revealing persons of both counterintelligence and tactical value.

When the entire Italian front began moving forward on 11 May 1944, the 85th CIC Detachment moved with it and setup headquarters at Minturno. In conjunction with the CIC Detachments from the 88th Division and II Corps, it screened the countless refugees streaming down from the hills and apprehended many enemy soldiers attempting to escape in civilian clothing.

Following the rapid and successful advance of the Division, the Detachment performed similar work in the towns of Scauri, Formia, Gaeta, Fondi, Terracina, Monte San Biago, Sonnino, and Sabaudia. Agents of the Detachment entered each town and began setting up road blocks and screening refugees to determine those of a suspicious nature. Many escaping German soldiers were apprehended, and in one instance, a large group of Fascist terrorists and fanatics was uncovered, and its leaders arrested.**

Rapid Advance Meant Rapid CIC Operations

Due to the rapidity of the advance, it was often necessary for the Agents to cover as many as three towns in one day, a fact which made

*Subj: Commendation, TO: CO, CIC Det. V Army, dtd. 14 July 44 (c)
**History of the 85th CIC Detachment (K-14) page 4 (c)

it extremely difficult to determine the extent of any Fascist movement in a given locality. However, through the use of Allied sympathizers plus information previously gathered concerning the area, it was possible to establish a temporary government to be expanded by higher echelons of CIC and AMG at a later date.

This activity was intensively continued as the troops moved nearer Rome, and with its capture, an advance team from the 85th CIC Detachment entered the city in the early morning of 6 June 1944. Pausing briefly with the Division, the Detachment participated in the chase that ensued because of the hasty retreat of the enemy north of Rome.

In the first days after the fall of Rome, members of the CIC Detachment of the 85th Division often found themselves in the position of a small dog nipping at the heels of a thoroughly frightened but much larger dog. In one instance the Detachment found itself 42 miles ahead of the Division Command Post and three miles north of the nearest Divisional troops, which had been ordered to stand fast because of the movement of British troops across the front of the Division Sector. In many instances during those days of progress amid confusion, CIC personnel found that they were the only Allied soldiers to have entered a town since the flight of the Germans, only hours before.

Having participated in the advance well past Rome, the Division was ordered into a rest area near Rome, and on 10 June 1944, CIC Headquarters was established at Ostia Antica.

II Corps CIC Follows the Leaders

Following up the work of the 85th CIC during the race to Rome were the agents of II Corps CIC. The advance of divisional units was so rapid that the measures instituted by the tactical CIC detachments were provisional at best. In the city of Formia, II Corps agents established headquarters in an abandoned apartment and then contacted the 85th Division detachment which was still in town. Failing to receive any information from this detachment, the agents began to install road blocks, utilizing local Carabinieri, at each end of the city. The office of the Podesta was contacted as the first step in forming a list of all persons still in the vicinity. Leading anti-Fascists in Formia provided agents with denunciations of enemy sympathizers, many whom were still lodged in official positions. But the II Corps agents could not remain in Formia long enough to develop all the material submitted by informants, and much work had to be left for the next CIC detachment to enter the town. This transfer of investigations from detachment to detachment was not a wholly satisfactory procedure; but the speed of advance by tactical troops gave the CIC units little choice in the matter.*

*Ltr to Commanding Officer, 6780th CIC Detachment, Subject: CIC Coverage of Formia, Italy between 22 May and 24 May 1944 inclusive, dtd 24 May 44, (Conf) (KCD 6-10-257)

A Period of Reassignments

With the capture of Rome, Allied hopes were high for the shortening of hostilities. The German Army was retreating to the North and the Allied Army was close behind. As General Mark Clark claimed, "The Fifth Army.....had at last become a tremendous fighting machine and its horizons were unlimited."* In the excitement that surrounded this victory, no one surmised that it would be almost a year before the war ended.

The month of June brought many changes to the CIC Detachments in Italy. IV Corps CIC under the new command of Captain John C. Crystal, formerly Commanding Officer of the 501st CIC, replaced VI Corps CIC on the line. VI Corps after its masterful work at Anzio and later at Rome was ordered to Naples with the CIC Detachments of the 3rd, 36th, and 45th Divisions to prepare for the August 1944 attack on Southern France.

The withdrawal of these Division CIC units from the line caused a marked change in the security problem facing the agents. Interrogation of escapees from German PW camps had revealed evidence that American soldiers were carrying to the front lines letters, diaries and other personal documents that could be utilized by the Germans for intelligence purposes. The CIC agents recognized the fact that the rapid influx of replacements in a combat situation made thorough security indoctrination virtually impossible, but they also noted that previous training of tactical troops in counterintelligence measures had been highly inadequate. As a result, the CIC Detachment gave first priority to the security indoctrination program after the 45th Division had been established in the Naples training area.

Activities of the 45th Divisions CIC Detachment occasionally strayed from the stated mission of the CIC during this period of static duty. Reports were received from the Carabinieri station in Battipaglia about soldier-civilian incidents in the town. Cases of intoxicated soldiers assaulting civilians, searching for girls, looting houses, and robbing townspeople all were referred to the detachment. These reports were passed on through channels to the G2 as CIC tried to concentrate on its security role.

The 36th Division CIC also found a large security mission facing them during their stay in the staging area. Reports that the division had just returned from Rome and was engaged in amphibious training for an assault on the coast of southern France filtered out to the civilians in the area. The prostitutes, peddlers and other vagrants who wandered about the Division territory represented a serious security hazard which led the CIC agents to recommend the barring of all civilians from military installations and training sites.

*Clark, Mark W., Calculated Risk p. 360

Loose Talk Threatens Security

In July a host of rumors circulated among the troops of the Seventh Army stationed in the Naples region. The soldiers realized that the invasion of Sourthern France for which they were training could not be far off. Every night during the week of July 14-10, Special Agents Robert G. Caldwell and George A. Lefebvre of the Seventh Army CIC Detachment made the rounds of the Officers' Clubs in Naples to gather stray information. From the talk they overheard, the agents compiled the following summary:

"1. Composition of Task Force: The 3rd, 45th, and 36th Divisions are now engaged in amphibious training on the beaches near Naples and the French Foreign Legion troops recently arrived by LCI boats from North Africa to take part in the coming operation with the above divisions of the Seventh Army.....

2. Target Area: Southern France is the most current rumor among nurses who apparently learn a good deal of information from their dates with officers and from patients.

3. D-Day: Speculation on the landing centers around what is considered the normal period of the refresher course in amphibious training now being taken by the 3rd Division. About three weeks is said to be used for this training and embarkation supposedly takes place shortly thereafter." Picked up by unfriendly ears, these speculations could have formed the prelude to disaster, and CIC was emphatic in its recommendation to G2 for wide security instruction of all the units engaged in training.*

A New CIC Detachment Joins the Northward Drive

Shortly after the fall of Rome, the 91st CIC Detachment, under command of 1st Lieutenant William M. Dennis, arrived and joined the Fifth Army. This Detachment, along with the detachments of the 85th and 88th Divisions formed a counterintelligence groundwork for the push northward.

Target reduction in small towns in the provinces of Rome, Viterbo and Grosseto continued during the month of June. Agent deployment in the town of Grosseto was typical of the standard operating procedure of the 36th Division Detachment in the days before it was withdrawn to Naples. Two operational teams designated as "A" and "B" composed of two agents each, approached the town simultaneously. Intelligence reports warned that a stretch of several hundred yards on the usable approach to the town was under direct enemy observation and artillery fire. Driving their jeep slowly along the dirt road, the agents were able to proceed without raising clouds of dust that would have pinpointed

*Memo for OIC from Agents Robert G. Caldwell and George A. Lefebvre, dtd 18 July 44 (Secret) (CIC [illegible]-269)

their movements in the German field glasses. They passed the forward Regimental CP and reached the Battalion CP where they were briefed on the local situation by the Battalion Commander. The agents decided to make a quick dash over the last leg of the road into town. A lull in the enemy artillery barrage provided the required break, and the two jeeps sped into Grosseto. Once in the town, the two teams split up immediately. Team "A" went directly to the local Municipio where the agents discovered that control of the town was in the hands of the pro-Allied Committee of Liberation and this regime had the active support of local Partisan leaders. A conference with the Committee members and Partisans was called and the agents explicitly outlined CIC objectives and intentions to the assembled officials.

Meanwhile, Team "B" undertook its mission of locating and searching all former enemy CP's in the vicinity. Main German headquarters had been situated in the Hotel Bastiani where the agents found numerous documents and considerable pieces of equipment scattered about in complete havoc. The search was conducted slowly and methodically, since the possibility of booby traps was a constant danger. After completing their coverage of the hotel, Team "B" moved on to other targets. At the edge of Grosseto, they uncovered the central switchboard for the abondoned German telephone system in the area buried in a deep bombproof shelter. Documents at this communications center indicated the location of subordinate CP's and the agents extended their search to these places. When the agents had completed their investigations of these former military installations they had filled a large box with documents to be forwarded to the G2.

The next mission of Team "B" was to insure the suspension of all civil communications by telephone and telegraph. The local bank and post office were ordered closed and all mail was impounded for censorship. By the end of the first day's activities, a temporary local government had been established by the AMG consisting of local officials approved pending further investigation by the CIC teams.

On the following day, the agent teams investigated and interrogated political prisoners apprehended by the Partisan group. Among these prisoners, they discovered Republican Fascists, German collaborators and German, Polish and Russian soldiers. After completing the preliminary investigations, the Division CIC agents were reinforced by Corps agents who eventually assumed charge as the 36th Division moved on to other towns.*

II Corps CIC is Lauded

The CIC accomplishments during the drive on Rome, while in the Eternal City, and during these post-Rome operations did not pass unnoticed. On 20 June, II Corps CIC received a commendation from II

*36th Division CIC, Monthly Security Annex, dtd 10 July 1944 (Conf) (KCD 1-25-175)

Corps Commander, Major General Geoffrey Keyes, that typified the feelings of commanders to the work of CIC during this period. It read:

> "I hereby commend you and your men for the quiet, efficient and thorough manner in which you carried out counter-intelligence activities within II Corps. Particularly gratifying was the competent manner in which you and your men trained and coordinated the CIC Detachments of our new division. "I am in receipt of a recent letter from the Allied Armies in Italy that points out how effective the Allied security measures have been and consequently how little the enemy knew of our actual strength prior to our attack on 11 May. The nature of the duties of the CIC is such that most military personnel know little of their activities. I realize however, that a good share of the credit for the effective security of the Corps belongs to you and the other members of your detachment. "Please convey my congratulations to all your men and express to them my confidence in their ability to continue their excellent work."*

These were warm words of praise for Lieutenant Crosby Lewis and his agents, but the II Corps CIC record showed that they were warmly deserved.

PBS Issues a Timely Political Report

Back at Peninsular Base Section, a report on the political parties in Italy was drafted at the end of June by Special Agent Wendell C. Gordon. This report was designed for dissemination to CIC Detachments operating in the Italian Campaign as an aid to individual agents in evaluating the political views of their subjects. A complete listing and description of parties ranging from the ultra-conservative Partito Fascista Republicana to the radical Partito Communist Party "is sincerely assisting the Allies in order to finish the war as soon as possible." But he went on to warn that "once the war is over, there may be violent disturbances involving perhaps street fighting between the Communists and Socialists on the one hand and the Demo-Cristiano and monarchist parties on the other." Measured in the light of future history, Agent Gordon's observations and predictions proved amazingly accurate. This political reporting was an important phase of the PBS detachment activities in keeping the other CIC detachments informed of the "big picture" which faced Allied forces in the occupation of Italy.**

Fifth Army CIC Detachments on the Move Again

The Allied advance northward from Rome was rapid, and CIC detachments kept pace with the daily progress. On 19 July, the bulk of the Fifth Army CIC entered Leghorn (Livorno) with the 100th Battalion, the

*History of the 202nd CIC Detachment (K-26) p. 6. (Restricted)
**Memo for the OIC from Special Agent Wendell C. Gordon, Subject: Political Parties, dtd 4 July 43, (Conf) (KCD 6-6-79)

1743

famous Japanese-American Battalion. These CIC personnel were part of an "S" Force with a mission duplicating that assigned the Rome "S" Force. Because of the difference in the size of the two cities, the Leghorn "S" Force was smaller although compact and completely staffed.

As a source of counterintelligence information, Leghorn was a dismal failure. The town was a virtual ghost city, largely evacuated and heavily mined by the retreating Germans. Leaving a sub-detachment behind to handle the security of Leghorn until PBS could assume control, Fifth Army CIC moved briefly back to Grosseto and in August to Rosignano Solvey.

During the middle of August, another administrative re-organization took place. The three Detachments which comprised Fifth Army CIC were inactivated and a new Detachment, the 305th CIC Detachment, was activated. All personnel and equipment were transferred to this new Detachment and Major Spingarn was placed in command. Like its predecessors, the 305th CIC Detachment was assigned to Headquarters MTOUSA and attached to Headquarters Fifth Army.*

A temporary re-organization also was effected in the IV Corps CIC detachment. A small sub-section of the Detachment was formed during the summer of 1944 to provide security for the command headquarters of the 45th Anti-Aircraft Artillery Brigade. This Brigade had been moved on line to discharge the role of an Infantry division since there was a limited need for anti-aircraft artillery during the Italian campaign. The decision to attach the CIC sub-section to the Brigade was based on the fact that the Brigade had no security unit of its own. Although the front line sector assigned to the Brigade was not a main axis of attack, the counterintelligence duties were heavy, the lines of least combat activity proving to be main channels for the flow of clandestine enemy intelligence agents.

Brigadier General P.W. Rutledge, the commander of the AAA Brigade, was emphatic in his praise for the manner in which the agents evacuated thousands of civilians from the forward areas, after screening them for possible enemy saboteurs. In his letter of commendation for the work accomplished by the CIC men, General Rutledge concluded by stating that "the splendid work and cooperative spirit of the CIC Detachment has earned for them the respect and confidence of all members of my command."**

Early in September, Fifth Army CIC sub-detachments entered Pisa and later Lucca with the assault troops which took these cities. Neither town was considered large enough for a regular "S" Force but Army CIC undertook the same functions as an "S" Force in addition to providing regular security coverage of the area.

**Ltr to Commanding General IV Corps from Brigadier General P.W. Rutledge; Subject: Commendation, dtd 23 Sep 44, (Confidential) (KCD 7-3-34)

Divisional and Corps CIC detachment operations in the month of September centered largely about town surveys as agents methodically installed security measures in the villages and communes of the province of Pisa. In the search for local Fascists, one pattern began to unfold as the agents moved from town to town; the Fascists were tagging along with the German retreat to the North. Afraid of capture by Allied Armies or reprisals by their own townspeople, former leaders and their underlings found refuge only in continual flight.

Section 4

ENEMY INTELLIGENCE IS THWARTED

The Allied advance which forged across the Arno River and into the towns of Pisa and Lucca, met the first concentrated German resistance in September. By that time the Allies were going up against the Gothic Line defenses, hidden high in the Apennines and almost 20 miles north of the Arno. Throughout September and the early part of October, short gains were made each day until portions of the Allied Army were a scant five miles from the coveted Po Valley.

General Clark in his book Calculated Risk said, "It is difficult now to explain the agonizing hope we then felt that 'just another mile' or 'just a few miles' would do the job."*

Unfortunately these "few more miles" did not come into Allied hands for six months.

The offensive did not stop with any definite setback or on any specific date. It merely ground slowly to a halt because men could not fight any longer against the weather and steadily increasing enemy reinforcements. Considering these hardships, General Clark ordered the men to "dig in" and, in his book, says, "I had to face my most difficult decision of the war: we could not get into the Po Valley before winter."**

Fifth Army had now reached what was to be its winter line and a new counterintelligence era began. From Salerno to Rome, CIC had been handicapped in attaining the goal of all operational counterintelligence agencies -- the capture of enemy agents -- partly due to inexperience in tactical procedures and partly by an actual lack of activity on the part of the German espionage and sabotage services.

Rome had offered the first opportunity to capture enemy agents; however, it was described as somewhat like shooting fish in a barrel as most of the agents apprehended had every intention of surrendering. The subsequent drive to the Arno had been too rapid to permit effective counterintelligence. The net result was that there was a great dearth of information regarding the German Intelligence services in Italy, their units and personalities, agents and recruiters, and methods and techniques.

*Clark, Mark W., Calculated Risk, page 398
**Ibid, page 402

The Mass Assault

In October 1944, there began a mass assault of German espionage and sabotage agents on the Allied lines which was perhaps unequaled in the history of the war.* Some of these were parachuted in and some landed by boat, but the overwhelming majority were line crossers. In addition, there were a number of post-occupational agents in cities and towns captured by Allied troops.

Fortunately, by the time this mass assault began, CIC had learned the importance of a control system. The road blocks and roving patrols, by now second nature to all CIC personnel, were again put into effect and extensively used until some of the more effective systems were devised. There was a constant need for keeping all troops informed about the danger represented by German and Italian agents passing through Allied lines and circulating throughout Allied occupied territory. In November 1944 a memorandum issued to all units of the 91st Division paid tribute to the work of the CIC, at the same time indicating that the responsibility for covering the front and actually picking up suspects lay with the forward elements and each individual soldier. Troops were advised to pay attention to the dress and appearance of all civilians in forward areas, to be skeptical of the statements made by these civilians, and to place in custody anyone not bearing a pass authenticated by the AMG officer. The crux of the message was contained in a paragraph that could serve as a capsule summary of the lessons learned by the CIC agents in Italy:

> "Be wary of everyone in your area. Remember this is not Brooklyn, or Topeka, or Oakland, but a foreign country where espionage, intrigue and deception are ingrained in the people and where it is looked upon as another way of earning a living."**

The six months from October 1944 to April 1945 will be remembered as one of the most productive periods in the history of CIC. A total of almost 200 trained enemy espionage and sabotage agents were captured in all Fifth Army areas, an average of over one a day. Almost three fourths of these were caught by the various CIC detachments under Fifth Army, although for a large portion of the whole period, CIC represented less than half of the operational counterintelligence personnel under Fifth Army.***

The effectiveness of CIC work during that period was realized in 1945 during the interrogation of "Dr. Kora," the German officer in

*History of the 305th CIC Detachment (L-1) page 9 (U)
**Hq 91st Infantry Division, Memorandum, dtd 22 Nov 44 (C) (KCD 7-6-61)
***History of the 305th CIC Detachment (L-1) page 10 (U)

charge of Abwehr Kommando 190, which ran large numbers of espionage agents into Fifth Army area, principally from Milan. Dr. Kora related that not a single one of his agents had returned between October 1944 and January 1945.*

This success was the result of coordinated action and cooperation, not only by Corps, Division and Army CIC, but also by British and Dominion FSS and Brazilian CIC personnel. Of the agents captured by US Detachments, however, the great majority were caught by either the 92d Division CIC, IV Corps CIC or Fifth Army CIC.

This was true of the apex of the concentrated enemy agent assault centered on the thinly-held areas assigned the 92nd Division and IV Corps. The excellent controls set-up by the CIC Detachments with these units led to the capture of a great many of these agents. Those who filtered through were frequently caught by the Army CIC either en route to or from their missions. In addition, the Army CIC was able to ferret out a number of post-occupational espionage agents in the towns directly behind the front lines.

Formation of a New Detachment

In contrast to the majority of Divisions then in Italy, the 92d Division arrived minus a CIC Detachment. This necessitated the handling of Divisional counterintelligence problems by segments of IV Corps CIC. In mid-October 1944, AFHQ decided that IV Corps CIC had too many other commitments and therefore decided to form the 92d Division CIC Detachment.

Special Agent Ramon Arrizabalaga, Jr., newly commissioned by Fifth Army, was chosen to command this Detachment. On 21 October he arrived at Viareggio where the Division had already settled down in a static situation. Excellent groundwork had been laid by IV Corps CIC personnel, enabling Arrizabalaga to start his counterintelligence work immediately.

The new Commanding Officer did not have long to wait before action began. On the day after his arrival at Viareggio, a suspect by the name of Santo Santagati was picked up by a British unit and turned over to the 92d PW Cage. After intensive interrogation, Santagati confessed to being an Agent of the Germans, recruited in Sicily. Before he was apprehended, he had reported to his contact at Pisa and had received instructions regarding his mission.

On the night of 26 October, Marino and Arrizabalaga, together with CIC men from IV Corps and Fifth Army, proceeded to Pisa where, after

---

*History of the 305th CIC Detachment (L-1) page 9 (U)

1748

breaking down the doors of two houses on false leads, they finally apprehended Marcello Bicchierini, who confessed a month later in Florence to being the German stay-behind agent whom Santagati had been sent to contact.*

Soon after arriving, Arrizabalaga became cognizant of the refugee problem that lay ahead. A problem was imminent as the part of the line held by the Division was greater in width than that held by II Corps. Because of the static situation and the thinness of Division troops, it quickly became the route through the lines for the majority of Northern refugees who wished to go South.

Through the cooperation of Colonel MacWillie, the Division G2, an educational program was started with frontline troops in an attempt to teach them that every civilian who crossed the lines was a potential enemy agent and should be shipped back to the Division PW Cage.

Figures bear testimony to the success of this program. From 25 October until 25 November, approximately 2,750 people were channelled from the frontlines to the PW Cage where they were screened by CIC. In addition, the Division had decided that 10 towns near the front should be evacuated, which necessitated the screening of an additional 2,000 people.

In a civilian nocturnal movement survey during the week ending 25 November 1944, an additional 1,414 persons were detained, making the astounding total of 6,160 persons screened from 25 October to 30 November.**

A Case of Misunderstanding

Throughout these busy days, the 92d CIC Detachment existed in name only; no official authorization had been received from the War Department formally activating the unit, and the personnel of this Detachment were technically on "detached service" from other CIC units. The explanation for this apparent oversight rested in an exchange of cables between AFHQ and the War Department. On 23 October, AFHQ had requested the allotment of personnel to form a CIC detachment for the 92d Division. The War Department reply indicated that approval would not be granted for a detachment composed of white personnel to serve with the colored division. Favorable consideration to the request would be given providing colored personnel already in the theater were utilized. What AFHQ had failed to convince the War Department was the fact that the CIC mission in Italy could not be

*History of the 92nd CIC Detachment (K-17) page 2 (S)
**Ibid, page 2 and 3

adequately performed by Negro CIC personnel: refugee control, interrogation of civilians, and other counterintelligence duties required agents who could be inconspicuous in the civilian groups among which they moved. The actual work performed with the Division did not demand colored personnel, and there never was any question about a CIC agent going undercover with the Division. To allow the detachment operating with the 92d Division to be removed because of the administrative wrangling would have been foolhardy, and AFHQ chose rather to allot the unit full detachment prerogatives, rights and responsibilities without official detachment designation.*

92d CIC Blocks the Mt Altissimo Pass

Soon after taking over their area, the 92d CIC Detachment had established contact with AMG for the use of Carabinieri to staff the road blocks in the locale. Approximately 38 such road blocks were set up, manned by a force of 250 Carabinieri. Additional personnel came from the MP's of the Division who helped maintain certain posts for 24 hour periods.**

In January, CIC made initial contact with the Partisans in the area. From interrogation of refugees it was learned that 90 percent crossed at the Mt Altissimo pass and filtered down into the Valley. The path these refugees inevitably followed was also the "spy trail" for enemy agents. After a survey of the situation in conjunction with OSS, it was determined that road blocks could be set up in enemy occupied territory (EOT) at the head of this trail, which at that time was controlled by Partisans.

The Partisan leader, "Pietro," was called through the lines and a plan was formulated whereby anyone coming down the trail would be held up by Partisans until there was a group of 25 or 30 people. Each person's name would then be taken from his identity card and the list given to a Partisan guide who would lead the group through the lines. The groups would then be given to OSS Partisans in Allied Occupied Territory (AOT) who would in turn give them to front line elements of the Division who would pass them on to the CIC Detention Cage at Viareggio.

This plan was very successful until the Germans learned of it and began sending their agents over another trail which ran down Mt Carchio; and eventually the Detachment had to establish an infantry road block at the bottom of the mountain.

**History of the 92nd CIC Detachment (K-17) page 3 (S)

The "Patterns Report"

During the latter months of 1944, the 305th CIC Detachment, under Spingarn, instituted a device which contributed to a large degree in the capturing of German Agents. This device was called a "Patterns Report" and involved collating and summarizing all the information obtained from captured enemy Agents which might throw light on the identification of other unknown Agents. It was in brief an attempt to determine what an average enemy Agent would look like and how he would act.

This included such items as what clothes and shoes he might wear; what pocket accessories, what documents and food he might carry; what his personal, educational and military background might be; what cover stories he might tell; how he might be expected to conduct himself under interrogation; and what identification devices he might have.*

Such a report was impossible to produce prior to the November 1944 mass onslaught as any report composed on the basis of a few captures would be of doubtful value. After November, however, when 50 Agents were apprehended in Fifth Army areas, such conclusions had real value. The Germans who were customarily systematic were likely to follow the same patterns in recruiting, indoctrinating and equipping Agents, who were likely to wear the same or similar types of clothes, tell similar cover stories and have similar documents and identification devices.**

Pardini Wears a Brown Suit

In January 1945, this descriptive record from Fifth Army CIC led to the capture of an important German Agent by the 92d CIC Detachment. The record had been received on 10 January, describing a suit material which was furnished by the Germans to certain of their agents as a Christmas present. On 15 January an individual named Ferdinando Pardini walked into the Detachment office wearing a suit which looked as if it had been made from the described material.

He had applied for a pass to Pisa from the AMG officer at Camaiori but had been sent to the CIC office as he had crossed the lines. Once in the Detachment office, he dropped his pretense of wanting a pass and stated that he had information regarding the German Intelligence Services. The information which he volunteered was vague and unimportant; upon further interrogation, he admitted that he had been sent into AOT as an espionage agent.

*History of the 305th CIC Detachment (L-1) page 11 (U)
**Ibid, page 11

Pardini's mission was that of organizing Fascist cells in the Pisa, Livorno and Viareggio areas and arranging for the receipt of arms and ammunition by water from EOT. Unlike the majority of Agents apprehended by the Detachment during the German onslaught, Pardini was untrained, inexperienced, frightened, and poorly chosen for the job.

Gabriele Sorrentino was a German Agent, the exact opposite of Pardini. Sorrentino was found loitering around a gun position and when picked up, pretended to be very stupid. Time was precious and since he was using an obvious cover story, it was decided to place him in the corner with his face to the wall. Twenty four hours later he confessed to being a short-range Agent of KDO - 150 on his third mission into AOT. Numerous German Intelligence teams, designated as Abwehr Kommando (KDO) units and Abwehr Truppe units were operating under the jurisdiction of the German Intelligence Service (G.I.S.)* Sorrentino's interrogation contained a wealth of details which were put to good use by SCI Unit Z, a high-level US Army Intelligence section. This "standing in the corner" which occurred as a spur of the moment idea, proved so successful that it was used many times in the ensuing months, always with great success.

On 10 March 1945, the 92d CIC Detachment received two German Agents who had been apprehended by OSS Partisans in the area between AOT and EOT. Bruno Bordogni, after several hours of interrogation, confessed to being an Agent of KDO-190 and Leonia Celli admitted being one of "Colonel David's girls," dispatched through KDO-190. It wasn't until later that CIC agents were able to learn of the significance of Colonel David's organization.

As reported by the 92d CIC Detachment, "Celli was made up to look as unattractive as possible, including red ankle-length drawers and horn rimmed glasses."** The interrogation brought forth the information that she was an actress of some renown and recently had been assisting her husband in Milan in writing Fascist propaganda. Prior to her departure, she had called on Mussolini and received his blessing.

Her mission, primarily one of her own undertaking, consisted of going to Florence, Siena and Rome to gather information to use in propaganda work on her return to Milan.

The Detachment found that she was one of the few Agents they had captured who was such an ardent Fascist that she refused to give any information about other agents who might be expected to enter AOT.

---

*Ltr, Subj: "13 Corps Security Refresher Course," TO: Chief, CIC, AFHQ, dtd 10 Jan 45 (S)

**History of the 92d CIC Detachment (K-17) page 9 (S)

The static situation during which the 92d CIC Detachment apprehended and interrogated so many German agents ended on 5 April 1945. But before this static period was completed, the Detachment received a letter of commendation from Major General Almond, the commanding general of the Division, expressing his praise for the unit that had captured more than twenty-five confirmed agents, screened 17,012 civilians, and instituted thorough counterintelligence measures in the 92d Division, a division that had undertaken its combat role in Italy without the aid of any security force.

In April, the 92d Division, reinforced by the famous Japanese-American 442d Infantry Regiment and also aided by the 473rd Infantry Regiment, moved forward. The extensive roadblock system of the Carabinieri was abandoned by the CIC and the then-renowed Mount Altissimo "spy trail" was captured on the second day. The Detachment moved after several days to Pietrasanta.*

IV Corps CIC Spreads its Net for a Big Catch

The winter freeze on the Allied advance meant a temporary end of forward motion; it never meant the end of all activity. No CIC unit was more aware of the multitude of daily tasks glossed over by the phrase "Static situation" than the Detachment serving with IV Corps. The thinly-held western sector of the Allied line was the security responsibility of this detachment. From October 1944 until the Spring offensive in April 1945, the German Intelligence Service dispatched agent after agent into the IV Corps area, intending by means of this mass infiltration to develop complete coverage of the forward regions of Allied occupied territory.

In the face of this onslaught of enemy espionage and sabotage agents, the 204th CIC Detachment managed to rush in many directions at once. In the month extending from 25 October to 25 November, agents of this detachment captured or participated in the capture of 28 enemy espionage and sabotage agents and unearthed five complete enemy sabotage kits that were buried behind Allied lines prior to the withdrawal of the Germans. The information that CIC discovered from the enemy agents apprehended late in October alerted the Detachment to expect the greatest enemy espionage drive in the month of November. Further details of the forthcoming GIS operation were furnished by a well-informed and highly reliable source, an American citizen from enemy occupied territory.

An American from EOT

On 23 October AMG officials in Lucca brought to the 204th CIC Detachment a man who claimed to be an American from Camden, New Jersey. He gave his name as Anthony Saponaro and quickly informed his interrogators that he had tricked the GIS into employing him as a member of

*History of the 92d CIC Detachment (K-17) pages 10 and 13 (S)

Officer stopped civilian traffic in the area; the Corps Provost Marshal assigned Military Police to road blocks; CIC road patrols were instituted and CIC Sections were established as far forward as the tactical situation permitted.

Agents of all sizes, shapes and descriptions were captured and interrogated. Some had been trained at the espionage school in Verona or at the sabotage school in Milan. Some were without training. German agents of Polish extraction were sent to obtain military intelligence relative to the Polish Army, and some Russians were sent to inflame Communist groups in the captured cities and towns.

Frederico Ponti was apprehended on 11 November and confessed to having been sent from the Sender Command Magnus Sabotage School in Erba to perform sabotage along the Autostrada from Pistoia to Livorno. Ponti's sabotage kit was later uncovered by the Detachment from the place where he had buried it before his trip across the lines.

Major Crystal, CO of the IV Corps Detachment, in a report to the CI Officer, Headquarters, Fifth Army, regarding Ponti's capture, said, "The explosives, . . .have been turned over to the IV Corps Engineers and a dummy substituted in the same spot. The dummy is booby trapped with two sticks of dynamite and under surveillance of two Pubblica Sicurezza agents from Pistoia. It is hoped that other enemy saboteurs will be so kind as to dig for the same box. If this happy event should occur, the remains will be shipped to you by wooden envelope. Attention is invited to the fact that the nearest military unit is a Fifth Army Graves Registration Service which has offered its services in any capacity."*

On the afternoon of 16 November "A" Troop, 110th Battery, 39th Regiment (English) apprehended Natale Racagni and Anna Maria Dei Brenti as they attempted to cross the Allied front lines. They were immediately taken to the CIC office at San Marcello and interrogated by IV Corps CIC agents, Fremont F. Lemler, Emil J. Rohner and Clarence B. Gangnes. Within a short time, both confessed to being enemy agents of Abwehr Truppe 152, Luftwaffe.

Personnel of the IV Corps CIC Detachment found during this "month of madness" that German agents, once they confessed, were prone to give very detailed excuses as to why they entered the German Intelligence Service. Racagni's excuse was one of the best.

According to Racagni's story, he had owned a pharmacist supply warehouse in Bologna. One night in July 1944, the Germans smashed the door of his warehouse and demanded to know why the hospital supplies

*Report to CI Officer, C/O AC of S, G2, Hq V Army from Hq IV Corps, dtd 14 Nov 44 (S)

the German Sicherheitsdienst, Headquarters Verona. His one intention was to use the guise of this service to enable him to cross over the lines and reach Allied authorities. The story of his recent life gave a picture of the fate of an individual caught by the tides of war in an enemy country.

After his elementary schooling in America, Saponaro went to Italy to attend the Royal Academy of Art in Carorra. Until 1941 he led an easy life, studying when he pleased and doing odd jobs. When America entered the war, Saponaro attempted to return to the United States; however, he was sent to a forced-labor factory in Germany. There followed a series of events during which he escaped from the factory and made his way to the German-held portion of Italy. In Verona, he contacted the German Intelligence Service and began his career as a double agent.

The mission Saponaro received was to accompany a certain Leonardodo Navasquez to Rome, remain there for a period of two weeks and then return through the lines to German-held territory. In Rome, the two men were to collect such information as the locations of "AMGOT"; British Secret Service; Italian SIM and the American G2. They were to get the names of Chiefs, agents, operation methods, spots at which agents were sent through lines into German territory and methods of communication. They were also to collect information on social and political development in Rome.*

On 22 October both men crossed from EOT into AOT and went immediately to Lucca, the home of Navasquez's parents. On 23 October they reported to AMG and then were forwarded to IV Corps CIC.

Saponaro was able to reveal considerable information of tactical intelligence use; he indicated the location of German CPs, mined roads, ammunition dumps, and furnished the names of important German leaders. The counterintelligence information that he gave on enemy intelligence personalities and operational techniques was a prime aid in the capture of line crossers the following month.

The San Marcello Operation

The desperate attempt of the German Intelligence Service to overwhelm the Allied counterintelligence defenses in November reached such large proportions that it was dubbed the "San Marcello Operation." But CIC was ready and waiting for the enemy agents. Information they had obtained caused one of the tightest controls of civilian movement in the history of the entire Italian campaign to be established in the IV Corps area. Military and police personnel were instructed to apprehend all strangers and suspicious persons; the Senior Civil Affairs

*Report from Hq IV Corps CIC, Subject: Saponaro, Anthony, dtd 23 Oct 44 (S)

contained therein were not being used. This angered Racagni and several nights later, in the bar of the Hotel Baglioni, he made several derogatory remarks about the Germans. He was informed that it might be wise if he held his tongue.

This same evening Racagni met a bar acquaintance named "Carlo," who told him not to worry about the loss of money; that if he were interested in making "plenty of money," he should come back the next day. Through a series of events Racagni was taken to Florence where he met a German in civilian clothes named Bauer, who informed him that he might have to risk his life, gave him 5,000 lire and sent him back to Bologna for three days to think over the proposition.

Deciding to refuse the proposition, Racagni told the CIC agents, he remained in Bologna. About five or six days later a man came to the house and, accusing Racagni of doing nothing to earn the 5,000 lire the Germans had given him, ordered Racagni to accompany him to Milan. During his interrogation Racagni based his entire explanation of his work as a German agent on this "forced journey" to Milan.

During August, September, and October Racagni was shifted from one city to another, attended a school for the identification of Allied units, and met the famed Dr. Kora.

The first part of his mission was to deliver 50,000 lire to a man who was operating a clandestine radio in Florence. Racagni was to enter this man's shop and inquire of the owner, "Have you got 17 tubes?" Upon this man's affirmative answer, Racagni was to turn over the money.

The second part of the mission was to go to Rome and observe all Allied movements in the city. Every day between the hours of 1300 and 1400, he was to go to the Trattoria Bolognese, Piazza del Popolo, a small restaurant in Rome, and wait to be contacted. Eventually, two men would come to him and say, "Haven't we met in Milan?". After this contact was made, Racagni would divulge all his information in return for his pay.*

On 8 November, he left Milan accompanied by Anna Maria Dei Brenti. They drove to Reggio Emilia where they spent two nights and then drove on through Modena, Fiumalbo, finally arriving at Abetone on 12 November. They started through the woods on foot but were apprehended by a German patrol and brought to the command post, where they were released after identification. On 16 November, after spending three days in an abandoned farmhouse because of inclement weather, they were apprehended by partisans who took them to the Carabinieri and then turned them over to the English unit.

*Report to CI Officer, C/O AC of S, G2, Hq Fifth Army from IV Corps CIC, dtd 18 November 1944 (S)

CIC believed that Racagni had made more than the one trip through the lines to which he admitted; it was not credible that he would have been paid by the Germans for three months of inactivity unless he had done something in return. Also it was hard to believe that the Germans would have entrusted such a large sum of money to an untried, inexperienced agent.

These feelings were substantiated during the interrogation of of Dei Brenti for she declared that Racagni had told her that he had already been through the lines on a previous mission. Both suspects were found to be definitely pro-Nazi and pro-Fascist and were treated as such.

German Intelligence Errors

Once the assault got underway, the agents in the San Marcello office were often able to identify suspects as soon as they entered the room. It amazed these CIC men that the Germans were so naive as to dress many of their agents in the same type of suit or furnish them the same type of shoes. Added to this were mistakes such as money in numerical sequence, identity cards which were stamped on the wrong page and, in one case, an agent who carried his identity card from the GIS.

Hunches often paid off. One of the most prevalent was when a person who claimed to have worked in Northern Italy only a short time was able to give the names of all the small towns he had passed through while crossing back into Allied occupied territory. Such a person was usually separated from the group and nine times out of ten, confessed to being a German agent.

A Bashful Suspect

Emil J. Rohner, who was in the San Marcello office during the assault and who won the Bronze Start for his work there, found one day that even in the midst of this tedious, intense and yet sometimes monotonous work, there could still be periods of humor.

Two suspect peasants were brought in who had been apprehended crossing a field near the front lines. One peasant talked freely of how he was simply looking for some strayed sheep, but the other peasant appeared bashful. Rohner thought he was "too bashful." This sense of embarrassment was visibly increased when the CIC agents in the office opened the peasant's wallet and found a series of pornographic pictures.

Not understanding the peasant's embarrassment and suspecting that he knew more than he was telling, Rohner decided to try to capitalize on this bashfulness. As it was raining outside, they made the peasant hold an umbrella over his head while still in the room

and start singing anything that came into mind. In the final analysis, the peasant was not an enemy agent, but the incident struck both the CIC agents and the peasant as being humorous and such a relief from the tension that gripped them, that they all had a laughing spell and the day suddenly became brighter for all.*

A Black Marketeer Turned Spy

The vigil for enemy agents during the winter months was never-ending. For every German Intelligence Service operative captured, there always seemed to be another taking his place. The tentacles of the German SS, IDA organization reached out over Northern Italy; Italian civilians in enemy-held territory seemed to be recruited into espionage work with ease. The account recited by one captured agent, while dubious in part, gave CIC an insight into the effective methods of the IDA.

In the middle of December, Guido Castelli, a citizen of Milan engaged in petty black market dealings, chanced to enter the Caffe Grande Italia in his native city. While Castelli was seated at a table, a stranger approached him and quietly asked for a match. His request was granted and was followed by an invitation from Castelli to have a glass of wine. Soon the two men struck up an intimate conversation. Castelli revealed that he was beset by financial and family troubles, and the stranger was quick to offer an easy solution. His name, the stranger claimed, was Ferrara, and he could be contacted at the Albergo Fontana, a nearby hotel. Without further explanation, the man excused himself and left the cafe.

The following day, Castelli sought out Ferrara at the address he had given. The deal awaiting him was simple but lucrative. Castelli would be given a German passport, an initial payment of 15,000 lire, and the address of the IDA organization in Parma. In exchange, he had to enlist his services as a political espionage agent for the Germans. It was not hard for Castelli to arrive at a decision. On 20 December he left for Parma.

IDA required three days to turn the black marketeer into a full fledged spy. But the Germans would not let Castelli start on his mission until weather conditions improved at the front. Meanwhile, Castelli went back to Milan to spend the Christmas holidays with his family. He returned to Parma in early January to thoroughly acquaint himself with his mission. IDA had ordered him to proceed directly to Rome after crossing the lines and contact three families who would help him acquire a room and other necessities. Once established in Rome, Castelli was to gather all the information available concerning the history of the various political parties, leading political figures,

*Interview with Emil J. Rohner - NCICA Convention at Philadelphia, Pa.

the attitude of the people concerning the loss of the Italian colonies, the public attitude toward the King, and similar matters. Castelli's two and one-half week stay in Rome was to be marked twice by contact with a courier from IDA. Between 1400 and 1430 hours on the 10th and 20th of February, Castelli was to go to the Piazza Colonna and look for a man who was juggling a ring in his hand. The exchange of a simple greeting would serve as a mutual identification, and Castelli would then impart his findings to the courier for transmittal back to Parma. On his return at the end of February, Castelli was expected to report in person to the IDA for debriefing and payment for his services commensurate with the value of the information he delivered.

Just prior to leaving Parma, Castelli was given some last-minute advice by the German Lieutenant who was handling him. He was cautioned to avoid all road blocks, to make friends with all Allied soldiers who stopped him by offering them a drink of cognac, to travel as far as Lucca by secondary roads and make contact there with a restaurant owner who would secure transportation for him to Rome. Castelli was warned above all that, in the event of capture, he was never to reveal his true mission to the Allies, for the punishment would be two-fold: his execution by the Allies and his family's internment in Germany by the IDA.

On 28 January, with 10,000 lire and two gold pieces in his pocket, Castelli crossed the front lines in the midst of a heavy Allied artillery barrage. By the evening of the following day, he arrived in Lucca where he remained for a week before going to Pistoia to "visit relatives." Shortly after his return, a week later, to Lucca, Castelli was arrested by Agents Myron G. Hoffman and Vito Rotunno of the 204th CIC Detachment after having been identified by the previously captured Fascist restaurant owner who had served as Castelli's contact in Lucca.

Interrogation by the two CIC agents cast some doubt on the authenticity of Castelli's stated mission. It seemed unlikely that Castelli would have wandered about the Pistoia-Lucca region in defiance of his orders from the IDA, and the agents surmised that he actually had been assigned to gather information about the political situation in the towns near the front lines. But the rest of his story appeared to ring true. German intelligence had not been napping in the fact of the Wehrmacht's repeated defeats.*

Traces of a German Counterintelligence Unit

Prior to the winter stalemate, agents of the 204th CIC Detachment had uncovered scraps of information about a German counterintelligence unit that had been active in the Pistoia province. During the course of his investigations, Agent Gangnes was directed to two citizens who had been involved with the German forces that had occupied the town

*Hq IV Corps CIC Detachment, Rpt, Confessed Enemy Agent, dtd 18 Feb 45 (S) (KCD 7--3--36)

of Pistoia, had served as an for the German Presidio Commander and was able to reveal a considerable amount of information about the military and economic administration of German forces within the province. had been of a German lieutenant who commands a counter-espionage unit designated as Abwehr Trupp 371. The reports of both these informants gave a preliminary outline of the counterintelligence efforts of the Germans as they retreated to the North.

An agent network had been established by the Abwehr Trupp 371 with the prime mission of apprehending persons attempting to get out of German occupied territory into Corsica and persons attempting to enter German occupied territory from Corsica. The counter espionage unit itself was highly mobile and did not remain stationed in one town for any long period of time. The names of several enlisted men serving with the Abwehr Trupp 371 and two Italian agents were furnished, and the 204th CIC Detachment maintained a careful watch for these agents as it progressed through the Pistoia province.*

During the winter of 1944, this vigilance was partially rewarded. In the town of San Marcello, Agent Gangnes uncovered some important leads to other personalities operating with the Abwehr Trupp 371 by interrogating civilians who had served as chambermaids and waiters in the villas occupied by the German unit. But the security of the Abwehr Trupp 371 had been highly effective, and the informants were able to reveal virtually nothing about the operations of the counter-intelligence group while in San Marcello. The 204th CIC Detachment had to be content to follow the trail of its German adversary.

Civilian Morale Wavers during the Winter Months

The static winter situation produced several new problems for CIC agents along the Northern front. After the dramatic advances of the Allied forces during the Fall, this period of temporary stalemate had a bad effect on the morale of the Italian civilians. Pessimistic rumors about Allied reverses were spawned and nurtured by remnants of the Fascist party, great attention was given to the German offensive in Northern Europe, and the husky voice of Mussolini barked in Milan that the population of Allied-occupied Italy should remain calm, for the day of liberation was near. The morale problem was further aggravated by the deterioration of relations between troops and civilians. The first jubilant days of freedom had ended. Now the Italians looked towards the Allies as their providers rather than their protectors. Inscriptions in crayon and coal were scrawled on walls around the town: "Roosevelt, I tre etti di pane" (Roosevelt, where are the three hundred grams of bread) and "Basta cogli Americani" (Down with the Americans) were among the phrases that greeted American

*Memo for the OIC from Agent C. B. Gangnes, Subject: Abwehr Trupp 371, dtd 21 Sep 44 (C) (RCD 2-14-241)

soldiers. Fuel was added to the fire of resentment by American troops who succumbed to the provocations of lower class Italian women. The civilians began to disclaim these relationships with slogans such as "Women, do not lend yourselves to the game," and "Women, we repudiate you." Agents of the IV Corps CIC Detachment often found it difficult to determine whether these anti-American sentiments were politically inspired or the spontaneous mutterings of a discontented segment of the populace. The problem of ferreting out Fascist elements in the face of these rumor and propaganda campaigns became all the more complex.*

Teamwork is the Lesson of the Winter Campaign

By February 1945 the frontline security measures of the CIC agents in the field and supporting research and intelligence furnished by the Fifth Army and the 15th Army Group CI were effectively linked. This coordination resulted in the capture of many stay-behind agents and line crossers who might otherwise have slipped through the IV Corps net.

One case which was concluded by IV Corps CIC Detachment during a 24 hour period serves to illustrate the wide range of planning and education which must precede a successful CIC operation. The balance of activities between forward CIC teams and higher echelon counter-intelligence units especially in the dissemination of background information, the importance of security indoctrination of front-line troops, the necessity for a firm instructional policy among the native population, and the thorough training of CIC agents in investigative procedures -- all are illustrated.

Twenty-four Hours in the Bagni di Lucca CIC Office

On the evening of 30 March 1945, four young men stopped a peasant on the road to Bagni di Lucca, Allied Territory, and asked for information about the roads to the south. The peasant told them that a rigid curfew law was being strictly enforced throughout the area and advised them to seek quarters for the night. The men heeded this advice and requested food and lodging from the peasant, for which they paid 2000 lire. At 0700 hours the following morning, the peasant took the four men to an American CP in Montefegatesi, some two miles away. This was done in compliance with the well publicized CIC regulations for the area; the CP's guard detail immediately escorted the four men to the Bagni di Lucca CIC office, Sub-Section 2, IV Corps CIC located about five miles from the front.**

*Hq 204th CIC Detachment, Memo for AC of S, G2, IV Corps, Subject: Lucca Civilian Morale and Reactions, dtd 1 Jan 45 (C) (KCD 2-14-250)

**Memo to OIC, No. 3 SCI, Florence, Subj: BILLI Lotario, SELMI Nerino, PICCHETTI Sergio, PEDROTTA Pedro, Confessed Enemy Sabotage Agents, 4 Apr 45, fr CIC Hq IV Corps (S), CIC Rpts of Captured Enemy Agents 8/44-4/45, KCRC No: BX 25096.

At 1100 hours that morning, Agents Rene R. Francazzi and Edwin M. Held began interrogations thich were not to end until noon of 1 April. Upon receipt of the four men, Francazzi and Held secured each man in a separate room, confiscated all their personal effects and traced their names through the CI Bulletins, which listed both their true names and t. e false ones which they were using. It now remained for CIC to obtain confessions from these men which could be used in their trial and which would fulfill existing requests for counterintelligence information.

The first man to be interrogated was Sergio Picchetti. The two agents let Picchetti tell his cover story and made no attempt to contradict him. After he finished his story, Picchetti wrote it down, giving his previous occupations, routes of travel into Allied Occupied Territory and his destination. As it became apparent that Picchetti was well-trained and would not confess readily, Francazzi and Held turned to the next man, Pedro Pedrotta, a twenty-two year old former student from Milan.

When Pedrotta entered the CIC office he had in his possession 32,700 lire, numbered in series, and false identity documentation. These incriminating pieces of evidence, plus the CI Bulletin background data and the cover story of Picchetti brightened the prospects for a quick confession from Pedrotta. At 1130 hours, Pedrotta related his cover story which the two CIC agents accepted without question. Pedrotta was encouraged to tell his story in great detail and once he had finished he wrote it in his own hand. Before he signed his statement, Pedrotta was told that he was in a counterintelligence office and he was given the chance to change his story. Pedrotta replied that he had told the truth and thereupon signed the document.

(U) Immediately, Held and Francazzi changed their manner. In rapid succession, they threw damaging questions at Pedrotta. They pressed him in the discrepancies between his story and Picchetti's concerning their activities before arriving in Allied Territory and the routes traveled from Enemy Territory. They told him that his identity card was false and that the ink was not then three days old; that his money was in series and that he had among his possessions two bordello receipts, which privileges were only allowed German personnel or persons in the German service. Pedrotta was then called by his aliases and was told where he was dispatched from, schools he had attended, personalities he knew, routes traveled from Enemy Territory -- all data from CI Bulletins. Intensive interrogation for an hour and a half keyed from every psychological angle completely unnerved Pedrotta. He suddenly blurted out that he was an espionage and sabotage agent in the employ of the German Intelligende Service (GIS), Eins (c)* and FIDE units. He then executed and signed a confession.

*This organization was also referred to in reports as I (c).

Eins (c) was a German organization interested primarily in Allied order of battle intelligence, while FIDE was an Abwehr sabotage section interested in military sabotage targets. Pedrotta and his three companions had attended a GIS topography school at Albergo Dolomite in Fai. There were about sixty students in the schools and the courses, map reading and topography, lasted for about three weeks during December 1944. From January to 4 March 1945, they attended courses in order of battle intelligence, espionage, and sabotage. These courses were conducted at GIS schools in Corredo. Upon graduating from the schools, the four men were sent to Reggio Emilia for a few weeks of relaxation before being dispatched into allied territory. From Pedrotta they learned that on the night of 29 March the four men had been taken to within a few miles of the German front. Upon arriving at the designated field post, the German intelligence officer in charge of their dispatching briefed them on their missions. Pedrotta and Picchetti were assigned sabotage and espionage missions in the area south of San Marcello. They were given the location of an explosives cache near the town of Pontepetri. They were to select military targets of opportunity. When the cache was empty, they were to return to German Territory, gathering political, economic and military intelligence on the way. Their mission was expected to take about seven weeks. The other two men had similar missions in the Piastre area.

After studying maps of the terrain in front of the German field post, the four men were dispatched toward Bagni di Lucca. CIC knew the rest of the story from the Italian peasant and the officer in charge of the American CP which had apprehended the men.

Within four hours of the arrival of the four suspects, Agents Francazzi and Held had obtained the first confession in detail. The remainder of the afternoon was spent in listening to the cover stories of the other two suspects and preparing for the intensive interrogation of the one most likely to break down. Nerino Selmi was chosen as the next subject of interrogation.

Selmi, alias Carlo Paradisi, was an uneducated, backward nineteen year old youth from Bologna. Under interrogation, he at first maintained a cover story. Selmi had a false identity card and 23,000 lire numbered in series when he was taken into custody. After several hours of aggressive interrogation by the two CIC agents, Selmi's confidence was shaken. The CIC agents overwhelmed him with the information they had concerning him and his fellow saboteurs, as well as with the contradictions between his story and those of his companions. At midnight, 31 March, Selmi confessed to being an agent of the GIS on a sabotage mission in the Piastre area.

Selmi had served in the Nembo Division which fought for the Germans in Italy. In December 1944, his father was wounded in an American air raid on Bologna. As a result, Selmi became quite embittered toward the

Allies and accepted an offer to work for the GIS. Selmi was the partner of Lotario Billi and they had both taken an oath to carry out their mission and return to German Territory. They had been given the location of an explosives cache just outside of Piastre which was to serve as the source of their sabotage devices. Having now told the truth as confirmed by independent material, Selmi wrote and signed a confession.

Agents Francazzi and Held went immediately to Picchetti's room and resumed his interrogation. It was 0100 hours on 1 April when they questioned Picchetti for what was to be the last time. Using the information provided by the CI Bulletins and the confession of Pedrotta, the CIC agents quickly outwitted Picchetti, and he confessed to being a saboteur and espionage agent. Picchetti proved to be strongly pro-Fascist and admitted that he would have returned to the Germans had he successfully completed his mission. After they obtained a signed confession from Picchetti, the two CIC agents assembled their material for the final interrogation, that of Lotario Billi.

Billi proved to be the most difficult subject of the four. He would not deviate from his original story and would not admit to any inconsistencies. After lengthy and intensive questioning, he was confronted with his companions' confessions, the large amounts of money in series which he had at the time of his capture, his routes and dates of travel, and the fact that he had destroyed his identity card. In the face of this stockpile of evidence, there was no way out for the reluctant Italian. Billi confessed that he was an agent on a mission for the GIS.

On 2 April 1945, Maj John C. Crystal, IV Corps CIC, directed the search for the sabotage caches of the four enemy agents. The explosives were successfully located and turned over to the Engineers. Subsequently, the four confessed enemy agents were forwarded to higher echelon interrogation centers.*

The Struggle to Survive

Members of the CIC Detachments in Italy during the winter of 1944-45 have stated that their primary purpose was not to capture enemy spies but rather to stay alive. This uncertainty of staying alive

*Interrogation Report on PEDROTTA Pedro, undtd, CSDIC/200/MU/15/Z 21; Interrogation Report on BILLI Lotario, SELMI Nerino, PICCHETTI Sergio, undtd, CSDIC/200/MU/15Z 22: 204 CIC Det Reports, SCI/Z and SCI #3, 2/45-4/45 (S), KCRC No. BX25096. Memo to OIC, No. 3 SCI, Florence, re: BILLI Lotario, SELMI Nerino, PICCHETTI Sergio, PEDROTTA Pedro, Confessed Enemy Sabotage Agents, 4 Apr 45, fr CIC Hq, IV Corps: 204 CIC Det Reports of Captured Enemy Agents, 8/44-4/45 (S), KCRC No. BX25096.

stemmed as much from the intense cold and snow as it did from enemy action. Any old farmhouse would do as a base of operations and the men took delight in "winterizing" them. The men of the 91st CIC Detachment were no exception.

In the latter part of 1944, the 91st Division was located high in the Apennines outside the town of Lioano and approximately 26 miles from the enemy-held town of Rimini. Agent Sampson W. Freestone and other members of the Detachment finally found an abandoned farmhouse, located on the side of a mountain overlooking a wide valley. It became their pride and joy.

Many long hours were spent in fixing it up. Windows were boarded-over, ceilings were braced, bricks were replaced with almost loving care, for this farmhouse held the prospect of a warm sanctuary during the icy winter months ahead. One member of the Detachment went so far as to partially prune the trees outside so that the branches would not splinter and injure anyone in case of a direct hit during an air raid.

One day after their labors were finished, they noticed a British artillery unit bringing a huge cannon into the valley below. Day by day they watched while the British soldiers with infinite pains, poured the cement for the foundation, aligned the gun and inserted the iron railing around the catwalk. Freestone and the rest of the Agents felt proud that such good warriors and noble craftsman were on their side. Finally they saw the lorries move slowly away and they knew the gun was ready.

At approximately 0300 hours the next morning, they were awakened by a British Sergeant who informed them that for safety's sake, it would be advisable to leave the house as the cannon was about to commence firing. "Good grief," shouted Freestone, "the damn thing's about two miles down the valley." The Sergeant was adamant and, primarily to humor him, the Agents filed out into the snow and ice.

Within minutes a roar was heard and slowly at first but with increasing rapidity, their "home" disintegrated. The boards fell from the windows, the side of the building cracked open and the chimney fell. Transfixed, the Agents watched and then as one, turned to the British Sergeant.

In the light of inter-Allied harmony, Freestone explained, it was just as well that the Sergeant was on his way back to his unit and was therefore unable to hear the endearments pointedly thrown in his direction. "Rimini was 26 miles away," stated Freestone, "and we had to pick a house directly in its path."*

*As per conversation with Sam Freestone at NCICA Convention, Hotel Warwick, Philadelphia, Pa., August 7, 8, and 9, 1953

Utilization of the Chain of Command

From October until December 1944, the 305th CIC Detachment was located at Tavernelle. Sub-sections of the Detachment were in operation at Rosignano Solvey, Pisa, Montelupo, Ponte a Egola, Pistoia, Prato, Scarperia and Florence. Units of the CIC Headquarters Security Section remained at the Army Headquarters (Traversa) and Rear Echelon Headquarters (Florence). In addition, personnel from the 305th CIC Detachment continued to operate the RIP at the Fifth Army PW Stockade near Florence.*

The chain of command during these winter months became apparent to the various Detachments and was given its rightful place. During the preceding months, the action had been swift, and Detachments often found themselves out of contact with their immediate superior. This necessitated the using of individual initiative, and Detachment Commanders ran their respective units with few orders from above. Naturally, few reports were sent "upstairs" while this separation of units existed.**

The mass assault of the German Agents necessitated the utilization of the chain of command. While it never was overbearing, the Army CIC Detachment acted in a supervisory capacity in that it collated reports from the various units under its command and was thus able to send Pattern Reports and other descriptive material to them that eventually aided in the capture of enemy Agents. The sending of reports to Army Headquarters also facilitated the capture of Agents, since it enabled Army CIC personnel to learn how many enemy suspects slipped through Allied lines and where in all probability they were.

That the Army CIC Detachment acted in a strictly supervisory capacity can be gleaned from a report Spingarn (then Lieutenant Colonel) sent to the Commanding General of the Army Service Forces in January 1945. In this report he said, "From an administrative standpoint, the most important lesson which has been learned during this period is that tactical CIC detachments must be able to operate as self-sufficient units."***

The Problems

One of the many problems that had to be solved to facilitate the captures of enemy agents was the education of Allied military personnel

*General Security Report - TO: ACofS, G-2 (CI) Fifth Army, dtd 3 Nov 44 (S)
**Interview with James Kelly and Harry Riback at NCICA Convention in Philadelphia, Pa., August 7, 8, and 9, 1953.
***Monthly Information Report - TO: CG, ASF from 305th CIC, page 9 (S)

who afforded these agents on mission the best means of crossing the Army area in either direction, through their friendly though misguided practice of picking up hitch-hiking civilians.* Security lectures by CIC personnel had to be given to the troops at short intervals and the importance of the talks impressed upon them.

Partisans were among the worst offenders in violating restrictions in civilian travel. They seemed to believe that membership in certain groups or possession of travel permits from Partisan leaders rendered them immune to security detention and investigation. One enemy agent captured by the 305th CIC Detachment had previously introduced himself to the inhabitants of San Miniato as a Partisan Lieutenant and, despite the fact that he was almost completely unknown there, he was, when arrested, carrying a letter given him by the CLN (Committee of National Liberation) stating that he was a member of the Comitato, and requesting that help be given him in reaching Rome.**

One of the largest problems was the lack of qualified CIC personnel to counter the German thrust. Witness: a Secret Priority Wire sent by Major Spingarn to Major Ralph Powers, Chief, CIC, AFHQ on 21 November 1944, stating:

> "URGENT SECURITY SITUATION HERE TEN SABOTAGE AGENTS CAPTURED WITHIN PAST FOUR DAYS THREE HUNDRED MORE REPORTED ENROUTE OR SOON TO COME SEVERAL CACHES OF ENEMY SABOTAGE EXPLOSIVES DISCOVERED....SECURITY SITUATION MOST SERIOUS SINCE BEGINNING OF ITALIAN OPERATION....ADDITIONAL AGENTS URGENTLY NEEDED."***

Spingarn reported on 28 October 1944 that another underlying factor actually of more long-range importance than the urgent need for additional CIC personnel with the Divisions was the defect in the tactical CIC setup whereby the areas of most counterintelligence interest were almost invariably the most thinly covered by CIC Agents, and the areas of least interest, the ones most strongly covered.

IV Corps CIC was covering a sector at least five times as large as II Corps; yet, because the major axis of military attack was through the II Corps Sector, all the American Divisions but one (the 92d) of Fifth Army were there and consequently, almost all of the CIC. This meant that IV Corps, including the 92d Division, had a total of about 18 CIC Agents, while II Corps and its Division had almost 45.

---

*General Security Report TO: AC of S, G-2 (CI) Fifth Army, dtd 3 Nov 44 (S)
**Ibid, page 10
***Secret Priority Wire from Spingarn to Powers, Chief, CIC, AFHQ dtd 21Nov 44

The anomaly of this situation was two-fold. Since the German attack was directed against the Sector occupied by II Corps, the soldiers were so closely spaced that it was virtually impossible for an enemy Agent to cross into AOT without being detected. The Germans realized this and consequently sent their Agents across at the thinly-held IV Corps Sector. So many Agents entered here that one road was nicknamed "Spy Highway No. 1, Italy."

Spingarn felt that in tactical counterintelligence, counterintelligence interest and activity is likely to be exactly in reverse emphasis to tactical interest and activity. At that time, the tactical CIC setup was based on the assumption that CIC should be in the area of the most troops and the hardest fighting.

The subsequent plan which Spingarn offered to correct the situation was often discussed but never adopted. Its basic premise was that if the single vacancy already existing in each of the six Division Detachments could be filled, the six additional men should be attached to Corps CIC or Army CIC, to be sent where they were most needed.* Unfortunately this plan never had its try-out period.

An example of the cooperation that existed among the various Detachments during the last months of 1944 can be gained by looking at the Lucca CIC Operations. This city fell to the Allied Forces on 8 September 1944 and the first CIC unit to enter was headed by S/A James Furniss of the 305th CIC Detachment. Control was maintained by this unit until 8 October when it was turned over to IV Corps CIC.

On 8 November 1944, IV Corps CIC pointed out that the area was too large to be handled by any one Detachment and as it was the apex point of the enemy Agent assault, and the "Spy Highway No. 1," passed through it, they asked for assistance. A coordinated plan placed the area by sections under the responsibility of Fifth Army, IV Corps and II Corps CIC, plus Italian SIM (CS) Agents.** This plan was successful and many enemy line-crossers were captured during the ensuing months.

An Impressive Record

Despite the success of this system of deployment, CIC agents serving in the Italian campaign had carried out their multiple activities as unsung heroes. Publicity accorded to the CIC units had been scant, and in January, Major Spingarn set about to correct this situation by compiling a three month record of the detachments serving

*Memorandum for Major Powers, Chief, CIC, AFHQ, dtd 28 Oct 44 from 305th CIC Detachment (S)

**Memorandum for Major Staudt - Subject: Tactical CIC Coordination, dtd 25 Nov 44 (S)

1768

under Fifth Army command. The list was impressive. From 10 October to 31 December, 110 espionage and sabotage agents sent on missions by the German Abwehr or SD were captured in Fifth Army areas with more than 75 of the apprehensions made by CIC personnel. Information divulged by these prisoners led to the discovery of eight caches of explosives left behind by the Germans for use by saboteurs. Other preventive counterintelligence by Fifth Army CIC units was equally effective. No consequential act of sabotage had occurred during the entire Italian campaign in areas occupied by the Fifth Army. Constituting less than fifty percent of all Allied counterintelligence personnel operating under Fifth Army, the CIC agents had accomplished the major share of security work.*

The Most Colorful Case

On 21 September 1944 a report from Colonel S. S. Hill-Dillon at AFHQ laid the groundwork for a case which, while probably not the most important, was unquestionably the most colorful in the history of the 305th CIC Detachment. This report stated that there was reason to believe that a woman crossed into AOT on 14 August 1944 and that "....details of her mission are unknown except that she was to carry back copies of extremist left wing newspapers." Her description:

> "Carla — Age 18, height 5'1½", thick set, black hair, dark complexion, Roman accent, claims to be skating champion."**

All Fifth Army Detachments were alerted as were the Carabinieri check points and the Military Police. On 19 October 1944, Mario Martinelli was apprehended at a civilian movement control post and turned over to Fifth Army CIC as he was without proper permission to travel and had no Florence identity card. Preliminary investigation revealed nothing, but serious suspicion was aroused when a letter was intercepted which he had smuggled out of the Carabinieri prison, asking certain persons in Florence to support his false story as to his recent whereabouts.

A check at the residence of Countess Barbieri, to whom the letter was addressed, disclosed that not only had Martinelli been there on 8 September and 15 October, but that on 22 October 44, a girl named Carla Costa had visited the residence and asked for Martinelli under the names of "Monello" and "Righi." Confronted with this information, Martinelli confessed that he and the girl were enemy agents. Detailed

*Hq 305th CIC Det, Ltr to Chief, CIC, AFHQ, Subject: Enemy Espionage and Sabotage in the United States during 1944 as reported by FBI, dtd 3 Jan 45 (S) (KCD 6-8-115)

**Report from S.S. Hill-Dillon, Col. GS at AFHQ to AC of S, G-2, RAAC, dtd Sep 44 (In G-2 File) (S) (C)

interrogation of Martinelli over a period of several days by S/A's John H. Richardson and Gordon M. Messing of the Army Detachment, revealed a large store of information of the GIS, Abwehr Kommando 190 which had trained and dispatched him, and other enemy agents sitting in or due in AOT. During the confession, Martinelli also implicated Carla Costa as his companion on his last journey into Allied territory and indicated that she was the No. 1 enemy female espionage agent.

From this detailed description and from leads picked up by agents in Florence, the route of her planned return to German territory was learned and all check-posts were alerted. Agents of the Detachment began combing the area and on 23 October, S/A Gordon B. Mason apprehended Costa near Pontepetri, making her way to a thinly held sector of the lines. Within minutes, S/A Alba H. Warren arrived at the same spot, after sweeping the road from the opposite direction.

The CIC Agents were amazed. It was hard to imagine that the pretty young girl they held could be the No. 1 woman agent. During the following days, when Costa proved to be the most stubborn and tenacious agent captured, they came to appreciate her high standing.

Costa at first refused to talk even after a white handkerchief which she carried had been heated over a candle to reveal the words - "ANHOERIGER DER ARMEE - LUFTFLOTTE ZU LEITEN" (Member of the Army - Lead to Air Force Headquarters), the identity documents of an Abwehr Kommando 190 Agent.*

Spingarn reported, "Various....devices have been employed without success, including confronting her with Martinelli....who crossed the lines with her.

".....I have virtually arrived at the conclusion that no short-term psychological treatment will persuade the girl to talk, which is a great pity since she is undoubtedly a walking gold mine of information of important CI value."**

It wasn't until 28 October, after about 60 hours of persistent interrogation, that Carla Costa proudly admitted that she was an enemy agent who had completed two successful missions. She steadfastly refused, despite several days of intense interrogation by S/A Messing, Major Cesare Faccio (Chief, SIM) and Major Spingarn, to disclose any information about her employers, her contacts or other agents.

Costa made one "slip" at this time when she admitted that her home was in Rome. At once, a priority call was made to the CIC Detachment, AAF/MTO, Section "M" in Rome, which provided at short notice

*Monthly Info Report TO: CG, ASF dtd 5 Dec 44, page 2 (S)
**Memorandum for the files - from 305th CIC Detachment dtd 26 Oct 44 (G-2 Files)

an extensive report on her background and on members of her group. This information could have been gathered before; the description of Costa which was previously circulated had mentioned her "Roman accent."

But the speed of the Air Force Detachment in following up the lead was extraordinary. Spingarn, in a later report, said that within 60 hours of receipt of the request by the 305th CIC, the Air Force CIC had investigated, collated, audited, typed, and returned a 20 page report on Costa without which it would have been impossible to "break" her.

Carla Costa was "broken" and the information she gave concerning both herself and Colonel David's group of woman Agents did much to aid CIC in capturing future line-crossers.

Costa's personal history was fantastic when one realized that she was only 17 years old. She had joined Colonel David's group on 2 June 44, just before the city fell to the Allies, because of her fervent faith in the Fascist cause and much against her parent's desires. She left Rome for Milan on 4 June with the rest of the group and through a series of events, met Bauer, Reimer, and finally Kora of Abwehr Kommando 190.

On 10 August she crossed into AOT and went to Florence to gain information on Allied troops in the area. She returned to EOT on 15 August and two days later left for Rome. She stopped at Florence again on the way to Rome for more information and finally reached the "Eternal City" through refugee channels. While in Rome she contacted Nella David, daughter-in-law of the German espionage agent, Colonel David, and also two stay-behind Agents who were subsequently apprehended by CIC personnel.

After her return from this second mission, she went to Gardone on Lake Garla where she had a private audience with Mussolini. He informed her that he wished all Italian women were like her and that she was to be awarded the Iron Cross, 2nd class. Upon her return from the interview, she was told that she was to be recommended for the Medaglia d' Argento (the Italian Silver Star), the second highest Italian military award.

On 14 October, Costa along with Mario Martinelli, crossed into AOT in what was to be their "swan song," although at the time neither knew it. Martinelli went to Florence and Costa went to Rome, where she again saw Nella David and picked up information on Allied movements in that city. It was on her return that she was apprehended.*

*Report from Hq of Allied Armies in Italy, dtd 12 Nov 44 (G-2 Files)

indicating that one Aldo Nieri was working for the GIS. Later investigation by the two CIC Agents in Pistoia (after they had been transferred to that city) revealed that Nieri had not been seen since the German evacuation.

On 22 December 1944 Nieri was apprehended in Pistoia in the uniform of a Captain in the Royal Italian Army. He confessed during interrogation that he had been recruited in June 1944 by Abwehr Truppe 152 and given the mission of remaining in Lucca after the Allied occupation. He had been arrested by the Partisans on 28 August and sent to a PW camp at Casoria. Eventually he was turned over to Italian authorities and after a cursory screening, was taken into the Italian Royal Army with the rank of Captain because of his previous rank of tenente di vascello in the X Flottiglia MAS. This "cover" was perfect and only the apprehension by CIC prevented him from doing great damage to the Allies.*

Winged Agents

In January 1945, CIC agents of the Fifth Army detachments had to deal with a new type of high-level collaborationist; carrier pigeons under German control. Attention of the CIC to the presence of these pigeons was brought by an Italian civilian in the town of Montecarelli who discovered a bird with a message in German attached to his leg. The pigeongram indicated that the pigeon had been released from San Donino and was being dispatched to Modena along with a forward echelon of eight other birds. Some concern was voiced at CIC Headquarters as to the designation of the solitary captive. Since he had crossed Allied lines, he was technically an enemy agent but having wandered off his course, he seemed entitled to the rights and privileges of a prisoner of war. Although the apprehension of this pigeon provided a moment of comic relief, CIC agents were mindful of future attempts to transmit messages by these airborne carriers and all Fifth Army detachments were alerted to investigate cases of captured pigeons.**

A New Detachment Receives a Hasty Education

CIC in the Fifth Army area was strengthened on 24 January 1945 by the arrival of the 10th CIC Detachment, commanded by 1st Lieutenant Franklin Cave, and attached to the 10th Mountain Division. The Detachment had arrived at Naples on 18 January and five days later proceeded to Livorno by boat.*** Fifth Army CIC had a hastily improved indoctrination course awaiting this newly-formed detachment in Livorno. CIC detachment commanders and agents as well as officials from OSS,

***History of the 10th CIC Detachment (J-116) page 1 (C)

Because of her age and sex, Fifth Army CIC took especial interest in her. After she had divulged all the information she knew concerning her companions and employers, an effort was made to make her see her error and the harm she had perpetrated both on herself and on her family.

This effort failed, although one poem she wrote while in the prison awaiting trial showed that her conscience had been touched, at least to a minor extent. She wrote:

"Fascist Carla Costa
Was born and died a sinner
Betrayed God, her country, her family...
O Pilgrim, you may dispense with your prayers!"*

On 18 December she was brought to trial and was sentenced to 20 years imprisonment. Mario Martinelli was given the death penalty.

On 20 December 1944, after her trial ended, S/A Gordon M. Messing of the Army Detachment visited Costa in her cell, perhaps for one last try to make her "see the light," although ostensibly it was to gather any remaining intelligence information she wished to give. Costa said that she could not understand why people were so interested in her. She observed that the nuns had visited her and smiled as she related the episode. Messing asked her if she were not a little ashamed to laugh at these women who treated her kindly and were genuinely sorry for her. To this, Costa replied that she was not mocking the nuns, but that somehow, laughter was the only response of which she was capable in a situation where another person would perhaps find an occasion for tears.

Once during the interview, when told she was arguing like a little girl, Costa replied, "Well I am a little girl."

In his report, Messing summed up his feelings by saying that Costa was, "....emotionally immature and incapable of appreciating the emotion of others. She is able to immune herself within the tight walls of her impervious fanaticism, caring nothing for other values and indeed despising them."**

Thus the colorful case of the No. 1 enemy woman espionage agent ended and Fifth Army CIC returned to the less colorful but equally important task of capturing other agents.

Another case actually began in September when S/A's Furniss and Warren entered Lucca with front line troops and uncovered information

AMG and British Security units served as "visiting professors" at this CIC "university," and gave the fledgling agents a forecast of things to come. Included in the twenty-two hours of lecturers and discussions were a brief account of CIC activities from the beachhead landing at Salerno, a review of detachments, static and tactical, employed in the campaign, and detailed summaries of civilian control, road blocks, refugee screening, town arrests, report writing, and the many other activities that CIC had been engaged in during the Italian campaign. By the close of this concentrated course, the new agents were filled with information which they were soon to put to practical test during their active training with the IV Corps CIC Detachment and its sub-sections.*

Since the Detachment was still inexperienced in CIC operations, they remained with IV Corps sub-sections at San Marcello and Bagni di Lucca until 17 February when they were relieved and officially attached to the 10th Mountain Division which at that time was holding the sector around Lizzano. On 19 February, the Detachment moved its office there and began operating as a separate unit.

The command of the Detachment shifted on 1 March to 1st Lieutenant James P. Furniss, formerly with CIC, Fifth Army, Lieutenant Cave moving to CIC, PBS.**

As the front was static at this period, most attention was focused on the control of movement. The usual combined MP-Carabinieri roving patrol and checkpoint system was established and was augmented by CIC spot checks. Lieutenant Furniss emphasized the need for acquainting the troops of the 10th Mountain Division with some of the ruses that enemy agents might employ to worm through Allied lines. In a training memorandum issued several days after he had taken charge of the 10th CIC Detachment, Lt Furniss recommended that all tactical troops develop a skeptical attitude toward the civilians they encountered near the battle line:

"A good practice for men on the front is to consider all persons suspect until they are able to prove their innocence....Spies have crossed the lines dressed as priests or nuns or leading flocks of sheep. No matter how innocent their appearance, all persons who have crossed the front, who wish to cross into enemy-held territory, or who in any way are suspicious in a front area should be escorted to the Divisional PW enclosure where they will be interrogated by CIC counter intelligence agents." The lessons of CIC in Italy had not been learned in vain. As a result of this coverage, an average of from 15 to 20 persons were arrested and convicted weekly.

---

*Hq 305th CIC Detachment, Ltr to AC of S, G2, Hq Fifth Army, Subject: CIC Indoctrination Course for Newly Arrived CIC Detachment, dtd 29 Jan 45 (S) (KCD 6-8-113)

**History of the 10th CIC Detachment (J-116), page 2 (C)

One of the most interesting enemy agents, Ivo Zanardi, was apprehended in late March by the Detachment. Upon interrogation, he admitted being on his twelfth mission into AOT. His assignment was to collect any information on the Division's preparations for the spring offensive and from him, CIC was able to learn the status of German preparations. The information Zanardi gave also led to the arrest of Arriano Righi who had been acting as a double Agent within the Division area.

This operation to secure the area prior to the offensive was the main task of the Detachment. All civilians in the area were screened and those considered dangerous were moved. On 10 April 1945, four days before the offensive began, the Detachment moved its offices to Campidello.*

CIC and the New Political Scene

The Fascists had been barely rooted out of the province of Bologna late in March 1945, when trouble arose from another corner. In spite of AMG proclamations that emphatically prohibited political meetings in recently-liberated communes, reports were received by agents of the 501st CIC Detachment that civilians and partisans in Camugnano and Riola de Vergato were participating in organized gatherings. Under the guise of a social affair, each meeting was in actuality a call for membership in the Communist party. There was nothing spontaneous about these meetings; strangers to the communists such as refugees and "visiting dignitaries" were prime movers in the organization of a recruitment campaign. Heavily infiltrated Partisan groups used the prestige and power they had gained in the liberation to the Communists' advantage. The principal targets of the organizers were the poor farmers who owned little, if any, of the war-ravaged lands. Prevalent rumors were seized upon and embellished. Citizens were supported in their fear that when the Allied troops left, Italy would be thrown into a turmoil similar to the confusion that followed on the heels of World War I.

The Communist power of persuasion extended in another direction as well. One family which refused to enroll in the party was threatened by denunciation to the Allied forces as Republican Fascists. Physical violence was considered an expression of party zeal, and unmarried girls of the communes were warned that if they refused to become Communists or were seen in the company of Allied soldiers, their hair would be cut. The girls who enrolled were offered a gold pin with hammer and sickle on a red background as a symbol of their new allegiance. Weapons used by partisans in their guerrilla efforts against the Germans were stored and only old, useless and rusty weapons were turned in at the demand of AMG.

*History of the 10th CIC Detachment (J-116) (C)

In the face of this Communist activity, the American Forces realized that their hands were tied. Informants were hard to recruit since they were reluctant to risk recognition. The morale of the Carabinieri and pro-Ally civilians was seriously stricken by fear of reprisals once the protection of the Allied Armies was removed. But the CIC agents realized that the arrest of a few ringleaders would be a warning for the Communist movement to burrow underground, and the prisoners would become martyrs of the cause. If allowed to continue without any Allied interference, the situation was liable to swell to the point where it would be impossible to counteract any possible subversion.

The only solution lay in a middle course. A reliable informant net-work protected by complete anonymity could be set up to help compile individual case histories. Persons who were clearly attempting to subvert Allied interests would be categorized as security threats. Beyond these measures, the CIC agents could make no recommendations. The security of Allied troops would be insured by constant surveillance of Communist activities; future control of the Communists was a matter for legislative chambers and conference tables.*

*Hq 501st CIC Detachment, Memo for the OIC, Subject: Political Activities and Possible Subversion in Camugnano and Riola di Vergato Areas, dtd 29 Mar 45, (S) (KCD 6-1-3)

Section 5

STATIC DETACHMENTS BUSY ON CLEAN-UP WORK

While the CIC Detachments along the front were busily engaged in thwarting the onslaught of the German Intelligence Service, the detachments located in the large cities already captured by the Allies were engaged in cleaning out German post-occupational agents. The 426th CIC Detachment in Rome was perhaps the busiest of all.

This detachment, commanded by Major Floyd C. Snowden and attached to the Rome Area Allied Command, had entered the city soon after it fell to the Allies. Segments of the detachment had participated in the "S" Force attack on the city and although much counterintelligence work was accomplished by that group, the majority of the work remained to be done by the detachment after the "S" Force withdrew.

When the Allied lines were only a short distance from Rome, a number of line corssers were able to infiltrate into the city and contact the post-occupational agents. During these months, the total number of arrests was high, with 55 in June; 88 in July; 64 in August; 51 in September and 78 in October.* During the winter months of 1944-45, arrests were fewer and centered mainly on those enemy agents who had successfully made their way through the line. The success of this Detachment was widespread and its end results important. By capturing infiltrating and stay-behind enemy agents, the Detachment kept the rear areas of the Allied Army clear - a definite morale lifter for the men "up front."

The Germans attempted to infiltrate agents into Rome by wagon, car, truck, footpower and even by boat. On 16 July 1944, when Lino Masin was approached, a new way was discovered. Masin, a member of the SA group of the German Espionage system, had been assigned a mission on 12 July, to be dropped by parachute, completely equipped with radio (w/t) and codes. He was ordered to assume the personality of a newswriter and to infiltrate the political party which appeared to be most popular and from this to penetrate an Allied organization.

Masin had succeeded in penetrating a political party at the time of his apprehension. He was brought to trial before an AMG General Military Court on charges of being an espionage agent, was found guilty and was sentenced to be shot.**

*Subject: Statistical Report of CIC, 426th CIC Detachment, Rome Area MTOUSA, dtd 22 Jan 45 TO: AC of S, G2, Rome Area MTOUSA (S)

**Subject: CIC Situation Summary Report TO: AC of S, G2, AFHQ, dtd 1 Sep 44, (I-22) page 25 (C)

Mass Arrests Made in Rome

At the time of Masin's arrest, CIC realized that Rome was virtually "loaded" with either suspected collaborators or actual enemy agents. In an attempt to apprehend them a surprise raid was made on 20 places simultaneously at 2300 hours on 27 July with more than 125 Allied personnel participating, including CIC, British FSS and the American Provost Marshal. This raid netted 33 suspects. A coordinated system was initiated during the raid whereby telephones were tapped and the conversations immediately relayed to CIC Headqunrters, where they were digested and instructions sent to the raiding parties by messengers.* Although German SS official Dollman, the prize target, was not found, many important arrests were included in the 33.

A similar raid of 27 places at 0600 hours on 10 October 1944 resulted in arrests of 24 persons who were considered most dangerous to Allied security from the study of their past actions, as contained in the Italian Police (Questura) questionnaire.**

A constant thorn in the side of the Rome CIC Detachment during its jurisdiction over the "Eternal City" was the presence of an espionage ring called the German SD Unit IDA. This ring maintained stay-behind agents in Rome and was constantly sending other agents into the city to contact them and receive espionage information.

On 10 October 1944, CIC agents arrested and by means of interrogation found that he had been instructed as to the details of his mission by Major Hass and Lieutenant Schubening, who were attached to German SD, Section 6, with Headquarters at Via Tassa, Rome, prior to the Allied occupation.

Major Hass had instructed to obtain information concerning 19 questions, 12 of which are listed here. They were:

"(1) Return with copies of newspaper circulated in Rome.
(2) Location of Allied Headquarters.
(3) Allied troops in Rome and name of units.
(4) Political parties, their strength and leaders.
(5) Conduct of Allied troops and specific cases of misconduct.
(6) Italian views of the occupation in Rome.
(9) Fascists who can be trusted by the Germans.
(10) Opinion of Allies regarding German espionage system.
(12) Procurement of labels and wrappers used by the Allies, viz., chewing gum and chocolate wrappers, cigarette

*Statistical Report of the CIC, 426th CIC Detachment, Rome Area MTOUSA, dtd 22 Jan 45 TO: AC of S, G-2, Rome Area MTOUSA, page 3 (S)
**Ibid

package, etc., in order that Germans can cause poisoning of troops.

(14) The arrest of German SS Agents and disposition.

(17) Location of Allied Intelligence Units and billets.

(19) Fascists who have been executed."

When captured, carried a cigarette with the letters "ADI" printed on the wrapper and containing a small piece of paper, written in German and signed by Hass, which was to be used for passage through the German lines on the return trip.

proved a useful agent - but not for the Germans. In addition to giving the information already listed, he admitted that he was to be a contact man for other agents soon to follow him. On the 1st, 10th, 20th and 30th of each month, was to appear in , by which action he was to identify himself to any enemy agents seeking contact.*

The 426th CIC Detachment ordered him to follow these instructions. On 20 October, 30 October and 1 November, he was removed from and placed in position, No agents attempted to make contact on these three occasions. On 1944, while standing at the column, a young man appeared and, calling him by his cover name of stated. " Together they crossed and entered a cafe in the

and the young man then appeared in front of the cafe and were greeted by a woman. Immediately, Special Agents Bruno A. Francazzi, Thomas R. McCabe, Rene Francazzi, George Terry, Anthony Scalora and Paul DeMare placed the two under arrest.

The two captured proved to be Armando Bianchi and Silene Badio, both affiliated with German SD Unit IDA, who had been sent to collect any political, economic, military, or general information. Each had received 20,000 lire, an English Sterling piece, and a "Serraglio" brand cigarette, which would guarantee safe access through German lines on the completion of their mission. Bianchi stated that Lieutenant Schubenig had ordered him to smoke the cigarette containing the German document if apprehended by Allied authorities.

The interrogation of these Agents revealed an important intelligence disclosure: the Germans had recently opened a sabotage school at Longone, just outside of Erba, and for it were recruiting members of the Italian parachute divisions and the Italian Republican Navy.**

*Monthly Information Report TO: CG, ASF dtd 1 Dec 44 (C)
**Memo for the OIC, Subject: German SS Hq IDA, dtd 15 Nov 44 (S)

[illegible] was important since CIC personnel could be alerted to watch for certain characteristics inherent in Italian military men as opposed to the average Italian civilian. Information such as this formed the basis for the "Patterns Report" distributed by the Fifth Army CIC Detachment in November.

At this time, the German SD Unit IDA was a powerful organization, requiring much attention by the 426th CIC Detachment. That fact that it was visibly disintegrating was forceably brought to the attention of the Detachment when Gianpiero Minerva was apprehended.

Minerva was arrested while contacting an individual planted by CIC in place of the original contact who had been arrested four months earlier. Some doubt as to the over-all competency of the German organization was aroused by the fact that they were evidently still attempting to contact a man arrested four months previously. Minerva's arrest led, on 16 February 1945, to the arrest of his partner.*

Rome Radio Ring Broken

The plan whereby a captured German agent was used to apprehend other agents sent to contact him was put into effect successfully many times by the 426th CIC Detachment. In one case it led to the "breaking" of a radio ring in Rome which was sending important military information to the Germans.

Early in December 1944, through devices used by Road Calls Signal Company, SCU Unit No. 4, radio transmission frequencies were detected very strongly in an area within a radius of two hundred yards from Piazza San Pantaleo. On 14 December, surveillance teams began a sound detecting and surveilling operation in the neighborhood, with the ultimate aim of raiding and searching the building indicated as containing a transmission radio. Two days later, the area from which the transmission could be originating was limited to a specified block.

During the process of this operation, an enemy courier agent, named Leonida Dell'Arte, alias "Giorgi," was dropped by parachute in the Sienna area on 10 December 1944. Dell'Arte made his way to Rome and, fortunately, surrendered himself to Allied authorities. Subsequent interrogation of Dell'Arte revealed that he had been assigned the mission of contacting one of two post-occupational agents in Rome, and of turning over to him the sum of 500,000 lire and two radio crystals. This contact was to be made at the Italfaro on the Gianicolo, near a white tower structure, where he was to go every Wednesday and Saturday at 1200 hours until contact was made. The post-occupational Agent was to recognize Dell'Arte by a black cigarette holder which he was to place in his mouth, and by the password "porco" to be said by the Agent, with the answer, "miseria," by Dell'Arte.

*Monthly Information Report TO: CG, ASF, dtd 1 Mar 45 (S)

The Detachment decided to allow the contact to be made with an immediate surveillance of the contact man to determine where he lived and his operational point and accomplice. Dell'Arte was instructed to inform the contact Agent that he had not brought the money or the crystals as he was not sure what he would find, and to ask for another appointment.

Although the crystals were of a frequency range different from that in use by the enemy radio agents, the Detachment knew that these agents were experiencing difficulty in broadcasting on their frequency range and hoped that they were attempting to change the range.

On 16 December the scheduled plan was put into operation. At 1200 hours, contact was made with Dell'Arte by an unknown person, who was "tailed" immediately after he left Dell'Arte. This person succeeded in losing the tailing agents of the Detachment; however, hope was restored when Dell'Arte disclosed that he had made another appointment for the following day at 1210 hours, under the clock in the main entrance of the Stazione Termini.

On 17 December at 1250 hours, a different person made contact with Dell'Arte, who this time carried the money and radio crystals. Dell'Arte, following instructions, guided the enemy agent to a spot around the corner of the railroad station, at which point the surveilling agents of the Detachment closed in and arrested him.

An immediate interrogation was conducted in the rear of the station and after a few minutes, the contacting person admitted to being one Ernst Riegler, alias "Riga." Riegler admitted he was to return with the money and crystals to his partner, Heinrich Gallmetzer, alias "Heine," at Piazza del Biscione #90. A surveillance team was sent to the address indicated to await the appearance of "Heine," who, according to his partner, was not expected to return home until 1700 hours. The time element was urgent as it appeared that Riegler was lying about his partner and was attempting to stall in order to give him time. After the surveillance team left, Riegler was interrogated once more by Captain Spears of CSDIC.

During the ensuing interrogation, it was learned that the radio used by "Riga" and "Heine" was hidden in a gas meter cubby-hole, to the right of the entrance at Piazza del Biscione #90. A raid and search party was dispatched and discovered the radio transmission set at 1450 hours. They also discovered that Gallmetzer, alias "Heine," had been arrested by the previously dispatched surveillance team at 1350 hours. Although never officially confirmed, it was fortunate that the surveillance team that apprehended "Heine" was dispatched immediately, as there was probably some plan between the agents whereby "Heine" would leave at a certain hour if "Riga" failed to return.

Both enemy agents were from Abwehr Group 150. Of the team, "Riga" was the radio operator and "Heine" was the informer. It was further learned that Riegler was an Unteroffizier (non-commissioned officer) of the Luftwaffe and Gallmetzer was a Lanzer (Private) in the Panzer Regiment of the German Army. Both men had been trained in an Abwehr espionage school at Innsbruck, Austria, prior to December 1943 and were brought to Bologna and then to Rome, arriving there in December. In February 1944, they began to operate as espionage agents.

The Germans considered this radio operation very important. When the Nazis withdrew from Rome in June 1944, "Riga" and "Heine" were given 100,000 lire to last until they were contacted, false identity cards, excellent cover stories and an apartment stocked with food. Their mission was to observe and report by radio all military movements noted by them, with direct reference to size, type, direction, time and date of these movements.

Their actual cover in the apartment was excellent. The transmission set was concealed in a small suitcase which to all appearances looked too small and innocent to be of any harm. In addition, they had strung the antenna wire on the terrace of their apartment, in between several clothes line wires, and covered the egg-shaped white insulators with black tape for concealment. The position of their apartment and the camouflage of the antenna and insulators made it practically impossible to detect the presence of the antenna unless looked directly down upon. This was impossible since the terrace was the highest point of the building.

With the capture of these enemy agents, a radio which had been transmitting from February 1944, and as late as 15 December 1944, was stopped. In the aftermath, it was interesting to note that the building indicated by the detection crew that had been sent out on 1 December was the immediate building to the south of the one in which "Riga" and "Heine" had lived, transmitted, and frustrated the Allies for eleven months.*

A Continuous Political Survey

Capturing enemy agents was not the only forte of the Detachment. Agents of the 426th CIC also kept a close survey of the stirrings of revised political parties. In March 1945, a four party coalition was in control of the government as a makeshift arrangement pending the complete liberation of the country. Weighed down by such basic problems as inflation, food shortage and unemployment, the government's early days in power were marked more by fits than starts. A persistent rumor that hindered the government's progress represented the Assembly

*Monthly Information Report TO: CG, ASF, dtd 1 Jan 45 (S)

as a puppet regime with the Allied forces manipulating the strings. But the need for a strong Allied position on the future of Italy was evident if a solid political center was to be formed. The bewildered masses of the country were searching aimlessly for leaders to rely on, and a situation ripe for the artists of subversion on the extreme Right and extreme Left was developing. The Rome press was not above suspicion. CIC agents investigated and halted a clandestine Fascist movement that had distributed a virulently anti-Allied newspaper. A close watch was maintained on the editorial comments of other newspapers as CIC heeded the warning of a confidential informant on one of the journals who claimed that "freedom of the press has become license in Italy."*

Detachment Protects Congressional Party

The security mission of the 246th CIC Detachment extended in several directions. In December 1944, Special Agent Harry J. Murphy and Agent Louis Eliopulos were sent to the Grand Hotel in Rome to make all necessary security precautions for the stay of a Congressional Party from the United States.

Military Police were organized into a roving patrol to cover the first floor of the Congressmen's hotel, and arrangements were made to block the street during arrival and departure times. The only incident occurred when the CIC agents had "...to reprimand the civilian waiter for permitting the switchboard operator to go up to the second floor to have a cup of coffee."**

This was only one sidelight in the everyday routine of CIC work, and the success of this operation bears testimony to the over-all success this Detachment experienced during its stay in Rome.

428th Acts as Theater Headquarters

The 428th CIC Detachment was an outgrowth of the CIC organization that accompanied the first American troops to the shores of North Africa. The first CIC organization in Africa was an overhead theater unit assigned to the North African Theater of Operations. With the publication of T/OSE 30-500, all Detachments were reorganized under War Department authority: the 428th being established as the MTOUSA Headquarters Detachment.***

*Hq 426th CIC Detachment, Memo for CIC, Subject: Political Situation in Rome, dtd 1 April 1945, (Confidential) (KCD 7-3-27)
**Memorandum for the OIC; Subj: Security of Congressional Party, 19 Dec 44 (C)
***Memorandum for the OIC; Subj: Observations and Comments Concerning the 428th CIC Detachment, dtd 2 Feb 48 (C)

In May 1944 Major Ralph W. Powers replaced Major Edward L. Ray as commander of this Detachment.* MTOUSA Headquarters moved to Italy in June 1944, its personnel with it.**

In Italy, the major function of the 428th CIC Detachment was to operate as the theater headquarters for CIC. All personnel were assigned to this unit and placed on detached service with CIC sub-detachments attached to Armies, Corps, Air Forces, Divisions, and Base Sections.*** Although it had its own staff of agents who did routine investigative work, the supervising of the other Detachments had priority over all other work.

One of the first foreign decorations was awarded Major Powers on 17 June 1944 when he was named to the grade of honorary Legionnaire 1st class for exceptional service rendered the Foreign Legion. The award was made by Colonel Lambert, commanding the Common Depot of the Foreign Legion.****

PBS Reorganized

The Peninsular Base Section with Headquarters at Naples was undergoing changes. The first occurred on 25 August 1944 when the 6784th, 6785th, 6786th, and 6787th CIC Detachments (overhead) were disbanded in the vicinity of Naples. On 26 August 1944, pursuant to authority contained in Paragraph II, General Order 184, Hq, Peninsular Base Section, the 430th CIC Detachment was activated, with Captain Jack B. Cameron as commander. Major Papurt had previously left PBS CIC for OSS, with which organization he later was killed.

The second change was effected by the rapid advance of the Allied Armies. As Cameron reported in his August Situation Summary, "...the expansion of territory is beginning to stretch C.I.C., P.B.S. like an accordian without any decrease of activity or responsibility in the Naples Area. Sooner or later one or the other must give; that is, C.I.C., P.B.S. will be stretched to such a point that adequate coverage will be impossible, or as we progress northward, less security emphasis must be placed on the territory to the rear. As long, however, as Naples remains the chief Allied port in Italy, security will be largely centered in its immediate area."

The establishment of two new sections by PBS alleviated the situation to a large degree as through use of these sections, wider coverage could be afforded. The first section was formed in June 1944 and was called the Transient Control Section. In reality, it was divided into

*Monthly Information Report TO: CG, ASF, dtd 1 Feb 45 (C)
**Memorandum for the OIC; Subj: Observations and Comments Concerning the 428th CIC Detachment, dtd 2 Feb 45 (C)
***Memo for OIC - Observations and Comments about 428th, dtd 2 Feb 45(C)
****Subj: Award of Foreign Decoration TO: CO, 428th dtd, 1 Dec 44 (C)

two sections, one section operating in the Naples area and extending its control as far north as the Gargliano River, and the other section handling travel control north and immediately south of Rome.

The second section was established in August 1944 and was called the Research Section. This section studied reports from the various security agencies, covering every aspect of value to security work. The advantage of this occurred when CIC, PBS moved into territory relinquished by, for example, Fifth Army and was able to send Agents into various towns, armed with definite facts as to conditions, names of partisans, lists of suspects who fled arrest, and such other data as would be necessary for CIC sub-sections to possess for intelligence operation. It also provided a continuous flow of pertinent information to sub-sections after they were established.*

CIC, PBS continued expanding as the Allied Armies moved northward. When the Allies finally set-up their winter line in the Apennines, the 430th CIC covered the largest amount of territory of any Detachment in Italy. Territorial jurisdiction extended from Naples to Pisa with the exclusion of the City of Rome, and a sub-section was even maintained in that city to handle PBS territory immediately north and south of Rome Province. Although the area extended inland only to an average of 25 miles, there were 300 miles of coast line to cover, which presented a constant security threat.

Adequate coverage was established by the coordination and utilization of CIC Agents of both Fifth Army and PBS. Either Detachment was ready to provide assistance during any problem that confronted them, and in this way, almost completely defeated all German attempts to infiltrate the area and cause damage.**

U.S. Citizen Apprehended by PBS

On 1 November 1944, when was apprehended, the Agents of the 430th CIC Detachment again proved an age-old adage, i.e., a citizen is not necessarily a patriot.

was born in the United States at Pennsylvania, on 15 July 1914, of Italian-born parents. He left American in 1932 to study engineering and architecture at the The activities in which he took part during the 12 years before his apprehension in 1944 were important enough to produce 12 charges on which he could be tried.

*Monthly CIC Situation Summary - August: TO: AC of S, G-2, AFHQ - 31 Aug 44 (S)

**Organization and Operation of CIC, PBS TO: CO, 305th CIC Detachment from 430th CIC Detachment, dtd 6 Jan 45 (S)

He was a confirmed liar. When something he previously said was disproved, he would simply substitute another falsehood. In the last analysis, when he was confronted by the evidence proving he lied, he would declare, "I am being persecuted. You don't understand me. I came to Italy to obtain classical culture."* Agents of the Detachment realized that his tactics were to substitute one lie for another, all information about his activities would have to be proved from outside sources. It was not difficult.

During the many interrogations that followed, reported that he had taken 25 examinations at the University between 1932 and 1943; that he was never a member of the Fascist party; that after the outbreak of war between the United States and Italy, he disseminated anti-Fascist propaganda; that he had worked at times for both CIC, Fifth Army and OSS and had been discharged, in one case by the officers' dislike for him and in the other because he [illegible] advances of an officer who was a homosexual.

He also reported that he was brought to trial by AMG and acquitted, as his story on the homosexual was proved correct, and that from June 1944 until his apprehension, he had not been employed.

claimed that his possession of American clothes, food, cigarettes, and his boarding of ships was due to his association with American officers, purely on a social basis. This last admission was the only one resembling the truth. Because he had lived in Italy for so long and could speak English and Italian so fluently, was very popular with Allied personnel who wished female companionship. The favors he received for arranging these meetings were evidenced when agents of the detachment raided his apartment and found everything from American butter to expensive cameras.**

While held in Poggioreale Prison during his interrogation, succeeded in smuggling out letters to American Army officers socially associated with him, asking them to intervene in his behalf. How well had been able to sell himself to the Allied personnel can be illustrated by the Detachment's report which related that "....intervention was attempted in Subject's behalf by American Army Officers at the United States Consulate and at this office. Such intervention even went so far as to have one Officer question the authority of the Assistant Chief of Staff, G-2, PBS, and CIC to hold Subject

reports were proved incorrect, one by one. It was learned that he had not attended the University since 1936 and yet had

refused repatriation in 1942, declaring to U.S. Consulate officials that he wished to remain and finish school and receive his degree the next term. It was also proved that he had joined the GUF, University Group of the Fascist Party.

Since there was no mention of on the Fascist reprisal records, agents knew he had not been an active anti-Fascist as he claimed. based his arrest by the SIM on 22 June 1943 as being indicative of his anti-Fascist record; however, it was proved that he was apprehended for forging an identity card and having illegal possession of four ration cards for clothing. Since he had escaped from Regina Coeli prison on 26 July 1943, he was still wanted by the Italian authorities.

had worked for Allied Intelligence. In September, after escaping from Italian authorities, he passed through Italian and German lines and reached Capri where he made contact with U.S. Army representatives who took him to Fifth Army Headquarters, Salerno, for interrogation. There he managed to convince Army authorities of his citizenship and subsequently was used by CIC, Fifth Army, as an interpreter. He was employed for one month and was discharged because of unsuitability and because Spingarn, Commanding Officer of the Detachment, felt he had all the earmarks of a petty criminal.

After his discharge, worked for one month for OSS, but he was discharged again for the same reasons observed by CIC, Fifth Army. He was tried by AMG on various counts ranging from illegal requisitions to possession of Army equipment, but was acquitted

The fact that he had worked for Allied Intelligence was not damaging except to the extent that after his discharge, he continued to represent himself as a "....U.S. Army employee, a Secret Agent of the U.S. Government and as a C.I.C. Agent."* Also among his personal papers when apprehended was an address book containing the names, home addresses, APO's and unit assignment of CIC personnel he originally contacted at Fifth Army. As Cameron reported, "The names of CIC personnel also would be welcome by the enemy and would endanger the life of every CIC man so listed in Subject's address book."**

Spingarn reported in a memorandum to Major Cameron, "My analysis of ...., is that he is a sharp-shooter and petty thief who has lived by his wits...for a long time. I am sure that many criminal charges could be preferred against him, and it is by no means impossible that a charge of treason for adhering to the enemy in time of war might also lie. Despite his corruptness, however, I should be

CONFIDENTIAL

inclined to doubt that he has been in contact with the enemy since he reached AOT."*

Because of freedom and penetration into Allied resources and because of his apparent lack of any feeling for the United States, the 430th CIC Detachment felt that he might just as easily turn to the Germans for monetary reasons. For this reason, Cameron recommended that, "(c) When Allied authorities have disposed of Subject's case, Subject should be turned over to the Italian authorities, Rome, for trial under the charges....of the attached memorandum.

"(d) If Subject's release is effected before the end of the war, Subject should be interned for the duration of the war as a security threat."**

Island Detachments Provide Security

In the overall picture, the mission and responsibility of some detachments were more important than the enemy agents caught. The 427th CIC Detachment, Northern Base Section, located on the island of Corsica, was such a detachment.

In the middle of January 1944, the Northern Base Section was assigned a CIC Detachment under the temporary command of Captain Lucien Picard who was transferred from the Peninsular Base Section to set up this new unit. In an informal letter of instructions, Major Ray advised Captain Picard that "Corsica is virgin territory from the counterintelligence point of view...take care not to get mixed up in black market and other type of activities that have no bearing on CI work."*** The arrival of the CIC had been anxiously awaited by the G2 of the Northern Base Section and also by the OSS men on the island who had been performing some counterintelligence missions.

By 15 March the Detachment had established office space and living quarters for its personnel in Ajaccio and Bastia, the two principal cities on Corsica. Supply problems were paramount. The almost universal CIC dilemma of transportation had a crippling effect on the 427th CIC Detachment. Agents required to make on-the-spot investigations had secured no means of dependable transportation. Requisitions for Army jeeps were tied up in administrative delays and attempts to procure civilian vehicles proved to be of no avail in the early days of the Detachment.

SECRET

The woes of Captain Picard did not begin and end with the Detachment's lack of mobility. He soon discovered that despite the widely stated need for a CIC detachment on Corsica, no authoritative voice would outline the scope of activities to be covered by American counterintelligence on the island. Liaison with the French Securite Militarire was inadequate and basic counterintelligence matters were beset by confusion and contradiction. Failure to appreciate the role of CIC extended up to the Commanding Officer of the Northern Base Section who objected to the wearing of civilian clothes by the agents.

Understanding of the CIC's functions came only after the earnest efforts of Captain Picard and the passage of enough time for the Northern Base Section Command to become familiarized with the Detachment. By April, the 427th CIC was in full swing, and Captain Picard, his mission of establishing the new Detachment accomplished, was replaced by Captain Clarence E. Read.

Under Captain Read, the Detachment became actively engaged in installation, port and airport security in addition to bearing a heavy work load of incident investigations and travel control. An unexpected extra responsibility was the watch for German agents landing from the island of Elba. A request for five additional agents to supplement the nine agents already assigned to the Detachment was a clear indication to the officers back at AFHQ that the island detachment was thriving in the Spring of 1944.

A new major mission developed for the Detachment in May; the reporting of public opinion on Corsica regarding the average Allied soldier. CIC findings were summed up in the monthly report:

"The usual old complaints viz a viz the Americans are repeated in civilian mail censored by the French. Such are lack of 'correctness' in contrast to the British, fondness for liquor, too much interest in women,....being too friendly with the Italian.... By contrast these are interspersed with some approval of American equipment, methods, food, generosity, and gaiety. The above are unusual in base areas.... whenever the civilian population feels the inconvenience of a military occupation removed from the combat zone."*

The importance of these reports on civilian public opinion grew during the summer months as the island took on new strategic significance: Corsica was to be one of the embarkation points for the invasion of Southern France.

The greatest percentage of CIC activity was immediately directed at providing adequate security. In conjunction with the U.S. Military Police and French Agencies, a system of security adapted to the

*Rpt to AC of S, G2 SOS, MTOUSA, Subj: Counter Intelligence Report, dtd 4 May 44 (C)

individual conditions and necessities was instituted for each port, staging area and embarkation point.

During the critical period immediately prior to "D-day," all civilian telephone communication was curtailed, bars were closed in certain sections, travel was not permitted in restricted areas without special passes, and road blocks were established to check all personnel. In addition, civilian travel from Corsica to North Africa was prohibited.

There were incidents of security violations. Contrary to the security measures expected to be imposed upon the incoming troops, the first group to debark had not been previously briefed and, instead of remaining in their various staging areas, were in some cases, given passes to visit the town of Ajaccio. Unfortunately, some officers and enlisted men who had been "briefed" also entered the city or outlying districts.

CIC immediately went into action and by use of force and threats, succeeded in rounding up the stray personnel and shepherding them back to their areas. While in town, the personnel had attempted to spend "invasion money" printed especially for use in France. This money would have given away the destination of the landings; consequently, CIC immediately proceeded to collect and exchange it under various pretexts. A similar situation at Propriano involving French troops was concluded in the same fashion.

Repeated security violations were also committed by Air Force units which, from time to time, brought Italian nationals to Corsica as servants, without proper military or civilian clearance. Not only was it in direct violation of MTOUSA directives but also tended to aggravate an already delicate set of circumstances by placing the Americans in the position of violating French law and "protecting" Italians from French justice. Remedial action was instituted through regular G2 channels and also by the Commanding General, NORBS.*

With the landings in Southern France, all ports and embarkation areas in Corsica were exceptionally busy handling the large numbers of men and ships involved. The 427th CIC Detachment provided strict security but also observed the decline in intelligence activity. They attributed this to the inevitable "let-down" after a period of heavy activity and to the diminished importance of Corsica from an intelligence point of view.

Read reported in the September Intelligence Summary, "With the diminution of Corsica as a factor in the war and the resultant reduction in NORBS strength and activity, counterintelligence activities

*Monthly Intelligence Summary TO: AC of S, G-2, NORBS dtd 31 Aug 44 (S)

have been reduced to a negligible amount. Security activity on a joint French-American basis continues but in skeletonized form."

The Northern Base Section CIC discovered that counterintelligence operations on the island were at an even lower ebb in October. Removal of Headquarters NORBS from Ajaccio to Bastia necessitated the shifting of the 427th CIC Detachment as well. Major Read urged that the Detachment be reassigned in view of its limited functions and suggested that an Air Corps detachment could adequately handle all counterintelligence activities on Corsica.*

On 2 November a cable from MTOUSA set the stage for the transfer of the entire 427th CIC Detachment to Marseilles, France. The next day, the agents boarded a boat bound for the Southern France port. Ten months after its activation, the 427th CIC Detachment had completed its Corsica mission.**

431st CIC on Island of Sardinia

Under command of Lt Nicholas A. Fortunato, the 431st CIC Detachment provided security for the Island of Sardinia. Arriving on 26 April from Naples where it had been activated as part of the City Administration and known as the 6790th CIC Detachment (Provisional), it was renamed the 431st CIC Detachment on 16 August 1944.

Upon arrival in Sardinia, the detachment opened its main office in Cagliari where it was attached to the Allied Garrison Sardinia: later sub-sections were opened in Sassari and Olbia. The Port Security system subsequently developed resulted in a high standard of security in the Port of Cagliari.

Among the outstanding accomplishments of the detachment was the apprehension of a group of enemy agents under the leadership of a priest, Father Luciano Usai. He was apprehended by the detachment on 29 June 1944 after he had been parachuted from a German plane. Later eight other enemy agents were apprehended, and information was obtained that led to the apprehension of a ninth after the Detachment left Sardinia. These enemy Agents, on a mission for the Republican Fascist Minister of the Interior, were equipped with wireless transmitters and large amounts of currency.

On 10 October 1944, the Detachment left Sardinia and proceeded to Naples where it was attached to the Peninsular Base Section and placed under the operational control of the AC of S, G-2. Although it

*Ltr to Chief, CIC, AFHQ from 427th CIC Detachment, Subj: Change in Location of Headquarters, 427th CIC Detachment, dtd 4 Oct 44 (S) (RCD 7-7-112)
**Orders from Hq NORBS, AG-370.5, to Commanding Officer 427th CIC Det, Subj: "Movement of Troops, dtd 3 Nov 44 (S) (RCD 7-7-113)

operated with the 430th CIC Detachment as a single unit known as CIC, PBS, it retained its identity for administrative matters and continued to function as such until 26 June 1945, when it was disbanded per paragraph 1, AG 322/160 C-O, Headquarters MTOUSA, dated 18 June 1945.

As evidence of the outstanding work performed by this Detachment, a commendation received from Allied Garrison Sardinia on 11 October 1944, can be cited:

> "1. This headquarters desires to commend the services rendered by the 431st Counter Intelligence Corps Detachment which has been in Sardinia since April 1944.
>
> 2. This unit, commanded by 1st Lieutenant Nicholas A. Fortunato...performed its duties in a superior manner and won the respect and cooperation of both Allied and Italian Commanders and Intelligence Personnel with whom it was associated.
>
> 3. In all matters referred to this Detachment, it demonstrated high efficiency and resourcefulness, particularly where the apprehension of enemy agents was concerned.
>
> 4. The accomplishments of this unit were a definite contribution to the security of Sardinia during the past six months."*

Section 6

PO VALLEY CAMPAIGN BRINGS VICTORY

With the arrival of spring, the long awaited attack began. On 5 April 1945, General Truscott ordered the Fifth Army to begin execution of the plan of Battle: a diversionary attack on the west coast. The objectives were Massa, Carrara, the La Spezia naval base and eventually the great port of Genoa. It was hoped that this attack would keep the enemy occupied on the left while bigger game was sought to the east.* On 9 April, General McCreery's Eighth Army launched a powerful, stunning blow from the east coast to open the main attack.

At 0030 hours on 14 April 1945 the last great battle of the Fifth Army in Italy began.

The 10th Mountain Division moved forward from Castel D'Aiano across a valley and up a strongly defended and heavily mined enemy hillside. They were followed in hours and days by II Corps and IV Corps and the divisions under them. General Clark relates that "advancement was measured by inches and feet."**

The attack gained momentum as they advanced from peak to peak and on 20 April the 10th Mountain Division broke out of the Apennines. By dawn on 21 April, Allied troops had entered Bologna, and the end was in sight.

As General Clark reported, "Everywhere the enemy was in disorder as the Allied armies, penned up for bitter months in the mountains, stretched their legs in magnificent strides across the plains."***

The Allies no longer nipped at the heels of the retreating Germans as they had done after the fall of Rome; instead they caught up and devoured them. On the right flank, the 91st Division and others swung in a huge semi-circle across the Po and Adige Rivers and headed toward Treviso and Trieste, with the South Africans sweeping farther northward toward Bolzano.

On the Fifth Army front the 85th and 88th Divisions drove straight north toward Verona and then on into the Alps. The 10th Mountain Division dashed along Lake Garda to Trento, deep in the Alpine ridges. The 1st Armored slashed past Modena and carved a huge circle across the Po Valley in a final dash to Brescia and Milan. The Brazilians

*19 Days from the Apennines to the Alps - The Story of the Po Valley Campaign
**Calculated Risk, by Mark Clark, pp. 431 and 432
***Ibid, page 430

skirted the southern edge of the Valley in a push to Alessandria. On 30 April the city of Turin fell to the Nisei 442nd Infantry Regiment. General Clark reported, "Even the Germans knew that it was all over, and Hitler's suicide in his underground bunker in Berlin merely made it official."*

On 2 May, Fifth Army Headquarters intercepted the enemy's instructions to the German troops stating that they should lay down their arms at two o'clock that afternoon. General Clark noted that, "It was the first time during the war that a German Army group had surrendered unconditionally."**

Nineteen Busy Days for CIC

A period of 19 days had elapsed from the initial assault on the German Gothic Line to the unconditional surrender of the German Armies. These were nineteen very busy days for the United States Counter Intelligence Corps.

The 305th CIC Detachment, under the command of Lt Colonel Spingarn, was ready to participate in all "S" Force operations. They formed the counterintelligence personnel of the Bologna "S" Force on 21 April, the day the city fell. In the four days they remained in the city, more than 20 enemy espionage and sabotage agents were captured plus German Intelligence Service officials, four clandestine radio transmitting sets and certain valuable intelligence documents.

After the fall of Bologna, the Detachment moved forward with advancing troops and formed a segment of the Verona "S" Force. On 26 April, Verona (the headquarters of the German SD in Italy) fell to the Allies and a large number of sabotage agents were apprehended. During the same period, the 305th CIC Detachment performed many small "S" Force operations in such cities as Mantova, Trento, and Vicenza.

The Summing Up

Spingarn summarized the accomplishments of the 305th CIC Detachment during the Italian campaign with a report that it had "captured over 200 German espionage and sabotage agents and German Intelligence Service officials...seized large numbers of clandestine radio transmitters...dug up numerous caches of enemy sabotage explosives, and... arrested and interned hundreds of subversive Italians."***

The impressive work of the 305th CIC Detachment had not passed unnoticed by the Fifth Army High Command. At an awards ceremony at the Fifth Army CP on 15 December 1944, Lieutenant General Mark Clark,

*Clark, Mark W., Calculated Risk, page 435
**Ibid, page 437
***History of the 305th CIC Detachment, page 13 (L-1) (U)

who was leaving Fifth Army to assume command of the Fifteenth Army Group, turned to their Commanding Officer and said: "Spingarn, the CIC has done a grand job--outstanding. It has been a great help to the Fifth Army."*

IV Corps CIC Follows a Fast Pace

The 204th CIC Detachment hastened along with the IV Corps in the final drive. As town after town fell into Allied control, the CIC agents surveyed the areas for personalities and information about the fast-retreating German forces. The agents discovered that in most of these towns food was plentiful, water and electric supplies were intact, and transportation was adequate. Pillaging, looting and devestation - the usual aftermath of battle - were rarely encountered. But there were still problems for the CIC.

In the town of Mantova, as in many communes and villages, the Partisans appeared to be strongly Communist. Political activity had started with a vengeance after the liberation and all political parties were engaged in membership drives. The CIC agents who entered the town unwittingly became figures of great importance to the citizens. Soon the cause of this unsought prominence became clear. The metal "U.S." buttons on the collars of their fatigues had been interpreted by the Italians to stand for "Unione Sovieticae," and the agents were hailed as Russian soldiers.

Few agents were caught during these days of high-speed mobility. Aware that the end of the campaign was near, local Fascists had fled from small towns hoping to gain anonymity in large cities. German soldiers, often dressed in civilian clothes and heavily armed with weapons, roamed about the countryside equally afraid to surrender to Allied authorities as to return to their own forces and face charges of desertion. Partisan units were able to round up many of these strays from the once-feared Wehrmacht and turn them over to the Allied forces.**

CIC Casualties Near the End of Battle

On 29 April Agents Paul A. DeMare and Crispin C. Hernandez of the IV Corps CIC left their Detachment in order to join the 10th Mountain Division CIC on the front line. Traveling north in their jeep, the two agents encountered and joined a group of 1st American Division vehicles that were heading toward the front. Several hours later, four unidentified planes dived down from the sky and attacked the convoy. The agents hastily abandoned their jeep and tore for the ditches along the side of the road. A bomb fell and cascaded its fragments over the roadbed. DeMare and Hernandez, both uninjured, made

*Ltr to SAIC, All Sections CIC, Fifth Army, Subj: "Commendation (305th CIC Detachment), dtd 17 Dec 44 (C) (L-22)

**Memorandum for the OIC, Subj: Town Survey of MANTOVA, dtd 28 Apr 45, (C) (KCD 2-14-252A)

dashes in opposite directions away from the road. A second bomb landed in the road and a flying piece of shrapnel from the explosion lodged in DeMare's thigh. Despite this wound, he was able to run beyond the range of the third bomb. Hernandez was not so fortunate. Shell fragments from the third bomb scattered in his direction, and the agent was struck in the chest and right forearm. Both agents were evacuated after the raid to hospitals for treatment and recuperation.*

The following night, 23 April, Agents Robert L. Campbell and Paul Halloran of the 204th CIC Detachment, who had been working in the Apennine Mountains with the 10th Mountain Division, started to return to the main headquarters of the Detachment in the small town of Bazzano. A few miles north of Bazzano, their jeep struck a mine. Halloran was killed instantly, and Campbell died twenty-four hours later without ever regaining consciousness. Although the German surrender in Italy was only ten days away, the battle for the Po Valley was still raging. Casualties could not be prevented by hints of a cease fire.**

92d CIC Detachment Moves Rapidly

The 92d CIC Detachment, commanded by Lt Ramon Arrizabalaga, Jr., had moved to Pietrasanta during the first days of the Spring offensive. But before they had left their headquarters at Viareggio, the agents of this Detachment had managed to deal with a number of defiant Fascist captives. One such captive, a twenty-three year old native of Messina named Francesco Mattei, scrawled his bitter thoughts across a wooden panel in his cell:

"On this night I have written on six sheets of paper my statement concerning my confession, which was extorted from me by torture, lynching, hunger, lack of sleep; a true expression of the 20th Century civilization. These are the usual vicissitudes occuring to a defeated people. I too am a man defeated but not tamed. A lion that still roars until his last breath and I feel death still far, perhaps because I do not fear it...."*** The unbridled lies and outright defamation in this statement were attributed partly to Mattei's immaturity and partly to the adamant spirit that the Fascists had instilled in some of their supporters. This defiance was indicative of the obstacles that lay before the CIC interrogators.

***Rpt to AC of S, G2, 92d Inf Div from Hq CIC Det, Subj: "Mattei, Francesco, dtd 8 April 1945 (S) (KCD 6-4-59)

By 20 April the speed of the Allied advance necessitated moving the 92d CIC Detachment headquarters to the city of Carrara. While at Carrara, the agents made major preparations for the forthcoming move into La Spezia, the second city to Genoa in the Region of Liguria. The Detachment, supplemented by five FSS Agents and Captain Henry Nigrelli of SCI Unit Z, together with his staff, were to comprise the "S" Force entering the city.*

This Force entered La Spezia on 24 April 1945, directly behind the advancing Recon Troop. The following morning the whole Detachment moved in and the "S" Force phase was concluded. Because of oversight on the part of the advance Detachment, a billet had not been secured, and the search for one became the immediate concern. The story of how one was found and the subsequent apprehension of the finder, developed into the most important case experienced by the Detachment.

A "British Intelligence Agent"

On 26 April Agent McKee reported to 92nd Division Headquarters and found that an Austrian corporal in civilian clothes had turned himself in to the G2 Section, with a report that a large amount of SD documents could be found in a nearby villa. Subsequent investigation failed to uncover them, but did uncover an English intelligence agent named Theodore Schurch who was attempting to requisition the villa for a British naval unit. Because there were no British Intelligence agencies operating in the area, McKee took the Englishman to Detachment Headquarters.

In the confusion that followed, Schurch located a billet for the Detachment, treated McKee to lunch on steaks he had taken from the SD villa, and finally had McKee drive him to La Spezia to see friends. As the day passed, his story became less credible. Driving along the coast road, Schurch finally admitted that he was not a British Intelligence agent but had penetrated the SD on his own. To emphasize the point, he carefully threw away, one at a time, 50 gold pieces which he contended had been given him by the SD.

By early evening of 26 April, Schurch's story was so confused and unsubstantiated that he was placed in the La Spezia jail. The following morning he confessed to being an SD Agent.

His background and mission were equally amazing. He had been recruited in London in 1935 by the British Fascists and he could speak Italian as his father was Italian-Swiss. Starting in 1936, he spent the majority of his time in Egypt and North Africa attempting to penetrate the British Army. With the fall of Fascism he entered the CIS and in June 1944, began operating with the SD.

*History of the 92d CIC Detachment (K-17) page 14 (S)

Schurch confessed that his mission was to reach Rome and penetrate the Vatican where he was to observe and report on American Archbishop Spellman's activities both in Rome and the Vatican and in the Russian occupied countries. After he confessed, Schurch was dispatched to Florence and later to Rome where he gave valuable information to SCI Unit Z in the "Eternal City."

On 30 April the Detachment left La Spezia and proceeded as the advance party into Genoa. This city provided the setting and the 92d CIC the agent, for one of the quickest and most fruitful enemy stay-behind roundups in Corps history.

30 Spies in 30 Days

SCI Unit Z supplied the Detachment rather vague information concerning an unnamed and undescribed Italian who occasionally frequented a certain local bar. Special Agent Henry Feldman, who had joined the Detachment in March, set out to find him.

At 1000 hours, Feldman found him attending a funeral and learned that his named was Arnaldo Varini. Immediate interrogation followed and by 1900 hours the same night and with the help of Varini, Feldman picked up ten other enemy Agents. By noon the next day, Feldman had apprehended a total of 15 enemy agents. It was an exceptional job considering the lack of information concerning the original suspect, and it resulted in the complete defeat of a KDO-150 stay-behind net.

Feldman continued his masterful work and in one month's time had apprehended and obtained confessions from over 30 stay-behind agents.* It was his initiative and perserverance that greatly contributed to the success of the 92d CIC Detachment in Genoa.

A Well-known American Poet

The case that proved the most memorable to the agents of the 92d CIC Detachment began on the day after the official cessation of hostilities. On the morning of 3 May, an agent was ordered to proceed to the home of a prominent American poet turned expatriate and pro-Fascist. From the summer of 1940 until shortly before the surrender in Italy, Pound had written anti-American tracts for broadcast by the Italian Ministry of Popular Culture to England and the United States. At times, the poet's own voice had been heard following the introduction, "Europe Calling--Ezra Pound speaking" and condemning the "International Financiers of New York" for having plotted to "drag" the United States into war.

*History of the 92d CIC Detachment (K-17) page 16 (S)

The agent discovered in Rapallo that had been taken away by the Partisans earlier in the day and turned over to an Infantry Battalion Commander of the US Army. On instructions from the G2, 92d Division, the captured poet was delivered to the CIC.

Interrogation was delayed until the following day when an FBI agent from Rome who had been gathering material on for 18 months, arrived at the Detachment headquarters. and Lt Arrizabalaga jointly obtained a signed statement from the poet which disclosed his activities on behalf of Mussolini, the man he had idolized, and the Fascist cause.

his mistress, and his wife, had formed a happy marital triangle throughout the war in the villa at . After completing the initial interrogation, CIC allowed wife and mistress to return to the villa. But was detained at the Detachment until he was placed under the jurisdiction of the Fifth Army Provost Marshal prior to shipment back to the United States on charges of high treason.*

The Record of the 92d CIC Detachment

In the summing up of its part in the Italian campaign, the 92d CIC Detachment recorded a total of 23,000 interrogations, of which 17,000 dealt with line crossers. From these interrogations, 102 enemy agents had been uncovered and convicted.** These accomplishments were made by a Detachment that never had been activated by the War Department and that never found a place in official Army files.

501st CIC in the Final Chase

While the 92d CIC carried out operations along the coast line, the 501st CIC Detachment followed the 1st Armored Division deep into the Italian Alps. Under the command of Lieutenant Richard W. Lindsay who had relieved Captain Richard R. Ray in January, the agents forged ahead despite battle hazards that included the entry by the CIC into towns where there were no American troops. On one occasion, a German plane swooped low, barely missing the house in which the Detachment was billeted and hitting and burning to the ground a barn about forty feet distant. As the Detachment entered the Aosta province near to the Great Saint Bernard Pass where the boundaries of Italy, France and Switzerland joined, border control problems assumed added importance in the daily routine of the agents. A system of road blocks, supplementing the running patrols of the tactical troops, served as a barrier to potential border crossers.***

***Ltr to Chief, CIC, AFHQ, from Hq CIC 1st Armored Division, Subj: "Attached Inclosures," dtd 18 May 45 (C) (KCD 6-1-1)

The assistance of a C/S (Italian Counteresnionage) Agent to the 501st CIC Detachment was invaluable throughout this final phase of the campaign. On 29 April the Agent, remained in a small town in the province of Bergamo to interrogate jailed suspects while the rest of the Detachment moved forward. Late in the evening, his interrogations still not completed, decided to catch a few hours sleep. Shortly before dawn broke the next morning, was roused by the local head of the Committee of National Liberation who claimed excitedly that a column of 4,000 Germans was approaching the town. A force of 200 Partisans formed the first and only line of defense. Shots being fired near the town confirmed the official's report, and hastened to the town square where he discovered the populace preparing for a frenzied flight. Mistaken for an Allied officer since he was clothed in an American uniform, succeeded in allaying the fears of the townspeople. Then he joined the Partisan leader at the front lines and ordered an Italian who spoke German to shout to the massed enemy forces that an "American officer" was leading the Partisans and that there was no sensible alternative to surrender. fired two shots in the direction of the Germans to punctuate his demand. An officer came forward cautiously from among the German troops and saw standing in an American uniform with his pistol upraised. The German's reaction was immediate. He called to his men to advance towards the Partisans with their hands high. Quickly, 150 German troops were disarmed and led off in confinement. bold venture had paid off, for the greater portion of the German column had been deployed in another sector and never approached in town. For this action, Lt Lindsay recommended that be awarded the Bronze Star.*

CIC Misses "Il Duce"

The 501st CIC Detachment's most exciting case began when S/A McDonough who was operating with Combat Command "A" arrived at the Partisan Headquarters in Brivio, to learn that Benito Mussolini was being detained by Partisans near the city of Como. He immediately sent a runner to Como with written orders that Mussolini be brought to Partisan Headquarters at Brivio for further disposition by the CIC.

McDonough followed the runner and arrived at approximately 1000 hours, 28 April 1945, at the joint Partisan and Committee of National Liberation Headquarters in Como.

McDonough was joined by S/A Lindsay at 1830 hours the same day and the Agents found that the CLN (Committee of National Liberation) had orders from their Headquarters in Milan to turn "Il Duce" over to that office.

*Ltr to Commanding General, 1st Armored Division from Hq 501st CIC Detachment, Subj: , dtd 5 May 45 (C) (KCD 6-1-1)

The situation was tense as Giovanni Dessy, Captain of the Intelligence Service, Italian Royal Navy, and Salvatore Guastoni had just been instrumental in disarming the 3,000 "last ditch" defenders of Mussolini by promising them safe passage from the city of Como. There were so many factions in operation that the CIC Agents feared an immediate uprising would ensue thereby killing many people who could be of help to the CIC.

The same evening, Lindsay interviewed Major Cosimo De Angelis, Partisan Commander of the town of Como, and Oscar Sforni, representative of the Republican Party for the CLN at Como. They related that early that morning, a certain Colonel Valerio from the Milan CLN had arrived with 15 armed partisans to capture Mussolini whom they believed to be hidden 30 miles from Como in the village of Dongo. Valerio emphasized that only Sforni and De Angelis could accompany him in the search for Mussolini.

They arrived in Dongo at 1330 hours and immediately found Captain Pietro who was supposed to be hiding Mussolini. Valerio and Pietro went to another room, leaving Sforni and De Angelis to themselves.

The two men revealed that they were subsequently arrested and thrown in prison and to their surprise, found that they had been arrested under Valerio's orders.

Later De Angelis and Sforni told that at about 1700-1800 hours, they saw a file of approximately 14 men lined up and shot before the city hall building of Dongo. These men included such Fascist personalities as Barraccu, under-secretary of State, and Petacci, brother of Mussolini's mistress. Petacci was removed from the group just before execution but was shot later when he attempted to escape.

After the completion of the executions, De Angelis and Sforni were released and they immediately questioned Pietro concerning Mussolini's disposition. De Angelis said that Pietro had told him that there had been fifteen persons killed, "and had added, rather significantly, one other."* Sforni also said that Pietro had related that it had been against his will to have Mussolini killed like the others, about three-quarters of an hour earlier. To Sforni's demand as to whether Mussolini had died in good spirit, Pietro had responded that, "he had not died 'too well.'"**

On 29 April 1945, Lindsay encountered eye witnesses at Como who said that they had seen the dead body of Mussolini at Milan, hanging by his feet in the Piazza of the Fifteen Martyrs. Acting on this information, Lindsay ordered the Como Questore to pick up Mussolini's wife, Rachele Guidi, and his son and daughter, Romano and Anna Maria. These three were brought to the Detachment's billet in the Villa Crespi at Como and eventually sent to the rear through CIC channels for their own safety and re-interrogation.***

---

*Mon. Info. Rpt. TO: CG, ASF, from 501st CIC, dtd 30 Apr 45, page 5 (S)
**Ibid. page 5 (S)
***Ibid., page 6 (S)

Although the capture of Mussolini was not successful, the apprehension of his wife and children and their subsequent interrogation provided the names of many Fascist personalities that were captured during the following weeks.

On 4 May 1945, after the cessation of hostilities, S/A's Kelly and McDonough went with a task force of the 01st Cavalry Reconnaissance Squadron to Aosta, called Val d' Osta or the Valley of Aosta. A rather bizarre situation was found in that this Italian community had created a separate flag, formed a separate government and wanted complete independence from Italy. Noting the discontent, the French started a propaganda campaign with the ultimate aim of annexing the community to France. Kelly and McDonough, besides handling security in the community, had to make sure that no outbreaks of violence occurred between the Italian and French troops stationed there. The community eventually remained Italian and on 5 June 1945, the two Agents returned to their Detachment at Biella.*

On 26 June 1945, the 501st CIC Detachment was disbanded in the vicinity of Biella. From its original landing in Italy on 28 October 1943 until its disbandment, the Detachment had been a measuring rod for a CIC Detachment assigned to an Armored Division. The success of the Detachment in keeping pace with its fast-striking Division bore testimony to the efficiency and thoroughness of the 501st CIC agents.

10th CIC in the Sprint to Victory

During the month prior to the Allied Spring offensive, agents of the 10th Mountain Division CIC established a system of refugee controls in the Division area that resulted in the screening of about 50 to 300 persons daily who had crossed from EOT to Allied lines. This close control was initiated to ward off a last-desperate attempt by the German Intelligence Service to gather information on the mounting of the offensive.

On the move with the Division in April, the agents managed to capture five enemy agents and saboteurs and to intern 150 Fascists considered dangerous to ordered peace in Italy. Twelve hours before any other Allied troops entered the city of Mantova, 10th Mountain Division CIC agents had secured targets that otherwise might have been destroyed. From their daring action, the agents were able to provide tactical commanders with information which showed that a contemplated bombing attack on the town was not needed.**

On 30 April members of the Detachment participated in an amphibious maneuver on Lake Garda that landed tactical troops in the town of Gargnano where Mussolini's former villa and office were located.

1802

CONFIDENTIAL

In "Il Duce's" hastily evacuated studio, Agent Peter Gordon discovered an amazing collection of the dictator's correspondence. Included in the cache of papers were letters exchanged between Mussolini and Hitler; reports by Mussolini on Italian-German relations; papers disclosing the formation of the Republican-Fascist government; dispositions and orders regarding the Fascist Army; activity reports of the SID and its chief together with results of investigations of noted anti-Fascists. The files, which contained enough material to form a clear profile of the Mussolini regime, had been carefully arranged, and an extensive card index provided the key to systematic study of the letters.

The file chief was located in the town, and he obligingly revealed that only two suitcases of papers of military importance had been removed along with the letters that related to Mussolini's private love affair. The remainder of the files had not been [illegible] agent Gordon had come across the most significant find of the Italian campaign.*

The "Italian Story"

The prodigious number of enemy agents captured and the overall success of each CIC Detachment in breaking them, the highly effective troop security measures, the road blocks and the town surveys were only segments of the "Italian story." Etched deeply in the memory of each CIC agent were the little unimportant incidents which assumed such stature during the elapsed time between the Salerno landings and the Spring victory in the foothills of the Alps. Histories could tell, but never recreate, the hell of Salerno and Anzio; the beauty of Rome; the bitterness of an Apennine winter; the sight of thousands of barefoot, dirt encrusted children; the brief glints of comedy that sometimes spotted the tragic gloom of war. But in the minds of each agent were thoughts that no official record contain and that no history can accurately relate.

The war was over and home seemed immeasurably nearer. The feelings of the CIC men can best be summarized by a remark attributed to a soldier with the 88th Infantry Division. He said simply, "We made it."**

CIC In Italy Re-organized after the War

The Germans' unconditional surrender on 2 May 1945 marked the end of the combat mission of CIC in Italy. As tactical divisions were rotated back to the United States or assigned occupation duties, the

1803

CIC units attached to them were disbanded. CIC agents who remained in Italy were divided between two detachments; the 430th which was sent to Austria and the 428th which continued counter intelligence operations in Italy until 14 December 1947.

APPENDIX I

ROSTER FOR ITALIAN CAMPAIGN

Note: Detachments listed are those to which individuals were assigned on permanent duty.

Name	Detachment
Abruzzese, William	305th

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

CHAPTER 5

PREPARATION FOR OVERLORD

CIC's Mission Grown Beyond Its Numbers

Between early November 1942, when Center Task Force commitments reduced CIC's numbers in England to seven persons,* and 1 May 1944, the eve of the jump-off on the biggest invasion in history, the ETOUSA CIC Detachment in England grew to 110 officers and 831 enlisted men,** a number considered far too small for the task which was assigned to CIC in the invasion of the continent. For the growth of CIC's mission had been far out of proportion to its growth in numbers. In vivid contrast to the vague last-minute plans for CIC's employment with the Western and the Center Task Forces in the invasion of North Africa,*** CIC's mission was now definite, with plans for its employment included in special annexes to invasion plans for all units down through Division.

Through trial and error in North Africa, Sicily, and Italy, and through the courage, initiative, and special abilities of its agents, CIC actually had written its own mission. Three men high in the planning circles had intimate knowledge of what CIC could do. Lt Col Gordon Sheen had returned from North Africa to become chief of the CI Branch at SHAEF. Colonel Oscar W. Koch, G2 of Patton's Third Army, had known CIC with the Western Task Force and again in Sicily as G2 of Seventh Army. Colonel Benjamin A. Dickson, G2 of First Army, had been even more closely associated with CIC. As G2 of II Corps, he had observed -- and directed -- CIC in the invasion at Oran and through CIC's first prolonged combat experience in Tunisia. At the end of the Sicilian campaign, when he was chosen by General Bradley for his role with First Army, he took along with him as his CIC chief Major Horace Miner, the Michigan college professor who had led II Corps CIC through the Tunisian and Sicilian campaigns, and 2d Lt Charles B. Conick, who, as a Staff Sergeant, had been one of the four CIC agents to go in on the invasion at Oran. What these men had learned in North Africa and Sicily, plus reports of what was happening in Italy, furnished the basis for CIC's assigned part in the invasion and occupation of Europe.

---

*There is a discrepancy in this figure. Radiogram No 3717, London to AGWAR, 10 Oct 42, signed "Eisenhower" listed all CIC personnel then in England and stated that all but three officers were to be used in the North African invasion; however, a special report written by Lt Col H.C. Sheen, CIB Chief in England at the time of the North African invasion, entitled "United States Counterintelligence in the European and North African Theater, August 1942-September 1943," stated that the transfer of CIC personnel to the North African invasion forces left only three officers and four enlisted men in England.

**ETO roster, 1 May 1944 (The latest roster now available). It is known, however, that several persons were added before 6 Jun 44. Also, 7 officers and 83 enlisted men belonging to ETO were in Iceland, but could not be considered in continental needs.

***See Chapter 1, "North African Campaign"

But an unbelievable amount of planning and training had taken place during this period of approximately 18 months, plus a profound increase in respect on the part of ranking Army officers for this hitherto little-known organization. CIC's early anomalous position is illustrated by a memorandum written at ETO Headquarters in March 1942, less than two months after the arrival of T/Sgt Gilbert S. Meldrum and S/Sgt John P. Ryan with U.S. troops in Northern Ireland in a semi-undercover capacity:

"It has come to the attention of this headquarters that military personnel may be investigating civilian espionage or subversive elements. Such action on the part of the armed forces of the United States may cause grave complications with North Ireland authorities."*

Further illustration is found in a letter from the AC of S, G-2, ETOUSA, to Washington on 31 March 1942:

"How secret is the presence of these members of the command to be? . . . The subject of purchasing civilian clothes is not clear to this office. . . This office recently received a shipment of special equipment which suggests that members of The Counter Intelligence Corps are intended to act in the role of authorized police. . ."**

Discussing this incident many years later Colonel (Reserve) Hugh D. Wise, Jr, recalled that General Headquarters in Washington had requested two CIC agents who "although they did not have to object to the English, must not be too fond of them." Wise, who at that time was Assistant Chief of CIC, said that CIC was not given any information as to how the men were to be used, and, except through calculated guess, did not know where they would be sent. Consequently they were not briefed or given any cover by CIC.***

Inspection Reveals Lack of Direction

Neither these problems nor the many more serious ones that developed as the numbers of CIC agents grew and the atmosphere of planning became more tense were to be solved easily. When Wise, then a Lieutenant Colonel, made an inspection of CIC Detachments in England in the fall of 1943, he found an appalling lack of direction of CIC efforts low morale among the agents, an inadequate number of linguists, and ignorance of the mission of CIC at practically all echelons.****

*Memorandum No. 44, Headquarters ETO, dated 6 Mar 42, from Operational History of Theaters (L-17) NOTE: No documents are available to indicate any incidents which may have precipitated the above memorandum.
**Operational History of Theaters (L-17) (RESTRICTED) (S & F LIBRARY FILES)
***Interview with Colonel (Reserve) Hugh D.Wise, Jr, August 1954
****Memorandum for the Chief, CIC, subject, "Visit to ETO and certain CIC Detachments in that Theater," signed Hugh D. Wise, Jr, Lt Col, GSC, Ass't Chief, CIC, dated 25 Oct 43 (SECRET) (S & F Library)

"The CIC organization in this Theater has been neglected for some time," Col Wise wrote. ". . . The Office of the Detachment Commander is not current on the CIC directives which have been issued and does not know. . .what the various detachments are doing. Each detachment has been left to shift for itself without coordination. The various detachments working in the same areas have not been coordinated, the detachment commanders did not know each other or where the men of overlapping detachments were located. The trip made by this officer constituted the first visit by a higher echelon to any one of the detachments except the SOS. . . .The Office of the Chief, CIC, ETO, did not know where the detachments were. No planning for future use or training except Lieutenant Copeland's work in reference to a training program instituted by 2d Lt Miles Copeland , . . ."

. . . This rudderless situation was not entirely the fault of any one individual, Colonel Wise pointed out. Even at the highest planning levels, no one knew what the ultimate organizational framework of the invasion forces would be, or who would command the various echelons. "It is believed that the Chief of CIC should be with the highest American Command which has under it tactical and static organizations both in the United Kingdom and on the continent," Colonel Wise stated. "However, . . . some difficulty has been experienced in determining what this organization is." Colonel Wise paved the way for the elimination of this particular difficulty through a conference with Brigadier General Edwin L. Sibert, AC of S, G-2, ETO, in which it was decided that for the present ETO should be considered the highest echelon, but that CIC's Chief and its personnel would be transferred without objection if another echelon became the appropriate one.

CIC Hampered by Lack of Direction

Another difficulty had been the instability in Counter Intelligence Corps organization and in the assignment of personnel. On 1 September 1942, soon after the arrival in England of a CIC detachment of five officers and 15 agents, Captain Kirby M. Gillette was named CIC Chief, ETOUSA, with additional duty as G2 staff officer in charge of Counterintelligence Branch (CIB) planning. On 10 September, Lt Col H.G. Sheen, former War Department CIC Chief, arrived and was named CIB Chief, thus relieving Gillette, by now a major, and his CIC Detachment, of staff responsibilities. With the depletion of CIC's numbers in England for the North African invasion, the CIB and CIC staffs again were merged, this time with Colonel C.R. Abraham as chief and Sheen as his executive. Late in February, Colonel Abraham was reassigned, Sheen was sent to North Africa as Chief of the Counterintelligence Branch at AFHQ in response to an urgent plea for a man capable of reorganizing CIC there, and Gillette again took over the combined CIB, CIC job. Another upheaval occurred in April, when Gillette was returned to the United States to join the staff of the Chicago school and was replaced by Major P.A. Calvert, newly arrived from MIS, War Department. Captain Claude Goza, who was designated Acting Chief, CIC, was replaced in August by

Lt Col Richard D. Stevens, who had just arrived from Iceland and held the position only while awaiting transfer to another assignment.*

CIC's organization was not alone in its instability. In an almost plaintive letter to CIC Chief Colonel Kibler on 31 May 1943, Major Calvert stated: "Counterintelligence and G2, itself, in this Theater have been seriously handicapped for a year due to the constant changeover in G2's, there having been five. The last four months have been particularly hective, with no permanent organization in G2 and with Colonel Sheen in Africa since February with no word from him. . . "**

Stable Organization Finally Achieved

On 20 October 1943, Major Howard E. Wilson, who had been commanding the CIC Detachment at Headquarters (COS), became Chief, CIC, ETO, and, with the promise of General Sibert that CIC would be permitted to remain intact regardless of changes in echelon, it was possible for the first time to form a stable organization. Wilson reorganized his headquarters, appointing Major Oliver L. Rapp as his executive; Captain Robert E. Doyle as officer-in-charge of all administration and the rapidly growing personnel problem; and Lt Frank E. Kearns as CO of the London Detachment. He also directed Lt Copeland to continue his training program upon an expanded basis.***

Colonel Wise's observation that CIC was hampered by the ignorance of its mission on the part of other Army personnel certainly was not new. This problem had been encountered in CIC's first combat experiences in North Africa.**** In January 1943, Major Gillette, in a letter to all CIC Detachments in the ETO and to MID, Washington, giving a brief summation of information received from North Africa, concluded with the following: "It is recommended that CIC detachment commanders take steps to acquaint their respective organizations with the mission and functions of CIC. Lack of knowledge of these facts has resulted in considerable misunderstanding in the field. The existence of the organization, its mission, and its functions should be well known throughout the Army, and every opportunity should be used to make known to proper authority the fact that this organization is prepared to render valuable service to our forces. It may be noted that a proper understanding of our mission can be conveyed without divulging that information which should be

****See Chapter 1, "North African Campaign".

treated as secret: namely, the identity of CIC personnel."*

This same thesis was expounded many times during the preparations for the Normandy invasion, but perhaps nowhere more lucidly than in a paper prepared by 1st Lieutenant Edward L. Saxe, of the ETO Detachment in March 1943 and sent along by Major Gillette to the CIC Chief in Washington with the comment,". . . has interested appropriate authorities in this Theater."**

In this paper, Saxe discussed the "erroneous assumption" that the functions of counterintelligence are entirely separate from the functions of operational and positive intelligence. Saxe pointed out that the German Abwehr and the British Intelligence agencies, both of which had long been active in the field, recognized the importance of the coordination of all intelligence agencies, either through the device of a single administrative unit, as in the Abwehr, or constant and thorough cooperation, as with the British.

"Each intelligence agency and each sub-section thereof possesses information of value to the next, Saxe wrote. ". . . The need for unity throughout the field of counterintelligence is, unfortunately, perceived only by those few who appreciate fully the activities of each one of the agencies involved in the general field of intelligence. Knowledge is often limited because of the need for secrecy, and secrecy sometimes becomes a fetish. There are few people in the U.S. Army who are fully aware of the contribution which can be made by the several U.S. Intelligence agencies and related bodies to a pool of information and experience available for counterintelligence purposes. . ." Saxe went on to give numerous examples of the lack of coordination of intelligence agencies, one of which was the fact that, although censorship of communication facilities had been established within the U.S. Army, little thought had been given to the positive function of censorship. "Overseas operations will provide many opportunities for obtaining valuable information from our routine mail, telephone and other communication checks, and personnel must be indoctrinated with the positive value of what is usually considered negative censorship," he wrote.

"The minimum essential is that all of the agencies and organizations which may possibly contribute something be informed of their possible contribution to Counterintelligence, that key personnel in each of these agencies and organizations be informed as to the very many facets which have to be exploited in this field and that someone in a position of authority coordinates all effort. Even though all counterintelligence functions are placed under the command of a Theater commander, this task will not be accomplished unless an authority who realizes the broad

aspects of the picture, the parties who can contribute to it, and what they may contribute, insists upon the close coordination and cooperation of all concerned," Saxe concluded.

Training Program Broadened

One of the main features of the training program which Colonel Wise in his report said had been initiated by Lt Copeland, assisted by seven agents, was a one month's "Orientation Course on Continental Europe," launched on 1 August 1943 with 22 students. Short courses in "Static Security" and "Laws of Occupation and European Politics" were given to numerous persons, and a month-long "CIC Field Training" course was given at the American School Center at Shrivenham to 180 agents, assigned to divisions and corps, whose field training was considered inadequate. Several CIC agents were sent to the British "Other Ranks Security Course" at Matlock, and men from the British Field Security Service (FSS) attended the Orientation course as guests.

Various other short courses were attended by CIC agents, including a nine-day "Order of Battle Course" and a three-day German documents course at the Military Intelligence School in London. In addition, CIC agents participated in various problems and maneuvers of the tactical units to which they were attached, and three officers and ten agents took part in Exercise Harlequin, an amphibious maneuver in the English Channel, to gain practical experience in the mounting of such operations.

All this training was considered necessary since it had been learned in North Africa that the training at the Chicago School, with its specialization upon such investigative subjects as laws of arrest, the taking of latent fingerprints and American court procedures would be of little benefit to the agents in the work they would have to do. Changes were made in the Chicago School curriculum, but these changes came too late to benefit greatly the men who would go to the continent with combat outfits.

Every CIC unit launched a program for training French and German linguists. This brief language training was, of course, insufficient for CIC's needs, and the lack of linguists continued to be CIC's principal weakness throughout the war. As late as January 1945, only 26.9 percent of the Corps' members in Europe could be classified as having a working knowledge of the German language. As our forces moved into Europe it was necessary to recruit men from other branches of service. There was not time to give these recruits formal training; they learned principally by working with other agents.*

* Wise Report, "Visit to ETO, etc."; "Training in England" from CIC Operational History of Theaters (L-17); Report of the General Board, USFET; Opns Rpts, 322.999 (CIC) ETO 7/1/43 through 7/30/43, No. A7 (612242) (SECRET), 101st Abn and same for 5th Inf Div and Hq ETOUSA (SECRET) (ALEXANDRIA Depot)

A flow of Training Bulletins sent out to all CIC units by Lt Copeland's section discussed such subjects as French political parties under Vichy; the Counterintelligence estimate in France; the followers of Laval; underground movements and German countermeasures; DeGaulle and the Fighting French; counter-sabotage; CIC tactical experiences in North Africa, Sicily and Italy; British and U.S. agencies related to the CIC; German military administration in France; and the French police system. During the immediate pre-invasion period, the Training Section sent lecturers on request to the Intelligence sections of lower echelon headquarters and to Civil Affairs detachments.

The last project achieved by the Training Section before the invasion was the publication of a 400-page bound volume entitled "CIC Handbook on Europe," compiled from documents from the files of British and U.S. Intelligence agencies and numerous other sources and containing, as detailed in the preface, ". . . facts on the countries, people and circumstances that will have any bearing on our operations on the continent. . ."*

Wise Reports on Morale

Colonel Wise in his report was critical of the factors which had caused the extremely low morale situation, which he attributed to "the promises of promotion and glamor made to the men before they came over and the falsehoods told them with respect to their selection and their mission." He cited a case where three men going out as sergeants were asked in the Office of the Chief, "How would you like to come home a Major?" and told of a Technical Sergeant who, upon being sent from Fourth Service Command to Iceland was told that he was to have been made a Master Sergeant but that the Office of the Chief had called for him by name and insisted that he be sent to Iceland. This, Colonel Wise stated, was not true. Similar "information" was reported to have been given to others in the Service Command. One Private First Class, sent to a division, was told at Fifth Service Command Headquarters that he had been carefully selected and chosen for a very special important mission.

"This type of thing is repeated as often as the men are talked to, and Third, Eighth and Seventh Service Commands seem to be the only ones which have not repeatedly been guilty," Colonel Wise wrote.

Colonel Wise repeated numerous similar examples, including the fact that men from the Fourth and Sixth Service Commands had been led to believe that if they joined CIC they could expect to be commissioned within two months. In addition, in the Fourth Service Command, men who expressed a desire for transfer from CIC were given to understand that if they pressed the matter, they would be sent overseas immediately in grade.

* Wise Report, "Visit to ETO, etc."; and "Training in England," from CIC Operational History of Theaters." (L-17)

CONFIDENTIAL

"The disappointments that have come to these men, naturally, had their effect. They feel that they have been duped and lied to by The Counter Intelligence Corps, and they resent that much more than they do the fact that there has been little or no promotion for them."

Even more serious than the low morale of the men, Colonel Wise pointed out, was the fact that these men were hampered both in their work and in their training by their enlisted status, although prerequisites for admission to CIC were as high, and in some respects higher, than those required for officers. Some of the British courses were closed to them; they could not be permitted to see certain CI publications, including the Counter-Sabotage Manual; and COSSAC (Chief of Staff to Supreme Allied Commander), the planning group for the invasion, was at that time planning a course in counterintelligence, open only to officers.*

CIC's Mission Threatened by OSS

Colonel Wise reported another development which threatened to wreck CIC's assigned mission, carefully worked out on the basis of experiences in North Africa and Sicily and published by ETO Headquarters on 17 August 1943. This directive stated CIC's mission to be: ". . to provide effective counter-espionage, counter-sabotage, counter-subversive and other necessary forms of security for all military and civilian organizations within the jurisdiction of the Commanding General, ETOUSA . . . . Their mission is directed against the enemy's efforts to gain information about, or do damage to, the Allied forces, their installations, personnel and equipment. . . . "**

Colonel Wise learned that the Office of Strategic Services (OSS) had moved into London "with a large staff of officers rather than enlisted men, unlimited money and with the complete backing of the Joint Chiefs," and had issued a directive in which the following was given as the function of the Special Counter Intelligence (SCI) unit within their organization: "To maintain a counter-espionage unit for the purpose of training and reporting upon the activity of enemy agents throughout the world (except the Western Hemisphere and the British Empire); also to make available to the Theater Commander, Staff Officers trained in counter-espionage duties; to furnish names and information concerning enemy agents, provocateurs, sympathizers and subjects."

According to Colonel Wise, Lieutenant General Devers, ETO Commanding General, over whose command line the 17 August directive had been published, on 24 August wrote a letter to the Joint Chiefs of Staff in which he said that he intended to use OSS personnel, among other things,

*Wise Report, "Visit to ETO, etc."
**Ltr AG 322, Hq ETOUSA, subj, "The Counter Intelligence Corps, ETOUSA," dtd 17 Aug 43. (RESTRICTED) (SCS Library)

to do "counter-espionage in the zone of the Allied Armies or territory occupied by them."*

Colonel Wise continued by explaining that when CIC first arrived in England the British had accepted them as the U.S. Army counterintelligence organization, but after the arrival of OSS with the apparent backing of the Joint Chiefs of Staff, the British had accepted them instead, and viewed the CIC as merely the American Field Security Personnel (FSP).

Colonel Wise conceded that this change in attitude had been facilitated by the fact that the Counterintelligence Branch in ETO Headquarters had become absorbed with the field security mission to the relative exclusion of the real counter-espionage problem. The whole situation, he feared, would result in CIC's being relegated to a field security mission, to be followed, in static situations, by routine military counterintelligence functions and the "leg-work" for OSS. Colonel Wise attached to his report a letter which had been received in ETO from AFHQ dealing with the friction which had developed in the North African Theater of Operations because of the overlapping in mission of the two organizations.**

CIC and SCI Missions Delineated by SHAEF Directive No. 7

That Colonel Wise's apprehensions, although well founded, did not eventuate will be seen as the story of the final planning for CIC's role in the European campaign and CIC's actual accomplishments is told; it also can be seen in the following brief paragraph from the report of the General Board on the "Organization and Operation of The Counter Intelligence Corps in the European Theater of Operations," prepared shortly after the end of hostilities in Europe: "In operations, personnel of Special Counter Intelligence and of The Counter Intelligence Corps were in direct contact for the exchange of information. Office of Strategic Services made available to The Counter Intelligence Corps its extremely efficient communications network for the rapid transmission of important classified information."***

No documents are now available to show how this problem was resolved and how the missions of the two organizations were categorized into their separate spheres so that a minimum of friction and a maximum

*Wise Report, "CIC in the ETO, etc."

**This letter, listed as an inclosure to Col Wise' report as follows: "Ltr dtd 7 Oct 43 recd by ETO from AFHQ dealing with relationships between OSS and CIC in Sicily," has not been located; however, other reports dealing with the same subjects are discussed and documented in Chapter 4. "The Italian Campaign," and Chapter 3, "Critique-North Africa, Sicily"

***Report of the General Board, USFET, "Organization and Operation of the CIC in the ETO," Study Number 13. (RESTRICTED)

of efficiency could be achieved by both, but it seems undeniable that the same decision was made at a very high level, as will be discussed later.

112 CIC Men in England in October 1943

At the time of Colonel Wise's visit in October 1943, there were 16 officers and 96 enlisted men assigned to CIC in England, and distributed among the following organizations: Headquarters ETO, SOS, Eighth Air Force, V Corps, 29th Infantry Division, 3d Armored Division, and 101st Airborne Division. Units then due to arrive were believed to be bringing their own CIC Detachments, although few of them were at full strength.* The correspondence files for 1943 are full of requests from the Theater for an increase in the T/O allocations for CIC units, and even for personnel to fulfill the T/O already adopted. A letter published by ETO Headquarters on 17 August 1943,** based on War Department allocations*** had designated that the following would be placed on detached service by the Chief, CIC, ETOUSA, in sections with field forces: Division Section, one officer and five enlisted men; Corps Section, two officers and 11 enlisted men; Field Army Section, five officers and 45 enlisted men; Air Force Section, five officers and 17 enlisted men, plus such expansion as might be necessary based on the increase in size of the Air Force; and SOS Base Section, as required, according to the size of the Base Section.

Actual numbers were far short of these requirements. It was already recognized by the ETO planners, as they studied the mission and accomplishments of CIC in North Africa, Sicily and Italy, that a full complement, in accordance with the published T/O, would be completely inadequate. The TBA, especially as it related to transportation, which had been published by the War Department on 17 July 1943,**** was felt to be so inadequate as to make even the small contingents of agents of little use to their tactical organizations. A letter from Major Edward L. Ray, Chief of CIC at AFHQ Headquarters to the ETO CIC on 31 August 1943 said, in part:*****

*Ltr, Hq ETOUSA Counter Intelligence Corps, Subj, "Consolidated CIC Monthly Situation Summary," to Chief, CIC, dtd 11 Oct 43, File AG 322-MGB (T-112 S & S Library) (RESTRICTED)

**Ltr, Hq ETOUSA, subj, "The Counter Intelligence Corps, ETOUSA," dtd 17 Aug 43 (R-27-S & S Library)

***Field Manual (Tentative), War Department, "Counter Intelligence Corps," 15 Feb 43

****Ltr, File AG 400 (16 July 43) OB-S-B-M, War Dept, The Adj Gen's Office, subj, "Special List of Equipment and Supplies for the Counter Intelligence Corps," dtd 17 Jul 43 (Found in Appendix to History of CIC, SOS Library)

*****Ltr from Hq AFHQ, APO 512, dtd 31 Aug 43, subj, "Counter Intelligence Corps, to Chief, CIB, G-2 Hq, ETO." (CONFIDENTIAL) (File 367 M.I.D. 322.999, European Theater, Alexandria Depot).

". . . The War Department TBA for the CIC is considered ludicrous by everyone in this Headquarters concerned with the CIC. It was obviously drawn up by someone with no knowledge of the tactical operations of the Corps. Transportation allowed virtually immobilizes CIC personnel who must be highly mobile in teams of two, regardless of the size of the sectors or detachment. Furthermore, very little of the great mass of other equipment is needed or desired. . . . In the meantime, it is strongly recommended that you reconsider your equipment needs before accepting the War Department's TBA at face value. It has absolutely no practical merit and if not revised, will practically destroy the value of the CIC with tactical units."

The TBA of which Major Ray was so bitterly critical permitted for each division CIC Section of six men and for each Corps Section of 13 men one jeep and one 3/4 ton weapons carrier; and for each Army Section of 50 men, two jeeps and four 3/4 ton weapons carriers. For other tactical sections it allocated one jeep for each 10 persons and one 3/4 ton weapons carrier for each 12 persons.*

New TO & E Authorized for CIC

The letters, staff studies and critiques which were pouring into the War Department from both AFHQ and ETO evidently bore fruit, for, on 29 November 1943, two letters, prepared by the Office of the Chief, CIC, were approved and published by the War Department, one concerned with special investigative equipment and supplies to be issued by the CIC Supply Depot in Baltimore, and the other with equipment and supplies to be issued by the Technical Services upon requisition of the Commanding Generals of tactical units to which CIC Detachments were attached. Numerous changes were incorporated in allocations to CIC Detachments, but the change that gladdened the hearts of CIC and literally put CIC "on wheels" was the allocation of one jeep for each two persons and one cargo trailer for each two jeeps in the tactical units.**

On 24 January 1944 the War Department published Table of Organization and Equipment No. 30-500, "Counter Intelligence Corps Detachment," which incorporated the two supply and equipment letters of 29 November 1943 and also set up a Table of Organization which gave to CIC for the first time a flexible organization made up of teams of various types and sizes which could be shifted about as they were needed, with a minimum

*Ltr, File Ag 400 (16 July 43), "Special List of Equipment, etc.," dtd 17 Jul 43

**Ltr, AG (27 Nov 43) OB-S-SPDDL-M, War Department, Subj, "Special List of Investigative Equipment and Supplies for the CIC, dtd 29 Nov 43; and Ltr, file and date same as above, subj, "Special List of Equipment and Supplies for the CIC." (CONFIDENTIAL) (Found in Appendix to History of Counter Intelligence Corps, S & F Library)

of administrative confusion. Four sizes of "A" or administrative teams and four sizes of "B" or operational teams were authorized. Tables of organization, the directive stated, would be composed of at least one "A" team and at least one "B" team, but the two kinds of teams "are so designed that any combination will provide a well-balanced Counter Intelligence Corps Detachment."*

By February 1944, CIC's numbers in England had grown to a total of 37 officers and 317 enlisted men, distributed among the following organizations: ETOUSA, SOS, 8th Air Force, 9th Air Force, First Army; V, VII, XV, and XIX Corps; 1st, 2d, 4th, 5th, 8th, 9th, 28th, and 29th Infantry Divisions; 2d, 3d, and 4th Armored Divisions; 82d and 101st Airborne Divisions, and the European Wing, Air Transport Command.**

SHAEF Directive No. 7 Defines CIC's Mission

On 5 February 1944, SHAEF Directive No. 7 was published, marking a milestone in CIC's history*** Its significance can be seen when it is realized that, for the first time, planning for CIC in combat was done from the top down rather than from the bottom up.

SHAEF Directive No. 7 set forth the general counterintelligence policies for all units operating under the Supreme Commander, with the explicit definition of the responsibilities of Counter Intelligence Staffs (defined as The Counter Intelligence Branches of G2); Counter Intelligence Personnel (defined as CIC and British FSP); SCI (Special Counter Intelligence units of OSS) and Civil Affairs staffs and detachment).

Within the positive framework of this directive, 12th Army Group, First and Third Armies and the corps and divisions under them drew up their own SOP's and directives. Most of the harassing difficulties which had beset CIC in North Africa, Sicily and Italy, brought on by either lack of understanding of CIC's mission or deliberate misinterpretation of that mission, ceased to exist when the planning was done at the top by men who knew intimately the needs of counterintelligence in a combat situation.

Past history now was the situation where the CIC Detachment had to battle up through channels on a thousand and one issues in order to be able to accomplish their mission as Major Edward L. Ray and his CIC Detachment at AFHQ had had to do.**** This time the Counterintelligence Branch at SHAEF was settling the problems before they arose.

*TO and E 30-500, 24 Jan 44.

***See Appendix 1, "SHAEF Directive No 7."
****See Chapter 3, "Critique-North Africa, Sicily"

Colonel Sheen as Chief CI Officer at SHAEF and Colonel Wise as his Executive Officer obviously had the backing of General Bradley, whose praise of CIC in North Africa and Sicily had been so lavish,* and of Colonels Koch and Dickson, who, as previously mentioned had had opportunity to observe CIC at close range and who were finally responsible for the intelligence planning for the First and Third Armies.

This directive gave to SHAEF Counter Intelligence Coordination Section the responsibility for the "general coordination of policy regarding the handling of Counter-Intelligence information in, from and to, the field, and the allocation of responsibilities and priorities." Aside from the general mission of policy and coordination, SHAEF delegated to the various echelons all counterintelligence operations, with the exception of Travel Control. Although administratively under ETO, and operationally under ADSEC and Base Sections, ComZ, for most of their operations, the Port Detachments and certain Border Control Detachments remained operationally under SHAEF Travel Control Section throughout the war, for Travel Control functions.

Prior to the invasion, CIC was directed to: "devote themselves to the training in military security of all formations and units," but commanders were reminded that, once the invasion had been launched, other responsibilities would be so great that CIC agents would not be available to check and advise on routine military security measures to the same extent as during the preparatory phases.

The three foremost targets given to CIC during the assault were: "known and suspect enemy agents"; "known enemy collaborationists, sympathizers, and other persons whose presence menaces the security of the Allied forces"; and "buildings, billets and installations known or suspected to contain documents of Counter-Intelligence value."

Other general duties assigned to CIC in the forward areas included the securing of communications and post offices until they could be turned over to proper authorities; advising on plans for security against sabotage of installations needed by the Allied forces and of captured ordnance and ammunition dumps; contacting local authorities friendly to the Allies; co-operating with Military Police in marshalling refugees; assisting in the discovery and collection of hidden armaments and equipment; checking upon the observance of security regulations promulgated by Civil Affairs staffs and detachments; and interrogating all released or escaped Allied PW's and civilian internees.

In other than the forward combat areas, including lines and zones of communications, CIC's duties were defined to include: the investigation of cases of espionage, sabotage, and, among the armed forces of disaffection; the detection and investigation of all cases involving subversive influences likely to affect adversely the Allied forces; the

*See Chapter 1, "North African Campaign"

institution of necessary checks on security controls imposed on the civilian population; and advising and assisting in all other general security matters. In any area about to be evacuated, CIC was to be responsible for taking necessary measures to prevent valuable information from falling into the hands of the enemy.

"CIC personnel attached to Corps and Divisions will not be diverted to duties which may retard or interfere with their proper employment," the directive stated,"and authorized CIC to call upon other troops for assistance in seizing suspect premises and in the execution of other Counterintelligence duties."

The responsibility for the disposition of CIC units and the allocation of areas in which they were to operate was given the Army Group Commanders, with the provision that SHAEF G2 could designate targets inside or outside the areas assigned to Army Groups.

Enemy Agents -- CIC's First Responsibility

Not only did this directive establish the framework for counter-intelligence policies in the ETO, but it made especial provision for those areas of responsibility in which possible friction could be foreseen. Chief among these was the settlement, once and for all, of the question of the attempt by SCI/OSS to usurp CIC's mission in counter espionage which Colonel Wise had learned in October 1943 was being planned for the ETO campaign, and which Colonel Sheen and others at AFHQ had recognized early in the North African campaign as a paralyzing force in the mission of counterintelligence.

There are no available documents to show how the problem was solved so that both CIC and OSS were assigned the missions previously allocated them by the War Department, but it can only be assumed that this was accomplished because planning was being done from the top. The directive speaks for itself:

"The first responsibility of Counter Intelligence. . . is the detection and apprehension of enemy agents. Detailed planning of measures. . . must be undertaken well in advance. Such plans will be based upon information supplied by SCI units and will be formulated in consultation with officers of these units. While SCI units will render advice and furnish information, executive action is the responsibility of CI Staffs and Personnel (CIC)."

With these words, SHAEF Directive No. 7 removed all doubt as to the mission of CIC in counter-espionage and set the pattern for the successful collaboration of the two units throughout the war. During the planning stage, SCI units were charged with the preparation of all available information about enemy intelligence services and with advising CI staffs in the selection of the immediate counterintelligence targets and in methods of dealing with them to ensure maximum intelligence results.

During the combat phase, SCI units were to act as the channel for counterintelligence information between OSS Headquarters in London and the CI staffs in the field and "to advise" in the selection of counter-espionage targets and "to assist" in the examination of captured enemy documents and in the interrogation of captured enemy agents.

This same directive outlined the area in which CIC could be of the greatest assistance to OSS in the performance of their mission -- through close cooperation in the handling of all captured enemy espionage agents. SCI staffs were to be notified immediately of the arrest of any enemy agent and be given the opportunity to interrogate him and collaborate in plans for his disposal, while the fact of his capture was kept in strictest secrecy. "It is only by making the fullest use in this way of SCI units that the maximum information can be obtained and the detection and arrest of other agents secured."

Later directives published by Group and Army reflect the same intentions, and throughout the war SCI and CIC units worked in the closest cooperation, as will be shown in succeeding chapters.

While SHAEF, through Directive No. 7, retained the responsibility for deciding general questions of counterintelligence policy and coordinating activities and disseminating information among the Army Groups, the responsibility for the organization and operation of counter-intelligence and the disposition of counterintelligence personnel was passed down to the Army Groups. Each Army Group Commander was also charged with the responsibility of ensuring that:

"All commanders and staffs within their commands are fully informed with respect to the proper employment of Counter Intelligence Personnel (defined in the directive as CIC)."

General Order 36 Reorganizes CIC in April 1944

On 27 April 1944, General Order 36, Headquarters ETOUSA, reorganized CIC and officially established it in the ETO. Under its provisions, all Counter Intelligence Corps officers and enlisted men on duty in the ETO, with the exception of those assigned with the European Wing, Air Transport Service, were relieved of assignment to Military Intelligence Service, WD, and assigned to Headquarters, European Theater of Operations, US Army, for duty with the Assistant Chief of Staff, G-2 Section.*

All administrative functions were delegated to the Chief, Counter Intelligence Corps, ETO, including the authority to transfer individuals into, within, and out of the CIC and to deploy personnel and detachments as needed. Operationally all detachments were under the G2's of the combat units and Communication Zone echelons during such time as they were attached. This permitted the flexibility which had been discovered

*GO 36, Hq ETOUSA, 27 Apr 44 (Confidential)(Alexandria Depot)

in North Africa, Sicily and Italy to be absolutely necessary if CIC were to perform its mission.*

General Order 36 also set up 40 Provisional Detachments, organized under the authority of TO & E 30-500, and was followed on 21 May 1944 by a directive attaching these detachments to First and Third Armies, SOS, ADSEC and USAF and sub-attaching them as follows:**

a. Infantry and Armored Divisions, one each of Types A-1, B-1 and B-2 teams,*** total, four officers, 13 men, attached as follows: Provisional Detachment 1, 82d Airborne; 2, 101st Airborne; 3, 2d Armored, 4, 3d Armored; 5, 4th Armored; 6, 5th Armored; 7, 6th Armored; 8, 1st Infantry; 9, 2d Infantry; 10, 4th Infantry; 11, 5th Infantry; 12, 8th Infantry; 13, 9th Infantry; 14, 28th Infantry; 15, 29th Infantry; 16, 30th Infantry; 17, 79th Infantry; 18, 83d Infantry; 19, 90th Infantry.

b. Corps, one A-2 and two B-2 teams, total, five officers, 14 men, attached as follows: Provisional Detachment 23, V Corps; 24, VII Corps; 25, VIII Corps; 26, XV Corps; 27, XIX Corps; 28, XX Corps.

c. Army Headquarters, one A-3 and one B-4 team, total six officers, 15 men attached as follows; Provisional Detachment 29, First Army; 30, Third Army.

d. Twelfth U.S. Army Group (called at that time First U.S. Army Group). Provisional Detachment 31, one A-3, one B-4 and eight B-3 teams, total, 30 officers, 103 men.

e. Advance Section Communications Zone (ADSEC), Provisional Detachments 32, 33, 34, and 35, one A-2, two B-2 and one B-3 team each, total eight officers and 30 men per detachment.

f. Western Base Section, SOS, Detachments 20, 21, and 22, one A-1, one B-1, and two B-2 teams, total four officers, 13 men in each detachment; Detachment 36, (SHAEF Detachment) nine officers, 25 men; and Detachment 37, one A-2, seven B-2, two B-3 and two B-4 teams, total 29 officers, 103 men.

g. Eighth Air Force, Detachment 38 and Ninth Air Force, Detachment 39, one A-2, three B-1 and one B-4, total eight officers and 26 men each.

h. Headquarters, ETOUSA, Detachment 40, one A-3, one A-4 and one B-1 team, total, seven officers, 14 men.

***For composition of teams, see SO 36, attached as Appendix 2 .

h. Headquarters; ETOUSA, Detachment 40, one A-3, one A-3, one A-4 and one B-1 team, total, seven officers, 14 men.

The Theater was short 144 officers to meet the above authorizations, and the creation of three additional detachments before the end of June made the shortage more acute, a shortage that was partially overcome during the war by means of battlefield commissions. By the end of June 1944, CIC ETOUSA had a total of 111 officers and 877 enlisted men, which meant that a number of detachments went to the Continent without their full complement either of officers or enlisted men. There were also in England one officer and 11 enlisted men assigned to European Wing, Air Transport Command.*

Few of the Divisions and Corps which came to the ETO after the invasion had their full complements, and by December 1944 the situation had become so acute that local recruitment was authorized by 12th Army Group, and all commanders were directed to screen their troops for suitable personnel. The necessary background investigations of all applicants placed a heavy burden on all CIC detachments at a time when they could ill afford to spare agents for this work.**

Confusion resulting from the arbitrary numbering system of units brought about a change, in July 1944, whereby CIC Detachments were named according to the unit to which they were attached. Detachments operating with Infantry Divisions were to carry the number of the Division: e.g., the 8th CIC Detachment (Prov), attached to the 1st Infantry Division, became the 1st CIC Detachment. Detachments with Armored Divisions carried the Division numeral, preceded by 5 (or 50): e.g., CIC Detachment 3, with the 2d Armored Division became the 502d CIC Detachment; Corps Detachments were indicated by the figure 2 (or 20); e.g., 205 for V Corps Detachment, 219 for XIX Corps Detachment; and Army Detachments were indicated by the figure 3 (or 30): e.g., First Army Detachment became the 301st CIC Detachment and Third Army the 303d.***

As the campaign in Europe moved on and Divisions and Corps were shifted about among the various Armies, all Corps and Division Detachments were relieved from their primary attachment to Army and attached directly to the units to which they were previously sub-detached.****

*See Appendix 3 for rosters of these units, compiled from ETO roster, 1 May 1944; SO 131, Hq ETOUSA, 10 May 44; SO 180, 29 Jun 44; and SO 181, 29 Jun 44.

Framework for CIC in the ETO

Administration of all CIC Detachments in the ETO was centralized in the Office of the Chief, ETOUSA, who had the sole power to assign detachments to Ground Forces and Air Forces units and Base Sections, and to transfer individuals from one detachment to another; however, great flexibility was attained by liberal use of temporary duty or detached service transfers within all echelons.* Provision was made for promotion of enlisted agents, within Table of Organization limitations, by the commander of the unit to which they were attached, and for the commissioning of qualified CIC agents to fill officer vacancies in CIC Detachments, these recommendations to be processed "in the same manner as are those for personnel of assigned units."**

CIC Detachments were attached to all combat units down to Division levels, to Advance Sections, Communications Zone (ADSEC or ASCZ) and to Base Sections, Communication Zone (ComZ) and to all large Air Force units. In other words, each echelon having a general staff had its own CIC detachment, which operated under the G2 of the unit.

Another milestone in the "battle of civilian clothes" was reached on 12 March 1944, when CIC officers and agents were authorized to wear civilian clothes "at the discretion of the Detachment Commander, CIC ETOUSA," with the warning that "Insofar as possible, authorization to wear civilian clothes granted and identification cards issued . . . . will be only for such specific times as required, and such authorization and cards will be renewable six months from the date of issue."***

12th Army Group SOP

With its mission firmly established by SHAEF Directive No. 7, and its organization set under General Order 36, CIC was ready to make its operational plans. As the first U.S. Army Group to become operational on the continent, the 12th Army Group set up its SOP for CIC, incorporating the general principles set forth in the SHAEF Directive, with added details as to CIC employment, organization, operations and procedures.****

The dual necessity of maintaining counterintelligence operations during the advance into Germany and of establishing a static counterintelligence organization to cover progressively conquered areas in

*Annex 4 to ETO CIC Administrative SOP (SCS Library Files)

***Ltr, AG 322 MPGB, Hq, ETO, US Army, subj, "Authorization for Certain Officers and Enlisted Men to Wear Civilian Clothing," dtd 12 Mar 44 (IC Depot 4-13-7) (CONFIDENTIAL)

****See Appendix 4, FUSAG CIC SOP, taken from First United States Army Group Standing Operating Procedure, Short title FUSAG SOP. (For deception purposes, the 12th AG was called the 1st AG during the planning period).

Germany formed the basis for planning for 12th Army Group. With this dual necessity in mind, 12th Army Group set up its own detachment, the 410th, consisting of two separate elements. One element, of two officers and four enlisted men, was responsible for administration of all CIC personnel attached to 12th Army Group Headquarters and acted as the channel for all CIC matters between higher and subordinate commands. The other element, one headquarters team and seven reserve teams, comprised the operational arm. Actually these teams operated both at combat and ADSEC (Advanced Section Communications Zone) level most of the time, being shifted about as needed.*

Under 12th Army Group's SOP, the G2 and the CI Staff of each unit to which a CIC Detachment was attached would be responsible for supervision of the employment of the detachment, but the actual employment was to be "a function of command to be exercised through the commanding officer of the detachment."**

The directive left no doubt as to the acceptance, at a very high level, of the belief that the standards used in the selection of CIC agents had produced a group of men capable of performing the missions assigned, and capable of being entrusted with a great deal of individual responsibility, as the following quotation will show:

"CIC personnel will be encouraged to exercise their initiative to the fullest extent, and, in the performance of their duties, they will be permitted to operate with minimum restrictions of movement. They will not be delayed in the execution of their assigned duties by the observance of standard customs or prohibitions (such as speed limits, access to places "off limits", etc.) nor by the military police or other military agencies. CIC badges and credentials will be honored at all times."

The directive prohibited the use of CIC on tasks not connected with counterintelligence, such as combat intelligence missions, routine PW interrogations, black market investigations, or other work which might interfere with the performance of CI duties. Specifically prohibited also was assignment to kitchen police, fatigue, and guard duties. No record has been found that CIC agents were employed on KP or routine guard duty, but the tendency of commanders to employ the most capable person near at hand for specialized tasks continued throughout the war and resulted in the use of CIC agents upon numerous occasions in work not of CI interest.

As an example, the 5th Infantry Division Detachment, in its Situation Summary for January 1944 listed seven cases handled: the theft of a carbine from an Army camp; theft of personal property from a soldier;

*Report of Operations (Final After Action Report), 12th Army Group, Vol IV, pp 109-110.

**See Appendix 4, FUSAG CIC SOP

alleged misappropriation of Medical Corps drugs by two soldiers at Langford Lodge; suspected doping of a soldier in a Belfast pub; firing by guards at U.S. Army installations on two unidentified persons; landing of unidentified plane near Castlewellan; and the attempted sale of eight Army rifles by two enlisted men to two civilians.*

CIC agents were not authorized to take civilian clothing to the continent, but were directed to wear the uniform prescribed for civilians serving with the armed forces with, normally, a CIC brassard supplied by ETOUSA.

The directive set up a uniform file system whereby information concerning suspect individuals and organizations and various security controls instituted in the area would be kept on 5x8" cards in such a way that all information which could be of value would be left by a detachment when it moved on. The type of information and the means of cross-indexing it was outlined in detail.

According to the "relay system," planned in order that an uninterrupted counterintelligence coverage would be attained, the Division Detachment would turn its records over to Corps, Corps to Army, Army to ADSEC, and ADSEC to the static detachments of the Base Sections, ComZ, as the final recipients.**

It was planned by Twelfth Army Group that a small group of the CIC Detachment having jurisdiction over a certain area should remain until the next detachment arrived in order to turn over any unfinished local business and advise the incoming group on their activities.*** This system did not always work smoothly, especially during the early phases of the campaign. A generally better plan was found to be that of keeping several members of Corps CIC forward with Division, and several from Army forward with Corps, so that when Division and Corps moved forward, these members would remain to orient their own detachments on the situation before moving forward again.****

By the time Twelfth Army Group was ready to move into Germany, an attempt was made to arrange counterintelligence coverage so that an area would remain under the control of the unit which instituted the original coverage.***** This difficulty had been forseen by Third U.S.

Army which worked out certain modifications in the Twelfth Army Group relay system, since, according to their After Action Report, "The Sicilian operation had proved that only confusion and needless repetition of effort resulted when Division Counter Intelligence Corps turned over to Corps and thence to Army, without coordination to effect continuous coverage."*

Third Army's pre-invasion plans called for the withdrawal of four enlisted men from each Division and one officer and seven enlisted men from each Corps, with full field equipment and transportation, to form a Reserve Pool for each Corps. Personnel from the Reserve Pool were to be assigned by the Corps CIC officer to reinforce Division Detachments and then remain in the area throughout Division, Corps and Army control, until relieved by ComZ Detachments. The Chief CIC officer, Third Army, was to be responsible for arranging for turn-over to ADSEC Detachments and for dispatching personnel back to the Pools as well as being custodian of the Service Records and administration. The plan also provided for great flexibility in the reinforcement of Corps Reserve Pools by transfer of personnel from other Corps Pools or from Army Reserve Teams.**

The records do not indicate whether these Reserve Pools actually were formed; if so, they were not referred to as separate entities. However, Third Army's reports do indicate that Division Detachments were reinforced by both Corps and Army CIC personnel so that "coverage was continuous from the time an area was first taken over by the Division until it passed from Army control . . . . CIC personnel familiar with the territorial problems maintained continuous coverage from the time an enemy area was taken."***

On one known occasion, just before the Third Army advanced into Germany, ADSEC Teams were attached to Third Army, two for work on the counterintelligence control line and a third in Army rear areas. On 16 December, when the Ardennes Breakthrough caused a complete regrouping of tactical units, an ADSEC team which had been attached for operations to XII Corps was retained in the area although responsibility passed to XV Corps, an example of the use of a lateral relay system.****

First Army attempted to overcome the weaknesses of the relay system by Pool Detachments who were to provide security in larger cities and towns on the lines of communication in liberated areas until the areas passed out of Army Group Control. Pool Personnel were to be requested

as needed by Corps and, when deemed advisable, some were to be sent with the Division Detachment on their entry into a town or city, but were to be concerned with such long-range problems as contact with local police, investigation of local administrators and the establishment of an informant system, rather than the search for documents, arrest of enemy agents and other activities of an immediate nature.*

However, the USFET Board in its report pointed out weaknesses in the relay system as planned by Twelfth Army Group, without making any official recognition of the modifications made by First and Third Armies. The Board report stated:** "In a fast moving situation, forward commands were unable to maintain adequate records, or were unable to wait for a detachment to relieve them, which resulted in considerable confusion and loss of effort. There were countless cases of individuals having been jailed by the detachments of divisions and corps without adequate case histories being placed in the hands of succeeding detachments. These detachments would then have to reinvestigate the prisoners in order to dispose of them. Another weakness of the relay system was that local authorities soon wearied of finding a new Counter Intelligence Corps detachment in the area every 10 or 20 days, and became confused by the changes in policy. Informants were reluctant to be passed from one agent to another because they sensed danger in becoming known as informants, and because, being called upon to repeat their entire story to a new counterintelligence representative a few days later, they lost confidence that their information would lead to action."

In order to facilitate CIC's task of apprehending espionage agents who would attempt to infiltrate our lines in the guise of refugees, 12th Army Group included in its refugee control plan*** provisions that would require that all civilian refugees who could not immediately prove that they had been made homeless by operations be screened by CIC at several points. CIC agents, aided by civil police, were to man the Security Control Post, which was to operate with the Traffic Control Post in the immediate rear of forward divisional boundaries or with the Civil Affairs Collecting Point or between the two. Here CIC was to make a rapid screening of refugees with as complete coverage as possible. All suspect refugees culled at this point were to be sent direct to the Civilian Annex to the Mobile PW Collecting Point, from which those cleared were to be turned over to Civil Affairs for disposition through refugee channels. Those who were obviously enemy agents were to be sent under CI escort direct to Army level where CIC agents would complete their interrogation and turn over to SCI any persons who could be of use to them; those who were merely suspect were to be sent to the

Civilian Annex to the Mobile PW Interrogation Post.

At this Civilian Annex suspects again were to be screened and given more thorough, although not prolonged, interrogation. Obvious agents were to be removed and sent to Army; those still suspect were sent to the Civilian Interrogation Center which operated as an annex to the Army PW cage; and those cleared were turned over to Civil Affairs Transit Area. After final and prolonged interrogation by CIC agents at the Army Civilian Interrogation Center, disposition was to be made by Army officials. It was stated that not all these stages in refugee evacuation would have to be followed in all cases, but the general process would remain as outlined.

In addition to the above, CIC was instructed to escort all civilians who were believed to have been organizers or key members of resistance groups or allied underground organizations to the Special Force liaison officer at Corps, who would be responsible for taking them to Army. Interrogation of these persons was to be limited to tactical information of CI interest, such as location of target buildings and possible saboteurs, agents and collaborators, while questions of political consideration were to be avoided.

MII Teams and CIC were instructed to maintain very close liaison and to exchange information freely. MII Teams were to interrogate refugees and displaced persons only for tactical and strategic information and to inform CIC immediately of any suspicious persons; CIC was to pass on to MII any persons deemed suitable for their interrogation.

Each unit operating under 12th Army Group was directed to work out its own detailed plans for CIC operations.*

First U.S. Army Has Initial Control

Since First U.S. Army was to be in control of all U.S. units during the assault on the continent and during the build-up in the lodgement area, all CIC detachments which took part in the mounting operations and the assault came initially under First Army control. This included ADSEC units, which later were to revert to ComZ, and Pool CIC Detachments which later were to revert to 12th Army Group and be organized into Tactical Reserve Teams under the 418th CIC Detachment.

With this in mind, First U.S. Army published, on 12 May 1944, its plan for CIC employment in Operation NEPTUNE.** This plan specified that tactical CIC Detachments consisting of two officers and 14 enlisted men, permanently attached to division, corps, and army would go on the invasion with their units and that three Army Pool detachments of the

*Report of Operations, 12th Army Group, Vol IV (G-2 Section)
**See Appendix 0, "Operation of The Counter Intelligence Corps, Annex 4f to First United States Army Intelligence Plan NEPTUNE," extracted from L-7, First U.S. Army Intelligence Plan NEPTUNE (Alexandria Depot)

same size would be sub-allocated as needed. All of these detachments, both permanently and temporarily attached, would be responsible to the AC of S, G-2, of their tactical unit. Each unit was authorized to ask for assistance from the next higher echelon: Division from Corps and Corps from Army. Port and Interior Detachments were to be attached to Headquarters, ADSEC, but until the areas in which they were to operate should be placed under ComZ, were to work under the G2 of the tactical unit in control of the area.

In addition to the three Pool Detachments made available to Army and its lower echelons, one officer and eight enlisted men from Pool Detachments, along with their own transportation, were placed on duty with the Headquarters Engineer Special Brigade Group on Y-day minus 15 to remain until after D plus 15; and three enlisted men were placed with First Engineer Brigade for the same period.*

A "Refugee Interrogation Post," consisting of one officer and three enlisted men from Army Pool personnel, equipped with three jeeps, were to land on D plus three on Omaha Beach and operate initially under the VII Corps CIC Detachment.

Six U.S. Navy Intelligence Officers also were attached to VII Corps Headquarters to be assigned "appropriate missions by the AC of S, G-2, VII Corps, and coordinate their work with the CIC."

A Port Detachment of ADSEC, consisting of two officers and 16 enlisted men, with five jeeps, were to land on Utah Beach on D plus five and operate initially under the VII Corps Detachment. They were assigned to work in the port area around Cherbourg, to include all installations in the Arsenal, and the warehouses and port offices in the area. One half of another Port Detachment, one officer and eight enlisted men with three jeeps, would land on Omaha Beach on D plus six and operate initially under V Corps Detachment.

One half of one First Army CIC Detachment was to land on Omaha Beach on D-Day, with the other half coming in on D plus three; another First Army Detachment was to land on D plus 15, and two Pool Detachments, destined for allocation to augment Corps Detachments, was scheduled for D plus 30.

First Army CIC Detachments were made "responsible for the security of Army troops and of the various echelons of Army Headquarters, interrogation of civilians sent back to First Army PW cage and Counter Intelligence measures requested by lower echelons." Until Corps rear boundaries could be established, Army CIC was to be responsible for security in all towns between Corps rear boundary and Army rear boundary.

*Roster of men attached to Engineer Brigade Group and Engineer Brigade attached as Appendix 9 (KC Depot 4-1-45)

The CIC Detachment for each headquarters was charged with CIC coverage in the zone under immediate control of that headquarters, with the Commanding Officer of Army and Corps CIC Detachments responsible for coordination of plans and activities of the detachments of the next lower echelons. The NEPTUNE Plan directed that each CIC Division and Corps Detachment "prepare detailed plans for the fulfillment" of a list of 20 objectives and duties, which were listed in order of priority. The first three objectives listed were: (1) arresting known and suspected enemy agents; (2) arresting known enemy collaborationists, sympathizers and others whose presence menaces the security of the Allied Forces; and (3) searching buildings, billets, and installations known or suspected to contain documents of counterintelligence value. Documents of combat intelligence value found during the search of such installations were to be transmitted immediately to the AC of S, G-2 or the S2 of the unit in control of the area.

Other important missions included the impounding of civilian mail; seizure of various installations which might be of value to the Allied Forces; advising other units in the establishment of guards at critical points; assisting the Provost Marshal in plans for marshalling refugees; and assisting Civil Affairs in the establishment of a reliable civil administration. CIC was charged with the responsibility of recommending to Civil Affairs the removal of unreliable civil officials; in fact, CIC's authority under the First Army plan was greater than that of merely "recommending," but an attempt to avoid possible friction is seen in the admonition that "civil officials will be arrested by CIC without consulting Civil Affairs only when the continued liberty of such officials represents a threat to security."

Also in the realm of civilian movement control, a Civil Affairs function, CIC was given the final authority for the issuance of travel permits, supervision of control points established outside the towns and the decision as to which illegal travelers were to be held for further investigation and which were to be judged by Civil Affairs for breach of travel regulations.

Another important mission for CIC was that of contacting local persons known to be friendly to the Allied cause to procure all possible information. According to the First Army Plan, "Military Intelligence Interpreter (MII) Teams will be used under CIC direction to obtain Combat Intelligence as well as Counter Intelligence information."* This is the only definite statement found that as teams they were to work under CIC direction in obtaining Combat Intelligence information. The MII Teams, made up of French-speaking persons, mainly French Nationals, worked very closely with CIC throughout the campaigns in France and Belgium, and from time to time members of these teams were attached operationally to CIC Detachments. According to the First Army

*Ibid, para 3a(14)

Plan, these teams, consisting of two officers and four enlisted men each, were to be available to armies, corps, and divisions on the basis of three per army, two per corps, and one per division.*

Third Army, in addition to following the procedures established by First Army generally, assigned an officer and four CIC agents to a Research Group to study and disseminate information to units attached to Third Army. By the end of January 1945 the team was handling 70,000 SHAEF personality cards and 200,000 Third Army CI personality cards. In the early stages the Research Team prepared Town CI Plans for dissemination to each detachment going into a town, but when the speed of movement across France made this plan impracticable, the Team substituted Counterintelligence Briefs for each of the Wehrkreises of Germany for distribution not only to Third Army Detachments, but to the Detachments of adjacent Armies. As their work increased, the Team was assisted at various times by CIC personnel from other units and by Civil Affairs and Military Government personnel.**

Records seem to indicate that, throughout the war, Third Army, in an attempt to overcome the shortage of CIC linguists, made frequent use of linguists from other G2 Sections to augment CIC Detachments. Third Army also, later in the war, created Security Detachments of two officers and ten enlisted men each and assigned one of these to each CIC team under Third Army to free CIC agents of considerable administrative and housekeeping duties to pursue their primary mission of apprehending enemy agents and personalities of CIC interest. Near the end of the war, all agencies interested in counterintelligence, technical intelligence, and personality and organization targets were organized into the Third U.S. Army Intelligence Center, which served further to coordinate intelligence activities and to relieve specialists from administrative duties.

In conjunction with its plan for NEPTUNE, First Army also published its plan for "Security in Zone of Operations" under First Army control, in which were outlined CIC's responsibilities following the initial assault, handling of prisoners and relationship with Civil Affairs and other agencies.***

V Corps Plan for CIC Operations

The V Corps operational plan, which may be used as typical of Corps planning, specified that normally two agents from Corps would be placed on duty with each divisional detachment having an operational

*Para 4, Annex 4a(1), to First Army Intelligence Plan NEPTUNE, L-7, Alexandria Depot

**Monthly Information Report #1, Hq Third U.S. Army CIC Det., dtd 20 Feb 45 (SECRET) (SCF Library)

***Attached as Appendix 10, Annex 4c to First United States Army Intelligence Plan NEPTUNE, Pre-Invasion File 251 A, Alexandria Depot (UNCLASSIFIED)

area so that, when the division moved forward, these men could remain and revert to corps control; at the same time two more men would be sent forward to join division in its new operational area.* In addition to duties as prescribed by First Army, V Corps gave to CIC the responsibility for checking the security observance in all Corps units, and the collection of tactical and strategic information "whenever such duties can be performed without serious interference with its normal mission."

V Corps organized its G2 Section into the following sub-sections: Administration; Counterintelligence, under which CIC operated; Military Intelligence Interpretation; Combat Intelligence, with responsibility for Order of Battle and PW interrogation; and G2 Air, with responsibility for Photo Interpretation Teams.

Probably a more accurate interpretation of the use of the MII teams than that contained in the First Army Plan is to be found in the Standing Operating Procedure for V Corps, contained in V Corps Report of Intelligence Operations. According to this SOP, both MII teams assigned to Corps Headquarters were to operate directly under G2 with the primary function of interrogating French civilians for tactical and strategic information of the enemy and the following secondary functions: (1) to act as interpreters for the Commanding General and Staff; (2) to assist the CIC Detachment in securing counterintelligence information from French civilians; (3) to assist the Civil Affairs Officer in securing the information required from French civilians; and (4) to assist the G2 section in an emergency in processing information and in the dissemination of combat intelligence information.

The MII teams began operations almost as soon as they landed on the Normandy shores, with one team working closely with CIC in the corps service area, and the other well forward in the divisional areas. "The best sources of information," the V Corps Report states, "were loyal Frenchmen who, upon hearing that we had landed, worked their way through the German lines to reach our forces . . . . In the first few days of the operation, it was found that one of the best contacts was through the CIC, since all line-crossers were screened by them before being cleared."

Since the screening of all civilians residing in operational areas and all refugees and evacuees was a CIC responsibility, it was obviously necessary that CIC and the MII Teams work in the closest cooperation.

1st Infantry Division CIC SOP

The SOP for the 1st Infantry Division CIC Detachment, as one of

*For V Corps CIC SOP, see Appendix 11, which has been extracted from 205-2 (12110) Intelligence Operations V Corps - European Campaign 10 May 42 - 10 May 45, Appendix I

the first ones prepared, may serve as an example of the mission assigned CIC at this echelon.* The CIC Detachment, which was expected to enter a town on the heels of the forward combat troops, was directed to accomplish the following: arrest all known or suspected agents and war criminals; contact the mayor, the chief of police, the leading priest and the town secretary; locate, shut down, and guard or seal all telegraph and cable offices, all telephone exchanges and private lines, radio stations, post offices, mail boxes and banks; search and guard or seal all enemy headquarters and CP's, depots, dumps, warehouses, installations and billets; inspect and guard, if necessary, all utilities such as gas, water and electric power; and check regularly on blackout and curfew regulations.

All German documents found were to be delivered to the Order of Battle unit at Division Headquarters. If the quantity was too large for immediate removal, a sampling was to be sent back and the rest placed under guard until removal could be arranged by Division. All civilian mail and telegrams written prior to D-Day and ten percent of the remainder were to be sent immediately to the War Office at 23-27 Brook Street, London, via message center.

Since it was expected that the CIC Detachment would usually arrive before the Civil Affairs team, certain CA functions were assigned initially to the CIC Detachment. Chief among these were instructions to be given the town mayor in connection with the proclamations he was expected to post and enforce. Severe restrictions in regard to civilian travel, blackout hours, collection of wireless sets and German arms were included. The mayor was to be instructed that all Germans must be turned over to CIC immediately, under severe penalty threat, and to be reminded that the "State of Siege" as proclaimed in 1939 had not been withdrawn, under which the crime of looting was punishable by death. The mayor was to be expected to provide billets for CIC, to be paid for at the regular CA rate, from Confidential Funds.

CIC was instructed to set up an office immediately in the Town Hall with someone on duty at all times who would know the location of all detachment members and visit the S2 of the Regiment in control of the area to see that he was familiar with CIC's mission and to offer him all possible assistance.

CIC was allocated Confidential Funds to be used in obtaining information concerning collaborationists, Nazi sympathizers, and French civilians harboring German soldiers, with a provision of a 1,000 franc reward to any French civilian who delivered a German soldier hiding in the area.

*See Appendix 12, "SOP for CIC Det," Appendix A to Annex 7, taken from 3-1-2 (7934), Intelligence Activities of 1st Inf Div (ETO), Jun, Aug, Sep 44.

Although certain details of organization and operational methods varied with the different divisional detachments, and experience as the war progressed brought about certain adjustments, the plan set up by 1st Division Detachment was generally followed throughout 12th Army Group.*

Shortly before D-Day three agents from V Corps Detachment were added temporarily to 1st Division Detachment, thereby bringing the strength of the detachment to two officers and 17 enlisted men, who were divided into four teams. "A" Team, consisting of one officer and six enlisted men with two jeeps, went ashore with the leading combat team, and "B" Team, four enlisted men with one jeep, with the second combat team, both on D-Day. "C" Team, one officer and three enlisted men, with one jeep, came in with Division Headquarters on D plus one. All of these teams carried only personal equipment and arms, while remaining equipment was brought in by "D" Team, consisting of four enlisted men with four jeeps with trailers.

On 20 June the teams were regrouped as follows: "A", "B", and "C" Teams, four enlisted men each; and "D" Team, two officers and three enlisted men. The first three were operational, while "D" Team handled administration, liaison and special missions, sending a member each day to each of the other teams to disseminate and collect information.

CIC Plans for Communications Zone

Early in the planning it was recognized that the Communications Zone on the continent, extending from the coastline to the rear boundary of Army, and constituting the life-line to our combat troops, would be a particularly fertile field for enemy espionage and sabotage agents and as such would require special CIC coverage.**

Abwehr-trained "stay behind" agents, French and Belgian citizens who had been corrupted during the long stay of the Nazis in their countries, and agents slipping in by sea and air were expected to menace our supply lines as well as attempt to provide the enemy with information concerning our reserves and our plans.

> "Targets for sabotage within the ComZ are so many and of such importance that it is probable that the enemy will make his major sabotage threat within this zone."
>
> "The ComZ will contain some of the most important targets for espionage on the continent."

*301-2 (7934) Intelligence Activities 1st Inf Div (ETO) Jun, Jul, Aug, Sep 44, Annex 7, CIC Activities 1 Jun to 30 Jun 44 (UNCLASSIFIED) (Alexandria Depot)

**Appendix II to Communications Zone Plan, Fwd Ech ComZ, European Theater of Operations, U.S. Army (Adm 376, Alexandria Depot)(U)

The above two statements are contained in the Communications Zone Plan for the European Theater campaign, finally completed with all changes, additions and amendments on 4 June 1944, two days before the invasion. Coupled with the statement, "CIC Detachments are the principal means available to Hq Ad ComZ," they left no doubt in the minds of CIC agents assigned to ComZ units that, even though they were not to be in the front line of combat, they had some busy months ahead.

CIC Detachments were assigned to the Advance Section Communications Zone (ADSEC), which would operate directly to the rear of Army boundaries, and to Base Sections, ComZ, which would control the remainder of the liberated and conquered territory. As the ADSEC CIC Detachments would move forward to cover territory released from Army control, Base Section Detachments would take over as the permanent static Detachments. The USFET Board, in its study of CIC in the ETO, reached the conclusion that CIC could have operated more successfully in the ComZ if coverage had been organized on a territorial basis under the direct operational control of the ComZ G2, rather than by the attachment of the CIC units to Advance and Base Sections.*

The Communications Zone Plan defined the scope of counterintelligence work as the establishment of "counterintelligence personnel into a network through the U.S. controlled area on the continent from, and including, the coastline up to rear boundary of the army . . . . for the purpose of assisting local commanders in preserving military security and of preventing, detecting, investigating, reporting and taking any other action with regard to suspected subversive activities, either civil or military, and to prevent the passage into or out of, and the circulation within, the prescribed area, of suspected subversive persons, material or information."**

Except for the omission of work to be performed with the forward combat troops, the CIC mission as outlined in the ComZ Plan was similar to that for Armies, Corps and Divisions. In addition, greater stress was laid upon the necessity for cooperation between Civil Affairs and CIC Detachments. CIC was directed to supply CA Detachments with all available information which would assist in the efficient control of the civil population, and CA was directed to secure the compliance of local officials with Counter Intelligence and Security policies and to confer with CIC in the making of all civil appointments. CIC was authorized to deal directly with the French Security Police, but dealings with local civil police were generally to be accomplished through Civil Affairs.***

*Report of the General Board, USFET, etc.
**Communications Zone Plan, Hq Fwd Ech ComZ, ETO, US Army, Sec V, para 2 (Alexandria Depot, Admin File 370) (U)
***Ibid, Sec XVII, para 10c.

Evidently recognizing that the setting up of an efficient civil government, the mission of Civil Affairs, and the clearing of all potential security threats from the area, CIC's mission would at times involve opposite concepts, the Intelligence Plan for the Communications Zone included certain specific warnings and areas of authority for each organization. Perhaps the most important of these, from a CIC viewpoint at least, was that: "Civilians arrested by CIC personnel will not be released by Civil Affairs or Provost Marshal without agreement of the CI officer."

In the handling of political suspects, CIC Detachments were warned that they "must be guided by the general consideration that it is not desirable for military forces to intervene in purely internal political disputes and that their responsibility does not extend beyond the task of securing the allied forces against attack by enemy agents or subversive elements. Except when individual political suspects are considered to be capable of actually assisting the enemy, or are needed for interrogation, they will be left for Allied governments to dispose of later."

It was pointed out that, in the earlier stages, CIC might have to "assist in the physical deposition (sic) of untrustworthy officials," but they were instructed that they should be concerned in the detention of these officials only when it was thought that these officials "would continue to assist the enemy or that they might posses information of counterintelligence value."*

Between D plus five and D plus 30, five Port and Interior Detachments, with a total of 166 men with 110 vehicles were scheduled to go to the continent. Until the establishment of a rear Army boundary they were to operate under control of First U.S. Army; after that they would revert to ComZ control.** These ADSEC Teams would then move forward behind the armies, releasing permanent control to Base Section Detachments.***

CIC in Base Sections, ComZ

Directives for CIC's operations with Base Sections were similar to those for ADSEC with provision for the special situations to be found in port areas. In addition, since all ports and airfields which furnished the principal means of entry and egress to the operational zone came under control of Base Sections, Base Section CIC Detachments were responsible for the enforcement of travel control regulations, which,

*See Appendix 13, Annex 2c to Operational Plan, Adv Sec ComZ, NEPTUNE, taken from Hq Adv Section Communications Zone, NEPTUNE operation Plan (Admin 377, Alexandria Depot) (SECRET)

**Annex 2 and 2a, Operational Plan, Adv Sec ComZ NEPTUNE (Alex Depot 377) (S)

***ADSEC History (Adm 533c, Alexandria Depot) (UNCLASSIFIED)

prior to D-Day, had been recognized as of such importance that a special section was established in SHAEF for their promulgation. Base Section CIC Detachments operated under Base Command authority in all matters pertaining to military and civil security, but in matters pertaining to travel control they operated directly under the Travel Control Section of SHAEF.* These operations will be the subject of a special section in this history.**

Security was CIC's Job

From the arrival of the very first CIC agents in England until the invasion, CIC's first responsibility was security of military information. Security campaigns, security lectures, and coverage of Service clubs, bars and restaurants both in uniform and in civilian clothes as a deterrent to "loose talk" were routine activities for CIC agents.

The first intensive coordinated coverage of approximately 450 clubs and restaurants in more than 100 cities and towns throughout the British Isles was performed during the last two weeks in May 1943 for the dual purpose of ascertaining the extent of "loose talk" and of gaining knowledge to be used in formulating plans for controlling security as its importance grew during the build-up for the coming invasion.*** Reports indicated that U.S. soldiers were much more close-mouthed than the British; in fact, security discipline was regarded as excellent. Officers were believed to pose a greater security problem than enlisted men, partly because they were in possession of more security information and partly because they were financially able to move about more freely.

Except for isolated cases, the only outstanding weaknesses seemed to be among civilian technicians employed by Lockheed Overseas Corporation in Northern Ireland and among the merchant seamen, neither of which groups seemed to have a proper appreciation of the importance of security discipline. The generally excellent condition among U.S. troops was believed to be due largely to a greatly exaggerated idea on the part of enlisted personnel as to the constant presence of CIC agents in public places, and it was suggested that such exaggeration should be encouraged.

Using security experience gained in the TORCH operation in North Africa, the invasion of Sicily and various excercises in the English Channel, a Security Sub-Committee began its formal planning for Counter-intelligence coverage of mounting operations for OVERLORD in September 1943. Each CIC team in the British Isles took part in a security exercise

*Ltr, AG 350.09-4 GBI-AGM, Hq SHAEF, subj, (Port Counter Intelligence", (S & S Library)

***Memorandum for General Crockett, subj, "Security Survey of U.S. Forces in the United Kingdom," dtd 16 Jun 43, signed by F.A. Calvert, Jr., Major, FA, Chief, CIB (CONFIDENTIAL) (S & S Library - 009279)

embodying all phases of security which would be encountered in OVERLORD and sent in its report on the success of the exercise, with recommendations for changes.*

The First Army NEPTUNE Plan, published on 12 May 1944, gave to Services of Supply (SOS) CIC Detachments, augmented by two Army Intel Detachments, who were to work with them until D plus 15, the basic responsibility for security during the mounting operations, with the provision that these agents were to be "freed from normal restrictions in the marshalling area."** The AC of S, G-2, arranged with Third Army for the temporary release of nearly 100 officers and agents to supplement the CIC Detachments with the Southern and Western Base Sections, to whom fell the main responsibility for security from the time the troops left for the marshalling areas until after the tactical troops had jumped off for the invasion and their areas had been searched for documents left behind. The CIC teams which arrived in the marshalling areas with tactical troops joined the SOS Detachments in maintaining security during their stay, and additional assistance was given by local civilian police and by the Military Police.***

The approximately 31 officers and 250 agents assigned to this task received their instructions on 15 April and moved to the camp sites, commonly called "sausages," to make their preliminary surveys and recommendations before the arrival of the troops. Because of geographic peculiarities and the presence of civilian homes and business establishments in the areas, and the necessity of separating "briefed" troops from "unbriefed" ones, unique problems presented themselves. CIC agents made recommendations as to the points where security guards would be necessary and where wire should be strung. In most cases the Engineers strung the wire, but, in the case where Engineers were not available, CIC agents strung it themselves.****

As the static troops who were to perform the housekeeping duties during the mounting operations arrived, CIC agents began giving them security lectures, explaining why they would be forbidden even to talk with briefed troops. When the tactical troops arrived, they also were given lectures, both before and after their briefing.

***Annex 2b, "Security Measures for Mounting," Hq Adv Sec ComZ NEPTUNE Operation Plan (Admin 377, Alexandria Depot) (SECRET); and "Pre Invasion Planning," from Operational History of Theaters (L-17)

****Pre Invasion Planning, etc.

CIC agents frequented [illegible] and Red Cross clubs in the area to check on loose talk [illegible] personnel were not outside their areas. After the [illegible] of loose talk of Red Cross personnel, the Red Cross was excluded from the briefed troops' areas.

In the tense atmosphere in the months preceding the invasion, [illegible] day brought a new batch of rumors, some indicating possible breaches of security, others of possible danger to morale, both of U.S. troops and British civilians, and still others -- of the "flashing light" variety -- indicating possible enemy espionage. All of these had to be investigated and carefully reported by CIC. A few of these led to civil or military action, but most of them indicated the need, and furnished information for, more security education, security lectures and security posters.**

It was impossible to keep from the enemy the knowledge that an attack was coming -- all the Allies hoped to do was to confuse him as to the place and the time of the attack and the strength of our forces. With each passing day, as many thousands of soldiers were added to the lists of those in possession of this information, the task of CIC, official guardians of the secret, became greater. How well the secret was guarded can be seen in the fact that the Germans were taken completely by surprise -- our forces had been fighting on the continent for six weeks before their strategists realized how completely they had been misled.***

"Although our commands were carefully seeded with CIC agents who rifled desks nightly and rattled safes in search of security violations," General Bradley wrote, "only one serious breach was uncovered during the life of the Big Secret."**** General Bradley was referring to the well-publicized story of the Major General who, at a dinner and cocktail party late in April 1944 talked too explicitly about the date of the invasion. He was reduced to the rank of colonel and banished from the Theater within 24 hours, and all those who had heard his indiscreet remarks, General Bradley explained, "were visited by CIC agents and cautioned to forget the conversation. The prompting was probably unnecessary; by that time all of them had been badly frightened."

APPENDIX I

SHAEF Directive No. 7, 8 February 1944

1849

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE

SHAEF/96X/INT 8th February, 1944

SUBJECT: SHAEF (Int) Directive No. 7 (Counter-Intelligence)

TO: Commander-in-Chief, 21 Army Group.
Commanding General, First US Army Group.

1. The Supreme Headquarters Allied Expeditionary Force Counter-Intelligence Directive No. 7 (less Sections V, X, XI and XII, which are to be issued later) is forwarded herewith.

2. This directive applies to counter-intelligence policy in the UK and in liberated territory overseas, under Operations 'OVERLORD' and 'RANKIN - Case C'. You are directed to implement the policies contained therein in the preparation of your detailed plans for these operations. A separate directive will be issued in due course on counter-intelligence in occupied enemy territory.

3. Although this directive has been written specifically for the Continental operations, it contains many policy items for general application to the 'RANKIN - Case C' Operations in the CHANNEL ISLANDS and NORWAY. Copies of the Directive are, therefore, being forwarded to the General Officers Commanding-in-Chief, Southern and Scottish Commands, who are requested to ensure that their detailed plans do not conflict with the general policies mentioned above.

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION I - DEFINITIONS

The following are definitions of terms used in this directive:

1. Counter-Intelligence

The collection, collation, evaluation and distribution of information as well as all executive action, including civil and military security measures, to counter enemy intelligence or subversive activities.

2. Counter-Intelligence Information

All information relating to counter-intelligence work.

3. Counter-Intelligence Staffs

British I (b) Staffs and US Counter-Intelligence Branches of G-2.

4. Chief Counter-Intelligence Officer

The officer in charge of any counter-intelligence staff.

5. Counter-Intelligence Personnel

Field Security and Counter-Intelligence Corps personnel.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence Division

SHAEF/96X/INT. 5th February 1944.

SHAEF (INT) DIRECTIVE No. 7 (COUNTER-INTELLIGENCE)

SECTION II - SPHERES OF RESPONSIBILITY

1. In the Planning Stage

(a) Supreme Headquarters, Allied Expeditionary Force will be responsible for:

(i) formulating counter-intelligence policy,

(ii) co-ordinating counter-intelligence policy with ANCXF and C-inC, AEAF,

(iii)co-ordinating the collection, collation and distribution of counter-intelligence information as between the producer agencies in LONDON and subordinate headquarters,

(iv) the security of the mounting of the operation. Co-ordination between forces under the Supreme Commander and static agencies in the UK will be effected through the Sub-Committee of the Inter-Services Security Board.

(b) Headquarters Army Groups will be responsible for:

(i) detailed counter-intelligence planning, including the selection of counter-intelligence targets within their respective spheres,

(ii) the dissemination of counter-intelligence information to subordinate headquarters,

(iii)maintaining liaison on counter-intelligence measures with AEAF and with ANCXF,

(iv) all normal security measures within their commands.

2. In the field

(a) Supreme Headquarters Allied Expeditionary Force will be responsible for:

(i) deciding general questions of counter-intelligence policy,

SECTION II (continued)

(ii) co-ordinating the counter-intelligence activities of the Army Groups,

(iii)maintaining close liaison with the producer agencies in LONDON to ensure that the Army Groups receive all the information they require,

(iv) maintaining liaison on counter-intelligence policy with AEAF and ANCXF.

/(b). . . . . .

(b) Headquarters Army Groups will be responsible for:

(i) the organization and operation of counter-intelligence within their respective zones,

(ii) collating and distributing counter-intelligence information from all sources relating to their respective zones,

(iii)maintaining close liaison with each other to ensure co-ordination of their activities, and the fullest interchange of counter-intelligence information,

(iv) rendering to Supreme Headquarters Allied Expeditionary Force such reports as may be called for,

(v) maintaining liaison on counter-intelligence matters with TAF and 9th Air Force, and with the appropriate naval authorities.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/9SX/INT 5th February, 1944

SHAEF (INT) DIRECTIVE No. 7 (COUNTER-INTELLIGENCE)

SECTION III - MILITARY SECURITY

PART I - IN THE UK

General

1. Military Security is at all times the responsibility of formation and unit commanders who will ensure that all ranks are cognizant of, and well trained in, all normal Military Security procedure. Operational success is vitally dependent on the strict observance of the basic principles of Military Security.

In the UNITED KINGDOM formations and units will concentrate, move and embark within the security framework set up by the existing static security organizations and with which formations and units will not need to concern themselves, except where liaison is necessary.

Existing Security Framework in the UK

2. It is important however, that formation and unit commanders should be aware, in broad outline of the component parts of this framework in order that they may be reassured and may confine their security activities to military matters only. To this end, commanders should be informed of whatever points are considered necessary concerning:

(a) The functions of the Inter-Services Security Board - 'OVERLORD' Sub-Committee

(b) The Coastal Belt Security Committees

(c) The existence and operation of the Regulated Areas and Visitors' Ban,

(d) Civil security activities of MI 5.

(e) The existence and functions of Regional Security Liaison Officers.

(f) The military and civil censorship plan.

(g) Security responsibilities of GHQ, Home Forces.

1056

SECTION III (continued)

(h) Division of security responsibilities at ports.

Detailed information concerning the above headings can be supplied on request to G-2 (Intelligence) Division. Supreme Headquarters, Allied Expeditionary Force.

Security Points requiring special attention

3. Experience has shown that in the training and preparation for an operation the following points of military security require special attention:

(a) The safeguarding of all information relating to the objective and date of the operation, together with the strength of the force and the methods to be employed

(b) The observance of strict security discipline in offices and with maps and documents.

(c) The proper security of telephone conversations.

(d) The restriction of knowledge of a cover plan to the minimum number of personnel.

(e) The proper observance of all censorship regulations.

(f) The importance of selecting a diligent and painstaking unit security officer who will, helped by CI personnel, properly train his men in the basic principles of security.

(g) The security discipline of troop movements.

(h) The complete segregation of all combat troops once briefing has taken place, and the rigid enforcement of all security regulations.

(i) The denial to unauthorized pressmen and photographers of access to troops.

(j) The safeguarding of all information and the discouraging of speculation about any special devices to be used for the operation.

(k) The importance of publicising any punishment allotted for security infringements.

Regulated Areas

4. The power to impose restrictions in regulated areas rests with the GOC-in-C of the Command concerned, and it is his responsibility to impose the necessary restrictions. If further restrictions are considered

SECTION III (continued)

necessary, the GOC-inC of the command concerned should be approached, but this should not be done lower than on an Army level.

5. For the information of First US Army Group, a short note on areas subject to special restrictions is attached at Appendix 'A'

Coordination

6. Certain security activities connected with the operation are undertaken through the co-operation of service and civilian authorities. These activities are co-ordinated by the Inter-Services Security Board - 'OVERLORD' Sub-Committee, and on a lower level, the Coastal Belt Security Committees. These committees will assign, in cases of doubt, responsibility for the co-ordination of any necessary security measures. The Coastal Belt Security Committees are convened under the chairmanship of the CSO 1 (I) of the command concerned, and any cases of doubt or difficulty should be referred to him.

7. All action taken by the Coastal Belt Security Committee is reported to the ISSB 'OVERLORD' Sub-Committee whose responsibility it is to ensure that all service and civilian authorities affected are duly informed.

COUNTER INTELLIGENCE PERSONNEL

8. CI personnel in the UK, relieved by the existing security framework of the responsibility for civil security, devote themselves to the training in military security of all formations and units. It must be realized, however, that CI personnel operating overseas will have heavy civil security responsibilities, and that good military security will largely depend on the effectiveness of the individual measures taken by each unit, which in turn depend on efficient training prior to going overseas.

Security reports

9. It is essential that any major breach of security which might endanger the success of Operation 'OVERLORD' should be reported immediately to Supreme Headquarters, Allied Expeditionary Force.

10. Any general tendencies affecting military security, or the prevalence of any minor form of security breach, should also be reported to Supreme Headquarters, Allied Expeditionary Force in case it may be necessary to issue a supplementary security instruction or take any necessary counter-acting measures.

Liaison

11. All formation commanders are responsible for ensuring that their CI staffs establish liaison, on their own level, with the CI staff of the static formation in whose area they are situated, or to whose area they move.

SECTION III (continued)

Cessation of Leave

12. Normal privilege leave will cease some time before D-day. The impression should be conveyed that this cessation differs in no way from previous cessations that will have occurred for the purpose of intensive training or exercises.

1859

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/93X/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION III - MILITARY SECURITY

PART II - IN CONTINENTAL EUROPE

General.

13. Military security overseas will continue to be the responsibility of command. The primary danger to the security of Allied forces will arise from civil sources, and as a result, Counter-Intelligence Personnel will be largely occupied with Civil Security duties. Commanders therefore must realize that Counter-Intelligence Personnel will not be available to check and advise on routine military security measures to the same extent as in the UNITED KINGDOM. (See para 8 above).

Duties of Counter-Intelligence Personnel.

In Forward Combat Areas.

14. Counter-Intelligence Personnel will in general be employed in accordance with the provisions of War Office letter 20/Misc/2450 (MI 11), 24th November, 1943, and War Department TM 30-215, 22nd September 1943. CI personnel attached to Corps and Divisions will not be diverted to duties which may retard or interfere with their proper employment.

15. In the assault, the primary duty of Counter-Intelligence Personnel is to secure Counter-Intelligence targets in the area of the objective. The selection of such targets will be the task of the appropriate Counter-Intelligence staff. Foremost among those targets will be:

(a) Known and suspect enemy agents.

(b) Known enemy collaborationists, sympathizers, and other persons whose presence menaces the security of the Allied forces.

(c) Buildings, billets and installations known or suspected to contain documents of Counter-Intelligence value.

16. Other duties of counter-intelligence personnel in forward areas will include:

(a) Co-operating with Military Police in marshalling refugees and other civilians arriving from enemy occupied territory and directing them to interrogation posts as outlined in Section VIII.

(b) Contacting local authorities and persons known to be friendly to the Allied cause, to secure all possible Counter-Intelligence information.

(c) Advising and assisting in security against sabotage all public and private installations whose continued operation is essential to the Allied forces.

(d) Checking upon the observance by the civil population of all security provisions contained in the proclamations and orders issued by Civil Affairs staffs and detachments.

(e) Assisting in the discovery and collection of any hidden armaments or equipment which have not been surrendered or reported in accordance with proclamations.

(f) The Seizure of civil communications until taken over by other authorities.

(g) Seizing and impounding civilian mail until it is taken over by censorship personnel.

(h) Advising on the immediate establishment of guards at all captured ordnance and ammunition dumps, especially those which may be accessible to the local population.

17. It must be realized that Counter-Intelligence Personnel, if limited to their own resources, may be unable to carry out all necessary security measures under adverse circumstances. Consequently, they may require the assistance of other troops in seizing suspect premises and in the execution of other Counter Intelligence duties where necessary and practicable.

18. The seizure of enemy documents which may contain information of Counter-Intelligence value is a primary Counter-Intelligence target. Often, however, such documents will contain information of value to combat intelligence, or documents desired by document sections will be found with other documents of Counter-Intelligence value. In such cases Counter-Intelligence personnel will co-operate with and assist document sections and combat intelligence staffs in the procurement of such material.

19. Certain documents containing statistical data will be of primary interest to Civil Affairs. Every effort should be made to preserve them intact and in place.

SECTION III, PART II (continued).

In Other Areas.

20. In other areas (including lines/zones of communications) under jurisdiction of the Allied forces, the duties of Counter-Intelligence Personnel will include:

(a) The investigation of cases of espionage and sabotage, and of dissaffection among the armed forces.

(b) The detection and investigation of all cases of subversive influences emanating from the civilian population and likely to affect adversely the Allied forces.

(c) The institution of necessary checks on security controls imposed on the civilian population.

(d) Advising and assisting in all other general security matters.

In an Evacuation or Withdrawal.

21. In the event that Allied forces are forced to evacuate any position, Counter-Intelligence Personnel will perform the necessary measures to prevent valuable information from falling into the hands of the enemy, (checking evacuated headquarters, etc.).

Liaison.

22. Liaison between Counter-Intelligence Personnel and all other Allied intelligence agencies is the responsibility of Security Staffs. It is essential that there be the closest co-operation, both in planning and in operation with:

(a) Civil Affairs Staffs and Detachment.

(b) Naval and Air Force Security Officers.

(c) Military Police (Provost personnel).

(d) SOI and SF personnel.

(e) W/T detection units.

(f) Document collection and evaluation units.

(g) Political Survey Officers.

(h) Attached Allied Counter-Intelligence Staffs and personnel.

SECTION III, PART II (continued)

Disposition of Counter-Intelligence Personnel.

23. The disposition of Counter-Intelligence Personnel units and the allocation of areas in which they will operate is the responsibility of the commanders of the Army Groups.

24. Subject to operational necessity, the Assistant Chief of Staff G-2 of the Supreme Allied Command may designate Counter-Intelligence targets inside or outside the areas assigned to the respective Army Groups.

Implementing Instructions.

25. It is the responsibility of the Commanding General, First US Army Group, and the C-in-C 21 Army Group, to ensure that:

(a) All commanders and staffs within their commands are fully informed with respect to the proper employment of Counter-Intelligence Personnel.

(b) The necessary liaison between security staffs and those agencies mentioned in paragraph 22 are established and maintained in all phases of operation.

(c) The necessary detailed counter-intelligence directives and plans are issued to the Counter-Intelligence Personnel within their commands.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE

AG 350.09-4 GBI-AGH 22 July 1944

SUBJECT: Port Counter-Intelligence.

TO: Commander-in-Chief, 21 Army Group.
Commanding General, Twelfth Army Group.
Allied Naval Commander, Expeditionary Force.
Air Commander-in-Chief, Allied Expeditionary Air Force.
Commanding General, European Theater of Operations.

1. Port Counter-Intelligence. This instruction replaces Supreme Headquarters, AEF (INT) Directive Number 7 (Counter-Intelligence) Section IV - Port Counter-Intelligence issued under reference SHAEF/9SX/INT dated 5 February 1944, which is cancelled.

a. For the purpose of this directive the term "Port Counter-Intelligence officer" will include all officers in charge of Counter-Intelligence personnel stationed at sea-ports, airports and frontier posts who had to deal with travel control.

2. Organization. General. Port Counter-Intelligence operations are of two kinds:

a. Military and civil security in the local military area.
b. Travel control.

3. Military and Civil Security in the local military area. On all matters of:

a. Military security, including the security of military installations.

b. Civil security concerning local static population, including all necessary investigations into cases of espionage, sabotage and subversive activities will be the responsibility of the Port Counter-Intelligence Officer, who, in turn, will be responsible to the Base Sub-Area (British)/Port (U.S.) Commander.

4. Travel Control. As regards Travel Control, and all ancillary matters, the Port Counter-Intelligence Officer will work under the direction of A.C. of S, G-2, Supreme Headquarters, AEF. The Port Counter-Intelligence Officer will keep his Port Commandant/Commander informed on travel control matters concerning which he deals directly with Supreme Headquarters, AEF.

5. Geographical responsibility of Port Counter-Intelligence Officers. The normal areas of responsibility of the Port Counter-Intelligence Officer is that of the Base Sub-Area (British)/Port (U.S.) Commander. A.C. of S., G-2, Supreme Headquarters, AEF with the advice of Counter-Intelligence Staff responsible for military and civil security in the zone, may, however, increase the area of responsibility of any Port Counter-Intelligence Officer beyond the limits of the base Sub-Area (British)/Port (U.S.) if deemed necessary.

6. a. Army. The security of the dock area, including control of exit and entry is the responsibility of the Base Sub-Area (British)/Port (U.S.) Commander.

b. Navy. The security of all naval installations and stores ashore, and the Counter-Intelligence precautions for all RN, U.S. and Allied Naval ships and craft in the port is the responsibility of the Naval Officer in charge. The Naval Officer in charge, with the advice of the Port Counter-Intelligence Officer will issue instructions governing harbor craft, fishing vessels, etc. manned by local civilian crews. The superintendent Sea Transport Officer is responsible that masters of merchant vessels conform to security regulations of the port and mount adequate sentries and guards. The U. S. Naval Port Security Officer (Commerce and Travel Officer) under the direction of the Naval Officer in Charge will be responsible for the internal security of U.S. Merchant Ships.

c. Royal Air Force. Dock sections of Royal Air Force Security Personnel will be available for supervising the disembarkation of Royal Air Force Personnel and Stores. In Counter-Intelligence matters they will operate under the direction of the Army Port Counter-Intelligence Officer.

d. Co-ordination. All security measures will be co-ordinated by the Port Counter-Intelligence Officer. While attached to the staff of the Base Sub-Area (British)/Port (U.S.) Commander, the Port Counter-Intelligence Officer will act as advisor on Counter-Intelligence matters to naval and other authorities in the Port.

7. Duties of Port Counter-Intelligence Officers. Port Control. With-in the port the Port Counter-Intelligence Officer will be responsible for:

a. Planning and supervising the control of entry to and exit from the dock area, from the landward side and from ship to shore.

b. Recommending measures for the protection of installations and ships from sabotage.

c. Establishing the necessary security check and control of civilian labor and personnel, and persons with business in the port, to whom passes are issued for entry into the dock area.

d. Checking crew lists of merchant ships and advising on security measures relating to crews, including shore leave.

e. Searching any small craft for Counter-Intelligence purposes.

f. The security control of all civilian travel through the port.

8. Civil Security. The civil security responsibility of the Port Counter-Intelligence Officer will include:

a. The investigation of and reporting upon all suspected cases of espionage, and sabotage or leakage of information.

b. Such immediate action in regard to suspects, including arrest as may seem expedient or, after reference, may be ordered by Counter-Intelligence Staffs.

c. Advising the Base Sub-Area (British)/Port (U.S.) Commander on security measures to be imposed on the civilian population in the area.

d. Liaison with the local police, and any civilian Port authority on Counter-Intelligence matters.

e. In all matters relating to civil security, the Port Counter-Intelligence Officer will maintain close liaison with the appropriate Civil Affairs Detachment. Civil Affairs Staffs will be responsible for the preparation of passes for issue to civilians allowed to enter port areas. Regulations governing their issue will be formulated by the Port Counter-Intelligence Officer.

9. Coastline Security. Within the sector assigned to the Base Sub-Area (British)/Port (U.S.) Commander, the Port Counter-Intelligence Officer will be responsible for the establishment and co-ordination of measures to prevent illicit communication between sea and shore, and illegal entry or exit by sea along the coastline. Measures ashore relating to the security of the coastline will be co-ordinated with any security measures taken by naval authorities.

10. Travel Control. The duties of the Port Counter-Intelligence Officer in regard to travel control is dealt with in Supreme Headquarters, AEF letter AG 350.09-4 GBI-AGM dated 10 June 1944, subject: "Control of Travel between UNITED KINGDOM and NORTHWEST EUROPE".

11. Records and Intelligence. Port Counter-Intelligence Officers will be provided by A.C. of S., G-2 Supreme Headquarters, AEF and Counter Intelligence Staff responsible for military and civil security in the zone with all necessary intelligence that is available, including lists of known and suspect enemy agents, suspect officials in the district and suspect seamen.

12. Reports as required, will be made as follows:

a. Military and Civil Security in Area.

(1) Base Sub-Area (British)/Port (U.S.) Commander.

b. Travel Control Matters.

(1) Direct to A.C. of S., G-2, Supreme Headquarters, AEF with copy to Base Sub-Area (British)/Port (U.S.) Commander where desired.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE

AG 350.09-4 GBI-AGM 10 June 1944

SUBJECT: Control of Travel between UNITED KINGDOM and NORTHWEST EUROPE.

TO: Commander-in-Chief, 21 Army Group
Commanding General, First U.S. Army Group
Allied Naval Commander, Expeditionary Force
Air Commander-in-Chief, Allied Expeditionary Air Force
Commanding General, European Theater of Operations

CONTROL OF TRAVEL BETWEEN UNITED KINGDOM AND NORTHWEST EUROPE

I. GENERAL

1. This instruction replaces SHAEF (INT) DIRECTIVE NO. 7, COUNTER-INTELLIGENCE Section V, Security Control of Civilian Travel between UK and Northwest Europe, issued under reference SHAEF/9SX/INT dated 16 March 1944, which is cancelled. This instruction should be read in conjunction with Administrative Memorandum Number 17 this headquarters, as.

2. The control of travel between the UK and Northwest Europe will be a responsibility of the Supreme Commander, Allied Expeditionary Force. Travel will be restricted to the minimum which is essential for the war effort. Every application will be considered individually.

3. For the purposes of this paper the term "civilian" will apply to any person not authorized to hold a recognized British or U.S. military, naval or air force identity card (e.g., AF.B 2606, AB 64, WD AGO Form No. 65 series, ETOUSA Enlisted Man's Identification Card). It will not, however, apply to any secret agent brought to the UK by one of the recognized British or U.S. agencies by means of operational air or sea craft provided for the use of such agencies. These agencies will be prepared to vouch for and will supply the name and particulars of any such agent to the Counter-Intelligence Staff of the Army Group from whose zone he is taken. Arrangements have been made with the appropriate departments in the UK for the passage of such agents through the controls on arrival.

II. CIVILIAN TRAVEL TO THE UK FROM NORTHWEST EUROPE

4. Travel to the UK is to be considered under three headings:

(a) In the initial stage of 'OVERLORD'.
(b) After the initial stage of 'OVERLORD' when an effective system of travel control has been established in the theater.
(c) Under 'RANKIN' - 'C'.

IN THE INITIAL STAGE OF 'OVERLORD'

5. Until an effective system of travel control has been established in the theater, notification of which will be given later, and except where it becomes necessary to undertake civilian evacuation for operational reasons, no civilians will be brought to the UK other than those required for intelligence or security purposes. These will be of the following three categories:

(a) Known and suspect enemy agents, who will be sent to the MI 5 Camp 020.
(b) Persons required for detailed interrogation, and who come to the UK voluntarily. These will be sent to the LONDON Reception Center.
(c) Leaders of resistance groups and Allied agents. These will be handed over to the appropriate British or U.S. Reception Center.

It is estimated that the number of civilians of these categories brought to the UK from the theater of operations up to D plus 30 will not exceed 100 - 150.

6. Individuals of these categories will only be brought to the UK on the authority of the Counter-Intelligence Staff (I(b)/CIB) of HQ Army Groups, or before an Army Group HQ is established overseas, of the senior headquarters ashore. This authority will be given in writing in the form shown at Appendix 'A' and will be carried by the escort right through to the ultimate destination in the UK. The category to which the civilians belong will be shown on the authorization. A copy of the authorization will be kept by the Counter-Intelligence Staffs at HQ Army Groups for record purposes. Lower headquarters who issue authorizations in the early stages will forward the copies to the HQ of the Army Group which is first established in the field.

7. Civilians of these categories will be brought to the UK in the LSTs carrying Prisoners of War.

The headquarters authorizing the dispatch of civilians to the UK will arrange for them to be escorted to the appropriate PW cage in the Beach or rear Maintenance area from which they are to be embarked. They will then be transported together with PWs in LSTs to ports in the UK, where they will be handed over to the Security Control Officer. PW escorts will be instructed to insure that no communication or contact is allowed between PWs and civilians being returned to the UK. On board LSTs, civilians will, if possible, be placed in one of the compartments on the troop deck.

8. The Security Control Officers at the ports in the UK will arrange for such civilians to be handed over to the civil authorities at the request of the appropriate department (e.g. MI 5, MI 6, SOE, OSS) after examination by the medical authorities.

AFTER INITIAL STAGE 'OVERLORD'

9. After an effective system of travel control has been established in the theater, certain civilians may be brought to the UK in addition to those required for intelligence and security purposes. These additional cases will be limited to key individuals whose presence in the UK is requested by British, U.S. or Allied Government Agencies. All such official requests will be made to the Passport Control Department in LONDON, who, if the request is approved, will communicate it through the Military Permit Office to the appropriate Army Group HQ in the Field. The armies in the field will not entertain any private applications from the civil population for permits to travel to the UK. This fact will be publicized by Civil Affairs. Agencies in the field wishing to bring civilians to the UK other than for intelligence purposes will refer the request to their parent agency in LONDON, who will make an official application as prescribed above.

10. All civilians travelling from the theater to the UK will continue to require written authorization from the Counter-Intelligence Staff at the appropriate Army Group HQ in the form shown at Appendix 'A'.

11. In the case of civilians travelling by sea, Counter-Intelligence Staffs at Army Group will notify the Port Counter-Intelligence Officer at the port at which they are to embark of the names and particulars of persons for whom such authorizations have been given. Port Counter-Intelligence Officers will be instructed that in no circumstances are they to allow any civilian to embark unless the civilian or his escort (if any) is in possession of a written authorization in the form shown at Appendix 'A'. Counter-Intelligence Staffs at each Army Group HQ will keep a copy for record purposes of all written authorizations which they issue.

12. For civilians travelling to the UK by air a similar procedure will be adopted. Counter-Intelligence Staffs at HQ of Army Groups will give prior notification to Air Force Station Commanders through the Air Force Staffs of the name and particulars of civilians authorized to be brought from an airfield under their control to the UK. Air Force Station Commanders will be instructed that they are not to allow any civilians to be brought to the UK by air unless they or their escorts are in possession of a written authorization in the form shown as Appendix 'A'. Counter-Intelligence Staffs will arrange with Air Force Staffs that civilians travelling by air to the UK are routed only to the following airfields which have been agreed to by AEAF, Home Office and MI 5:

HARROWBEER, HURN, BEAULIEU, HAWKINGE.

13. When the stage is reached at which it is decided to allow civilians in the theater to make application for permission to travel from the theater to the UK, representatives of Passport Control Department

in the theater will deal with such applications. Counter-Intelligence Staffs will maintain liaison with these representatives for Counter-Intelligence purposes.

UNDER RANKIN - 'C'

14. Under RANKIN - 'C' a similar procedure will be adopted as for OVERLORD. In the first phase the civilians who will be brought to the UK for intelligence purposes will, it is estimated, still be very few in number. Inasmuch as no DJ will be returned to the UK under RANKIN 'C', the headquarters authorizing the return of civilians will arrange necessary escort to the port of debarkation in the UK, where they will be handed over to the Security Control Officer for disposal. Agencies in the field wishing to bring civilians to the UK, other than for intelligence purposes, will refer the request to their parent agency in LONDON. Applications by agencies in LONDON for civilians to be brought to the UK will be made to the Passport Control Department in LONDON, who, if the request is approved, will communicate it through the Military Permit Office to the Army Group or Force Headquarters in the field.

15. Under RANKIN - 'C' Passport Control will establish offices at an early stage in liberated territories and in due course, in occupied GERMANY, and all applications by civilians for permission to travel to the UK will then be dealt with through them. No private application for permission to travel to the UK will be entertained before Passport Control Offices are established.

III. CIVILIAN AND SERVICE TRAVEL FROM THE UK TO NORTHWEST EUROPE

16. No civilian or Services personnel other than members of the AEF or personnel travelling as part of a formed unit requested by ANCXF, HQ AEAF, or HQ of Army Groups will be allowed to travel from the UK without a permit issued by the Military Permit Office, LONDON, who for this purpose will be acting as agents of the Supreme Commander, AEF. American representation will be provided at the Military Permit Office for the handling of American applications. Permits will, where necessary, be valid for a return journey. Paragraphs 3 - 13 above therefore will not apply to the return to the UK of civilians to whom permits have been issued to visit the theater. Every civilian entering the theater must also be in possession of an identity document bearing a photograph. British civilians will use either a passport, a National Registration Identity Card with photograph, or a BR form 12 for this purpose. American civilians will use a passport.

17. Permits will not be issued to persons travelling for private reasons. Subject to the usual security check, permits may be issued by the Military Permit Office without reference to ANCXF, HQ, AEAF, or Headquarters of Army Groups, only to persons in the following categories:

(a) Distinguished persons nominated by SCAEF.

(b) Service or civilian personnel of categories requested for the theater by ANCXF, IFQ, AEAF, or HQ of Army Groups

10. (a) Members of SHAEF.
All applications for visits to the Continent will be forwarded to A C of S, G-3, SHAEF, for co-ordination.

(b) Services personnel other than AEF.
Except for personnel covered by 17(a) and (b) above, the sponsoring agency in the UK will secure the approval of the appropriate Headquarters in the field for the visit before sending the application to the Military Permit Office.

(c) Civilians.
Applications for travel by civilians (other than those covered by 17(a) and (b) above) will be made by the sponsoring agency to the Military Permit Office which will refer them to ANCXF, IFQ AEAF, or to Headquarters of Army Groups, according to the destination. The Headquarters in question will be responsible for deciding whether a permit may be granted, and for informing the Military Permit Office, LONDON, of their decision.

(d) The MPO will forward to AC of S, G-3 Division, this headquarters, weekly a list showing names, destination, object of journey and length of visit of all persons to whom permits have been granted during the period. The permit will include, under the heading "Destination", the headquarters which the holder is authorized to visit. Further instructions will be issued as to the procedure to be followed when SHAEF moves overseas.

See Attached
Amendment - 9 July.

19. Headquarters of Army Groups, AEAF, and ANCXF will be responsible for the supervision and facilities of visitors to their respective headquarters or areas. Port Counter-Intelligence officers will forward to SHAEF Travel Control Section (G-2 Div) the names and destinations of all civilians arriving at their port.

20. SHAEF Travel Control Section will be responsible for determining the necessity for special supervision of visitors on security grounds. When information available to the Military Permit Office, LONDON, indicates the need for supervision, that office will notify SHAEF Travel Control Section as soon as the permit has been issued, to enable it to plan the supervision of the visitor.

21. Port Counter-Intelligence Officers will be responsible for indorsing the permits of all visitors at the port of entry and at the port of exit with a note of the date and place of entry or exit. In cases where visitors enter or leave by air, the Air Force Commander of the airfield of entry or exit will be responsible for insuring that the permit is so indorsed.

22. TRAVEL FROM OTHER COUNTRIES TO THE THEATER. Further instructions will be issued.

By command of General EISENHOWER:

E. C. BOEHNKE
Colonel, A.G.D.
Adjutant General

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE

AG 350.09-4 GBI-AGM 9 July 1944

SUBJECT: Control of Travel Between UNITED KINGDOM and NORTHWEST EUROPE.

TO: Commander-in-Chief, 21 Army Group
Commanding General, First U.S. Army Group
Allied Naval Commander, Expeditionary Force
Air Commander-in-Chief, Allied Expeditionary Air Force
Commanding General, European Theater of Operations

1. Reference is made to letter this headquarters, file and subject as above, dated 10 June 1944.

2. Paragraphs 19 to 22, inclusive, of letter referred to in paragraph 1, above, are renumbered 22 to 25, inclusive, and the following added as paragraphs 19, 20 and 21:

19. Issue of AEF Travel Permits. a. Civilians and service personnel other than members of the AEF or of a formed unit requested by ANCXF, Headquarters AEAF or Headquarters Army Groups.

(1) Included in AEF "priority build-up tables." These will be regarded as coming under paragraph 17 (b) above. Such persons will apply direct to the Military Permit Office, and permits will be issued, subject to the usual security check without reference to the theater. Applications, which must give surname, full Christian names, date and place of birth, Type and serial number of identity document held, must be endorsed by a service authority confirming that the applicant is included in the AEF priority build-up table.

(2) Dealt with under SHAEF Administrative Memorandum No. 17. AEF Travel Permits will be issued, after the appropriate security check, by the Military Permit Office at the time of the approval of the movement authority (see paragraphs 2 and 3, Section II, Administrative Memorandum No. 17, this headquarters, cs.)

b. Personnel employed by MI 6, SOE and OSS. The Military Permit Office is authorized to issue AEF Travel Permits for single or return journeys from U.K. to NORTHWEST EUROPE to these individuals without reference, provided applications are made through the Passport Control Office (Captain JEFFES).

20. Military Permit Office. a. The following details are given for information.

b. The postal address of the Military Permit Office is

Military Permit Office
Passport Office
Dartmouth Street
LONDON, S.W. 1.

c. The telephone number of the Military Permit Office from 0930 until 1900 hours daily is

WHITEHALL 9060

After 1900 hours, the officer on duty can be reached through the War Office at the following extensions:

Colonel Steward	)	Ext 1991
Captain Watson	)	
Lieutenant	)	Ext 1990

21. Civilian Travellers. a. The attention of civilian travellers to NORTHWEST EUROPE should be drawn to the following requirements under the laws of the UNITED KINGDOM.

(1) Except in certain cases, details of which can be obtained from the Passport Office, no person may leave the U.K. without first having obtained an Exit Permit. Applications for Exit Permits should be addressed to:

Passport Office
Dartmouth Street
LONDON, S.W. 1

The form of application for Exit Permit (Form P) can be obtained from either the Military Permit Office or the Passport Office - both offices are in the same building.

(2) No civilian may depart from the U.K. without the leave of an Immigration Officer. Immigration officers are posted at all principal passenger, air and sea ports.

By command of General EISENHOWER:

E.C. BOEHNKE
Colonel, AGD
Adjutant General

G-2 (Intelligence) Division

SHAEF/9SX/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION VI-RELATIONS WITH OTHER INTELLIGENCE AUTHORITIES.

Naval and Air Force Security Authorities.

1. Counter-Intelligence staffs and Counter-Intelligence personnel will maintain close liaison with all Naval and Air Force security authorities in their area.

2. The co-ordination between Naval and Military Counter-Intelligence authorities in regard to Port Security is dealt with in Section IV.

3. The security of airfields and control of entry thereto is an Air Force responsibility, but Counter-Intelligence personnel will be available to assist Air Force security authorities in carrying out investigations. The question of travel control at airfields is dealt with in Section V (to be issued later).

4. Counter-Intelligence staffs and personnel will, in discharging their responsibility for the security control of the civilian population safeguard the interests of the Naval and Air Forces. The following are the main duties which will be performed on behalf of the Navy and Air Force where desired:

(a) Liaison with representatives of Civil Affairs on counter-intelligence.

(b) Liaison with local civil authorities, including the civil police.

(c) Security control of the civilian population, in conjunction with Civil Affairs.

(d) Investigation (outside airfields) of incidents involving civilians, reported by Naval and Air Force personnel.

5. Whilst the Army is responsible for Civil Security in the theatre of operations, RAF security will, generally speaking, be ensured by RAF security personnel who will co-ordinate their activities at all levels with the Army and keep them fully informed on all matters relating to civil security.

SECTION VI (continued)

Special Intelligence Agencies Represented in the Field.
MI 6(v) / OSS (X2)

6. MI 6(v) and OSS (X2) will provide Special Counter-Intelligence (SCI) units for attachment to the CI staffs of British and US Army Groups and Army Headquarters. These units will work as an integral part of the CI staff of the Headquarters to which they are attached. A memorandum on their duties is at Appendix "B".

SOE/OSS(SO)

7. Special Force (SF) Staffs will be attached to headquarters of Army Groups and Armies. Their counter-intelligence functions consist in:

(a) Providing the CI staff with counter-intelligence information obtained from Resistance Groups, together with an estimate, based on previous knowledge, of the reliability of the source.

(b) Assisting CI staffs and personnel in matters where their specialized knowledge of Resistance Groups would be of help. This will include assisting in establishing the bonafides of persons claiming to have been working for allied underground organizations or Resistance Groups. It is emphasized that while the SF staffs will be able to provide assistance in such cases, the responsibility for determining the bonafides and for recommending as to disposal rests with the CI staffs.

Mobile W/T Detection Units

8. Mobile units for locating illicit wireless transmitters will be supplied by the Radio Security Service and US Signal Corps. A memorandum on their function and employment is attached at Appendix 'C'.

Allied Intelligence Services

9. Allied Intelligence Missions will be attached to Army Groups and will contain a counter-intelligence element. Detailed directions on the relationship between CI staffs and Allied Counter-Intelligence Services will be issued in due course. During the planning stage, no operational plans will be discussed with Allied Intelligence Services, except under direction of Supreme Headquarters, Allied Expeditionary Force.

10. It is envisaged that the role of allied CI personnel will include:

(a) Assisting CI personnel in the examination and disposal of miscellaneous suspects and suspect refugees.

SECTION VI (continued)

(b) Assisting in the collection of counter-intelligence information in the field.

Political Survey Officers

11. Political Survey Officers are officers of the Psychological Warfare Branch engaged in the collection of information for propaganda purposes. They will be attached to Army Groups and certain lower headquarters.

12. Their duties will include the collection in the field by overt methods (e.g. direct observation, interrogation of civilians and refugees, examination of documents, etc.) of:

(a) All forms of civil intelligence required by PWB units and staffs, ONI, PWE and OSS for the purpose of propaganda output and guidance of propaganda policy.

(b) Information required by Civil Affairs and other interested bodies, relating to conditions of life in the countries concerned and the attitude of the people to these conditions which is not otherwise provided.

13. Political Survey Officers and CI staffs will make available to each other such information of interest as they may acquire from their own sources.

Censorship Staffs.

14. The army censorship organization will undertake the censorship of certain civilian communications. This will include the examination of captured mails in combat area. Close liaison should be maintained with the censorship staffs to ensure that the maximum CI information is obtained from such censorship. CI staffs will provide the censorship staffs with "Watch Lists" containing the names and addresses of persons and organizations over whom censorship supervision is desired in the area concerned.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/96X/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE).

SECTION VII - SECURITY CONTROL OF CIVILIAN POPULATION.

Spheres of Responsibility.

1. The security control of the civilian population will be a joint responsibility of Counter-Intelligence and Civil Affairs Staffs. As a general rule, CI staffs will be responsible for formulating security policies but they will co-ordinate with and consult with Civil Affairs Staffs when these policies affect the civil population. Civil Affairs staffs will be responsible for implementing security policies through Civil Affairs Detachments and the indigenous authorities.

Relation between CI personnel and Civil Affairs Detachments.

2. CI personnel and Civil Affairs Detachments will maintain close liaison in the field to ensure co-ordination of action and avoid duplication of effort. When the entry into a town in which Civil Affairs Detachments are to operate is contemplated, the closest co-ordination must be maintained in the planning and execution of their respective roles. CI Staffs may establish in any locality a Security Committee to review and co-ordinate all matters of security interest. This committee may consist of representatives of military, naval and Air Force CI staffs, Provost Marshal Staff, CA Detachments and, when desired, indigenous police.

Proclamations:

3. Proclamations imposing restrictions upon the civil population of liberated territory will be promulgated by the Supreme Allied Commander. These will include the usual wartime security restrictions. The drafting of these proclamations will be the responsibility of Civil Affairs Staffs who will determine the necessary restrictions in conjunction with CI Staffs. Such regulations as may be issued by subordinate commanders within the framework of these proclamations will also be prepared by Civil Affairs Staffs in consultation with CI staffs.

Security Regulations.

4. CI Staffs will be responsible for recommending to Civil Affairs Staffs security regulations affecting the civil population. Civil Affairs Detachments will be responsible for implementing such regulations through the local civil administration. CI personnel will initiate checks to ensure that such regulations are carried out and will

report any infractions to CI Staffs and to Civil Affairs Detachments.

Relations with Indigenous Police

5. It is the responsibility of Civil Affairs Detachments to supervise, and where necessary, reactivate all police forces in liberated territory. Supervision of the security branches of the indigenous police forces will be carried out in accordance with policies laid down by the CI Staffs.

6. Wherever possible CI personnel will make their initial contact with indigenous police in conjunction with Civil Affairs Detachments. Thereafter CI personnel will maintain direct contact with the indigenous police at all levels on day to day routine matters.

7. Civil Affairs Detachments will ensure that CI personnel have at all time free access to the records of the local police. If it is found necessary to seize any records, the Civil Affairs Detachments will be informed and the records returned as early as practicable.

Relations with other Civilian Authorities.

8. Civil Affairs Staffs and Detachments will, whenever possible, be the channel for dealing with other civil authorities. After the initial contact has been made in conjunction with Civil Affairs, CI Staffs may make direct contact on day to day routine matters.

Officials.

9. The suspension and appointment of civilian officials will be a Civil Affairs responsibility. CI personnel will furnish Civil Affairs Detachments with any information they possess on the reliability of officials and Civil Affairs Detachments will consult with CI personnel in cases where the reliability of an official is doubtful from the security aspect. CI personnel will only arrest these officials who might continue to assist the enemy or be required for interrogation, and in such cases they will keep Civil Affairs Detachments informed of any action they take.

Suspect Political Organizations.

10. If there is evidence that any political organization is subversive in character and that its activities constitute a menace to the security of our forces, CI staffs will be responsible for recommending action to be taken, e.g. whether its activities are to be suspended, the members arrested, or the records seized. Where the activities of such an organization do not endanger the security of our forces, but tend to promote unrest among the civil population or to be politically disruptive, Civil Affairs Staffs, in consultation with CI Staffs, will be responsible for recommending action to be taken.

SECTION VII (continued)

Denunciations.

11. Where denunciations of individuals are received by CI personnel, the cases will first be examined to determine whether suspicion is based upon political, personal or security grounds. If it is clearly established that no violation or danger to security exists, the names of such persons will be given to Civil Affairs Detachments for any further investigation or action. Where convenient Civil Affairs Detachments and CI personnel may establish a joint system for the preliminary examination of denunciations. Security grounds will be the only justification for the detention of denounced persons by CI personnel. Mere membership in a particular organization will not necessarily provide sufficient grounds for detention.

Black and White Lists

12. CI staffs will receive detailed information prior to D day designed to assist in the security control of the civilian population. This will include:

(a) Black lists of officials and other individuals known to have assisted the enemy, and lists of European political organizations in which membership is sufficient to present a prima facie case against an individual.

(b) White lists of officials and other individuals believed to be reliable.

13. CI Staffs and personnel will bear in mind the fact that this information is primarily intended to serve as a guide only and that in most cases the information should be verified by local investigation before action is taken.

Security check of civilian labour.

14. Thorough security checking of mass labour is impracticable. Such precautions, however, as are feasible, such as checking by Civil Affairs Detachments with local police, care in selection of foremen, and the establishment by CI personnel of a system of informants, will be instituted wherever such labour may be in a position to endanger security. In the employment of individuals within headquarters or other places where they may have access to confidential information or vulnerable points, Civil Affairs Detachments will be responsible for preliminary checking with local police. No such individuals will be employed, however, until their names have been checked against the suspect lists and cleared by the CI staff.

SECTION VII (continued)

Passes and Permits.

15. Civil Affairs Staffs will be responsible for, but will work in close co-ordination with CI Staffs in the preparation and issue of civilian passes and permits and of plans for their use.

16. Civil Affairs Detachments will supply CI personnel with forms to enable them to issue passes and permits to civilians in special circumstances. Civil Affairs Detachments, not CI personnel, however, will be primarily responsible for issuing such passes and permits, and they may use the indigenous police for this purpose.

1884

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/G2X/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION VIII - PROCEDURE FOR INTERROGATING REFUGEES AND CIVILIAN SUSPECTS IN THE OPERATIONAL ZONE

General

1. In the operational zone the following classes of persons must be regarded as suspects and will require examination and interrogation for counter-intelligence purposes:

(a) Refugees reaching our lines from enemy territory.
(b) Civilians who have aroused suspicion and failed to establish their bona fides.
(c) Released or escaped allied prisoners of war and civilian internees.

The object of such interrogation is to provide an effective screen to prevent the infiltration of enemy agents.

2. In addition interrogation will be conducted with the aim of collecting counter-intelligence information, as well as intelligence of value for operational, propaganda, and other purposes.

3. The evacuation of civilians from the forward areas for relief purposes or for operational reasons will be a responsibility of Provost Marshal and Civil Affairs Staffs. For this purpose, refugee clearing stations will be established in the forward areas, where refugees will be marshalled and directed to the Refugee Camps which will be established, as required, by the Civil Affairs Staffs of Army Headquarters.

Security Control Posts

4. Counter-Intelligence personnel in the forward areas will be responsible for establishing security control posts to divert from the main stream of refugees these who will be required for interrogation (see paras 1 and 2 above), and for directing them to the Refugee Interrogation Posts. The security control posts may often be conveniently established at the refugee clearing stations. It must be made clear to all concerned in handling refugees in forward areas that security interests must have priority over welfare.

SECTION VIII (continued)

Refugee Interrogation Posts

5. It will be the responsibility of CI staffs to determine where to establish the Refugee Interrogation Posts. It may be found convenient to establish them as annexes to the Corps P/W cages, since civilian suspects may then be attached to parties of P/W and escorted with them from the forward areas, and, if necessary, evacuated with them to the Army P/W cage.

6. Refugee Interrogation Posts will provide the principal machinery for "screening" suspect persons and it will be at this stage that the bulk of the information of intelligence value will be obtained. The interrogation staff at the refugee interrogation post may be provided from the central reserves of CI personnel at the disposal of CI Staffs of Army Groups, and from CI personnel of the Allied National Intelligence Service operating with the CI Staffs. Combat Intelligence and Political Survey Officers should be given facilities for interrogating persons passing through the Refugee Interrogation Post.

Civilian Interrogation Centres

7. Persons whose cases clearly require detailed examination will be passed back from refugee interrogation posts to the Civilian Annex to the Army Prisoners of War cage. Civilian Interrogation Centers will be established at these Annexes and suspects will here be interrogated and investigated at length, and reports furnished to the Counter-Intelligence Staffs for decision as to final disposal.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/9SX/INT 5th February 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION IX - THE HANDLING AND DISPOSAL OF KNOWN AND SUSPECT

ENEMY AGENTS

1. The first responsibility of Counter-Intelligence staffs in the theatre of operation is the detection and apprehension of enemy agents. Detailed planning of measures against the German Intelligence Services (GIS) must be undertaken well in advance. Such plans will be based upon information supplied by SCI units and will be formulated in consultation with officers of these units. While SCI units will render advice and furnish information, executive action is the responsibility of CI Staffs and personnel.

2. GIS Targets having been designated by the CI Staff, success will depend upon the speed and thoroughness of initial action. Plans should therefore include attacks on GIS targets by CI personnel operating in many cases with advance units.

3. Whenever GIS personnel are captured, SCI officers must be notified and afforded the earliest opportunity to interrogate them. All documents, records, or equipment of GIS personnel captured will be turned over to SCI units for examination. SCI units will be consulted as to the disposal of each individual case. It is only by making the fullest use in this way of SCI units that the maximum information can be obtained and the detection and arrest of other agents secured.

4. It is important to conceal from the enemy the amount of knowledge concerning the organization and activities of the GIS which we have acquired through captured agents. The arrest and disposal of known and suspect enemy agents must therefore, be attended with the maximum degree of secrecy. No mention should be made in the press of the capture of or action taken against an enemy agent without the express authority of the AC of S, G-2/DGSI Army Group.

5. In order to ensure secrecy, CI staffs should arrange for the provision of suitably guarded secret premises in which captured enemy agents may be segregated and detained.

6. CI staffs should arrange to be kept informed of the arrest of enemy agents by indigenous authorities whether military or civil. The powers of CI Staffs to demand that any such agent be handed over to them for examination or disposal will be the subject of agreements to be reached with the Allied National Authorities.

SECTION IX (continued)

7. The ultimate disposal of a captured enemy agent should be decided by the CI Staffs after consultation with the SCI unit.

8. The field interrogation of arrested enemy agents should be carried out immediately. The more important cases should, upon advice of SCI officers, be returned to the U.K. for further and more specialized interrogation at the MI 5 Interrogation Centre in LONDON.

9. Where evidence is available and military necessity demands, prosecutions can be instituted against captured enemy agents of any nationality in US and British military courts. Counter-Intelligence Staffs should constantly bear this possibility in mind in all cases of sufficient importance. Captured enemy agents may in some cases be tried in the Civil or Military courts of the indigenous authorities in liberated territories when these are reconstituted. Advice as to legal procedure should be obtained from Civil Affairs legal officers.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/9SX/INT 16 March 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

SECTION X - COUNTER-SABOTAGE

Prevention.

1. The protection of all stores, equipment, installations, etc. against sabotage will be the responsibility of Command. CI Staffs will be responsible for advising commanders in regard to measures for the prevention of sabotage. For this purpose Counter-Intelligence Personnel will conduct surveys and inspections of vital points and will recommend protective measures.

Investigation.

2. The investigation of all cases of suspected sabotage will be a responsibility of Counter-Intelligence Staffs, and all suspected cases will be reported to them without delay.

3. Investigations will normally be undertaken by Counter-Intelligence Personnel, but in special cases an expert investigator may be obtained from MI 5, LONDON, at the request of the Chief Counter-Intelligence Staff Officer at Army Group Headquarters.

4. Liaison will be maintained with bomb disposal units for assistance in connection with sabotage equipment.

Enemy Sabotage Agents

5. Information from special sources covering the sabotage activities of enemy agents will be made available to CI Staffs by SCI units, who will advise on the action to be taken in request to such agents.

6. Any captured saboteur known or believed to be an enemy agent will be handled in the same manner as other enemy agents (see Section IX).

Liaison with MI 5.

7. Counter-Intelligence Staffs at Headquarters, Army Groups, will maintain direct liaison with the counter-sabotage section of MI 5. MI 5 will furnish the CI staffs with all available information of enemy sabotage methods and equipment, and with advice as to measures for the prevention and detection of sabotage and interrogation of saboteurs.

SECTION X (continued)

CI Staffs will similarly notify MI 5 of sabotage developments discovered in the field. Where necessary such information will be passed through I 6(v), LONDON, and the SCI units in the field.

COUNTER-INTELLIGENCE

SECTION XI - CHANNELS OF COUNTER-INTELLIGENCE INFORMATION

1. Responsibility.

(a) The Counter-Intelligence Staff, SHAEF, will undertake the general coordination of policy regarding the handling of Counter-Intelligence information in, from and to, the field, and the allocation of responsibilities and priorities. The detailed work in connection with the collation and distribution of Counter-Intelligence information will be the responsibility of the Coordination Section, SHAEF, and the CounterIntelligence Staffs at Army Groups and Army Headquarters as indicated below.

(b) The Coordination Section, SHAEF, will be responsible for the collation and distribution of Counter-Intelligence information covering the whole theatre, and with special reference to territories not yet liberated

(c) Army Headquarters will be responsible for the collation and study of Counter-Intelligence information required for the planning of immediate operations, or affecting the day to day security of their own particular area.

(d) Army Groups will be responsible for the collation and study of information relating to territories already liberated, or to areas still occupied by the enemy which may become a theatre of operations.

2. Procedure for handling information collected in the field.

(a) Counter-Intelligence information derived from captured documents, interrogation, reports, etc., and collected in the field will be studied by the Counter-Intelligence staffs at Army Headquarters, and the SCI Unit attached thereto for the purpose of extracting such information as is required for immediate tactical planning or the security of their own particular areas.

(b) Army Headquarters will pass back to Army Groups information required for planning or for the collation and study of Counter-Intelligence records covering the Army Groups area as a whole.

SECTION XI (continued)

(c) SCI Units at Army and Army Groups will pass back direct through their special communications channels to MI 6(v)/OSS(X2) unsuitable for transmission by Army signals. MI 6(v)/OSS(X2) will undertake the collation and the further distribution of this information where necessary, to other departments in LONDON or WASHINGTON and will pass to the Coordination Section, SHAEF, such detailed routine information as will be necessary for maintaining the personality cards up to date, and any summaries which will be required by SHAEF.

(d) Army Groups will pass back to the Coordination Section, SHAEF, all information of general interest or having special reference to territories not yet occupied by Allied forces, and such other reports as the Counter-Intelligence Staff, SHAEF, may direct.

(e) Detailed instructions will be issued separately regarding reports to be furnished by Army Groups to SHAEF when their Armies take the field.

3. Procedure for the distribution of information in the field.

(a) The Coordination Section, SHAEF, will be responsible for supplying Army Groups with amendments and additions to the existing Counter-Intelligence Brief, and any additional information relating to territories already liberated or not yet occupied by our forces. For this purpose, the Coordination Section will be supplied by departments in LONDON and WASHINGTON with the necessary collated information.

(b) All further information or requests for information addressed from departments in LONDON and WASHINGTON to formations in the field, and which are suitable for transmission by normal Army channels, will be routed through the Coordination Section, SHAEF. Information concerning the operation of SCI Units or which is not suitable for transmission by normal means, will be routed through MI 6(v)/OSS(X2).

(c) Departments in LONDON or WASHINGTON will, from time to time, supply the Coordination Section, SHAEF, with information necessary for the preparation of any general reports or appreciations required by the Counter-Intelligence Staff, SHAEF.

4. Exchange of Counter-Intelligence Information between Army Groups

Except as stated in paragraph 5 below, the flow of information in the field will normally follow the chain of command. Lateral communication between Headquarters below Army Group level will only be needed for detailed information requiring immediate action by neighboring Headquarters. Each Army Group will pass direct to the other Army Group any Counter-Intelligence information which may be of interest to them, and, similarly will supply to the other a copy of any routine reports submitted to SHAEF.

SECTION XI (continued)

5. Travel Control.

The Travel Control Section, SHAEF, will coordinate the flow of Counter Intelligence information in the theatre relating to its own particular sphere of activities. For this purpose, information and requests for information concerning travellers and travel control regulations will be passed direct to the Travel Control Section, SHAEF, by C.I. staffs at Sea and Air Ports and eventually at Frontiers. Similarly, information and instructions concerning travellers will be passed by the Travel Control Section, SHAEF, direct to Port and Frontier C.I. staffs.

6. Documents Sections.

Documents sections of Intelligence staffs at Army Groups and Army Headquarters will give Counter-Intelligence staffs an opportunity to study any documents containing information of Counter-Intelligence interest. Original documents that are only of Counter-Intelligence interest will be passed to Counter-Intelligence staffs for disposal. Purely Counter-Intelligence documents which Counter-Intelligence staffs are to pass to a higher headquarters in accordance with paragraph 2 above, may be handed to the documents sections for transmission and labelled "For attention Counter-Intelligence Staffs". Documents of purely Counter-Intelligence interest received by the SHAEF Documents Section will be passed to the Coordination Section, SHAEF, for action.

7. Channels of Counter-Intelligence Information.

The channles of information as between Army Groups, SHAEF, and producer departments are shown on the attached chart at Appendix 'A'. The colored lines may represent a flow in either direction.

(a) MI 6(v)/OSS(X2) pass information relating to hostile secret intelligence services direct to SCI Units attached to Army Groups in the field through their own special communications (solid red line). Lateral communication between Army Groups is similarly provided as shown. Other producer departments MI 5, War Office, MI Sections, SOE/OSS(SP), and PWE/OSS(R & A) feed any information relating to hostile secret intelligence services, which they may obtain from their own sources, to MI 6(v)/OSS(X2).

(b) SOE/OSS(SO) are in direct communication with their own SF Staffs attached to Army Groups (dotted red line). Lateral communications between SF Staffs at Army Groups are similarly shown.

(c) All producer departments pass information to the Coordination Section, SHAEF, (green lines) where it is collated and passed on to Army Groups in suitable form (purple line). The Coordination Section, SHAEF, distributes such information to other departments as may be

SECTION XI (continued)

concerned (green line) and feeds back to Army Groups the results of work done on such information.

APO 757 (Forward)
28 April 1945

SECTION XII

SUBJECT: Suspect British Indian Nationals

TO: Headquarters, 21 Army Group
Commanding General, 12th Army Group
Commanding General, 6th Army Group

1. Supreme Headquarters, AEF Intelligence Directive Number 7 (Counter-Intelligence), Section XII, subject as above, dated 16 March 1944, is rescinded.

2. Arrangements have been made with the India Office as set out below regarding the discovery and disposal of suspect British Indian Nationals in Europe. In order to assist in dealing with suspect British Indians, the India Office has provided for attachment to G-2 Division, Supreme Headquarters, AEF, a number of officers with the necessary linguistic qualifications and background knowledge. These officers will constitute the British Indian Security Unit (BISU) and will be available for attachment to Army Groups as required.

3. British Indian Nationals may be regarded as falling within two categories:

a. Indian Prisoners of War (including captured seamen), subdivided into:

(1) Suborned Prisoners of War.
(2) Loyal Prisoners of War.

b. Indian civilians:

(1) Suborned civilians.
(2) Loyal civilians.

4. Prisoners of War. Attempts have been made by the enemy to suborn certain British Indian Prisoners of War. In this connection some have been induced to join an organization called the Indian Legion, and some to work in civilian roles, e.g. as radio announcers.

5. Indian Prisoners of War recovered from recognized Prisoner of War camps will, in the first instance, be dealt with by Indian Army officers attached to G-1 Division (FWX). A list of suspect Indian Prisoners of War is being distributed to G-1 Division (FWX) and to

Counter-Intelligence Staffs (see paragraph 11 below). When any such suspect Prisoners of War are discovered in recognized Prisoner of War camps, G-1 Division (PWX) officers, or the officers administering the camps, will request the assistance of officers from the British Indian Security Unit. The assistance of such officers will also be requested whenever the loyalty of Indian Prisoners of War in a recognized Prisoner of War Camp is in doubt. All suspect Indian Prisoners of War will, so far as is practicable, be segregated from other Prisoners of War.

6. When Indians are received singly or in groups (i.e. not as members of recognized Prisoner of War camps) the responsibility for deciding whether they are Prisoners of War or civilians will rest with the British Indian Security Unit who will be immediately consulted. If it is established that they are Prisoners of War the British Indian Security Unit will arrange for their disposal after such brief interrogation as may be necessary to determine whether there has been any degree of collaboration with the enemy. If it is established that they are civilians, the British Indian Security Unit will take action as outlined in paragraphs 10 or 11 below.

7. All British Indian Prisoners of War will be evacuated to the United Kingdom where the detailed examination of their bona fides will be undertaken. A preliminary examination by officers from G-1 Division (PWX) or from the British Indian Security Unit (as outlined in paragraphs 5 and 6 above) will be necessary in order tht those who are known or believed to have been suborned may be sent to the United Kingdom under escort.

8. Close liaison will be maintained by G-1 Division (PWX) and the British Indian Security Unit with IS9 (WEA) regarding any Indians claiming to be escaped Prisoners of War.

9. Civilians. The primary function of the British Indian Security Unit will be in connection with Indian civilians. All Indian civilians will be detained, and a report submitted to Supreme Headquarters, AEF or to the appropriate British Indian Security Unit officer, if available, who will then make the necessary arrangements for interrogation.

10. Those Indian civilians who, it is decided after interrogation and consultation with the appropriate authorities, may be considered cleared from a security point of view, will be permitted either to remain in Europe or to return to India on release, under arrangements which will be initiated by the British Indian Security Unit.

11. Revised lists of Indian (collaborators) are in the course of preparation and will be forwarded to Counter-Intelligence Staffs and to G-1 Division (PWX). Persons named in these lists will be detained after interrogation and ultimately repatriated to India under escort. On no

SECTION XII (continued)

account should they be sent to the United Kingdom. There is no objection to British Indian civilians detained as collaborators being kept in the same detention camps as German civilian suspects. They should, however, be kept separate from Indian Prisoners of War.

By direction of the Supreme Commander:

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

APPENDIX "A" - AREAS SUBJECT TO SPECIAL RESTRICTIONS.

1. Under Defense Regulations and Aliens Orders, restrictions of various types are imposed on the activities of civilians for the purpose of ensuring the maximum security control of the population in areas of special importance.

Regulated Areas.

2. The Admiralty, the Secretary of State for War, and the Secretary of State for Air are empowered by DR 13A to declare by order that any district in which there are naval, military, or air force activities, shall be a Regulated Area. The effect of such a declaration is that in the areas concerned, the service authority specified in the order may impose restrictions on the movements of persons within that area by prohibiting or regulating the use, by members of the public, of highways and other places to which the public have access. Regulated areas have been created in SCOTLAND and on the EAST and SOUTH Coasts of ENGLAND. The GOC in C of the Command concerned has been given authority to apply the restrictions.

Protected Areas.

3. Four protected areas have been declared in SCOTLAND. The effect of the declaration is that a pass or permit is required for entry into or residence in the area concerned. Those persons (not being enemy aliens) who were residents in the Protected Areas at the time of the declaration creating it, are exempt from this requirement.

Defense Areas and Restricted Areas.

4. Under DR 16A, the Regional Commissioner may, subject to the control and direction of the Minister of Home Security, regulate movement within any Defense Areas within his region for the purpose of meeting, or hindering actual or apprehended attack. The whole of the UK has been split up into twelve Defense Areas, co-extensive with the twelve Regions. The exercise of these powers is illustrated by the bans which have been placed from time to time on visits for pleasure to coastal areas. Areas so banned to holiday-makers have been known as 'Restricted Areas'.

5. Premises and places which by their nature are vulnerable to espionage or sabotage, such as docks, factories, depots, etc. are frequently declared to be Protected Places under DR 12. It is an offense to be upon a Protected Place without the permission of the authority specified in the order declaring a Protected Place.

Aliens Protected Areas.

6. No alien may without permission of the police, enter an area scheduled as an Alien's Protected Area. These comprise a coastal strip on the EAST and SOUTH coasts, the principal harbour areas, and a few inland areas.

Service Premises.

7. Trespass upon premises used by His Majesty's Service is an offence under Dr 15, and trespassers may, without prejudice to proceedings which may be taken against them, be removed. It is also an offence to continue to loiter in the vicinity of such premises after having been requested by the appropriate authorities to leave.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE
G-2 (Intelligence) Division

SHAEF/9GX/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

APPENDIX "B" - SPECIAL COUNTER-INTELLIGENCE UNITS

General

1. Information relating to enemy secret intelligence services in enemy, enemy-occupied and neutral territory is available in LONDON, mainly in Section V of MI 6, X2 Branch of OSS, but also, in other departments such as MI 5 and MI 14(d), War Office, owing to the special nature of this information and the great discretion required in its use, it is not suitable for passing to the CI Staffs through normal intelligence channels. Special CI Units will therefore be supplied by Section V of MI 6 for attachment to British Army Group and Army Headquarters and by X2 Branch of OSS for attachment to US Army Group and Army Headquarters. These units will act as a channel for passing information to CI Staffs about enemy secret intelligence services and will advise them as to its use.

2. All producer departments of information of this type in LONDON will work in the closest collaboration and will pass their information to MI 6/OSS for transmission, if necessary, to SCI units.

Organization

3. (a) British

SCI units are of two types:

Type "A" (4 officers and 6 O.R's) suitable for attachment to an Army Group HQ.

Type "B" (2 officers and 2 O.R's) suitable for attachment to an Army HQ or a smaller force engaged in a specific operation of limited scope.

(b) U.S.

Officers	Army Group	Army
Majors	1	1
Captains	2	1
First Lieutenants	1	1
Total	4	3

1900

APPENDIX "B" (continued)

Enlisted Men	Army Group	Army
First Sergeants	1	1
Staff Sergeants	1	1
Technicians 4th	5	3
Pfc's	4	2
Total	11	7

Administration

4. SCI units will be administered for all purposes by the headquarters to which they are attached (British, by the Camp Commandant: US by the headquarters company).

Duties

5. The duties of SCI units in the planning stage are:

(a) To assist in the preparation of all available information about enemy secret intelligence services in the form required by the CI Staffs.

(b) To advise CI Staffs in the selection of the immediate counter-intelligence targets and in the method of dealing with them to ensure the maximum intelligence results.

6. The duties of SCI units in the field are:

(a) To distribute and interpret to the CI Staffs all counter-espionage information received by them from LONDON and from other SCI units, and advise as to its most effective and secure use.

(b) To afford the maximum protection to special sources of secret counter-espionage information.

(c) To advise CI Staffs in the selection of counter-espionage targets whose capture is likely to yield material of value.

(d) To assist CI Staffs in the examination of captured enemy documents or material of special counter-espionage interest.

(e) To assist CI Staffs in the interrogation of captured enemy agents.

(f) To pass to LONDON all information on enemy secret intelligence services collected in the field, including such captured documents and other material as is no longer required in the field.

(g) To serve as a direct channel between each Army Group HQ for information on enemy secret intelligence services collected in the field.

(h) To serve as a channel between the Army Groups and from the Army Groups to LONDON for any other counter-intelligence information which cannot be passed through normal service channels.

Employment of SCI units

7. SCI units are normally attached to the CI Staffs of a headquarters and are directly responsible to the Chief CI Staff Officers.

8. Although not technically forming part of the CI Staff, the officers of SCI units will work in closest liaison with the component sub-sections of the staff. The functions of the SCI units are advisory and not executive. Executive action on information supplied by SCI units is the province of the CI Staffs and CI personnel.

9. SCI units will normally pass their information direct to the appropriate sub-section of the CI Staff. However, in furtherance of their responsibility to safeguard special sources (see para 6(b) above), they will have the right to withhold any particular item of information derived from such sources from any but the Chief CI Officer, and to represent to him the necessity for prohibiting or limiting action upon it, where action or unrestricted action might prejudice the security of these sources. The ultimate decision as to whether action is or is not to be taken in the field will rest with the A C of S (G-2) or the DCS (I) of the Army Group, except when an express prohibition to take action is issued by MI 6 or OSS in LONDON.

10. Personnel of SCI units should not be employed in any area where there is danger of capture and therefore of interrogation by the enemy. They should normally move with the HQ to which they are attached.

11. It may often be profitable to attach CI personnel to SCI units for short periods of training for special tasks, e.g., seizure and inspection of CI documents. Personnel of SCI units may also accompany CI personnel on such tasks subject to the proviso in the preceding paragraph.

APPENDIX "B" (continued)

12. Personnel of SCI units are specially qualified and must not be employed on any other than counter-intelligence duties.

Communications

13. SCI units are furnished with special communications and codes and are not normally dependent on Army Signals.

14. Each SCI unit will be in direct communication with its LONDON Headquarters, and all units within the same Army Group Zone will be in direct communication with each other. In addition, each unit with an Army Group Headquarters will be in direct communication with the unit at the other Army Group Headquarters.

SUPREME HEADQUARTERS
ALLIED EXPEDITIONARY FORCE

SHAEF/96K/INT 5th February, 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

APPENDIX "C" MOBILE W/T DETECTION UNITS

1. Function.

The detection of illicit wireless transmitters is carried out in two phases; first, the recognition of a wireless signal as originally from an enemy agent and its rough location by long range direction-finding, and second, the accurate location of the illicit transmitter by local direction-finding. The first stage includes the large scale analysis of wireless signals based on a fixed DF system which in this theatre is carried out in the UNITED KINGDOM. The second stage, in the field, is carried out by a team of mobile DF vans, operating under the direction of the central control in ENGLAND with its attendant analysis and fixed DF. Six vans each are provided at 21 Army Group and First US Army Group respectively, linked by special W/T to the common central control. The function of these vans is to locate from comparatively short range, the source of a radio signal on to which they are directed in terms of frequency, rough location, etc., by the central control. They are not suitable for the initial detection of an agent's signal, a task which for technical reasons can hardly ever be accomplished successfully by local action.

2. Organization

The personnel and vans at HQ 21 Army Group will form part of the Special Communication Unit supplied by MI 6. Those at First US Army Group will be supplied by the US Signal Corps. While these units will be technically controlled from the UNITED KINGDOM, they will be under the operational command of the Chief Counter-Intelligence Staff Officer at Army Group Headquarters. The officer in charge of the mobile vans will be responsible for their technical employment. They will at all times work in close liaison with SCI units and counter-intelligence personnel.

3. Local Intelligence

Experience has shown that CI staffs may expect to receive numerous reports alleging illicit use of wireless behind our lines. Many of those reports will be obviously absurd or the result of ulterior motives on the part of local inhabitants, but all reports that are not obviously ridiculous must be investigated. An officer experienced in investigating such cases will be available at each Army Group Headquarters and any reports which appear to merit investigation will be referred to him. He will be able to call on any further technical help necessary.

APPENDIX "C" (continued)

Mobile DF vans will not normally be employed in investigating cases arising from local intelligence without prior reference to the central station in the UNITED KINGDOM.

SUPREME HEADQUARTERS.
ALLIED EXPEDITIONARY FORCE
G-2 (INTELLIGENCE) DIVISION

SHAEF/9SX/INT 16 March 1944

SHAEF (INT) DIRECTIVE NO. 7 (COUNTER-INTELLIGENCE)

APPENDIX "D" - THE SECURITY CHECKING OF SECRET AGENTS

1. All agencies who recruit secret agents in the field will submit the names of such agents, before employment, to the CI Staffs of Army Group or Army Headquarters. Where necessary the names will be submitted direct to the Chief Counter-Intelligence Officer who will institute the required security check without disclosing the purpose for which it is being made.

2. The CI Staffs will check the names of such persons against their records, and may, if they and the agency concerned consider it necessary or desirable, check the names with the civil police or make other local enquiries to establish their bona fides.

3. The above procedure will also be adopted for the security checking of any agents recruited in the field to operate behind our own lines as confidential informants.

APPENDIX II

General Order 36, ETO, 27 April 1944

1907

Assignment of CIC personnel ---------- I
Provisional organization of CIC detachments ---------- II

I--ASSIGNMENT OF CIC PERSONNEL. Effective immediately, all Counter Intelligence Corps officers and enlisted personnel on duty in the European Theater of Operations, exclusive of such personnel on duty with European Wing Air Transport Command, and now assigned to Counter Intelligence Corps, Military Intelligence Service, War Department, will be relieved from such assignment and assigned to Headquarters, European Theater of Operations, US Army, for duty with Assistant Chief of Staff, G-2 Section. (AG 210.3/2 x 220.3 OPGB)

II--PROVISIONAL ORGANIZATION OF CIC DETACHMENTS. 1. Effective this date, the following units are provisionally organized in accordance with the appropriate column of T/O & E 30-500, 24 January 1944, and each with an authorized strength, as indicated:

Unit	Teams		Strength Off	Strength EM
CIC Detachments #1 thru #22 (Provisional)	1-Type A-1		1	1
	1- " B-1		1	4
	1- " B-2		2	8
		Total	4	13
CIC Detachments #23 thru #28 (Provisional)	1-Type A-2		1	3
	1- " B-4		4	11
		Total	5	14
CIC Detachments #29 thru #30 (Provisional)	1-Type A-3		2	4
	1- " B-4		4	11
		Total	6	15
CIC Detachment #31 (Provisional)	1-Type A-3		2	4
	1- " B-4		4	11
	8- " B-3		24	88
		Total	30	103
CIC Detachments #32 thru #35 (Provisional)	1-Type A-2		1	3
	2- " B-2		4	16
	1- " B-3		3	11
		Total	8	30
CIC Detachment #36 (Provisional)	1-Type A-2		1	3
	2- " B-4		8	22
		Total	9	25

(GO 36, ETOUSA, 27 Apr 1944, continued)

Unit	Teams		Strength Off	Strength EM
CIC Detachment #37 (Provisional)	1-Type A-2		1	3
	7- " B-2		14	56
	2- " B-3		6	22
	2- " B-4		8	22
		Total	29	103
CIC Detachments #30 and #39 (Provisional)	1-Type A-2		1	3
	3- " B-1		3	12
	1- " B-4		4	11
		Total	8	26
CIC Detachment #40 (Provisional)	1-Type A-3		2	4
	1- " A-4		4	6
	1- " B-1		1	4
		Total	7	14

2. Necessary personnel for these detachments will be provided by this headquarters.

3. Units will be equipped in accordance with T/O & E 30-500, 24 January 1944.

a. Special equipment required for these units will be requisitioned in accordance with War Department letter, AG 400 (27 Nov 43) OB-S-SPDDL-M, subject: "Special List of Investigative Equipment and Supplies for the Counter-Intelligence Corps," 29 November 1943.

4. The provisions of AR 345-800 and AR 345-900, as amended, will be complied with where applicable.

5. Units will be assigned to Headquarters, European Theater of Operations, and attached to field and air force commands as required. (AG 322 OPGB)

By command of General EISENHOWER:

R. B. LORD,
Brigadier General, GSC, Deputy Chief of Staff

OFFICIAL:

R. B. LOVETT,
Brigadier General, USA, Adjutant General

APPENDIX IV

FUSAG CI SOP

1940

CIC

1. GENERAL.

The organization, training, administration, and operations of FUSAG CIC personnel will be in general accordance with the provisions of TM 30-215, WD dated 22 Sep 43, subject: "THE COUNTER INTELLIGENCE CORPS."

2. ORGANIZATION.

a. Based upon T/O and E 30-500, dated 24 Jan 44, the CIC detachments in the European Theater of Operations are organized in accordance with the provision of Section II, GO 36, Hq ETOUSA, dated 27 Apr 44.

b. Reinforcements or replacements to subordinate headquarters normally will be made from CIC reserve teams attached to this headquarters. However, a higher headquarters may withdraw personnel from one or more of its lower echelons to reinforce temporarily another of its headquarters.

3. TRAINING.

All CIC personnel have completed, under WD supervision, certain training courses designed to qualify them in general, for CI work. Personnel in this theater have completed or will complete under ETOUSA supervision certain other training programs intended to qualify them for CI work in the ETO. In addition to this training, commanders of headquarters to which detachments have been attached are responsible for insuring that:

a. Each CIC member maintains a high standard of physical condition and a high state of training as a soldier (emphasis to be placed on training in self-defense, defense against booby traps, etc.), that he is trained in vehicle maintenance, and that he gains a useful knowledge in one or both of the French and German languages.

b. The detachment participates in unit training exercises, and that it develops and engages in exercises designed to simulate forthcoming operations.

4. OPERATIONS.

In commands to which CIC personnel are attached, the AC of S, G-2, assisted by his CI staff officers, is responsible to his commander for general supervision of, and advice pertaining to, the employment of such personnel. Actual employment, however, is a function of command to be exercised through the commanding officer of the CIC detachment.

a. The commanding officer of the detachment is responsible for detailed planning regarding the employment of his detachment personnel. Necessary CI information upon which such planning is to be based will be provided by the G-2 (CI) staff concerned.

b. CIC personnel will be operated in teams of two men or larger groups whenever practicable.

c. It is of the utmost importance that effective CI coverage be maintained continuously in large or important towns and areas. In establishing CI coverage initially for such locations, individual CIC members will develop informant systems, begin investigations of suspect persons, and will become acquainted with and gain confidence of influential local persons whose cooperation is helpful. For these and many other reasons, it is highly desirable that certain of these members continue the maintenance of coverage in the area until relieved by other personnel who have become sufficiently acquainted with the local situation to permit their efficient assumption of control. When such conditions prevail, a small group of the CIC detachment of original jurisdiction should remain in the location in order to turn over to relieving personnel any unfinished local business and to advise in their activities. Only when it becomes apparent that control can be relinquished without jeopardy to the CI coverage will the original group join its detachment.

(1) The above will be considered in planning, and when necessary the temporary attachment of one or more CIC personnel to be left in charge of a specific town or area may be requested from a higher headquarters.

(a) Whenever practicable ComZ and air force CIC personnel specifically trained in port and airport CI duties, will be made available to tactical demands required to establish initial CI coverage for ports and airports.

(2) Under unforeseen circumstances which may occur during operations and when it becomes apparent that it will be necessary to relieve lower echelon CIC personnel of responsibility for CI coverage in an area to be vacated by their headquarters, the higher headquarters will make possible the early relief of such personnel by detailing relieving personnel to the area prior to or immediately after movement of the lower headquarters.

d. When the situation demands, detachment commanders by oral orders may place personnel under their command on temporary duty with other detachments upon approval in each case by the appropriate G-2.

Annex "P" continued

e. CIC personnel have full power and authority to arrest or detain any person who violates military security or whose detention is otherwise deemed necessary for the accomplishment of the CI mission.

f. Members of the CIC are authorized to call upon any member of this command for such assistance as may be required in the performance of their assigned duties.

g. Liaison between CI personnel and all other allied intelligence agencies is the responsibility of CI staffs. However, members of the CIC will work in closest cooperation with:

(1) G-5 and CA detachments.
(2) Naval, air forces, and ComZ CI personnel.
(3) Military police and personnel of the office of the provost marshal.
(4) SCI and SF personnel.
(5) Radio DF personnel.
(6) Document collection and evaluation teams.
(7) P & PW Officers.
(8) Attached allied CI staffs and personnel.

h. CIC personnel will be encouraged to exercise their initiative to the fullest extent, and, in the performance of their duties, they will be permitted to operate with minimum restrictions of movement. They will not be delayed in the execution of their assigned duties by the observance of standard customs or prohibitions (such as speed limits, access to places "off limits" etc.) nor by the military police or other military agencies. CIC badges and credentials will be honored at all times.

i. CIC personnel will be employed only on tasks involving a CI interest. They will not be employed on combat intelligence missions, routine PW interrogations, black market investigations, nor other work which is properly the function of another agency and which may retard or interfere with the performance of CI duties. CIC personnel will not be assigned to kitchen police, fatigue, guard, or other duties of comparable nature.

5. DUTIES.

Included among the operational duties of CIC personnel are the following:

a. Primary Duties in Forward Combat Areas: The primary duty of CIC personnel is to secure CI targets in the area of the objective. Foremost among these targets are:

(1) Known and suspect enemy agents.

(2) Known enemy collaborationists, sympathizers, and other persons whose presence menaces the security of the allied forces.

(3) Offices formerly occupied by the enemy intelligence services or enemy police organizations and any documents they contain.

(4) Offices of local para-military organizations and collaborationist bodies and their records.

(5) Centers of communications.

(6) Buildings, billets, and installations known or suspected to contain documents of CI value.

NOTE: Army CI staffs will receive from this headquarters all information on these subjects which is available from special sources and will be responsible for distributing it to CI staffs and CIC of lower organizations as required.

b. Seconday Duties in Forward Combat Areas:

(1) Making security checks in cooperation with the military police who are marshalling refugees and other civilians arriving from enemy occupied territory.

(2) Contacting local authorities and persons known to be friendly to the allied cause in order to secure all possible CI information.

(3) Advising upon and assisting in security against sabotage all public and private installations, the continued operation of which is essential to the allied forces.

(4) Checking upon the observance by civil population of all security provisions contained in the proclamations and orders issued by G-5 and CA detachments.

(5) Assisting in the discovery and collection of any hidden armaments or equipment which have not been surrendered or reported in accordance with ordnances.

(6) The seizure of civil communications and arranging for their protection against sabotage until taken over by authorized signal communications personnel as provided in operational orders. The records of such installations are of prime importance and should be secured, guarded, and turned over to the proper authorities.

(7) Seizing and impounding all civilian and captured enemy mail.

(8) Advising on the immediate establishment of guards at all captured ordnance and ammunition dumps, especially those which may be accessible to the local population.

(9) Stopping publication of newspapers and other periodicals.

(10) Taking measures necessary to prevent looting and destruction of enemy documents and material by our own troops.

(11) Transmitting to G-5, PM, or MP officers all information on matters within their purview, such as civilian controls, adequacy and extent of cooperation of civil police, and the extent of disorder, looting, and sabotage.

c. Investigative Duties. The CIC will be employed in investigations of:

(1) Espionage.
(2) Sabotage.
(3) Subversive activity, including rumor mongering and surreptitious issue of enemy propaganda.
(4) Disaffection, treason, and sedition within the US forces.
(5) Violations of security regulations.
(6) (In certain instances involving a CI interest) Personnel of government of occupied territory who are retained in their official capacities.
(7) Certain civilian personnel to be employed by the US government (See para 6, Annex "F").

d. Miscellaneous Duties:

(1) Cooperating with the corps of military police and other military and civil authorities in exercising control at frontiers of territory under the jurisdiction of US armed forces. This action will include the recommending of the establishment and the assisting in the maintenance of controls and control systems over the entrance of persons, goods, and information into territory occupied by this command.

(2) Assisting port CI officers in the discharge of their duties.

(3) Performance of security surveys to determine the safety of communications, transportation lines, storage and supply facilities, and other US installations and offices.

(4) Delivery of security lectures to the troops and other provisions for general indoctrination of all US military personnel in security principles.

(5) Surveillance of hotels, bars, restaurants, and other places frequented by US military personnel, and located within or near the area occupied by US troops.

(6) Establishing informant networks.

(7) Keeping the assistant chief of staff, G-2, of their respective commands informed of internal politics, political parties, or subversive groups which may be inimical to the counter intelligence interests of the allied forces.

e. Duties in the Event of Evacuation or Withdrawal:

(1) Searching evacuated headquarters, bivouac areas, supply depots, and other installations to insure that documents or any material that might be of intelligence value to the enemy have been completely destroyed or removed.

(2) Checking the control of refugees along the routes used by troops to prevent the possibility of enemy infiltration.

f. Duties of Special Groups. Duties of special groups will be in accordance with the needs of their particular assignment in addition to the duties enumerated above.

6. UNIFORM.

CIC personnel are authorized to wear the uniform prescribed for civilians serving with the armed forces. Normally, they will wear the civilian uniform and the CIC brassard as supplied by ETOUSA. Civilian clothing will not be taken to nor worn on the Continent. CIC credentials and badges will be carried as part of the uniform except when they might jeopardize the safety of the agent or the successful accomplishment of his mission.

7. CHANNELS OF COMMUNICATION.

Normal intelligence channels will be used for all CIC purposes. Lateral communication between detachments is authorized.

8. RECORDS.

In order to facilitate the taking over of areas by relieving CIC detachment, it is essential that the records kept by CIC detachments be uniform and arranged so that they are easily intelligible to persons other than their compilers.

a. For the above purpose:

(1) All detachments will use cards measuring 5" by 8".

(2) Both cards and files will be kept in such a way that a detachment leaving an area can conveniently leave behind the cards and files referring to the area while taking with it only those files relating to general CI policy and administration.

(3) Particulars noted on the cards should enable an incoming detachment to find readily all relevant information, whether on the card itself or in the files.

b. Files.

(1) Separate files will be kept for:

(a) Suspect individuals.
(b) Suspect organizations.
(c) Security controls.
(d) Investigations.
(e) Periodic reports of agents.
(f) Periodic security reports.
(g) Security policy.
(h) Administrative subjects.

(2) Categories numbered (a) to (e) above will be sub-divided by towns or districts.

(3) In general files, each individual case or organization will be allotted a separate number; e.g. BERNARD Andre -- 1, HERMANT Abel -- 2. All further correspondence on BERNARD Andre will then be marked with the same initial number followed by a letter: e.g. 1a, 1b, 1c, etc. This will enable correspondence in general files to be kept either chronologically or separately by subjects, so that documents on any one subject can quickly be found or extracted.

(4) Where papers relating to an individual or organization are included in several files, cross reference will be made either in the files or on the relative cards.

(5) When documents relating to a particular case become numerous, they should be removed from the general file and a new individual file should be opened.

c. Card Index.

(1) Particulars of all suspects, informants, suspects

organizations, and addresses will be carded and the same territorial division will be made of the card index as is made of the filing system. (See b. (2)).

(2) Cards relating to individual suspects will record:

(a) Full name, address, and occupation, with any aliases.

(b) Any details of the case and of action taken which will assist in identification.

(c) Reference to file containing documents of the case, with numbers of relevant inclosures.

(d) Cross-reference to names of any associates (unless this is already cross-referred in the relevant files).

(3) Cards relating to informants will record:

(a) Full name, address, and occupation.

(b) Reference to files containing any related documents, with numbers of relevant inclosures.

(c) How first contacted.*
(d) Estimated reliability.*
(e) Cross-reference to any suspects or cases reported by the informant.*

(4) Cards dealing with parties, organizations, suspect establishments (cafes, etc.) will record:-

(a) Name and addresses.
(b) Brief case history.
(c) Reference to any files dealing with it, with numbers of relevant inclosures.
(d) Cross-reference to individuals connected with it.
(e) Action taken.

* Unless these particulars are already noted in the files.

1948

APPENDIX V

Third Army Instructions for CIC

1949

THIRD UNITED STATES ARMY INSTRUCTIONS FOR THE COUNTER INTELLIGENCE CORPS

I. MISSION:

1. The primary mission of The Counter Intelligence Corps is the security of the combat troops.

2. CIC will not be concerned with local politics, excepting situations which might affect tactical plans or the security of combat troops.

II. ORGANIZATION:

1. To provide continuous and complete CIC coverage during operations, at the direction of AC of S, G-2, TUSA, four (4) EM from each division Detachment will be withdrawn and transferred to Corps Reserve Pool with full-field equipment and two (2) ¼ ton trucks with one (1) trailer. One (1) officer and seven (7) EM from Corps CIC Detachment will be similarly transferred with same equipment and four (4) ¼ ton trucks to Corps Reserve Pool. Service Records and allied papers of all EM transferred to Corps Reserve Pools will be forwarded to Chief CIC Officer, Headquarters, TUSA, for administration.

2. Personnel from the Corps Reserve Pool will be used specifically:

a. To reinforce Division Teams for city and town coverage.

b. To provide static CIC personnel who will remain in the town or city until relieved by Zone of Communications CIC Detachments, at which time they will report to Chief CIC Officer, Headquarters, TUSA, for dispatch back to the Corps Reserve Pool. Chief CIC Officer, TUSA, is responsible for arranging transfer of control to Forward Echelon, Communications Zone, CIC Detachments.

3. The Corps CIC Officer under the direction of the Corps AC of S, G-2 will be in charge of the Corps Reserve Pool. It will be his responsibility to assign these Corps Reserve CIC personnel to Divisions as the operation develops. Chief CIC Officer, Headquarters, TUSA, will be kept currently advised regarding the disposition of Corps Pool reserves, and current requirements of the Corps. Corps Reserve Pool will be reinforced when necessary, either from the Reserve Pool of another Corps, or from Army Reserve Teams. It is recommended that the Corps Reserve Pool be located in or near the Corps rear echelon.

4. The Reserve Pool personnel will be employed by the Division Detachment Commander to the fullest extent possible in all aspects of security work which will be of significance in the long-term security of the town, and will revert to the command of the CIC Detachment Commander of each succeeding echelon as the operation progresses.

5. The CIC Commanders of Division, Corps and Army, acting under the appropriate AC of S, G-2 are responsible for the allotment of zones of responsibility to various CIC elements located within their areas. (They are further responsible that, prior to the assignment of CIC to a given area, this personnel is briefed and trained, as far as possible, in the economics, politics, and personalitites of that area). Emphasis will be placed on specific missions for each Agent. If Corps' allotments of zones of responsibility, as reported to Army, are inconsistent with projected plans, Army will direct such modification by Corps as is consistent with proposed needs.

III. DUTIES

1. The primary duty of CIC to secure CI targets in the area of the objective, i.e., to seize such information, personalities, material, documents, headquarters and offices and enemy-controlled and para-military organizations as countering the activities of enemy intelligence services and subversive bodies, and of applying full security measures to the civil population.

2. Special CIC Targets:

a. Known and suspect enemy agents.
b. Known enemy collaborationists, sympathizers.
c. Centers of communications (telephone, telegraph, radio).
d. Offices formerly occupied by enemy intelligence services, or enemy police organizations, and any documents contained therein.
e. Offices of para-military organizations and collaborationist bodies and their records.
f. Enemy military headquarters and command posts:

(1) CIC personnel will examine premises, documents and material of captured enemy headquarters and command posts for documents and information of Counter Intelligence value.

(2) CIC personnel will make the inspection directed above after the captured headquarters or command post has been cleared of mines and/or booby traps by the Engineers or trained reconnaissance personnel. They will request assistance from nearest troops as required.

3. Other duties:

a. Cooperate with Provost Marshal, Civil Affairs, and the local police in marshalling refugees and other civilians arriving from the enemy lines, and arranging for their preliminary interrogation and segregation of suspect individuals, and for the imposition of appropriate control and security measures.

b. Contact local authorities and persons known to be friendly to the Allied cause, in order to obtain all possible Counter Intelligence information.

c. Advise upon the protection against sabotage of public utilities, bridges, depots, rail centers, locks, etc., the continued operation of which are essential to the Allied Forces. They will suppress looting.

d. Seize and impound all civilian mail and insure that it is available to field censor teams for examination. CIC itself will not censor such mail. All mail of enemy origin will be forwarded immediately through Intelligence channels to AC of S, G-2, Third U.S. Army, Attention: Documents Section, for further disposition.

e. Insure, in conjunction with Signal Corps personnel, that telephone, telegraph, and radio communications with territory still occupied by the enemy are severed.

f. Assist CA and MP personnel in restoring law and order, reforming local police and administrative bodies, and recommend to CA the imposition of essential security measures.

g. Check the observance of security measures by the civil population.

h. Assist in discovering and collecting any hidden armaments, radios or equipment not surrendered in accordance with proclamations.

i. Assure the safety, and make complete use for CI purposes of all records held by local police authorities, post offices, (including boxes of individuals and organizations), administrative bodies, banks, hotels, and the like.

j. Question, for CI purposes, individuals found imprisoned in former enemy controlled prisons and camps.

k. Investigate all cases of espionage, sabotage, violations of security regulations and subversion affecting the Armed Forces.

l. The investigation of civilian labor employed by the Allied forces when so directed.

m. Advising CA on the retention of local officials working under supervision of Civil Affairs, and investigating all matters of security interest pertaining to them.

4. CIC personnel will be employed only on tasks involving a CI interest. They will not be employed on Combat Intelligence Missions, routine P/W interrogations, black market investigations or other work

which is properly the function of another agency and which may retard or interfere with the performance of CI duties. CIC personnel will not be assigned to kitchen police, fatigue, guard or other duties of comparable nature.

IV. COUNTER-INTELLIGENCE INFORMATION:

1. Counter-Intelligence Staff, Headquarters, TUSA, will forward through intelligence channels information regarding:

a. Personality Targets.

(1) Lists of personalities and organizations in areas of interest will be forwarded to Assistant Chiefs of Staff, G-2, Corps and Divisions at the earliest practicable date.

b. All other counter-intelligence information will be forwarded immediately through intelligence channels.

2. CIC personnel, obtaining counter-intelligence information of value to higher headquarters will report same immediately to the appropriate AC of S, G-2.

V. COMBAT INTELLIGENCE:

1. CIC personnel encountering information of tactical value in the pursuit of their CI mission will forward it immediately to the AC of S, G-2 of the nearest unit.

2. All records or devices of combat intelligence value will be evacuated to the nearest G-2 or S-2 immediately.

VI. HANDLING OF KNOWN AND SUSPECT ENEMY AGENTS:

1. Apprehension:

a. When a known or suspect enemy agent is apprehended, he will be thoroughly searched immediately, and all articles, of whatever nature, will be removed from him. Effects not on his person will be collected, but kept separate. Tangible evidence in all cases will be handled by as few persons as possible. The first holder will tag all tangible evidence. Receipts for such evidence will be taken each time possession passes from one person to another. A complete record of the chain of custody will be kept with the evidence at all times.

2. Interrogation:

a. Immediate interrogation of the arrested person by the CIC will be limited to questions directed to the following objectives:

(1) To ascertain the identity or description of associates in the locality.

(2) To ascertain their objectives, instructions, methods of operation and communication.

(3) To obtain a brief statement from the Agent which will assist subsequent interrogation.

(4) To clarify points which can only be verified at points of capture, e.g. identifying premises or persons, locating hidden wireless equipment, etc.

3. Evacuation:

a. Agents arrested will be reported immediately to the AC of S, G-2, Third-U.S. Army through channels, by the quickest available means. CIC will escort the prisoner to such place as may be directed, or turn the prisoner over to such authorities as may be directed by the AC of S, G-2, Third U. S. Army. Whenever the prisoner is moved, all of his effects will be moved with him, together with an arrest form containing information about the circumstances of the arrest, a copy of the report of initial interrogation, and any statement made by the prisoner.

b. Information regarding the apprehension of known or suspect enemy agents will be classified "SECRET" and made known to as few individuals as possible. Apprehended agents will be kept separate from all other personnel. No information concerning their apprehension will be given to the press.

VII. HANDLING OF CIVILIAN SUSPECTS:

1. Such civilians will come under CIC investigation as a result of:

a. Having been apprehended passing through our lines.
b. Having been selected out of groups of refugees.
c. Having been denounced.
d. Having violated security ordinances.

2. Arrest, interrogation and search of such suspects, is a CIC responsibility. Once an individual's identity as an agent has been established, he will be handled as a known agent. If the individual cannot be determined to be an agent, but further investigation is believed desirable, the person will be sent to the civilian section of the Army Prisoner-of-War cage.

3. The CIC of each Division will take appropriate steps to see that the front line troops apprehend and deliver to Military Police

1954

CONFIDENTIAL

2. Members of resistance groups can be of great assistance to CIC Detachments. However, many people are expected to claim participation in such groups who were not, in fact, members. Persons who can give the name of their group leader may be verified by requesting such identification through the AC of S, G-2, Third U.S. Army.

IX REPORTS, FILES AND RECORDS:

1. CIC Detachments will submit the following reports:

a. Spot reports of emergency cases will be forwarded through intelligence channels by the most expeditious means available to the AC of S, G-2, Third United States Army.

b. CIC Tactical Work Sheets, completed and forwarded within 24 hours (see Appendix) one copy to team making report, one copy to Corps, one copy direct to AC of S, G-2, TUSA.

c. Monthly CIC Situation Report to Chief, CIC ETOUSA, through channels as required by para 22f, TM 30-215.

d. Daily Morning Report to MRU as required by ltr, Headquarters ETOUSA, dated 18 May 1944, AG 370.5 (Cent. MRU), Subject: Servicing of CIC Detachments.

e. Monthly Report of Badges and Credentials are required by paragraph 38a TM 30-215.

2. Files:

a. All CIC elements of this Command will establish and maintain a CI file based on a standard method as shown below. Every effort will be made to keep filed material to a minimum consistent with efficient operations.

b. Separate files will be kept by card indices if possible for:

(1) Individual suspects.
(2) Suspect organizations and parties.
(3) Security and controls.
(4) Passes and permits.
(5) Names of informants and coded list of confidential informants.
(6) Records of denunciations.
(7) Copies of completed SHAEF detention forms, and CA Arrest Forms.

c. Indigenous Records:

(1) All records of purely civil administrative or cultural interest will be placed in the custody of Civil Affairs.

(2) CIC personnel will see that civil records of Counter Intelligence interests are protected. These will not normally be removed from a town but will be left in the custody of Civil Affairs, if the CIC personnel remains in the town.

(3) Records of purely Counter Intelligence interest, such as those of German espionage and counter-espionage organizations and secret police, will be exploited locally, without delay, and forwarded to the AC of S, G-2, Third U.S. Army

1956

[redacted]

APPENDIX VI

First Army SOP for CIC

1957

FIRST UNITED STATES ARMY STANDING OPERATING PROCEDURE FOR THE COUNTER INTELLIGENCE CORPS

1. OPERATION OF DETACHMENTS.

a. The purpose of Pool Detachments is to provide static security personnel in liberated areas. Inasmuch as these Pool Detachments are to be employed statically and allowed to remain in the cities to which they are detailed as long as such cities remain under Army Group control, this reserve must not be entirely committed in the initial areas captured. They can only be detailed to larger cities or important towns on the lines of communication. Short-term requirements for CIC personnel in emergencies will be met by requesting assistance from Corps and Army Detachments.

b. To avoid problems of "take-over," some members of the Pool Detachment which is detailed for long-term occupancy of a town will enter the town while it is still under the jurisdiction of Division CIC Detachments. Such advanced Pool Personnel will be under the command of the Commanding Officer, Division CIC Detachments, as long as the town remains under Division control. The Pool personnel will be employed by the Division Detachment Commander to the fullest extent possible in all aspects of security work which will be of significance in the long-term security of the town. Members of the Division Detachment will be most concerned with the search of enemy headquarters and installations for documents of Counter Intelligence or Combat Intelligence value, for arranging the guard on critical points, the arrest of known enemy agents, the seizure of civil mail and stopping of local civil communication. Members of the Pool Detachment operating with the Division Detachment will be most concerned with contacts with the local police, liaison with the Civil Affairs Field Detachment, investigation of native local administrators, the study of such captured documents as relate to the local population, and the establishment of an informer system.

c. Corps will request Pool personnel from AC of S, G-2, First US Army, to meet envisaged needs in large and important towns. Depending upon the rate of advance representives from the Pool Detachment to be permanently allocated to a city will enter that city at such time as may be determined by the Commanding Officer of the Division Detachment. It will be the responsibility of CIC personnel in a town to request "take-over" personnel sufficiently in advance to permit continuous cover. During rapid advances it will be desirable to have some Pool personnel make the initial entry with the Division Detachment. Under more static conditions Pool Detachment representatives will be made available to Divisions early enough for the Pool Detachment members to become thoroughly familiar with the situation before the withdrawal of the Division Detachment. Upon this withdrawal, the remainder of the Pool Detachment allocated to the town will be sent in.

d. In smaller, or less important towns where permanent CIC coverage is not contemplated, personnel from Corps or Army CIC Detachments will take over from the CIC personnel already in such towns in a like manner to that described for the taking over by Pool personnel.

e. When Civil Affairs Officers enter a town before, or simultaneously with, CIC personnel, CIC will contact the civil authorities with the Civil Affairs Officer, if practicable. Any difficulties encountered in securing the cooperation of civilian authorities will be adjusted with the assistance of the Civil Affairs Officer.

2. HANDLING OF KNOWN AND SUSPECT ENEMY AGENTS.

a. Persons of this category will come to the attention of the CIC in one of the following ways:

(1) Listed on Counter Intelligence information sheets provided by the Office of the AC of S, G-2, First US Army. All names on these sheets, derived from Pink file cards, and indicated on the sheets by the coded letter (P), are of this category.

(2) Persons identified as agents by captured agents during interrogation by CIC or OSS/SCI.

(3) Persons detected in acts of sabotage or espionage.

(4) Persons giving themselves up voluntarily as spies.

(5) Persons found in possession of materials indicating the possesser to be an agent or saboteur.

b. As far as possible, known and suspect enemy agents will be taken into custody by CIC at such times and under such conditions that the fact of their capture will be concealed from the public and the local police. No information regarding the capture of an agent will be released to the press. CIC will be responsible for the secret custody of such agents and for their escort to the rear.

c. When a known or suspect enemy agent is arrested, he will immediately be thoroughly searched and all articles, of whatever nature, will be removed from him. Insofar as possible all of his effects, not on his person, will be collected, but kept separate from these taken off his person.

d. Immediate interrogation of the arrested person by the CIC will be limited to questions directed to the following objectives:

(1) To ascertain the identity or description of associates in the locality.

(2) To ascertain their objectives, instructions, methods of operation and communication.

(3) To obtain a brief statement from the agent which will assist subsequent interrogation.

(4) To clarify points which can only be verified at points of capture, e.g. identifying premises or persons locating hidden wireless equipment, etc.

e. Agents arrested will be reported immediately to the AC of S, G-2, First US Army by the quickest available means. CIC personnel will escort the prisoner to such place as may be directed, or turn the prisoner over to such authorities as may be directed by the AC of S, G-2, First US Army. Whenever the prisoner is moved, all of his effects will be moved with him, together with an arrest form containing information about the circumstances of the arrest, a copy of the report of initial interrogation and any statement made by the prisoner.

3. EXAMINATION OF CIVILIANS SUSPECTED OF SUBVERSIVE ACTIVITY.

a. Such civilians will come under CIC investigation as a result of:

(1) Having been apprehended passing through our lines.
(2) Having been selected out of groups of refugees.
(3) Having been denounced.
(4) Having violated security ordnances.

b. Arrest, interrogation and search of such suspects, is a CIC responsibility. Once an individual's identity as an agent has been established, he will be handled as a known agent. If the individual cannot be determined to be an agent, but further investigation is believed desirable, the person will be sent to the civilian section of the Army Prisoner-of-War cage.

c. The CIC of each Division will take appropriate steps to see that the front line troops apprehend and deliver to Military Police custody any individuals crossing our lines. A short, signed statement of related facts will be sent with the prisoner by the combat troops apprehending him. CIC will coordinate with Civil Affairs and Provost Marshal in the routing of such individuals to refugee camps and the detention, for further investigation, of such of them as may appear suspicious.

d. CIC Detachments will coordinate with the Provost Marshal and local police so that civilians found moving during hours of curfew, without proper travel permits or in forbidden areas, will be reported to the CIC for investigation. Strangers in the area should be brought to the attention of CIC by local police.

4. CIVILIAN INFORMANTS.

a. There are two categories of civilian informants: Overt

denouncers and Covert Informers.

(1) CIC personnel in each town will maintain a publicly known office to which civilians desiring to give information may be directed. The minimum record of denunciations will consist of name and address of denouncer and denounced, a short synopsis of the information given, and the interrogator's evaluation of the source of the information. These denunciations will be dealt with methodically, culling out rumors and hearsay information and pursuing specific leads.

(2) A system of informants will be developed within the population. These informants should be remunerated by rewards for valuable information rather than by regular pay. A CONFIDENTIAL roster will be maintained showing the names and addresses of these informants and the operative number assigned to each. This number will consist of the numerical designation of the CIC Detachment followed by any number or letter series which may be selected and sub-allocated to the various towns under the jurisdiction of the Commanding Officer of the CIC detachment concerned. All records of information provided by such confidential informants will indicate the source by operative number only. This will include reports rendered to higher Headquarters.

b. Members of resistance groups can be of great assistance to CIC Detachments. However, many people are expected to claim participation in such groups who were not, in fact, members of organized resistance groups. Some of these can be eliminated from those presenting themselves as members of the resistance by asking if they actually belonged to a group and, secondly, who the leader was. Persons who can give the name of their group leader can be verified by direct contact with Officers of G5/SO or by requesting such identification through AC of S, G-2, First US Army.

5. REPORTS AND RECORDS.

a. A weekly Counter Intelligence Report will be rendered by each Army, Corps, and Division Detachment under First US Army serving outside the United Kingdom. This CONFIDENTIAL periodic report will be rendered as of 2400 hours each Sunday and the original copy will be sent direct to the AC of S, G-2, First US Army. In cases where Pool or Port Detachments or "takeover" personnel from higher echelons are operating in the territory under the security jurisdiction of the Commanding Officer, Tactical CIC Detachment, the Commanding Officer of the Tactical Detachment is responsible for reporting all CIC activities within his area. He may request reports from Pool and Port Detachments sufficiently in advance to formulate his own report.

b. The Counter Intelligence Report will be rendered in the following form:

1. Summary of Situation.

a. General military security situation within the area of jursidiction.

b. General civil security situation.

c. Recommendations.

2. Military Security.

a. Special measures taken to prevent leakage of information, sabotage, unauthorized access to military installations, etc.

b. Breaches of security of information; investigations made and action taken.

c. Cases of unauthorized entry into military installations, attempted sabotage, etc.

d. Security of personnel (propaganda attempts by the enemy and any reactions).

3. Civil Security.

a. No cases of individual suspects with full details where no special report has been submitted. These details will include the name and residence of the suspect and a brief synopsis of the investigation. All investigations will be reported in full, upon completion, to the AC of S, G-2, First US Army. When a suspect is sent to the First Army civilian cage, a copy of the investigation of the individual will accompany the copy of arrest form sent to Headquarters, First US Army.

b. Progress of cases under investigation and disposition of cases already reported.

c. Information concerning subversive organizations. This information will be arranged by towns or areas.

d. Security controls placed on civil population reported by towns or areas to include:

(1) Movement, communication, demonstrations, etc.
(2) Any restrictions imposed upon subversive organizations, collaborationists, elements, etc.

e. Relations between:

(1) Troops and civil population.
(2) CIC and local authorities.

f. Rumors -- particularly defeatist and those which indicate breaches of security.

4. Counter Intelligence Information.

a. Personalities.

(1) In areas under control of other Allied units.
(2) In areas still under enemy control.

b. Information concerning Counter Intelligence target data in areas still under enemy control.

5. Dispositions of CIC Personnel, Indicating Number Located in Each Town.

c. Files

(1) Separate files will be kept for:

(a) Individual suspects.
(b) Suspect organizations and parties.
(c) Security controls.
(d) Passes and permits.
(e) Names of informants and coded list of confidential informants.
(f) Records of denunciations.
(g) Copies of completed arrest forms.
(h) CIC agents' periodic reports (if any).
(i) Weekly Counter Intelligence Reports.
(j) Security policy.
(k) Administration.

(2) In files containing correspondence on a number of individual cases or organizations, each individual case or organization will be allotted a separate number: e.g. John Jones, 1; Mary Smith, 2. All further correspondence on John Jones will then be marked with the same initial number followed by the letter: e.g. 1a, 1b, etc.

(3) Where papers relating to an individual or organization are scattered throughout several files, the information will be cross-referred by notes made either, in the files or on the relative cards. When documents relating to a particular case becomes numerous, they should be removed from the general file and a new individual file should be opened.

d. Card Index.

(1) Particulars of all suspects, informants, suspect organizations and addresses, will be carded on 5"x0" cards.

1963

CONFIDENTIAL

(2) Cards relating to individual suspects will record:

(a) Full name, address and occupation, with any aliases.

(b) Any details of case and of action taken which will assist in identification.

(c) Reference to files on the case.

(d) Cross-reference to names of any associates (unless this is already cross-referred in the relevant files).

(3) Cards relating to informants will record:

(a) Full name, address and occupation.

(b) Reference to files containing any documents relating to him.

(c) Unless already noted in files:

(i) How first contacted.
(ii) Estimated reliability.
(iii) Cross-reference to any suspects or cases reported by the informant.

(4) Cards dealing with parties, organization, suspect establishment (cafes, etc.) will record:

(a) Name and address (addresses).
(b) Brief case history.
(c) Reference to any files dealing with it.
(d) Cross-reference to individuals connected with it, if not in files.
(e) Action taken.

e. Arrest Reports.

Forms for the report of arrest of civilians will be provided. One copy of this form will accompany the prisoner; one copy will be forwarded to the AC of S, G-2, First US Army; and one copy will be held for local file.

f. Because of the transitory nature of the occupation of any town by any particular CIC personnel, the following records must be turned over to the CIC personnel relieving the withdrawing Detachment, or, if continued CIC coverage of the town is not planned, the records will be turned over to the CIC in the closest large town where there will be continuous coverage:

(1) All files listed in 5.c. (1) (a) through 5.c. (1) (g), pertaining to the town.

(2) All index cards relating to Counter Intelligence matters in the particular town.

g. Captured Records and Archives.

(1) All records or devices of Combat Intelligence value will be evacuated through G-2 channels, immediately. In this regard, particular attention will be paid to extract any files of German Intelligence offices, as material of Counter Intelligence value is usually present therein.

(2) All records of purely civil administrative or cultural interest will be placed in the custody of Civil Affairs.

(3) CIC personnel will see that civil records of Counter Intelligence interest are protected. These will not normally be removed from a town but will be left in the custody of Civil Affairs, if no CIC personnel remains in the town.

(4) Records of purely Counter Intelligence interest, such as those of German espionage and counter-espionage organizations and secret police, will be exploited locally, without delay, and forwarded to the AC of S, G-2, First US Army.

Reproduced Hq VIII Corps, CIC Det No 25 (Prov) 5 July 44.

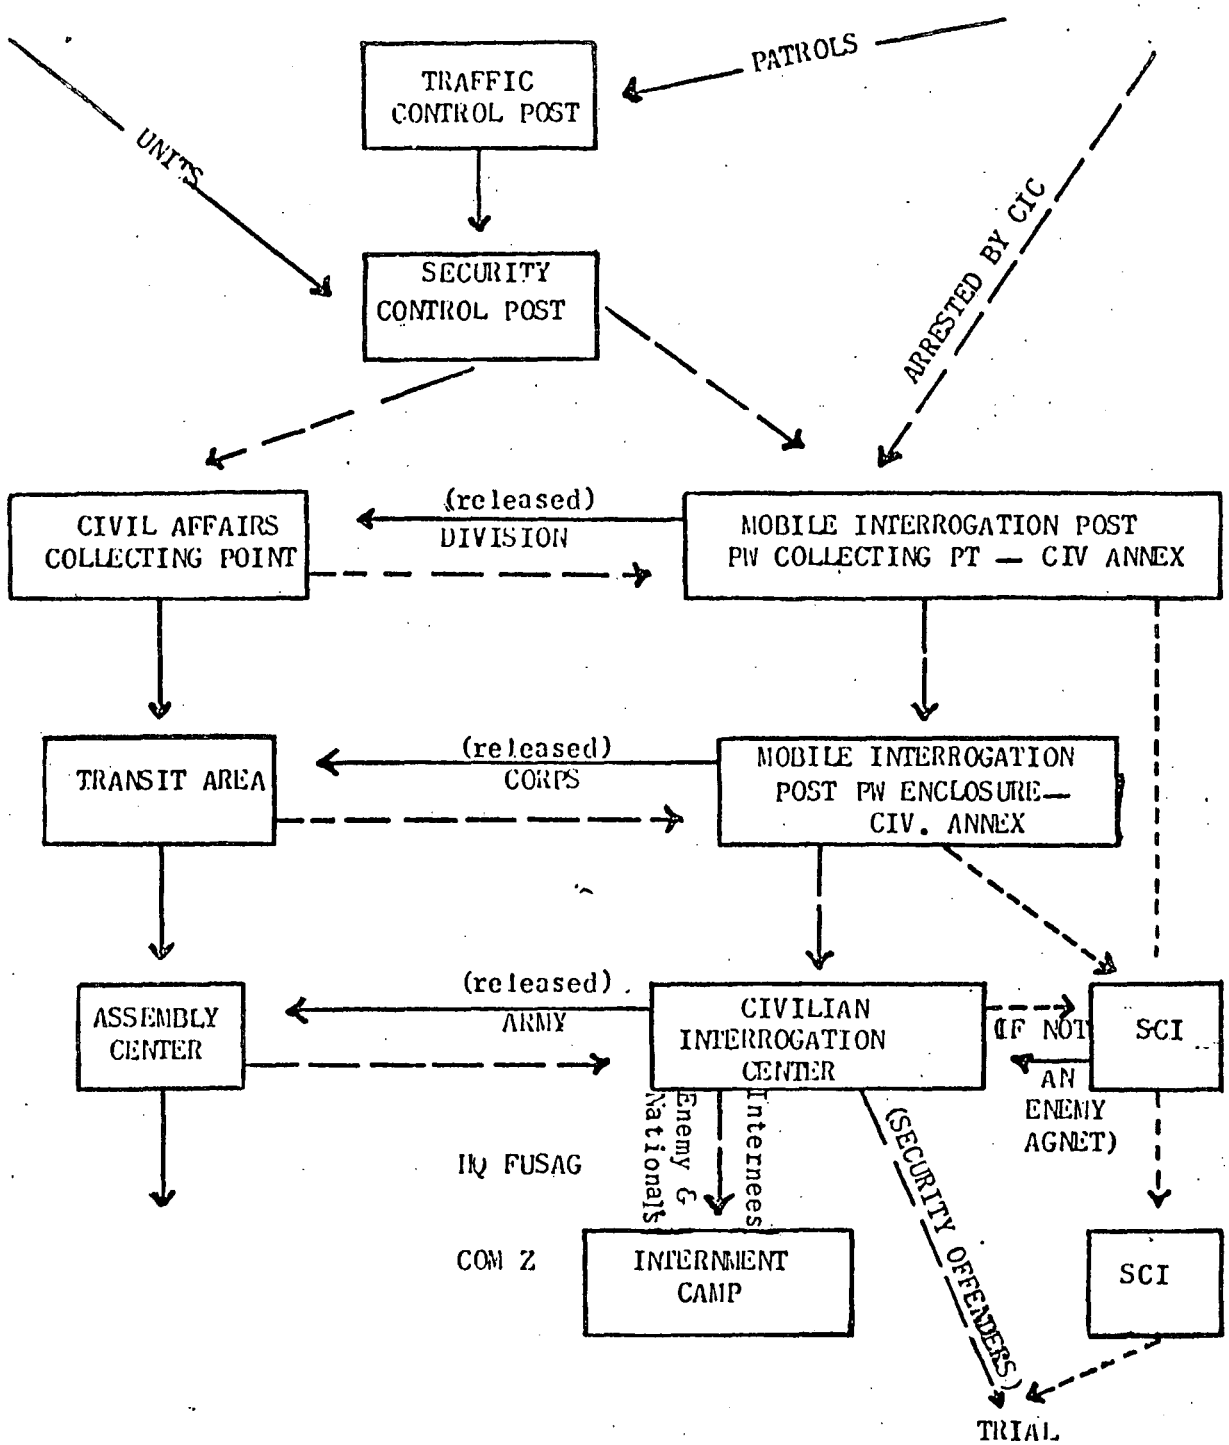
APPENDIX VII

FUSAG CI SOP, Evacuation Channels for Refugees and Suspects

1966

FUSAG CI SOP

EXHIBIT "A": CHANNELS FOR EVACUATION OF REFUGEES AND SUSPECTS



_____ Refugees and displaced persons of no CI interest.

_ _ _ _ Suspects, enemy nationals, internees, security offenders, etc.

- - - - - - - - Enemy agents.

1967

EXHIBIT "B" FUNCTIONAL CHART

LOCATION	STAFF	FUNCTION	REMARKS
1. TRAFFIC CONTROL POST In rear of forward divisional boundaries at bridges, crossroads, etc.	Military police. 1-3 civil police if available.	1. Control military traffic. 2. Keep military routes free of refugees directing these to CA collecting point. 3. Send suspect persons to security control post.	Security control post may be attached to TCP where appropriate.
2. SECURITY CONTROL POST With TCP, with CA collecting point, or between these two.	1-2 CIC agents, 1-3 civil police	1. Conduct snap checks (as near to 100% coverage as appropriate to number of refugees and tactical situation). 2. Segregate refugees from enemy lines from those rendered homeless by operations. The former will be sent back to div. PW collect. Pt. (civilian annex) the latter to CA collecting Pt. 3. In the case of suspects, arrest report form will be completed and forwarded by escort to div. PW collecting Pt. (civilian annex)	Terrain, tactical situation, and number of refugees will determine location of security control post and extent of snap check.
3. CA COLLECTING POINT In rear of forward divisional boundaries behind TCP's, along refugee evacuation routes.	Civil police and/or civilians under CA supervision	1. Refugees will be organized into parties, instructed where to go and told what rodds to use. 2. Refugees will not be held at these points, but sent to nearest transit area (or advanced transit area).	Terrain, tactical situation, and number of refugees will determine location and number of collecting points.

1958

LOCATION	STAFF	FUNCTION	REMARKS
4. PW COLLECTING POINT (Civilian Annex) Division and corps (PW enclosure).	CIC agent available at each at all times.	1. If mobile interrogation post is not available CIC agent will interrogate civilian suspects or enemy nationals (IPW team may help if not busy with military prisoners). 2. Known or obvious enemy agents will be sent back under CI escort (who takes with him all articles removed from agent) to army CI staff, which must be notified immediately. 3. Suspects will be interrogated for further details to determine their status and, if not released, sent back to PW enclosure of the next higher echelon. At army level, refugees who are still suspect will be sent to the army civilian interrogation center.	1. Prolonged interrogation of enemy agents will not be made below Hq FUSAG level. 2. Refugees cleared of suspicion will be turned over to CA.
5. MOBILE INTERROGATION POST (optional) At civilian annex to PW enclosure	Mobile interrogators from Army or FUSAG, CIC.	1. Provide specialist interrogation to determine true status of suspects.	These establishments are optional, but the desirability of properly classifying suspects and obtaining CI information at the earliest moment is self-evident.

1966

LOCATION	STAFF	FUNCTION	REMARKS
6. ADVANCED TRANSIT AREA (optional) Approximately div. level, not more than 20 miles from collecting points, off the main military routes.	Civil organization, refugees, and CA basic det. (relief officer and 1 medical officer) from transit area	1. Provide food, shelter, and urgent medical attention. 2. Expedite organized evacuation of refugees to transit area.	Optional: established if distance between collecting point and transit area exceeds 20 miles; also in heavily populated area with damaged bldgs, when front is reasonably stable.
7. TRANSIT AREA At corps level, off the main military routes, not more than 20 miles from collecting points or advanced transit areas. Co-ordinated by CA with G-1, G-2, (CI), G-3, G-4 (Traffic) Engineers, and PM at corps.	Civil organizations, refugees, and CA basic det. (1 relief officer and 1 medical officer).	1. Provide food, shelter, and emergency medical care. 2. Expedite return of refugees to their homes or those of other civilians if they are local residents, or organize evacuation to assembly center.	If distance between transit area assembly center exceeds 20 miles, additional transit areas will be established at 20 mile intervals.
8. ASSEMBLY CENTER In rear areas, (approx army level) off main military routes.	Civil organizations, refugees themselves, and 2-3 CA basic detachments (1 relief officer and 1 medical officer).	1. Provide food, shelter, and medical care. 2. Dispose of refugees as appropriate.	

LOCATION	STAFF	FUNCTION	REMARKS
9. CIVILIAN INTERROGATION CENTER Adjacent to, or as annex to, army PW enclosure.	1. Specialist interrogators from army & FUSAG CIC res. dets. 2. Allied intelligence services (optional) 3. Civil police (obtained through CA).	1. Only security suspects will be held here, and only while case is under investigation. a. Passed to Hq FUSAG (enemy agents only). b. Handed to civil authorities for prosecution in civil. c. Handed to CA for prosecution. d. Handed to civil authorities for internment. e. Released.	1. Not a place of permanent detention; army CIB must issue written authority for detention exceeding 3 days. 2. Except in case of release confirmation of chief, CIB, army, must be obtained before order is carried out. 3. Enemy nationals (not normally passed thru civilian interrogation center) will be sent to internment camp.
10. INTERNMENT CAMP Rear areas, normally behind army in Communications zone.	Staffed by civil authorities, supervised by CA.	Provide facilities for indefinite detention of enemy nationals and internees, to include food, shelter, and medical care.	Permanent establishment.

1671

APPENDIX VIII

Annex 4f to First Army Intelligence Plan NEPTUNE

1972

ANNEX 4f
TO
FIRST UNITED STATES ARMY
INTELLIGENCE PLAN
NEPTUNE

OPERATION OF THE COUNTER INTELLIGENCE CORPS

1. POLICY. Reference is made to Sub-Annex 4c and First US Army Standing Operation Procedure for Counter Intelligence Corps for the statement of general policy matters affecting employment of CIC personnel.

2. TYPES AND JURISDICTION OF CIC DETACHMENTS.

a. Tactical CIC Detachments, permanently attached to Army, Corps and Division Headquarters, will consist of 2 Officers and 14 enlisted men. Detachment Commanders of these Detachments are responsible to the AC of S, G-2 of the Headquarters to which they are attached.

b. Pool CIC Detachments, of the same size, from Army Group Pool, will be sub-allocated to Army, Corps and Divisions and will be responsible to the AC of S, G-2 of the unit which they temporarily accompany. Three Pool Detachments will be available for such allocation.

c. Port and Interior CIC Detachments will be attached to Headquarters, Advance Section Communications Zone and will be responsible to the AC of S, G-2, Advance Section Communications Zone. They will operate within areas placed under the control of Headquarters, Advance Section Communications Zone, or areas to be placed under such control. In the latter instances, the CIC Detachment will be responsible to the AC of S, G-2 of the unit controlling the area.

d. The CIC Detachment attached to each Headquarters will be responsible for providing CIC coverage in the zone designated as being under immediate control of that Headquarters. Corps will be responsible for the area between Division and Corps rear-boundaries. Each echelon may request assistance from the next higher echelon. If Corps cannot meet such requests from Divisions, the request will be forwarded to Army.

e. The Commanding Officer of Army and of Corps CIC Detachments will be responsible for the coordination of plans and activities of CIC Detachments of the next lower echelons to their own Headquarters.

3. CIC MISSIONS.

a. The primary duty of CIC personnel in combat areas is to prepare and execute Counter Intelligence plans in the area. CIC objectives and duties will be, in order of priority:

1973

(1) Arresting known and suspected enemy agents.

(2) Arresting known enemy collaborationists, sympathizers, and others whose presence menaces the security of the Allied Forces.

(3) Searching buildings, billets and installations known or suspected to contain documents of Counter Intelligence value. Documents of Combat Intelligence value found during the search of such installations will be transmitted immediately to the AC of S, G-2 or to the S-2 of the unit in control of the area.

(4) Searching enemy communication centers for codes, cipher devices, directories and records.

(5) Advising on the timely establishment of guards at all critical points such as captured engineer, ordnance and ammunition dumps, especially those which may be accessible to the local civil population.

(6) The seizure and/or stoppage of civil electrical communications until taken over by the appropriate authorities.

(7) Seizing and impounding civilian mail, copies of telegrams and associated records and funds until they are taken over by Civil Affairs or censorship personnel. Such material will be guarded locally and not evacuated.

(8) Assisting in the discovery and collection of any hidden armaments, radios, or equipment which have not been surrended or reported in accordance with proclamations.

(9) Seizing enemy films in motion picture houses, enemy films in private photographic establishments and evacuating such films through G-2 channels.

(10) Advising and assisting in the protection against sabotage of all public and private installations whose continued operation is essential to the Allied Forces.

(11) Investigating cases of suspected espionage and sabotage.

(12) Directing and coordinating the activities of representatives of such indigenous Counter Intelligence agencies as may accompany the First US Army or be contacted locally.

(13) Checking upon the observance by the civil population of all security provisions contained in the proclamations and orders issued by Civil Affairs staffs and detachments.

(14) Contacting local persons known to be friendly to the Allied cause in order to procure all possible information. Military Intelligence

1974

Interpreter Teams will be used under CIC direction to obtain Combat Intelligence as well as Counter Intelligence information.

(15) Cooperating with Provost Marshal and Civil Affairs with respect to security requirements involved in marshalling refugees and other civilians arriving from enemy occupied territory and directing them to interrogation posts.

(16) The institution of the necessary checks on security controls imposed on the civil population through Civil Affairs and Provost Marshal.

(17) Assisting Civil Affairs detachments in the establishment of a reliable civil administration. Recommendations for the removal of unreliable officials will be made by CIC to Civil Affairs. Civil officials will be arrested by CIC without consulting Civil Affairs only when the continued liberty of such officials represents a threat to security.

(18) The investigation of civilians employed by the Army in capacities which might endanger highly classified information or equipment.

(19) Investigating all cases involving subversive influences emanating from the civilian population and likely to affect adversely the Allied Forces.

(20) Coordinating with Air Raid Warning Service to secure information of possible parachute agents.

b. Port Detachments and Tactical and Mobile Detachments engaged in port security will:

(1) Plan and supervise the control of entry to and exit from the dock area from the landward side and from ship to shore.

(2) Recommend measures for the protection of installations and ships from sabotage.

(3) Make recommendations to the appropriate authority for the establishment of a pass and permit system and the security control of civilian labor and persons with business in the port to whom passes for entry into the dock area are issued.

(4) Advise on security measures relating to crews, including shore leave. Initially, shore leave should not be permitted.

(5) Search any small craft for security purposes, coordinated with the Naval Port Security officer.

(6) Control, from a security aspect, all civilian travel through the port.

(7) Prevent attempts to evade censorship by military personnel proceeding by sea on duty or leave, and forward to the Deputy Chief Censor all illicitly carried correspondence, together with a circumstantial report.

(8) Investigate and report on suspected cases of espionage, sabotage or leakage of information.

(9) Take immediate action, including arrest, if expedient, in regard to suspects.

(10) Advise the Port Commander on security measures to be imposed on the civilian population in the area.

(11) Establish and coordinate with Naval authorities measures to prevent illegal entry or exit by sea and illicit communications between sea and shore. Measures ashore relating to the security of the coastline will be coordinated with any security measures taken by the Naval authorities.

(12) Organize, where possible, among the civilian population, a system of "Coast Watchers" upon the stretch of coast for which responsible.

(13) Coordinate Counter Intelligence activities with the Naval Port Security Officer (Commerce and Travel Officer) who is charged with security of all Naval installations and stores ashore, the Counter Intelligence precautions and internal security of all Allied Naval and Merchant ships and craft in the port. The Naval Officer-in-Charge, with advice of the Commerce and Travel Officer, is charged with the issue of instructions governing harbor craft, fishing vessels, etc., manned by local civilian crews.

c. During the mounting of the operation CIC Detachments will be made available to check security in and around the concentration and marshalling areas as follows:

(1) SOS CIC Detachments will have the basic responsibility.

(2) Two Army Pool CIC Detachments will work under SOS control until D plus 15.

(3) Such portions of Tactical CIC Detachments as are to be lifted with later echelons of the Headquarters to which they are attached will pay particular attention to the search of concentration areas vacated by embarking troops in order to ascertain that no papers are left behind.

(4) CIC personnel will be freed from the normal restrictions in the marshalling area as long as possible and will check the observance of security regulations by tactical units in the marshalling area. Breaches by the combat troops will be handled directly with the Commanding Officers of the troops concerned and all other problems referred to the SOS Marshalling Area Security Officer.

4. ALLOCATION OF CIC PERSONNEL AND RESPONSIBILITIES DURING THE ESTABLISHMENT OF THE BEACH-HEAD.

a. CIC personnel will be allocated on the following basis:

(1) Full Corps and Division Detachments for which the allocation of lift will be made by the Headquarters concerned.

(2) First US Army CIC Pool personnel will be attached to Engineer Special Brigades as follows:

(a) 1 Officer and 8 enlisted men with 4 trucks, ¼ ton and 2 trailers, 1/4 ton, will be attached to Headquarters Engineer Special Brigade Group by Y-15 to remain on duty with that Headquarters until recalled after D/15.

(b) 3 enlisted men with 2 trucks, ¼ ton and 1 trailer, ¼ ton, will be attached to Headquarters, First Engineer Special Brigade by Y-15 to remain on duty with that Headquarters until recalled after D +15.

(3) A Port Detachment, attached to the Headquarters, Advance Section Communications Zone, and consisting of 2 Officers and 16 enlisted men with 5 ¼ ton trucks, will land on UTAH on D plus 5 and will operate initially under the direction of the Commanding Officer, VII Corps CIC Detachment.

(4) CIC Pool personnel constituting a "Refugee Interrogation Post," and consisting of 1 Officer and 3 enlisted men with 2, ¼ ton trucks, will be attached to Headquarters, VII Corps, and will land at UTAH on D plus 3, and operate initially under the direction of the Commanding Officer, VII Corps CIC Detachment.

(5) One-half of one Port Detachment of the Headquarters, Advance Section Communications Zone will consist of 1 Officer and 8 enlisted men with 3 one-quarter ton trucks, and will land at OMAHA on D plus 6 and operate initially under the direction of the Commanding Officer, V Corps CIC Detachment.

1977

(6) One-half of one Army CIC Detachment will land at OMAHA on D Day, the other half will land on D plus 3. Another First US Army Detachment will land on D plus 15.

(7) 2 Pool Detachments for allocation to Corps will land on D plus 30.

(8) Lift for the Detachments enumerated in (3), (4), (5) and (6), above, has been allocated in Annex 2a of the First US Army Operations Plan NEPTUNE.

b. (1) Corps and Division CIC Detachments will prepare detailed plans for the fulfillment of those missions outlined in paragraph 3, above, as directed in paragraph 12 of Annex 4e of the First US Army Operations Plan NEPTUNE.

(2) Port Detachments of the Headquarters, Advance Section Communications Zone will be employed under the jurisdiction of the appropriate Corps AC of S, G-2 for Port Security work in port and harbor areas which will eventually come under control of the Headquarters, Advance Communications Zone. The Port Detachment landing at UTAH on D plus 5 will be employed from the outset for Counter Intelligence work in the port area of CHERBOURG to include all installations in the ARSENAL and warehouses, port offices and installations around the BASSINS a FLOT and DE RETENUE, AVANT PORT DE COMMERCE, the DARSE TRANS-ATLANTIQUE, and the PORT des FLAMANDS.

(3) Army CIC Detachment will be responsible for security of Army troops and of the various echelons of the Army Headquarters, interrogation of civilians sent back to the First US Army cage and Counter Intelligence measures requested by lower echelons. Before a Corps rear-boundary is established, the Army CIC Detachment will take over responsibility for security in the towns which are in closest proximity to the various echelons of the Headquarters, First US Army. This Headquarters will occupy, successively, GRANDCAMP, CARENTIN and ST LO. CIC responsibility in the first named town will be assumed on D Day. After a Corps rear-boundary is set, security in all towns between Corps and Army rear-boundaries will be a First US Army CIC responsibility.

(4) (a) Six United States Navy Intelligence Officers attached to Headquarters, VII Corps, and landing on D plus 3, will be assigned appropriate missions by the AC of S, G-2, VII Corps, and coordinate their work with the CIC.

(b) Documents of Naval interest will be examined by Naval personnel attached to units of the First US Army and transmitted to the AC of S, G-2, First US Army for delivery to the Navy.

1978

5. CIVILIAN MOVEMENT CONTROL.

a. Each CIC Detachment will cooperate with Civil Affairs and local police in putting the following system of Civilian Movement into effect at the earliest possible moment.

b. There will be regulation of civilian movement in the area under control of First US Army. Civilians will be forbidden to move more than twelve kilometers without securing a permit to travel from Civil Affairs.

c. Civil Affairs will make this movement restriction known by proclamation or order to the civilian population, such proclamation or order to be posted in towns under First US Army control. The proclamation will further state where applicants are to report to apply for travel permits. The restrictions will likewise be made known in all Civil Affairs refugee collecting points and camps and persons will be warned not to leave the camp without a proper permit.

d. In each town where there is a Civil Affairs Detachment, Civil Affairs will establish a permit-issuing office. While Civil Affairs will make the actual issue of permits with CIC approval, applicants will be dealt with by local officials, preferably police, under Civil Affairs control.

e. The policy on travel permit issue will be that such permits will be given only to those persons who have local residence and a reasonable excuse for travel, or persons trying to reach their permanent homes which lie elsewhere in the zone of control of the American Army. These latter will be given travel permits only when their claimed residence has been established, and the permits will be surrendered to the local police upon arrival. Civil Affairs channels of communications will be used to establish the validity of residence if there is a Civil Affairs Detachment in the town where residence is claimed. If there is no Civil Affairs Detachment, CIC channels will be employed.

f. Local police will be charged with the responsibility of determining, from examination of documents and interrogation of applicants, whether these applicants are actually local residents, or proceeding to their permanent residences, and if they should be allowed to move. Local CIC personnel will be given the names of all persons applying for travel permits, which will be issued only upon consent of CIC. Consent or refusal will be given by CIC within 24 hours of the receipt of the names of applicants. CIC will give consent after checking the names against their lists of persons wanted for arrest. If doubt exists, the permit should be withheld pending check against First US Army card files.

g. All cases of persons desiring to move from one locality to another, and not falling into the categories established above, will be turned over to CIC Detachments for investigation. If any such cases arise, which give indication of possible subversive activity, the person

1979

will be sent to the Army civilian cage or refugee interrogation center for thorough interrogation.

h. Civil Affairs, in coordination with the CIC, will arrange to have the local police establish control points outside the town, on its principal roads, such control points to be operated during the hours when the curfew is not effective. Police on these local control points will permit civilian entry or exit from the town only when the civilian is known to be a resident of the country-side about the town, or if he has a permit issued by Civil Affairs. Persons not in these categories, trying to leave town, will be turned back, and strangers to the area, arriving in the town without proper permit, will be taken into custody and investigated by the CIC. Those for whom more detailed interrogation is desired will be evacuated to the First US Army civilian cage. Others will be judged by Civil Affairs for breach of travel regulations.

i. If it becomes necessary for Civil Affairs to establish refugee camps in forward areas, from which refugees will be moved to the rear in groups, these refugees will be subject to interrogation at CIC Refugee Interrogation Posts at the points where most advanced refugee camps are established. Interrogation will be accomplished as rapidly as possible to permit evacuation of the refugees.

j. In areas behind Division rear-boundary, CIC personnel will be withdrawn from the less important towns. Where this is done, the vetting and police control posts will be continued by Civil Affairs without submitting applicants' names to CIC, as required in paragraph 5f. Civilians who are strangers to the area and who arrive in such towns without proper travel permits, or civilians attempting to leave the town serreptitiously, without travel permits, will be taken into custody by Military Police, or local police, and evacuated by the Provost Marshal, with a statement of the circumstances, to the First US Army civilian cage, for interrogation. The name and disposition of the civilian will be reported to Army CIC by Civil Affairs.

6. REFUGEES, IMPRESSED WORKERS, EVADERS AND ESCAPERS.

a. CIC Detachments will arrange to have persons in these categories reported to them by Civil Affairs, Provost Marshal and local police.

b. Persons of these categories may be apprehended individually:

(1) While crossing into our lines from those of the enemy.

(2) Through the operation of the Movement Control System.

(3) Through the operation of the Coast Watchers and Port Control Systems.

1980

c. Groups of persons in these categories may be overrun by our advance forces.

d. Action to be taken in the case of individuals:

(1) Civilian refugees of enemy nationality, or from enemy-dominated countries, with the exception of FRANCE, will be sent to the First US Army civilian cage for further investigation.

(2) FRENCH civilian refugees will only be permitted to move when their identity and locality of residence has been established under functioning of the Civilian Movement Control System. Civilians claiming to be members of resistance organizations will be reported expeditiously to the AC of S, G-2, First US Army, for identification. Until such identification has been accomplished, these civilians will be given no special prerogatives. All others will be required to remain in their locality, or go to a refugee camp. Any of them trying to circumvent these restrictions will be sent to the First US Army civilian cage.

(3) (a) Captured enemy escapers and evaders are Prisoner-of-War, unless apprehended in civilian clothes, committing subversive acts.

(b) Allied escapers and evaders, after interrogation by appropriate G-2's, will be escorted to the rear by the Provost Marshal for disposition, after interrogation by IS9(MEA). After interrogation of escapers and evaders claiming to belong to units of the First US Army, the CIC will determine their identity before they are released to return to their units.

(4) TODT workers apprehended individually will be turned over to the Provost Marshal.

e. Action to be taken in the case of groups of civilian refugees or impressed workers:

(1) Provisions for the handling of such groups will be made by Civil Affairs and the Provost Marshal. CIC will check such handling to assure themselves that these individuals are not allowed to move about in rear areas without control. See paragraph 5c, above.

(2) CIC will form Refugee Interrogation Posts which will be sent to refugee camps to interrogate the refugees.

(a) To select such of them as may be of Counter Intelligence interest for detailed interrogation at the Army civilian cage.

(b) To clear such of them whose residence is behind our lines, so that permits to travel may be issued them.

(c) To select out TODT workers to be turned over to the Provost Marshal.

f. Evacuation of detained civilians taken into custody by CIC will be made along with Prisoners-of-War to the Army civilian cage where they will be segregated and where intensive interrogation facilities will be available.

7. ACTION WITH REGARD TO POLITICAL PARTIES AND ORGANIZATIONS.

a. The following parties, para-military organizations and youth movements are suspect:

(1) Parti Populaire Francais

(a) Jeunesse Populaire Francaise
(b) Service d'Ordre and Gardos Francaises
(c) Cercles Populaires Francais and Amis de l'Emancipation Nationale.
(d) Groupe Paysan

(2) Rassemblement National Populaire

(a) Le Front Social du Travail
(b) Centre Syndicaliste de Propagande
(c) Centre Social Franco-Europeen
(d) Le Centre Paysan
(e) Jeunesse Nationale Populaire
(f) Legion Nationale Populaire

(3) Milice Francaise
(4) Francisme
(5) Mouvement Social Revolutionnaire
(6) Ligue Francaise
(7) Groupe "Collaboration"
(8) Small Paris Formations

(a) National Collectivisme

(b) Le Parti National Socialiste Francais; La Croisade Francaise, Mouvement National Communautaire; Le Front Franc

(c) Les Energies Francaises

The Feu Movement

(d) Groups Patronized by de Chateaubriant

(e) La Ligue de la Pensee Francaise

1982

(9) Breton Separatists

b. No general suspicion attaches to the members of the Legion des Combattants or of pro-Vichy parties and organizations organized from the South Zone. Individuals from these organizations will be treated on the basis of their past record.

c. With respect to the parties and organizations itemized in paragraph 7a, the following action will be taken:

(1) All party and organization officials will be arrested.

(2) All members found wearing uniform or bearing arms will be arrested.

(3) All members known to have collaborated actively with German police or Security organizations will be arrested.

(4) Party and organization records will be seized.

(5) The rank and file of members of these organizations will be strictly controlled by limiting their movements and requiring them to report frequently to the local police. If deemed advisable and practicable, all members of the suspect organizations may be arrested.

(6) Lists of party members are likely to be found at Headquarters of the Service des Renseignements Generaux in the principal towns of regions, as well as in local party offices.

8. INDIGENOUS OFFICIALS AND POLICE.

a. Indigenous Officials.

(1) All officials who are also members of the collaborationist parties or organizations mentioned in paragraph 7a should normally be deposed and arrested.

(2) The Regional divisions are post-Armistice creations. For this reason, and also because they are the normal links between the French administration and the SIPO and SD, officials at Regional level are more suspect than department and local authorities.

(3) Ex-officials who have been imprisoned for political reasons, are not necessarily suitable candidates to fill administrative posts from which undesirable officials have been removed. Former collaborationists who have turned their coats in the expectation of an Allied victory, have recently been imprisoned in considerable number.

b. Police.

(1) In general, the lower ranks, sergeants and under, of the Gendarmerie, Police Municipale and Police Urbaine d'Etat can be relied on to maintain law and order and to enforce security restrictions.

(2) All ranks of the specially created Anti-Communist and Anti-Jewish Police are suspect.

(3) Higher ranks of the Service des Renseignements Generaux, (Police Speciale), the Police de Surete, (Police Judiciaire), and G.M.R. (Groupes Mobiles de Reserve) are suspect.

(4) Any higher police officials appointed or promoted since the beginning of 1944, i.e. under the Darnard regime, are suspect.

(5) Any police left in possession of their arms and actively employed immediately prior to our reoccupation of an area, are suspect.

APPENDIX X

Annex 4e to First Army Intelligence Plan NEPTUNE

1987

ANNEX 4e
TO
FIRST UNITED STATES ARMY
INTELLIGENCE PLAN
NEPTUNE

SECURITY IN ZONE OF OPERATIONS

1. GENERAL SECURITY MEASURES. (See Paragraph 7h, Section II, "Intelligence," First United States Army Standing Operating Procedure).

a. Authority over Civil Population. In the First United States Army Zone of Operations, the Military Commander is the sole authority over Civil population.

b. Relationship with Civil Affairs. The AC of S, G-2, makes recommendations pertaining to security measures. CIC, Civil Affairs and Provost Marshal operate in their respective spheres under policies of First United States Army, or higher commander. Closest liaison between Civil Affairs, CIC, AC of S, G-2, and Provost Marshal is essential.

c. Civilian Communications.

(1) Civilian mail service and telephone, telegraph, cable and radio traffic in occupied territory will be stopped without delay. Mail will be held under guard in post offices. No communication services for civilians will be resumed until ordered by First United States Army.

(2) Captured mails in combat areas will be examined by Mobile Censor Teams operating under higher authority. AC of S, G-2's and CIC will maintain close liaison with these teams to obtain all information of counterintelligence interest. Prior to arrival of Mobile Censor Teams, CIC may open and search mail for information of counterintelligence value.

d. Press and Radio Censorship. (See Paragraph 27, Annex 14, Signal Communications Plan).

Censorship of press and radio will be the responsibility of field censors furnished by higher authority.

e. Civilian Identity Documents, Passes and Permits.

(1) Existing system of civilian Identity Documents will remain in force. When necessary, new Identity Documents will be issued by indigenous authorities under the direction of Civil Affairs.

1988

(2) Preparation and issue of civilian identity documents, passes and permits is a Civil Affairs responsibility. In doubtful cases, Civil Affairs will request CIC for recommendation.

(3) AC of S, G-2 of the Division, or higher headquarters, will recommend any security conditions to be imposed upon local issue of passes and permits.

(4) CIC will be furnished with passes and permits by Civil Affairs for issue in special situations.

f. Proclamations.

(1) Civil Affairs will prepare, in advance, proclamations to be issued in occupied territory, giving directions to civil population. These will include the usual war-time security restrictions on such matters as assisting the enemy, possession of arms, radio transmitters, cameras, binoculars, carrier pigeons, curfews, prohibited areas, etc.

(2) G-2's will make known to Civil Affairs any additions or modifications to these proclamations which are necessitated by local circumstances.

2. CIVILIAN LABOR.

a. Normally, investigation will not be possible prior to employment. Where practicable, however, it is desirable that lists of employees shall be checked against suspect lists by CIC.

b. Where civilians are to be engaged on work which presents marked opportunities for espionage and sabotage the CIC should be informed in order that the bona fides of all such persons can be checked, so far as possible.

3. SECURITY CONTROL OF REFUGEES.

a. Security Control Posts will be established in forward areas by CIC for the purpose of interrogating refugees in order to segregate suspicious civilians and released or escaped allied PW's. Security Control Posts should be established at Civil Affairs refugee clearing stations or MP check points.

b. Refugee Interrogation Posts will be established at points on main routes probably in Corps areas. Although staffed by CIC agents other personnel such as Counterintelligence officers from Army Group, military intelligence interpretors, PW interrogators and representatives of the French Intelligence Service may be employed in the sifting of civilian [illegible] and the recording of [illegible] intelligence and counterintelli-

c. Civilian cages (British Civilian Interrogation Centres) will be established at Army level for the detention and interrogation of individuals passed back from Refugee Interrogation Points or Division PW cages. Suspects will here be interrogated and investigated at length by special interrogators. Further disposition will be determined by the AC of S, G-2, First U.S. Army.

d. If after interrogation numerous civilians remain whose continued detention is necessary for security, they will whenever possible be handed over to the indigenous authorities, coordinated with Civil Affairs.

4. HANDLING OF SUSPECTS - GENERAL.

a. Denunciations. Local denunciations should be dealt with methodically, not only in order to apprehend dangerous persons, but also to satisfy local civilians that action will be taken where justified. Prompt handling will prevent action by local populations to take the law into their own hands. Except when the denounced individuals's name appears on a suspect list, arrests will not normally be made by CIC until the denunciation is confirmed by a person of known reliability. Security grounds alone will justify the detention of denounced persons by CIC. If it is clearly established that no violation or danger to security exists, the names of persons denounced will be given to Civil Affairs detachment for further action.

b. Detention and Evacuation. In the forward areas, civilians arrested as suspects, will be handed over to the Provost Marshal for detention and evacuation through Division and Army prisoner-of-war cages, unless considered important enough for special handling. If local conditions permit, suspects will be processed through a Refugee Interrogation Post before detention. Preliminary sifting should be carried out as early as possible to relieve the Provost Marshal of the burden of evacuating and accommodating harmless civilians.

5. HANDLING OF POLITICAL SUSPECTS.

a. The CIC, under the direction of the AC of S, G-2, is responsible for action in respect to subversive or hostile political organizations.

b. Intelligence officers and CIC Detachments must be guided by the general consideration that it is not desirable for Allied military forces to intervene in purely internal political disputes and that their responsibility does not extend beyond the task of security the allied forces against attack by enemy agents or subversive elements. Where the activities of a political organization do not endanger the security of our forces, but tend to be politically disruptive, Civil Affairs staffs in consultation with Counterintelligence staffs will be responsible for deciding upon the action to the taken.

c. G-2's will receive, prior to D-Day, specific information on the treatment of members of particular political organizations, including a list of suspects known to have assisted the enemy. An OSS/SCI unit attached to First United States Army will supply additional information on suspects. Such information will be disseminated through G-2 channels.

d. Civilians arrested by CIC personnel will not be released by Civil Affairs or Provost Marshal without agreement of the CIC.

6. RELATIONS WITH THE CIVILIAN AUTHORITIES.

a. Initial contact with civil authorities, including police, will normally be made in conjunction with Civil Affairs. CIC personnel will make direct contact on day to day routine matters.

b. The suspension and appointment of civilian officials is a Civil Affairs responsibility. CIC personnel will furnish Civil Affairs Detachments with any information they possess on the reliability of officials and Civil Affairs Detachments will consult CIC personnel in cases where the reliability of an official is in doubt from the security aspect. CIC personnel will only arrest those officials who might continue to assist the enemy or be required for interrogation, and in such cases they will keep Civil Affairs Detachments informed of any action taken.

7. RELATIONS WITH INDIGENOUS POLICE.

a. Civil Affairs staffs and Detachments will supervise all indigenous police forces in liberated territory. Supervision of the security branches of the indigenous police forces such as Service de la Surveillance du Territoire, Renseignments Generaux and Police Judiciaire will be carried out in accordance with policies laid down by the appropriate commanders.

b. Civil Affairs Detachments will insure that CIC have at all times free access to the records of the local police. If it is found necessary to seize records, the Civil Affairs Detachment will be informed. The records will be returned as soon as practicable.

8. ALLIED SYMPATHIZERS.

a. AC of S, G-2's will check names of persons representing themselves as members of resistance groups before reliance is placed on these individuals by other staff members. The sources of information for G-2's and CIC will be:

(1) Black Lists of officials and others known to have assisted the enemy, and lists of European political organizations in which membership is sufficient to present a prima facie case against an individual.

(2) White Lists of officials and others believed to be reliable.

b. Information from the above sources, which will be supplied prior to "Y" Day, is primarily a guide and in most cases information should be verified by local investigation.

c. The assistance of OSS/SCI, OSS/SO and representatives of French intelligence organizations will be available to CIC in identifying members of resistance groups.

9. COUNTERESPIONAGE.

a. Information about enemy intelligence activities will be supplied AC of S, G-2's of Corps shortly before Y-Day and subsequently in the field to an OSS/SCI unit attached to First United States Army. Special targets for CIC will be indicated to Corps and Divisions by the AC of S, G-2, First United States Army.

b. Arrests of enemy agents or suspected enemy agents will be reported immediately through intelligence channels to the AC of S, G-2, First United States Army, who will notify the OSS/SCI unit. Officers of this unit will be given an opportunity to participate in interrogations and advise on disposal of such prisoners.

c. A report of interrogation and statement made by the prisoner will be sent to the AC of S, G-2, First United States Army. A copy of the report should accompany the prisoner. Documents found in his possession will be taken from him, but will accompany the prisoner wherever he is sent for interrogation.

d. CIC will segregate from other civil detainees or PW's, any prisoner known, or strongly believed, to be an agent and will not allow him to communicate with anyone. Special arrangements will be made for escorting them to the rear for further interrogation.

10. PORT AND COASTAL SECURITY. (Refer to Annex 17 to Operation Plan NEPTUNE - Advance Section, Communications Zone).

a. Division of Responsibility.

(1) Army.

(a) The Port Commander is responsible for security of the dock area, including control of exit and entry.

(b) Initially Port Security will be the responsibility of the Commanding Officer of the unit which seizes the port. CIC Port Detachments attached to Advanced Section, CZ will operate under control of Division or Corps ACofS, G-2 in those ports which are to be put into operation. These Port Detachments will take over all port security

duties when responsibility for the port is transferred to the Commander, Advance Section, CZ. Whenever possible, personnel from these Port Detachments will enter the port with the first CIC Detachment to arrive and will operate initially under supervision of the tactical detachment Commanding Officer.

(2) Navy.

Local security of Naval installations and stores ashore, those parts of the dock area allocated to the Navy and the security of all naval and merchant ships and fishing and other craft in the port. U. S. Navy counterintelligence officers from Task Force 122 will be attached to U. S. Army units in order to enter major ports with CIC Detachments.

(3) Coordination.

All security measures will be coordinated by the AC of S, G-2 of the First U. S. Army unit controlling the Port. When the Port Commander takes over, the Port Security Officer will be responsible for coordination of security measures. Close liaison will be maintained with Naval and other authorities in the Port.

b. Coastal Security.

Security measures for the coastline and ports not in operation will be initiated by the AC of S, G-2 of all echelons for the area under control of their respective commander. Measures to prevent illegal entry and exit by sea and illicit communication between sea and shore will be put into effect in coordination with Naval authorities. A system of civilian "Coast-watchers" may be necessary. All persons entering or attempting to leave the area, except through operational ports, will be turned over to the CIC for interrogation.

11. CIVILIAN TRAVEL CONTROL.

a. Responsibility.

(1) Security Control of civilian travel between the U.K. and theatre will be a responsibility of S. H. A. E. F.

(2) The term civilian will apply to any person not holding a British or U. S. Naval, Military, or Air Force identity card, and any restrictions on civilian travel will apply to all Allied service personnel (other than British and U. S.) who are not part of a formation or body of troops.

b. Initial Stages.

(1) Until an effective system of control has been established

in the theatre no civilians will be brought to the U.K. other than those required for intelligence or security purposes.

(2) Personnel in these categories will be evacuated to the U.K. on authority of AC of S, G-2 of the highest headquarters established on the Continent.

(3) The headquarters authorizing the dispatch of civilians to the U.K. will arrange for them to be escorted to the appropriate PW cage from which they are to be embarked. They will be transported together with PW's to ports in the U.K. where they will be handed over to the Security Control Officer. No contacts will be permitted between civilians and PW's during the journey. Written authorization will accompany these civilians.

c. Later Stages.

(1) When an effective system of travel control has been established in the theatre certain civilians may be brought to the U.K. in addition to those required for intelligence and security purposes. Such civilians will be limited to key individuals and those persons as required by British, U. S. or Allied agencies.

(2) All such official requests will be made to the Passport Control Department in London, who, if the request is approved, will communicate it through the military permit office to H.Q. Army Group in the field.

(3) No application from the civilian population for permits to travel to the U.K. will be entertained by First U. S. Army. Agencies wishing to bring civilians to the U.K. will refer the request to the parent agency in London, who will make official application through the Passport Control Department.

(4) Counterintelligence staffs will notify the Port Security Officer of the port at which they are to embark, of the name and particulars of civilians to whom travel authorization has been given. Port Security Officers will not allow any civilian to embark unless the civilian or his escort is in possession of a written authorization.

12. COUNTERINTELLIGENCE PLANS - DETAILED.

Detailed plans for individual towns and cities will be prepared by Corps or Division CIC detachment commanders under the direction of the AC of S, G-2. For large cities, planning material indicating sensitive points will be furnished by the AC of S, G-2, First United States Army.

APPENDIX XI

Specialist Teams, Operation CIC Detachment, V Corps

1995

ANNEX XI TO SECTION SOP

SPECIALIST TEAMS, OPERATION CIC DETACHMENT, CORPS

1. Assignment.

a. One detachment assigned to each Corps.

b. Operates directly under the counterintelligence officer, G-2 Section.

2. Functions.

a. See TM 30-215. In addition to the functions prescribed therein, the Section will check upon security discipline in all units of the Corps and will actively assist in the collection of tactical and strategical information whenever such duties can be performed without serious interference with its normal mission.

b. Members of the Section will from time to time make detailed checks of the observance of security measures in all Corps units. When the Corps CP is moved, the Section will make a detailed check of the vacated CP to determine whether any classified papers or documents have been left behind.

c. In processing refugees or in contacts with civilians who have recently come through the line, the Section will record and report any enemy information readily obtainable from such civilians and will report names of all persons who should be questioned in detail by MII Teams.

d. Documents having intelligence value obtained from civilians will be transmitted promptly to Corps G-2.

3. Operational Area.

a. The normal area of operations of the team will be the Corps administrative area. The detachment headquarters will normally be in the principal town in the Corps area and the members of the detachment will normally be billeted in their respective duty areas.

b. As a general rule, two men from the detachment will be attached to each division having an operational area. These men will be employed by the division throughout its operational area and insofar as practicable will be permitted to become thoroughly acquainted with the counterintelligence situation in this area. When the division moves forward and the Corps takes over the divisional area, these two men will remain therein, reverting to Corps control. At the same time, two more men will be attached to the division concerned for operation with it in its new area.

4. Reports.

a. Weekly CIC Summary.
b. Special CIC Summaries as required.
c. Daily report by each detachment for 24-hours ending at 0800, the report to reach Corps CI Officer not later than 0800 of the following day. These reports will form the basis for a consolidated report prepared by the counterintelligence officer and forwarded daily to Army. It will be in the following form:

HEADQUARTERS
_____DIVISION

From: 0800B Hours
To : 0800B Hours

Date:

DAILY CIC DETACHMENT REPORT

1. Area of Responsibility. (Include in first report. Thereafter, "No change until change in area").

2. Disposition of Personnel. (Include in first report. Thereafter, "No change until some redistribution").

3. Activities during Period. (For example, snap travel controls or other activity not covered under particular heading).

4. Cases Investigated.

5. Cases Pending.

6. Arrests and Disposition of Prisoners.

7. Miscellaneous.

a. Tactical information.
b. Rumors.
c. Breaches of security.
d. Information concerning anti-Allied organizations.
e. Other CI information.

_____
CO, CIC Det.

1st Ind.

Hq. ----Division, A. C. of S., G-2, ------July 1944.

To: A.C. of S., G-2, Hq. V Corps, APO 305, U. S. Army

Inclosed Daily CIC Detachment Report for period _____.

_____
A.C. of S., G--2, (or)
Asst. A.C. of S., G-2

INSTRUCTIONS

1. The Daily CIC Report is intended to cover the matters called for during the 24-hour period from 0800 hours to 0800 hours day by day.

2. The report should be prepared daily and submitted in time to reach the A.C. of S., G-2, V Corps, by 0800B hours of the day following the day for which submitted.

3. Example: The Daily CIC Detachment Report for 10 July 1944 covering the period 090800 hours - 100800 hours should be sent in time to reach the A.C. of S., G-2, V Corps, by 110800B hours.

4. Classification of report is "confidential" or higher depending on contents.

1998

APPENDIX II

The Corps did not issue a standing operating procedure, but each section issued instructions to subordinate units in separate memorandums. The following SOP for intelligence was issued by this headquarters on 16 January 1945, which was a revision of the SOP issued early in the operation:

STANDING OPERATING PROCEDURE FOR INTELLIGENCE

I - INTELLIGENCE OPERATIONS

1. Ground Reconnaissance and Observation.

a. Zones or objectives for Corps and divisions are specified in Corps orders.

b. Infantry, cavalry, and armored forces inform supporting artillery of essential elements of information, and of indications to be observed. Artillery maintains continuous observation within its zone of operations, and keeps supported units constantly informed of enemy activities.

c. Service units remain constantly alert to detect hostile agents and forces operating in supply and service areas. Medical units record and report to next higher headquarters, through intelligence channels, all military information obtained from wounded prisoners of war.

d. Units and commands search all command posts and message centers lately occupied by the enemy for situation maps, tactical orders, and documents.

e. The evaluation of information is included with the dissemination when appropriate, but is distinguished from the information received.

2. Collection and Transmission of Information.

a. Reports of hostile movements include time observed, location, strength, composition, and direction of movement.

b. Reconnaissance of defensive dispositions, searches for and reports of location of main line of resistance, flanks, mass of artillery, reserves, antitank guns, obstacles, and mine fields.

c. When contact is imminent, positive information is reported promptly as obtained; negative reports are made to Corps at least every two hours.

d. If contact is broken by the enemy with a friendly unit of battalion or larger size, an immediate report is rendered by most expeditious means available, and an hourly report is rendered thereafter until contact is regained.

e. Geographical locations referred to in reports are further identified by map references and coordinates.

f. The following is always considered URGENT, and is transmitted by the most expeditious means:

(1) First contact with hostile units by ground forces.
(2) First artillery fire, and marked changes in amounts.
(3) Major changes in hostile dispositions, such as movement of a battalion or larger, counterattack by a battalion or larger unit, assumption of the defensive, withdrawal, loss of contact, etc.
(4) Initiation of attack by hostile infantry or armored elements.
(5) Presence of hostile armored units.
(6) Hostile parachute and airborne activities.
(7) Identification of a new enemy regiment or division.
(8) Use of toxic chemicals.

g. In transmitting intelligence by phone or radio, reference is made to the coordinates at which the action took place, but <u>not</u> to the proximity of friendly units.

h. Channels of Communication.

(1) Enemy information transmitted to Corps is addressed to G-2.

(2) Divisions and Corps Cavalry report all pertinent information directly to similar adjacent units, as well as to Corps.

(3) Corps Cavalry reports urgent enemy information to leading and adjacent division, and to Corps.

(4) Ground reconnaissance elements report movements of hostile forces to the nearest threatened unit and to Corps.

(5) Tank destroyer units attached to Corps maintain direct communication with Corps Cavalry.

(6) Corps Cavalry, when employed in an anti-airborne role in rear areas, establishes direct communication with the Antiaircraft Artillery Intelligence Service.

2000

3. Prisoners of War, Documents, and Captured Materiel.

a. Echelons below division limit the examination of prisoners of war to matters of immediate importance to the unit concerned, and to identifications.

b. Examination of prisoners of war is conducted within divisions by prisoner of war interrogating teams attached from the Theater MIS. Division Intelligence Officers keep these teams constantly informed of essential elements of information to be obtained from prisoners of war.

c. German military personnel are permitted to retain the paybook (Soldbuch), but any attempt to mutilate by tearing out Pages 3 and 4 is prevented.

d. Prisoners of high rank (colonel and above) and other prisoners of especial interest, including well-informed foreigners, are reported immediately through intelligence channels to Corps G-2.

e. Prisoners are evacuated direct from division to Army unless desired by Corps for further interrogation. Prisoners are evacuated to Corps when specified by the Corps G-2 or his representative, or when obviously of especial interest.

f. The Corps IPW Officer, as the representative of the Corps G-2, may observe interrogation in lower echelons, direct that particular items of information be obtained, and select special prisoners for further interrogation at Corps.

g. Enemy air force flying personnel are taken to the nearest division cage, including all documents and papers taken from them and their plane. The air force interrogation unit is notified through division or Corps ASP Officer. Air force flying personnel will not be interrogated by ground force IPW personnel.

h. Captured documents are marked (using rubber stamps if available) with the time and place of capture and with the name of the capturing unit (division or separate unit).

i. Situation maps and copies of tactical orders obtained from prisoners of war and enemy dead are transmitted to Corps by special messenger; the time, place, and circumstances of capture will be noted on the document. Other documents are transmitted to prisoner of war collecting points by the prisoner escorts.

j. Codes and ciphers are turned over to signal intelligence officers at Corps as soon as practicable; they are forwarded to Corps G-2 by the capturing unit by special messenger.

2001

k. The location and brief description of new or unique captured materiel is transmitted to Corps G-2 as soon as practicable.

l. Documents captured at radar installations are not to be removed or separated from the equipment with which they are captured. The equipment is placed under guard by the nearest unit, and the radar officer with AAA at Corps is notified through intelligence channels. The report includes the exact location of the equipment and documents.

4. Reports.

a. Divisions, separate units (cavalry, engineers) in contact with the enemy, and Corps Artillery transmit intelligence summaries (Isums), by telephone or other rapid means as follows:

(1) At 0600, 1200 and 1800 hours, giving changes in the enemy front lines, new identifications, enemy attacks, and other enemy action during the six-hour period.

(2) At 2400 hours, giving enemy front lines at close of period; all identifications; enemy attacks; approximate amount of enemy artillery fire; enemy armor observed or in action; enemy material captured, disabled, and destroyed; prisoners of war taken; number and time of enemy air attacks; extent of enemy patrolling; and movement observed behind the enemy lines; all covering the twenty-four hour period.

b. G-2 or S-2 Periodic Reports are submitted to Corps G-2 as of 2400 hours, to reach Corps not later than 0300 hours.

5. Liaison.

a. Corps Cavalry provides continuous liaison to Corps G-2, to each leading division when cavalry precedes the division and when appropriate, to adjacent divisions. Liaison officers maintain radio communication with their unit.

b. All liaison officers, whether intelligence or operations, are briefed on the enemy situation in the respective zones of action prior to their departure from their parent units, and report all available information to Corps G-2 upon arrival.

c. During failure of communications, units in contact with the enemy send an Isum to the Corps G-2 at least twice daily.

6. Air Reconnaissance.

a. An officer assigned to the Corps G-2 Section is designated as G-2 Air. He coordinates all requests for tactical and photo reconnaissance other than armed reconnaissance.

b. Tactical Reconnaissance.

(1) Tactical reconnaissance includes visual observation of areas, roads, pin-point locations, and pin-point or short strip photographs.

(2) The Corps is allotted five planned missions and a lesser (variable) number of impromptu missions daily. Requests for planned missions are consolidated and submitted by Corps G-2 Air so as to arrive at Army prior to 1000 hours of the day preceding the one on which the missions are to be flown. Requests for impromptu missions may be submitted at any time.

c. Photo Reconnaissance.

(1) Photo reconnaissance includes basic cover of the area of operations (verticals), front-line cover (verticals), pin-point or strip photographs (verticals or oblique), merton gridded obliques, and ungridded obliques.

(2) Basic cover of the area of operations is furnished on the basis of one copy per division, one copy for Corps Artillery, and one copy for Corps Headquarters. Additional copies on the basis of 25 copies per division and 20 for Corps Artillery may be obtained through Corps G-2. Front-line cover is flown daily to a depth of ten miles when the front is stabilized (weather permitting). One copy is furnished to each division concerned immediately upon receipt; normally, this will be 12 to 24 hours after the flight.

d. Requests for both tactical and photo reconnaissance is submitted to Corps G-2

7. Maps.

a. Reference: Letter of 20 July 1944 from Headquarters, First U.S. Army, file 061.05/44 (ENGR), Subject: Map Supply and Distribution.

b. Maps are issued on the basis of requisitions submitted, which may be informally prepared, but must be signed by an officer. Allowances are shown in the Map Allowance Table, which is appended to the letter cited above. Requisitions for maps are automatically approved at the map issue point if within the prescribed allowances and within limits of maps available. Otherwise, approval of the Army Engineer is required.

c. Requisitions for maps are submitted to the Army Map Liaison Officer at Engineer Section, Corps Headquarters. This liaison officer draws the maps from the Army Map Depot and arranges for issue, in the case of Corps Headquarters and Corps troops, or arranges for direct issue from depot to division.

d. Maps no longer required for use because of obsolete area coverage or for other reasons are returned to the Army Map Depot through normal map distribution channels.

e. Copies of all maps prepared by subordinate units, and supplemental or corrective information which increases the usefulness of available maps, if forwarded to the Army Engineer for appropriate action. All new maps to scale of 1:10,000 or smaller, are coordinated with and approved by the Army Engineer prior to publication.

8. Enemy Use of Toxic Chemicals.

a. Upon the first use or suspected use of toxic chemicals, the unit subjected to or in the vicinity of the attack reports the incident to the next higher headquarters giving the following information:

(1) Type and name of chemical used.
(2) Time and place of attack.
(3) Area affected.
(4) Means employed (bomb, high level spray, low level spray, mortar fire, artillery fire, cylinders, or other means).
(5) Amount of chemical used, as indicated by number and size of bombs, shells or other means.
(6) Number, severity, and disposition of casualties.
(7) Protective measures taken.

b. Until the enemy's use of toxic chemicals has once been confirmed, information concerning a suspected enemy gas attack is not disseminated to units other than those affected until confirmation from Corps has been received.

9. Crashed Enemy Aircraft.

a. A guard is immediately established around crashed aircraft, and all other than authorized personnel are denied access. The air interrogation unit is notified through division or Corps ASP Officer, who will send a representative to take charge of the wreckage and remove it. The guard will not be removed until the arrival of air personnel bearing proper credentials or until ordered by Corps.

b. Enemy aircraft falling between division rear boundaries and the Corps rear boundary will be placed under guard consisting of one officer and two enlisted men by the commander of the unit nearest the crashed aircraft. Unauthorized personnel will not be permitted to approach the aircraft closer than 25 yards. Any person authorized to inspect the crashed enemy aircraft before the guard is relieved will have a pass issued by the Corps AAA Officer, and a record will be maintained by the guard of all persons visiting the crashed aircraft. Division commanders will be responsible for taking effective measures to guard enemy aircraft falling within their respective areas.

II - INTELLIGENCE SPECIALIST TEAMS

10. Intelligence specialist teams are attached on the following basis:

	Total number of teams or detachments attached		Composition of each team or det.	
	Corps Hq	Each Div	Off	EM
Order of Battle	1	1	1	2
Interrogation of Prisoners of War (German)	3	2	2	4
German Military Intelligence Interpreters	1	1	2	4
Photo Interpretation	4	1	2	4
Counterintelligence Corps	1	1	5	14

a. One of the Photo Interpretation Teams assigned to Corps Headquarters is attached to Corps Artillery, and two teams operate at the Army Photo Interpretation Center.

b. Two of the Interrogation Prisoner of War Teams assigned to Corps are attached to divisons, depending upon the need for such teams.

11. All intelligence specialist teams operate under the direct supervision of the A.C. of S., G-2, (or S-2) of the unit to which assigned or attached.

12. Reports are submitted by the specialist teams through the A.C. of S., G-2, as follows:

a. Order of Battle report, to be prepared daily (when appropriate) by the Order of Battle Officer and appended to the G-2 Periodic Report as Annex No. 1.

b. Prisoner of War Interrogation Report, to be prepared daily (when appropriate) by the senior IPW officer, and appended to the G-2 Periodic Report as Annex No. 2. The report is prepared for the 24-hour period ending at 2100 hours.

c. MII Teams submit reports of interrogation of civilians as follows:

(1) Information of tactical or strategic military value is disseminated through intelligence channels to appropriate subordinate and adjacent units. Four copies of each such report are forwarded to Corps G-2.

2005

(2) Information of counterintelligence value is disseminated through counterintelligence channels.

(3) All reports that include the identity of informants are classified as SECRET.

d. Photo Interpretation reports are prepared for all photos interpreted by PI Teams of Corps or divisions. These reports are prepared for both first phase and second phase interpretation, and are appended to the G-2 Periodic Report as an Annex. Four extra copies of all such reports are forwarded to Corps G-2.

e. Counterintelligence reports are submitted as set forth in Section V.

III - SPECIAL INTELLIGENCE AGENCIES

13. Weather Detachment.

a. A Weather Detachment is attached to the Corps Field Artillery Observation Battalion, which provides the following forecasts:

(1) A daily forecast at 2000 hours, covering the period 2000 hours the following day, which is disseminated by the detachment to Corps and divisions G-2's by teletype.

(2) Long-range forecasts (covering a period of 40 to 72 hours) when requested by Corps G-2.

b. All weather forecasts are included in the Corps G-2 Periodic Report.

IV - MISCELLANEOUS

14. Psychological Warfare.

a. A Publicity and Psychological Warfare Section in Army Headquarters is prepared to furnish the following services:

(1) Leaflets, either of a standard variety or especially printed to meet particular needs, to be fired into enemy territory by artillery or dropped from planes.

(2) Loudspeakers, for broadcasts to enemy troops in order to urge surrender. (One set of this equipment is available at Corps Headquarters).

b. All requests for such services are made to Corps G-2.

2006

c. All psychological warfare activities within a divisional area are conducted only with the concurrence of the G-2 of the division concerned.

d. All psychological warfare activities within the Corps are coordinated by the Corps G-2.

15. Intelligence Funds.

a. Confidential intelligence funds are furnished by higher headquarters to Corps and divisions for the purchase of information concerning the enemy.

b. Confidential funds are held under the custody of the A.C. of S., G-2, of Corps and division.

c. Confidential funds may be expended to reimburse non-military personnel when specifically employed to gain enemy information, but are not used to reward civilians who have voluntarily given information.

16. Civilians.

All civilian personnel coming through the lines is interviewed by MII personnel of divisions, and those who give indications of having knowledge of enemy forces or installations are carefully questioned. Reports of information gained are submitted as provided in Para 13 c, above. Personnel having special military knowledge is evacuated or reported to Corps for further questioning. Civilians coming through the lines are carefully screened by CIC. (See Para 21)

V - COUNTERINTELLIGENCE

17. Censorship of Mail.

a. Military censorship will be in accordance with Cir. 33, ETOUSA, 21 March 1944, as amended, and as amplified by the following: First US Army Circular No. 17, 5 February 1944; First US Army Intelligence Instructions No. 30, 16 November 1944; and First US Army Amendment to Intelligence Instructions No. 30, 8 January 1945.

b. Unit censors will carefully examine all photographs included in personal mail and will deny transmission of those of military significance. For policy on local processing of film, see Letter Hq ETOUSA, 6 October 1944 (AG 062 OpGB), as amended by letter Hq ETOUSA 22 November 1944 AG 062 OpGB. All other amateur film will be developed through facilities of the Army Exchange Service, see Circular 111, 25 August 1944, Hq First US Army and Memorandum No. 2, 7 January 1945, Hq First US Army.

18. Security of Command Posts and Bivouac Areas.

a. Civilians will not be permitted to enter any command post or bivouac. Except when properly escorted, military personnel will not be permitted to enter any command post or bivouac area before being positively identified.

b. Guard systems of command posts and bivouac areas will be tested from time to time to make certain that no unauthorized persons can gain access thereto.

c. Signs giving unit locations will not show actual unit designations. The use of unit code names for this purpose is authorized.

19. Security of Information.

a. Each individual will be reminded that in case of capture he will give the enemy only his name, rank, and serial number.

b. Military operations will not be discussed with civilians or with any unidentified person. No individual will be given any more information than is necessary for the proper performance of his official duties.

c. Insofar as practicable, field orders, overlays or other documents giving the dispositions or contemplated movements of friendly forces will be transmitted by messenger or liaison officer only in daylight. If transmittal at night becomes necessary, special precautions will be taken.

d. Marked maps giving the location of command posts of regiments or higher headquarters, or the dispositions of units of corresponding size, will not be taken beyond regimental command posts. In no case will the operational plans of a unit larger than a regiment be carried further forward than a regimental command post. Necessary precautions will be taken to see that visiting officers comply with this procedure.

e. A search will be made of evacuated CP areas to insure that no classified or identifying material has been left.

f. No friendly agent will be permitted to pass out of our lines who has not reached forward troops through proper intelligence channels.

20. Signal Security

a. (1) Such secret information as unit designations, coordinates giving locations of friendly command posts or units, names of

specific places or areas occupied by friendly units, the dispositions of friendly troops or operations plans will not be transmitted in the clear over the telephone or radio except in case of operational necessity.

(2) Under operational conditions where only short-term security is necessary, the Slidex and Maplay codes will be used for the transmittal of classified information over the telephone or radio; however, these codes must be used with discretion.

(3) Whenever operating conditions permit, classified information should be transmitted through message center channels in order to take advantage of the cryptographic devices and systems available to those agencies for the security of communications.

b. No message with a classification higher than confidential will be sent in the clear by wire-line teletypewriter channels. No message will be sent by teletypewriter over radio channels unless specifically authorized as provided in AR 380-5.

21. Civilian Controls.

a. Civilians infiltrating through our lines from enemy occupied territory will be arrested and turned over to the CIC for interrogation before they are evacuated to the rear.

b. Civilians attempting to move through our lines into enemy territory will be arrested and turned over to the CIC for interrogation.

c. All civilians residing in operational areas of tactical units and all refugees and evacuees who pass through the operational areas of tactical units will be screened by the CIC. All known or suspected enemy agents and saboteurs will be arrested and evacuated to First Army Interrogation Center.

d. Whenever a new area is over-run by our forces, notices will be posted in public places ordering all deserters from the German Army to surrender to our military forces without delay and informing them that failure to do so will cause all such persons found in civilian clothes thereafter to be apprehended and tried before a Military Government Court. The notice will also order all civilians to report the presence of German soldiers in hiding and will warn them that failure to make such report or the harboring of any German soldier by a civilian will cause such civilian to be arrested and tried before a Military Government Court.

e. For detailed list of party officials, civil police, civil officials and para-military organizations to be arrested and held for interrogation by CIC see Intelligence Instructions No. 32, Hq First U.S. Army, 14 December 1944, and letter Counterintelligence Operations in Germany, Hq V Corps 9 January 1945.

f. The offices of all German intelligence agencies, all party organizations, para-military organizations, and military organizations will be searched and all intelligence documents found therein will be forwarded through intelligence channels to the A.C. of S., G-2.

g. Civilian mail, telephone, telegraph, cable, newspaper and radio service will be stopped immediately upon occupation of enemy territory and will not be reopened except by authority of the Commanding General, First U. S. Army. Radio transmitters will be impounded.

h. Photography is forbidden. The use of field glasses or telescopes is forbidden. Field glasses and telescopes will be impounded. The use of cameras is prohibited.

i. Civilians will not be transported in military vehicles except where necessary in official military business.

22. Reports.

a. Each CIC detachment will submit a daily report to the A.C. of S, G-2, V Corps, through intelligence channels, for the 24-hour period ending at 0000 hours, to reach Corps not later than 0000 hours of the following day, giving the following information: (1) Area of responsibility; (2) disposition of detachment personnel; (3) Activities during period; (4) cases investigated; (5) cases pending; (6) arrests, including name, address, reason, and disposition; (7) miscellaneous, including tactical information, rumors, breaches of security, subversive organizations, and other CI information.

b. A weekly Counterintelligence Report is required by First U. S. Army from each corps and division CIC detachment. This weekly periodic report will be rendered as of 2400 hours each Sunday. The original report and one copy will be sent through channels to the A.C. of S., G-2, First U.S. Army. The weekly Counterintelligence Report will be in the same form as that shown in Appendix D of letter Counterintelligence Operations in Germany, Hq V Corps, 9 January 1945.

c. A report of arrest of all civilians evacuated rearward will be made on CI Arrest Report Form (SHAEF AGO Form No. 7) in duplicate to accompany such prisoners rearward.

BY COMMAND OF MAJOR GENERAL HUEBNER:

S. D. MASON,
Colonel, G.S.C.,
Chief of Staff.

OFFICIAL:

THOMAS J. FORD,
Colonel, G.S.C.,
A.C. of S., G-2.

DISTRIBUTION: Special.

2010

APPENDIX XII

SOP for CIC Detachment, 1st Infantry Division

2011

[redacted]

APPENDIX "A" TO ANNEX #7, TO INTELLIGENCE ACTIVITIES REPORT.

SOP FOR CIC DETACHMENT

1. UPON ENTERING A TOWN.

a. Arrest all known or suspected enemy agents or war criminals.

b. Contact Mayor, Chief of Police, leading Priest, or town Secretary.

c. Locate, shut down, search, and guard (if possible) or seal all:

(1) Telegraph offices (also cable).
(2) Telephone exchanges and private lines.
(3) Radio stations.
(4) Post offices and mail boxes. All mail to remain under guard or lock and key.
(5) Banks. All money found in banks or post offices to be locked in a safe place on the premises and the keys turned over to the Mayor.

d. Search and guard (if necessary) or seal all enemy:

(1) Headquarters or CPs.
(2) Depots, dumps or warehouses.
(3) Positions or installations.
(4) Billets.

e. Inspect and guard (if necessary) all utilities, such as gas, water, electric power and light.

f. Investigate all collaborationists, pro-Nazis and suspicious incidents or individuals.

g. Check blackout and curfew regularly.

2. GENERAL.

a. Visit the Regimental S-2 of the area as soon as possible and keep him informed.

b. When visiting any Regimental area, contact the S-2, explain mission, and offer him any assistance desired.

c. Set up an office at the Town Hall and have a man on duty there who knows the location of other team members.

d. Obtain billets nearby and pay Mayor for them as per Civil Affairs price list before leaving town (get a receipt).

2012

[redacted]

[redacted]

e. Arrange troop communications through Division Signal Officer.

3. INSTRUCTIONS TO MAYOR UNLESS THERE IS A CIVIL AFFAIRS DETACHMENT IN TOWN.

a. Curfew: 2300-0500.

b. Blackout hours; sunset to sunrise.

c. Bury all civilian and animal dead.

d. Report but do not molest all U.S. and German dead.

e. All civilians must be off streets when troops are passing through.

f. Restrict all civilians to town.

g. Report all strange civilians or unknown refugees to CIC for investigation.

h. All civilians are forbidden to enter without permission any place which has been locked or put under guard.

i. All U.S. and German equipment not to be molested if in large quantity. If in small lots to be collected in a designated place. All German equipment to be turned in to CIC.

j. All arms and sending sets (w/t) to be turned in to police.

k. All Germans to be captured or reported immediately to CIC. Severe penalties for harboring, feeding or aiding Germans.

l. The Mayor to run the town honestly, efficiently and quietly. He sets prices, distributes food, provides for refugees.

m. Radio sets (receiving) may be kept and used. If radios have been collected previously and stored, they may be returned to their owners.

n. Cameras may be kept, but may not be used near U.S. troops, equipment or installations.

o. Report to CIC all unexploded bombs, shells and other types of explosives but do not touch.

4. GERMAN DOCUMENTS.

If in small lots collect and deliver to Division Hq., O.B. Unit. If too large, make a selection to take back, guard remainder, and report their location. Mark documents' location and date taken and by whom.

5. CIVILIAN MAIL AND TELEGRAMS.

Lock or guard in Post Office. Select all written prior to D-Day and 10% in general, and mail to: 23-27 Brook Street, War Office, London, via Message Center. Be on lookout for any German mail.

6. LOOTING BY MILITARY PERSONNEL OR CIVILIANS.

Strictly forbidden. Report to Military Police, Civil Affairs, or any officer. Arrest looters if possible. Mayor should be advised that the "State of Siege" as proclaimed in 1939 has never been withdrawn and that looting by civilians is punishable by death.

7. TODT WORKERS.

Interview them. If cleared, they will be evacuated in accordance with provisions of Security Plan - Civilian, Hq V Corps, 26 June 1944. Those not cleared will be given to Division P.W. cage as war criminals. Make out arrest form in triplicate and a statement of subject's status.

8. SUSPECTS.

They will be investigated and (1) cleared, if possible, or (2) classified as war criminals, or (3) if in doubt have subject interrogated by one of the French officers attached to Division Hq. During the investigation the subject may be arrested and placed in a civilian jail. Before taking this action secure approval of AC of S, G-2. Two copies of the Civil Affairs arrest report will be filed out on any civilian so held (1 to the Gendarme and 1 to the local Civil Affairs Detachment).

9. WAR CRIMINALS.

Will be turned into the Division P.W. cage accompanied by the Civilian Arrest Form in triplicate, and a statement (memo) of the prisoner's status. The third copy of the C.A. form will be receipted by the senior M.P. and returned to the CIC.

10. PASSES.

Will be issued only by C.A.O.'s. These should show the following:

a. Name.
b. Address.
c. Reason for travel.
d. Route of travel.
e. Information identifying traveler with his identity papers.
f. Time for travel.
g. Final disposition of pass.
h. Signature of C.A.O. issuing pass.
i. Date of issue.

2014

11. FINANCE.

Confidential funds are used for the purchase of information concerning collaborationists, Nazi-sympathizers, French civilians harboring German soldiers, rewards of 1000 fr. for the capture of German soldiers by French civilians, and payment of billets for CIC personnel when quartered in towns or villages.

12. RECORDS AND REPORTS.

Journals are kept by all teams. Summaries of these journals are obtained daily by a member of the CP team. A situation summary as of 0000 daily concerning the activities of the entire detachment is submitted to C/S, G-2, C.A.O. and Security Group.

A weekly C.I. report, based on the daily situation summary, is submitted through V Corps to First U.S. Army.

A monthly report of CIC operations is attached as an Appendix to the G-2 Operation Plan.

Lists of informants, resistance personnel, cases and suspects is maintained, covering the Division and adjacent area.

13. LIAISON.

Liaison is made with C.A.O. at Regts either when the S-2 is contacted or by direct telephone communication with the Div. Hq. team.

C. G. STEINWAY,
2d Lt., Cavalry,
CO., CIC Det #0 (Prov)
Attached 1st U.S. Inf. Div.

2015

APPENDIX XIII

Annex 2c to Operational Plan, ADSEC, NEPTUNE Intelligence Plan

2016

ANNEX 2c
TO
OPERATIONAL PLAN - ADV SEC COM Z

NEPTUNE

Intelligence Plan

SECURITY IN COM ZONE

1. GENERAL SECURITY MEASURES AFFECTING CIVILIANS

(This annex is written to conform with existing directives. SHAEF is considering new policy concerning civil administration in liberated territory which may be at wide variance with policy as set forth herein).

a. Authority over Civil Population. The sole authority over the civil population is the Military Commander of the area.

(1) Civilians entering territory controlled by Advance Section Com Z in a manner not in compliance with rules and proclamations will be turned over to the CIC with a signed statement of the circumstances. After interrogation, the prisoners will be turned over to the Provost Marshal.

(2) Civilians attempting to move out of territory controlled by Adv Sec Com Z in a manner not in compliance with rules and proclamations will be thoroughly searched and handled as in para (1) above. If they try to evade arrest they may be brought under fire.

(3) Any civilian taken into custody will be accompanied by a statement giving the circumstances and bearing the signature of the persons making the arrest. Military Police will refuse custody of civilian prisoners unaccompanied by such a statement.

(4) Civilian employees who are to have access to confidential information or to places presenting opportunity for important sabotage, will first be checked by the CIC.

b. Relationship with Civil Affairs. The ACofS, G-2 makes recommendations pertaining to security measures only. CIC of the ACofS, G-2, Civil Affairs, and Provost Marshal operate in their respective spheres under policies of the Advance Section Com Z, or higher commander. Closest liaison between Civil Affairs, the CI officer, and Provost Marshal is essential.

c. Civilian Communications. Civilian mail service and telephone, telegraph, cable and radio traffic in occupied territory will have been stopped and will remain so. Any mail remaining will be held under guard in post offices. No communication services will be resumed until ordered by higher headquarters.

d. Civilian Identity Documents, Passes and Permits.

(1) Existing system of civilian Identity Documents will remain in force. When necessary, new identity documents will be issued by indigenous authorities under the direction of Civil Affairs.

(2) Preparation and issue of civilian identity documents, passes, and permits as a Civil Affairs responsibility. In doubtful cases, Civil Affairs may request the CI officer for recommendation.

(3) ACofS, G-2 will recommend any security conditions to be impounded upon local issues of passes and permits.

e. Proclamations.

(1) Civil Affairs will prepare, in advance, proclamations to be issued in occupied territory, giving directions to Civil population. These will include the usual war-time security restrictions on such matters as assisting the enemy, possession of arms, radio transmitters, cameras, binoculars, carrier pigeons, curfews, prohibited areas, etc.

(2) The ACofS, G-2 will make known to Civil Affairs any additions or modifications to these proclamations which are necessitated by local circumstances.

2. CIVILIAN LABOR

a. Normally, investigations will not be possible prior to employment. Where practicable, however, it is desirable that lists of employees shall be checked against suspect lists by CIC.

b. Where civilians are to be engaged on work which presents marked opportunities for espionage and sabotage, the CIC should be informed in order that bona fides of all such persons can be checked, so far as possible.

3. REFUGEE INTERROGATION POINTS. Mobile Refugee Interrogation Points under the operational control of Headquarters, AS COM Z, may be set up at key points on main routes along which civilians are passing. These posts will be manned by CIC personnel supplied from Advance Section Com Z pool. Refugee Interrogation Points will normally be in the forward area of AS COM Z.

4. HANDLING OF SUSPECTS--GENERAL

a. Local denunciations should be dealt with methodically, not only in order to apprehend dangerous persons, but also to satisfy local civilians that action will be taken where justified. Prompt handling will prevent action by local populations to take the law into their own hands. Except when the denounced individuals name appears on a

suspect list, arrests will not normally be made by CIC until the denunciation is confirmed.

b. Detention and Evacuation. Civilians arrested as suspects will be handed over to the Provost Marshal for detention and evacuation through prisoner of war cages unless considered important enough for special handling. If local conditions permit, suspects will be processed through a Refugee Interrogation Post before detention. Preliminary sifting will be carried out as early as possible to relieve the Provost Marshal of the burden of evacuating and accommodating harmless civilians.

c. Civilian Cages. These will be established where civilian suspects will be segregated from prisoners of war and held for final disposition.

5. HANDLING OF POLITICAL SUSPECTS

a. The CI Officer, under the direction of the ACofS, G-2, is responsible for action in respect to subversive or hostile organizations.

b. The CI Officer and CIC Detachments must be guided by the general consideration that it is not desirable for allied military forces to intervene in purely internal political disputes and that their responsibility does not extend beyond the task of securing the allied forces against attack by enemy agents or subversive elements. Except when individual political suspects are considered to be capable of actually assisting the enemy, or are needed for interrogation, they will be left for allied governments to dispose of later.

c. The ACofS, G-2 will receive, prior to assumption of territorial jurisdiction for counter-intelligence purposes, specific information on the treatment of members of particular political organizations, including information of suspects known to have assisted the enemy. OSS/SCI units attached to the first United States Army and Communications Zone will supply additional information on suspects. Such information will be disseminated through G-2 channels.

d. Civilians arrested by CIC personnel will not be released by Civil Affairs or Provost Marshal without agreement of the CI Officer.

6. DEPOSITION OF POLITICALLY UNTRUSTWORTHY OFFICIALS

a. The deposition of politically untrustworthy officials will be a Civil Affairs responsibility. As a general principle, no person will be retained in office or employment who has wilfully collaborated with the enemy, or who has deliberately acted in a manner hostile to the Allied cause. Information on civilian officials will be available to ACofS, G-2 and the CI Officer will provide Civil Affairs with all assistance in determining the reliability of key officials. Black and

white lists are not certain proof of unreliability or otherwise. They are merely intended to serve as guides. Local inquiries will, in most cases, have to be made before action is taken. Civil Affairs Officers will make such inquiries through, or in consultation with, the CIC.

b. In the earlier stages, the CIC may assist in the physical deposition of untrustworthy officials, but they will only be concerned with their detention in those cases where it is thought that they would continue to assist the enemy, or that they might possess information of counterintelligence value.

7. RELATIONS WITH INDIGENOUS POLICE

a. Civil Police. CIC personnel will have at all times direct access to indigenous police forces but will keep the Civil Affairs Police Officer informed. Whenever possible, the initial contact will be made in conjunction with the Civil Affairs Police Officer.

b. Security Police. Day to day contact with indigenous Security Police, such as Central de la Surveillance du Territoire, Renseignments Generaux, and Police Judiciarie will be maintained by CIC personnel. Although the Civil Affairs Police Officer is responsible for administrative supervision of these police forces, he will carry out the policy of the ACofS, G-2.

8. ALLIED SYMPATHIZERS

a. ACofS, G-2 will check names of persons representing themselves as members of resistance groups before reliance is placed on these individuals by other staff members. The sources of information for the ACofS, G-2 and the CI Officer will be:

(1) "White List" of individuals believed to be reliable (other than agents of allied organization) will be available.

(2) Special Force Staff (OSS) attached to First United States Army and Communications Zone.

9. COUNTERESPIONAGE

a. Information about enemy intelligence activities will be supplied to the ACofS, G-2 prior to the 'Take-Over' of territorial jurisdiction for counterintelligence purposes by Advance Section Com Z from First United States Army. Additional information of enemy intelligence activities will be available through OSS/SCI units attached to First United States Army and Communications Zone.

b. Arrests of enemy agents or suspected enemy agents will be reported immediately through intelligence channels to higher headquarters where OSS/SCI will be notified. Officers of OSS/SCI will be given an opportunity to participate in interrogations and advise disposal of such prisoners.

2020

[redacted]

c. Interrogation of suspected agents by CIC in Advance Section Com Z will normally be directed to establishing guilt or innocence, the existence or otherwise, of accomplices in the locality, and means of communications; or in the case of important suspects, obtaining an immediate statement which will assist subsequent interrogators in higher headquarters.

d. A report of interrogation and statement made by the prisoner will be sent through intelligence channels to higher headquarters. A copy of the report should accompany the prisoner. Documents found in his possession will be taken from him, but will accompany the prisoner wherever he is sent for interrogation.

e. CIC will keep any prisoner known, or strongly believed to be an agent, segregated from other civil detainees or prisoners-of-war and will not allow him to communicate with anyone. Special arrangements will be made for escorting them to higher headquarters for further interrogation.

f. The capture of German Intelligence Service documents and records will be reported at once through intelligence channels to higher headquarters and will be made available to OSS/SCI Officers upon request.

g. The ACofS, G-2, will keep informed of arrests of enemy agents by indigenous authorities. Agreements on the subject of handling these prisoners will be published at a later date.

10. COUNTERINTELLIGENCE PLANS - DETAILED

a. A CIC plan will be prepared. Detailed plans for individual towns and cities will not be prepared. The general problem of CIC, Advance Section Com Z is one of 'Take-Over' from established networks. First United States Army will by agreement give ample warning to the CI Officer to allow the CIC Advance Section to become indoctrinated prior to 'Take-Over'.

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Part I - Normandy (6 June 1944 - 24 July 1944)

Chapter 1

CIC AGENTS IN FIRST ASSAULT WAVES

Few events in world history can rival in magnitude the Allied invasion of Normandy in June 1944. Within twenty-five days after the initial assault on 6 June, one million men and more than 560,000 tons of supply were landed on the northern coast of France in the most gigantic amphibious assault ever attempted.

For the Counter Intelligence Corps, the events of 6 June 1944 marked the beginning of a vital assignment that thrust its agents into every phase of the 336-day drive across Europe. CIC detachments were with sixty-five divisions, fourteen corps, six armies and two army groups, besides SHAEF and ETO Headquarters staffs and numerous Communications Zone units.

Gone were the uncertainties that preceded the invasion of North Africa and, to a slightly lesser degree, the invasions of Sicily and Italy. This time the Counter Intelligence Corps' mission was well defined in instructions issued by commands from the Supreme Headquarters Allied Expeditionary Force (SHAEF) down to divisions, and every detachment was firmly established by the Table of Organization and Equipment 30-500 even though in many instances the actual numbers of men available fell short of the T/O. The need for CIC was recognized at every echelon, despite the shortage of agents to fill that need.*

CIC Protects Security of Invasion

In the final tense hours before the assault was launched, thousands of briefed troops boarded their landing craft along the English Channel and thousands more in Southern England waited inside their "sausages," assembly areas enclosed by barbed wire cordon.

Across the choppy Channel, German troops guarded vast fortifications, waiting and wondering when and where the attack would come.

CIC agents stationed in the assembly areas and adjacent towns kept constant vigil in a final effort to see that no hint of the impending invasion reached enemy ears.

---

* Reference Chapter entitled "Preparation for OVERLORD."

The Landing

H Hour for the amphibious assault was 0630, but when the first waves of infantry swept ashore, after skirting or blasting a path through hundreds of treacherous underwater obstacles, airborne troops had been fighting the battle of Normandy for five hours.

The United States 101st Airborne Division had begun dropping southeast of the town of Ste. Mere-Eglise, behind UTAH Beach, at about 0130; the British 6th Airborne Division on the eastern flank of the NEPTUNE area at about 0200; and the U. S. 82d Airborne Division in an area northwest of the 101st at about 0230. CIC agents with both U. S. Airborne divisions jumped with the first wave of paratroopers.*

The 4th CIC Detachment went in with the 4th Infantry Division when it stormed UTAH Beach at 0645, and CIC detachments with the 1st and 29th Divisions, who invaded OMAHA Beach on the Calvados coast, were hard on the heels of the first assault troops to wade onto French soil.

The 90th Division CIC Detachment and half of the CIC detachment with VII Corps accompanied their parent units onto UTAH Beach on D Day, and the V Corps Detachment landed on OMAHA. The remainder of VII Corps CIC came in on D Day plus 2.

Other detachments followed shortly thereafter. The 2d Infantry Division CIC reached OMAHA on D Day plus 1, followed by the 2d Armored CIC on 9 June; and the 9th Infantry Division's detachment landed on UTAH the following day.

First Army's CIC detachment, commanded by Captain Horace Miner, a veteran of the Tunisian and Sicilian campaigns, landed with Headquarters when it moved ashore on D plus 3, and three "pool detachments" of divisional size were split among the various tactical detachments during the first week. One officer and eight agents from "pool detachments" were assigned to work with Headquarters Engineer Special Brigade Group, and three agents with the First Engineer Brigade for the assault and until D plus 15.

---

* Operation Overlord, by Albert Norman, Phd (The Military Service Publishing Company, 1952); A Soldier's Story, by General Omar N. Bradley (Henry Holt and Company, 1951); and (Draft copy) "Capture of Cherbourg and Cotentin Peninsula by VII Corps, U. S. Army (6 June to 1 July 1944," Red Vault, VII Corps, (SECRET), (Departmental Records Branch, AGO, Alexandria, Va.).

The first two CIC detachments with the Advance Section, Communications Zone (ADSEC), arrived at OMAHA on 11 June. One, Port Detachment "B," immediately began operations on the beach under the direct control of G2, First Army; the other, Port Detachment "A," was attached by First Army to VII Corps.

By the end of the first week, approximately two hundred CIC agents had landed at Normandy and were engaged in the beachhead activities.*

Corps Detachments Attempt to Coordinate CIC Work on Beaches

Few documents or reports have survived the first week of the invasion period. Doubtless few were compiled in those early days of activity because CIC agents, like the thousands of tactical troops dug in on the thin sliver of coast line, were too busy to write reports.

The 207th CIC Detachment, under command of Major Edwin Bennett,** was attempting to coordinate the work of the detachments with the divisions under VII Corps on UTAH Beach, while the 205th CIC Detachment, under Major Erle Pettus, Jr., was doing the same among units in the V Corps area on OMAHA Beach.

Before the 207th arrived at 1600 hours on D Day, agents of the 101st CIC Detachment, under Captain Martin E. McGuire; the 82d Detachment, under 1st Lt. William F. Jacobi; and the 4th CIC Detachment, under 1st Lt. Oliver D. Appleton, were working at their targets and desperately trying to establish contact with each other. Before the week was over, the 90th CIC Detachment, under 1st Lt. Walter D. Osborne, and the 9th, under 1st Lt. Joseph W. Musick, had reached the area. Two ADSEC teams, commanded by Captain Alvin Johnson and 2d Lt. Meredith Wilson, which had accompanied the 207th Detachment, also were in the area.

---

* Although available records from the above units do not reflect all the above information, plans for Operation NEPTUNE (code name for OVERLORD during planning phases) indicated this distribution of CIC personnel. The actual composition of the Pool Detachments is not known, but it is believed that they were from the Twelfth Army Group Tactical Reserve Teams, since a notation in the VII Corps G2 Journal of 16 June 1944 mentions the names of two persons who are known to have belonged to one of the TRT's.

** Information given by James F. Foothorap (Lt. Col., MI, Res.) in interview September 1955.

2028

CIC detachments operating in the V Corp area before the arrival of the 205th were the 1st, with 2d Lt. Charles G. Steinway as CO, and the 29th, led by 2d Lt. Ellis O. Mayfield. The 2d CIC Detachment under 1st Lt. Arthur Jenkins and the 502d (2d Armored Division) CIC Detachment, commanded by 2d Lt. Richard W. Beebe, arrived within a few days.*

101st Agents First on Normandy Soil

The 101st CIC Detachment, which was the first to be thrown into the confusion that prevailed for the forty-eight hours following the invasion, suffered the heaviest casualties of any detachment during the ETO campaign.

Three days before the invasion, Captain Martin McGuire, who was to command the 101st throughout the ETO campaign, joined the detachment. He had little time to brief his men and no time for a practice jump. This was to be his first.

Seven men were selected to accompany him: 2d Lt. Bradley McKennon and Agents William F. Gannon, Max L. Stemple, Frank E. Benson, Jr., Frank I. Robinson, Thomas E. Ryan, and Howard W. Summes. The remaining agents of the seventeen-man detachment were to come in later that day by landing craft.

Each of the eight men was assigned to a different plane in the hope of minimizing casualties since it was felt that men of their specialized training could not be easily replaced. In spite of this precaution, upon landing the group was reduced to three when Stemple, Benson and Robinson were killed, Gannon seriously wounded, and McKennon wounded and captured when he landed directly atop a German Command Post.**

Like the other troops of the 101st Airborne Infantry Division, these eight men watched the dusk fall slowly on the evening of 5 June 1944, as, joined with with small groups at a half-dozen air fields in southern England, they made final checks on their weapons and attended to other last minute preparations.

---

* Information re the Detachment commanders has been obtained mainly from rosters as of 10 May 44; several have been confirmed by interview. Names of the ADSEC Co's were obtained from Major Francis W. Carpenter (MI Res). The time of arrival on the continent of the various Divisions has been taken from The Army Almanac; A Soldier's Story, by General Bradley; and Crusade in Europe, by General Eisenhower; and from interviews.

** Two months later, with the rapid advance through Normandy, McKennon was freed from a German military hospital in Rennes by U. S. troops.

2029

The tension was broken once by an unexpected visit by General Eisenhower. The Supreme Allied Commander, fully aware of the dangers which lay ahead for the paratroopers, visited each airdrome, talking with the men and offering a few words of encouragement.

After what seemed like an eternity the men boarded the DC-6's, their faces blackened and their bodies burdened under eighty pounds of equipment. One by one the planes wheeled into position and within an hour all the troop carriers were air-borne and formed into groups. Accompanied by heavy fighter escort, they at last moved out across the Channel in the direction of Normandy. During the ensuing minutes, the jumpers had little to do except smoke and try to catch a brief glimpse of the vast sea armada below them through an occasional break in the dense clouds. As the first wave of planes neared the coast, German flak soon caused the air fleet to scatter in all directions. The flak, combined with heavy cloud banks, made it impossible for many planes to locate the drop zones, lighted previously with flares set by small bands of British and American pathfinders.

At approximately 0200 the first American paratroopers jumped, landing over an area twenty-five by fifteen miles square. By dawn, Major General Maxwell Taylor had rallied only 1,100 of his 6,000 men at the appointed rendezvous to begin the desperate fight to contact beachhead forces.

CIC agents of the 101st had been provided with so-called "Grey-Lists," names of persons who might be expected to be valuable as informants, but these lists proved in most instances to be inaccurate and outdated. However, there was little time for CIC work, as such, during the first hours, as CIC agents, like the combat troops, were trying to stay alive and fighting desperately to establish contact with other U. S. units.*

82d CIC Begins Operations

The 82d CIC Detachment was not as hard hit as the 101st in its landing, but one agent, Leonard K. McRae, was seriously wounded and later evacuated to the United States.**

The only report of 82d CIC activities on D Day is a handwritten document signed by Lieutenant Jacobi, who had become the commanding officer just

---

* Interview with Major Martin E. McGuire, 24 August 1954; and "CIC in ETOUSA, 6 June 1944 to 8 May 1945," from "Counter Intelligence Corps Operational History of Theaters," (Restricted), (AIS Staff and Faculty Library - J-23).

2030

before the invasion. The report stated that after arrival in Ste. Mere-Eglise, the Detachment impounded mail in the post office, found classified documents in a former German headquarters, and contacted two members of the underground resistance movement and the mayor. All documents were turned over to the Civil Affairs Officer.

The report also mentioned that Lt. Edward D. Salstrom and Agent Joseph R. Whalen gave assistance at the 3d Battalion, 505th Regiment Command Post, and that a radio receiving set belonging to a "Dutchman," who claimed to be an Allied sympathizer, was seized and turned over to the Civil Affairs Officer to be held or disposed of at his discretion.*

Three members of the 82d CIC Detachment were credited with performing outstanding services on D Day. Lieutenant Salstrom and Agent Whalen who, after jumping into enemy territory, ". . . seized the post office in Ste. Mere-Eglise, cut communications, and impounded all mail, while under extremely heavy enemy shell fire," and Agent Graves Gladney, who was ". . . sent on numerous hazardous missions outside of his regular duties, such as manning observation posts under heavy shell fire, and has shown an untiring devotion to duty."**

Airborne Detachments Hard Hit in Normandy Jump

The casualties suffered by CIC with the airborne divisions were cause for re-examining the wisdom of CIC's participation in assault operations. CIC men who had jumped with the airborne divisions later debated the advisability of sending CIC teams on D Day airborne operations. Some stressed the value of having agents on the spot during a surprise landing, but other CIC veterans felt that the benefits of having agents join the attack were not commensurate with the risk of losing highly trained personnel whose most important work was to come after the landings had succeeded.***

VII Corps CIC Coordinates Work on Utah Beach

A daily commentary kept by the 207th CIC Detachment, attached to VII Corps, has revealed some of the work done by this detachment as well as the work and disposition of the detachments operating under its general direction during the beachhead period: the 4th, 9th and 90th Infantry Division CIC Detachments; the 82d and 101st Airborne Division CIC Detachments; and the ADSEC and Port detachments.

Half of the 207th CIC Detachment landed on D Day; the other half remained on ships in the harbor off UTAH Beach until D plus 2, when they came ashore to join the advance segment at corps headquarters.

The corps detachment immediately began operating in teams or "groups," as they were called, and by D plus 5 were functioning in five groups. They continued in this fashion throughout the Normandy campaign, operating in from five to seven groups, the composition of which was changed as the occasion demanded.

Immediately after landing at 1600 hours on D Day, one group proceeded to the 4th Infantry Division Command Post, where they contacted members of the 4th CIC Detachment. Scattered bits of information, principally concerned with German morale, were obtained from civilians.

Few Documents of CI Value Found

On the following day, in coordination with the 4th Detachment, 207th agents covered the towns of Le Grand Chemin, Ste. Marie du Mont, St. Martin de Varville, St. Germain de Varville and Foucarville, all in the immediate beachhead area, where they interviewed city officials, sealed Post Offices, searched hastily-abandoned German headquarters and billets and checked the reliability of local police. A few documents were found, but none of particular CI importance.

By the third day, 207th CIC Detachment agents were beginning to produce results. In an abandoned enemy underground headquarters they found German Order of Battle maps covering both the V and VII Corps areas, and in other evacuated headquarters found a divisional signal code; a map showing vital utilities in V Corps area; and an artillery map of the zones of fire in the eastern part of the peninsula. All of these documents were forwarded to army.

In a meeting with Corps Civil Affairs, Provost Marshal and G1 officials, agents helped set curfew regulations. Since Civil Affairs teams were not yet operating, CIC agents then turned over the responsibility for publicizing these

regulations to the town mayors in the area. They also directed the mayors to search for arms caches and for German PW's hiding within their towns. On the same day, agents also interrogated and ordered released the whole population of Revenoville, forty-three persons, who had been rounded up into the PW cage; they also established liaison with the 82d Airborne CIC Detachment.

Importance of Liaison Recognized

On D plus 4, the 207th CIC Detachment established liaison with the 101st Airborne CIC Detachment, and within the next few days contacted the 90th and the 9th CIC Detachments. This liaison was considered particularly important in order that work would not be duplicated and time wasted by more than one detachment entering the same town. Various detachments exchanged information informally, including newly developed techniques.

For example, on 11 June, agents from the 207th CIC's Team #3 interviewed officials in Ste. Marie du Mont concerning a list of suspects obtained from the 101st CIC Detachment, and on the next day, another team from the detachment instructed agents from the 82d CIC Detachment on the handling of civilian and Organization Todt workers.*

Although operational plans set up by 12th Army Group prior to the invasion had clearly defined the various channels to be used in the evacuation of civilian suspects, civilian refugees, and prisoners of war, the confusion of the first few days on the beachhead evidently had delayed the execution of these plans. Regardless of the cause, 207th CIC's daily commentary reported that on D plus 6, arrangements were made with the Provost Marshal for "funnelling civilians out of PW channels." Also, on D plus 6, a map of mine fields and fortifications north of Monteburg and two radio transmitter sets were found by a 207th CIC Detachment team in the home of a woman who was reported to have harbored Germans after the invasion. By this time, the 207th had contacted underground resistance leaders who possessed valuable information and had reported their names to London so that Office of Strategic Services' representatives could

* Organization Todt, popularly called OT, was a semi-military German organization, formed by Dr. Todt in 1938 to build the German Westwall and later utilized by the Army Engineers for construction work both in Germany and in occupied countries. After Dr. Todt's death in 1942, the Organization Todt came under control of Prof. Albert Speer. It was organized into battalions with a nucleus of specialist German personnel and a large amount of hired or impressed foreign labor. (Unclassified) (CIC Handbook on Europe, AIS Staff and Faculty Library).

come to interview them. The detachment had also arranged for MII (Military Intelligence Interpreter) personnel to work with CIC, a practice which continued throughout most of the European campaign.

During the first week, the 207th also began a card file of counterintelligence personalities which they kept throughout the ETO campaign.*

German Resistance Delays V Corps on OMAHA

Underwater obstacles, heavily mined beaches and intense artillery fire from the cliffs above brought heavy casualties to V Corps assault waves at OMAHA Beach, and slowed down their advance. However, by afternoon of D Day, troops of the 1st and 29th Infantry Divisions had driven inland more than a mile and opened the beaches to traffic.**

Agents of the 1st and the 29th CIC Detachments were considerably handicapped in their early operations by the heavy enemy fire. As a result of this, one casualty occurred. Agent Rex W. Hitchcock of the 29th was wounded and evacuated through England to the United States.***

Less is known of V Corps operations during the first days of the assualt than of VII Corps, but it is believed that Major Pettus brought his first agents ashore when V Corps headquarters moved in early in the evening on D Day and set up in a ditch atop the bluffs scaled earlier by the combat troops.****

A later summing-up of V Corps activities lays stress upon the help received by the CIC detachment from the Military Intelligence Interpreter (MII) Team that worked with them from the moment of landing. Through the Military Intelligence Interpreter (MII) CIC agents were able to obtain information from loyal Frenchmen who, upon hearing that the Allied forces had landed, worked their way through the German lines to reach them. A considerable number of these Frenchmen proved to be members of the French Forces of the Interior (FFI), one of the more important French underground organizations.

**** A Soldier's Story, by General Omar N. Bradley (Henry Holt and Company, 1951) p. 170. NOTE: It is hoped that by personal interviews more can be learned of V Corps CIC initial landing.

2034

In the confusion of the first few days of operations, V Corps personnel interested in positive intelligence discovered that one of their best contacts was through CIC, since all line crossers were screened by CIC before they were cleared. Mayors, school teachers and priests proved to be the most valuable contributors of tactical information, and their reports were appreciated and fully exploited by Allied higher headquarters.*

Divisional Detachment Work Begun

Few documents are available from the divisional detachments operating under V and VII Corps during the beachhead period--probably few were written--but scattered reports indicate that CIC agents assumed their previously assigned tasks of sealing post offices, severing communications lines, searching former German headquarters and billets, and contacting resistance workers for information concerning collaborators and possible stay-behind agents. There seems to have been little difference between the work of division detachments from that of corps detachments; the first to reach an area took care of it. Upon several occasions, one detachment would enter a town to find that another detachment had already entered and had everything under control.**

29th CIC Reduces Targets in Isigny

The first complete target reduction report on file is that of the 29th CIC Detachment in the town of Isigny, which the 29th Infantry Division occupied on 9 June. Procedures utilized by agents in entering and exploiting this town--the establishment of a curfew, cooperation with resistance leaders, and seizure of enemy documents--followed a pattern that was to be tried and tested by many CIC detachments before the Normandy fighting had ended.

The agents who came right behind the first combat troops found the residents confused and restless, their homes destroyed by bombardment, street fighting and fire. The civilians were particularly fearful about a group of German soldiers dug in just beyond the town on the road to Grandcamp.

Through Andre Farin, a resistance leader from Grandcamp, CIC made contact with Isigny's resistance leader, a M. Charles, who was also a director of the local bank. Utilizing Charles' aid, they immediately arranged a meeting

with several resistance leaders to learn the counterintelligence situation, to determine the reliability of the town officials, to check White and Black lists, and to set up plans for an interim government.

They established a temporary office in the town hall that had served as a District German Naval Headquarters. A search of the hall produced several secret documents of tactical interest, which were turned over to Lt. Charles B. Conick of the 301st (First Army) CIC Detachment for transmission to the proper authorities.*

Travel Control Is A Major Problem

Nearly every detachment was faced with numerous problems in the control of civilian traffic and the handling of refugees coming through the lines, operations which were complicated by the congestion in the beachhead area and by the lack of an over-all plan.

In the first town they entered, Ste. Mere-Eglise, the 82d CIC Detachment received assurance from the mayor that he would encourage civilians to return to their homes and that the local five-man police force would set up necessary road controls to halt the civilian movement in and out of the town. The detachment also assisted Civil Affairs and Military Police in selection of their control posts. In his report at the end of the first week, Lieutenant Jacobi recommended that refugee points for the collection of wanderers and strays be set up in the main towns in the occupied area, and that identification be provided for each refugee cleared through such stations.**

At about the same time, Lieutenant Appleton, 4th CIC Detachment CO, suggested that front line soldiers be instructed to challenge all civilians and to require that they show their French identification. He further recommended that any person who was not thoroughly identifiable from his photograph should be turned over to a fluent French linguist for interrogation, since a large percentage of German soldiers spoke poor French and could be trapped by their shortcomings in the language.***

The 1st CIC Detachment, in a later summary of activities of this period, also reported much confusion in the handling of French civilians until after the

division reached Caumont on 13 June. At this time, it was possible to establish a forward security line behind which all civilians could be placed, both for their own safety and to neutralize them as security threats.*

Generally, the reception accorded the U. S. troops by French civilians was enthusiastic. It was reported that the residents were almost 100 percent pro-Allied. Numerous denunciations were made, but upon investigation it usually appeared that the accused had worked for the Germans because he had been forced to do so or had traded with them for profit. In questioning the denunciators, CIC agents found that few of them were able to distinguish between the ideological collaborators and those who had dealt with the Germans for mercenary reasons. The distinction was important because the latter cases were considered of French interest.**

In some areas, especially that covered by the 4th Infantry Division, CIC agents found that, although the civilians were cooperative, they seemed reluctant to divulge information because they did not yet feel "secure enough to reveal themselves."***

Todt Workers Present Special Problem

Todt workers, members of a para-military labor force recruited by the Germans, also presented a problem, since there was no clearly defined policy for handling them. They always claimed to have been conscripted but most of them were believed to have been willing recruits. Usually, these persons were turned over to corps headquarters for disposition.****

CIC Produces Tactical Information

Throughout this beachhead period, much of CIC's contribution was in the collection of tactical information. Agents of the 82d CIC Detachment were credited with finding, on the body of a German officer, a document indicating the Order of Battle of units opposing their division.* The 1st CIC Detachment obtained from a French resistance leader the location of a German ammunition dump, names of key resistance figures throughout the area, and facts regarding enemy troop movements in the vicinity of Berginy.**

Questioning of civilians by 29th CIC Detachment agents produced two important pieces of tactical information: they learned of a subterranean tunnel, wide enough for the passage of vehicles, which ran for several miles along the coast in the area of Criqueville-Englesqueville, and they found a man who knew the exact location of underground telephone cables from Cherbourg to Caen.***

Some of the most important document caches were found in organization Todt headquarters. In a search of these headquarters in Ste. Mere-Eglise, Lieutenant Salstrom and Agent George A. George of the 82d Detachment, found several boxes of documents containing detailed construction plans for defensive installations, pill-boxes, road obstacles, military camps, supply dumps and heavy gun emplacements on the Cotentin Peninsula. Names of employees and their pay records were included. All these documents, along with five captured Todt engineers, were sent along to headquarters of VII Corps, which was already planning its advance up the peninsula to Cherbourg.****

By 2000 hours on D plus 1, 4th CIC Detachment agents had found numerous documents in enemy headquarters throughout the area, from which the Germans had fled in surprise, but by the end of the week they found that searches became less profitable because the enemy was destroying or removing most of the items of intelligence value before retreating.*****

No Espionage, Sabotage Activity Found

No reports have been found of sabotage or espionage activity, although all detachments remained alert to the possibility of stay behind agents and German agents infiltrating the lines in civilian clothes. The only personality target arrest reported was a woman apprehended by the 101st CIC Detachment in the "hub" city of Carentan. On arrival there, on D plus 4, Captain McGuire and his men found personality files and German black lists in the local Gestapo office. A study of these files revealed that a business man, had willingly aided the Germans as an interpreter. She was arrested and sent to England for internment.*

Rear Area Security Considered Satisfactory

By the end of the first week, as Allied Forces were preparing for the breakout from the beachhead area, several detachments reported that security in their rear areas was satisfactory and that the civilian traffic problem was less acute, due partly to established controls and partly to realization by the civilians that such controls were necessary.**

In the first few days after the landing, CIC detachments were expected to perform security checks of the areas selected to be division or regimental command posts. The 4th CIC Detachment was particularly efficient, reporting the completion of their surveys on the evening of D plus 1.***

2d and 502 CIC Detachments Join V Corps Area

On the V Corps Front, the 1st Infantry Division had steadily shoved the enemy southward until, on 13 June, they were 20 miles inland at Caumont. In the meantime the 29th had driven west to contact VII Corps and the 2d Infantry Division, and the 2d Armored Division had moved in to lend support at potential danger points all along the front.****

By the time NEPTUNE was a week old, the beachheads were firmly established, consolidated and broadened into an area extending up to twenty miles inland at one point and stretching forty-two miles across. Nine U. S. and seven British divisions

**** A Soldier's Story by General Omar N. Bradley (Henry Holt & Co., 1951), pp 25

had landed, tons of supplies had been funnelled through the beaches, and the U.S. VII Corps was set for its first breakout.

During June, four more divisions came in and two more corps became operational, to join the forces rushing up the Cotentin Peninsula towards Cherbourg, or to join those protecting the base of the peninsula and preparing for the bigger breakout that would follow the reduction of Cherbourg. The 79th Infantry Division landed during the three day period 12-14 June, the 30th Infantry Division on 15 June, the 83d Infantry Division on 18 June, and the 3d Armored Division on 29 June. The VIII and XIX Corps became operational on 15 June.

The 79th CIC Detachment was commanded by 1st Lt. Irvin Bogatin; the 30th by 1st Lt. Melvin Handville; the 83d by 1st Lt. Oliver A. Vietor; the 218th (VIII Corps) by 1st Lt. Albert R. Bowen; the 503d (3d Armored) by 1st Lt. Theodore M. Black; and the 219th (XIX Corps) by Capt. Ernest S. Baker.

Before ten days had passed, more than three hundred CIC agents had taken part in the invasion. In spite of all the confusion of these first days, they had, with intelligence and enthusiasm, gone about their assigned missions of guarding against threats to military security, searching for enemy documents and establishing liaison with local citizens. They had firmly established themselves as part of the combat team.*

Chapter 2

CONQUEST OF THE COTENTIN

The second phase of NEPTUNE began on 14 June when VII Corps started to cut across the Cotentin Peninsula. This was the prelude to a northward push on Cherbourg. Already one-third of the way across the Peninsula, the 82d Airborne entered on the westward drive along with the 9th Infantry Division.

As the 9th neared the coast, the 82d pivoted south to form a defensive line across the Cotentin neck. On the morning of 18 June the 9th Division captured its final objective on the west coast, and twenty-four hours later began its race toward Cherbourg. The 4th Division, which had been expanding the beachhead north and west, and the newly arrived 79th Infantry Division joined in a three-pronged attack on this seaport.

The 90th Division was transferred from the VII Corps front, shifting south to the Cotentin neck. Cherbourg was encircled 21 June, and after a desperate fight, surrendered on 27 June. The 4th, 9th and 79th Divisions quickly wiped out remaining resistance on the Peninsula.*

VII Corps CIC Detachment Operates on Peninsula

Ranging up and down the Cotentin Peninsula, sometimes with the forward combat troops and sometimes in the rear areas, agents of the 207th CIC Detachment and their attached ADSEC agents had a busy time, as evidenced by brief comments in their daily log. It is apparent that agents from the Twelfth Army Group CIC Detachment were also attached to the 207th CIC, since names of some of these agents appear frequently in the daily commentary kept by the detachment from 6 June to 28 June 1944. Obviously some members of the Air Corps CIC detachments based in England also had been sent to the continent since the following statement appears in the log for 23 June 1944: "Two CIC men of Ninth Air Corps [evidently Air Force is intended] are now stationed at Ste. Mere-Eglise."**

Again there seems to have been little difference between work of the VII Corps Detachment from that of the division detachments, except that the 207th CIC Detachment was attempting to coordinate the work of the different divisional detachments and to set a take-over system into operation, as planned by directives published before the invasion. But the take-over system often worked in reverse, with the corps detachment first entering a town and then turning over its records to a divisional detachment.

---

* A Soldier's Story, by General Omar N. Bradley (Henry Holt & Co., 1951) pp 298-314

** 207th CIC log, 6-28 Jun 44 (Unclassified), (Kansas City Record Center Box 25097). (NOTE: Available NEPTUNE plans do not include mention of these units).

2041

On the rapid move up the Peninsula, VII Corps CIC Agents frequently seemed to be with forward troop elements in areas which, according to plan, were to be covered by divisional detachments. On one occasion, after searching what was reported to have been the former quarters of the German General Rommel near Pont L'Abbe and two chateaus north of Orglandes, former billets for German officers and Organization Todt workers, 1st Lt. John H. Heminway and Agents John H. Reber and Charles K. Schroeder, of the 207th's Group #4 turned their document haul over to the 90th CIC Detachment. Again, on 26 June, the day before the final capitulation of Cherbourg, the 207th passed information on the Barneville area to the 90th.*

Only two incidents in which a divisional detachment turned over records to corps have been found, although doubtless there were others, since the 207th was trying to get the take-over system into operation. One occured on 21 June, when the 4th CIC Detachment transferred to the 207th records on the Valognes and Montebourg area which it had been working for three days, and the second on 29 June, when the 4th CIC Detachment closed its Cherbourg office, delivered its records to the 207th and moved with its division to a new position at the southern end of the Contentin Peninsula.**

The first complaint about the inadequacies of the take-over system was expressed in a summary by 9th Division's G2 at the close of the Cotentin Campaign:

"CIC: The same problem confronted Divisions on the Cherbourg Peninsula as in Tunisia and Sicily, in that the Division CIC personnel were spread over a wide area in the rear, and were unable to keep pace with the Division advance. It is recommended that higher headquarters take over towns behind the lines more promptly. There is much for CIC to do with the front line troops."***

This was only the first of many such official comments to be made over a situation that plagued CIC's operations throughout the European campaign and was listed as one of the chief deficiencies in counterintelligence by the USFET General Board in their report at the end of the war.****

2042

207th Agents Scout for Corps CP Sites

A possible explanation of the preponderance of work done by the 207th in forward areas was attributed by a member of the detachment to General Collins' habit of moving his Corps Headquarters forward of his divisions when he wished to press those divisions forward during the move toward Cherbourg. On these occasions he sent corps CIC agents scouting in front of the lines for a suitable location, a rather unusual mission for CIC. That may have contributed to the tendency of the VII Corps Detachment to stay up front.

At various times during the Cotentin Peninsula battle, the 207th CIC Detachment assisted tactical troops in clearing out pockets of German soldiers. Although French resistance groups proved helpful, CIC agents often were alarmed over their irresponsibility. On one such occasion some resistance members had reported, evidently without sufficient investigation, that a certain pocket of German soldiers, located four or five miles below Carteret had requested permission to surrender. As the agents, accompanied by tactical troops, advanced to accept the surrender, the Germans opened fire and the Corps G2, who had decided to go along on the mission, was killed.

Throughout the European Theater of Operations Campaign, CIC agents were often the first Allied representatives to enter a recently evacuated town. This was the case in Carteret, on the western coast of the Cotentin Peninsula, in which Agents Varenick and Charles Schroeder received a "hero's welcome" upon arrival on 22 June. They immediately contacted the mayor, who was in session with the town's aldermen, and organized the town's firemen into a police force, a procedure which became a standard practice throughout the campaign in France. The considerations behind this practice included the following: the firemen were natives of the town and knew the inhabitants; they were an organized group, accustomed to taking orders; and they were less likely to have been infiltrated by pro-Nazis than the existing police forces.*

Disposition of Organization Todt Workers

The handling of Organization Todt workers remained a problem, since clear-cut policy was established. Reports from 4th CIC Detachment reveal that on 12 June, five were referred to VII Corps headquarters; on 14 June several were turned over to Civil Affairs; on 16 June seven were interrogated by 4th CIC Agents aided by 207th CIC Detachment Agents, but were allowed to remain where they were since they were believed not to be subversive. Again on 18 and 19 June, Organization Todt workers were turned over to Civil Affairs, but on 23 June three

* Interview with Michael E. Varenick, former VII Corps CIC Detachment Agent 6-8 Aug 54, Chicago; and 207 CIC Det log. 6-28 Jun 44 (unclassified) (Kansas City Records Center, Box 25097).

were sent by First Army to a "civilian workers collection point."* This problem became more acute near the end of the Peninsular campaign when, during a two-day period, the 4th CIC Detachment found more than one hundred Organization Todt workers.**

Conflicting directives applying to the Russians among the Organization Todt workers created a situation of special concern to CIC. When VII Corps agents went to the 9th Infantry Division PW enclosure at St. Jacques de Nehou on 20 June, to interview thirty such Russians, they learned that twelve of them had been sent to the beach the night before for transfer to England as Prisoners of War. They proceeded to interrogate the remainder, but had screened only eight when the Major in charge of the enclosure ordered all of them loaded on trucks for the transfer. Although the agents protested that Organization Todt workers were to be separated from Prisoners of War and sent to civilian detention camps, the Major brushed them off with the explanation that he had orders that all Russians were to be treated as Prisoners of War. The whole group was shipped to England.*** Confusion may have arisen from the fact that, in addition to the Russians who had been recruited both voluntarily and involuntarily as laborers, a number of Cossack troops were known to have volunteered as soldiers in the German Army. Evidently both CIC agents and the Major had been insufficiently briefed as to these differing categories. That officials at higher echelons were aware of the presence of Russian soldiers among the Germans is evident from one unusual assignment given to a CIC agent. On 21 June, while Allied soldiers waited outside the garrison at Cherbourg, Agent Michael Varenick, of VII Corps CIC Detachment, broadcast in Russian an appeal for the surrender of the garrison.****

Corps Detachment Develops Coordination Methods

As more small villages and towns came within VII Corps control, refugee problems became more pressing, and agents of the 207th often conferred with divisional detachments on methods of refugee handling and civilian movement control.***** Available documents indicate that, in spite of the rapid advance,

***** 207th CIC Det Log, 23 June 1944, Ibid.

the 207th CIC Detachment was accomplishing a considerable amount of coordination with the divisional detachments in other matters as well. This liaison was important, not only in the Normandy campaign, but as experience for future action on the continent. With the assistance of an OSS representative, corps agents obtained from resistance leaders complete "Black and White" lists for the Peninsula, which they passed on to all the CIC detachments in operation there.* Lists of collaborators compiled by divisional detachments were also processed by the 207th and distributed to units throughout the areas concerned.**

Busy 207th CIC Detachment agents found time to contact the newly arrived 79th CIC Detachment, and brief them on techniques which had been developed for mail handling, daily reports and refugee control. And on the 23d, Agents Varenick and Stephen J. Neville visited Brix and procured four resistance leaders, who were to lead forward units into Cherbourg. These natives were delivered to 79th Division Headquarters.***

VII Corps CIC agents also received from the division detachments several suspects whom they interrogated further before referring them to army for final disposition. Among these were who had been arrested by the 4th CIC Detachment after being denounced by citizens of Valognes. was accused of having reported three American parachutists to the Germans on D Day. He claimed that, peering through a slot in his door at about 0400 hours, he saw three "masked men" with guns and, believing them to be bandits or terrorists, fled through a side window to report them to the Germans. As soon as he had made the report, continued, it abruptly occurred to him that these men were in fact Allied parachutists. He then rushed back to persuade his neighbor to hide them, but they had disappeared. Questioned by CIC agents, the neighbor confirmed that had asked him to hide the parachutists. But the findings were considered inconclusive and was sent further to the rear.

The case against was also weak. was accused by five Frenchmen of having written and disseminated anti-Allied literature, for which express purpose he purportedly had been released from a German prison camp. The accusers, however, were unable to produce any of the literature, insisting that it had been lost or destroyed. When interrogated by CIC, denied all charges. He claimed to have been a French soldier, captured at Dunkirk. The Germans released him, he said, in April 1943, because his wife had died, leaving his children uncared for. He maintained that it was not unusual

for the Germans to release prisoners for similar humanitarian reasons. He also was sent to the rear.*

Several persons regarded as security threats also were arrested by 207th agents, among them a Interviews with six informants had indicated that these had been responsible for capture of two American parachutists who were hidden in a villager's home and the seizure of seven villagers as hostages.**

4th CIC Detachment Operates in Front Lines

As the 4th Infantry Division inched its way up the peninsula in preparation for the final big push on Cherbourg, 4th CIC Detachment agents were operating largely in front line areas, searching abandoned enemy positions and conducting routine questionings of civilians, who by now were beginning to volunteer information on enemy activities and local collaborators.*** On 27 June, as the last German defenders of Cherbourg were surrendering, the entire detachment, except for three agents who remained at the Division CP, moved into the city and initiated their major operation of the campaign. Here, the agents arrested a number of collaborators, checked control posts, made sure that local police were cooperating with the Military Police in the checking of identification papers, and searched German installations. In these installations the great bulk of documents uncovered prompted CIC to call in the corps Order of Battle Team to look over the haul on the spot, reversing the usual procedure of moving documents elsewhere for study.

CIC men were less successful in their searches after the tactical troops had a chance to move into Cherbourg. When agents inspected an underground communications system at the request of the 8th Infantry Regiment's S2, they discovered that it had been looted by the troops. All documents of intelligence interest had been destroyed.

One 4th CIC Detachment agent went to the Pasteur Hospital in Cherbourg to inspect identity cards of employees. He found all papers in order except those of who had Red Cross identification papers, but wore a Hitler Jugend uniform, complete with swastika armbands and medals. The agent arrested her and turned her over to the civilian collecting point for disposition.****

4th Detachment Activities Believed Typical

Few reports are available on the 4th CIC Detachment, and only scattered reports on the 9th. These reports indicate that the 9th was collecting and sending back to the G2 a considerable amount of tactical information.*

However, a daily log kept by the 79th CIC Detachment has, through its brief entries, furnished what is believed to be a typical survey of the work of a divisional detachment in this rapidly changing situation.

In the conquest of the Cotentin, the 79th Infantry Division had a major role. After landing on UTAH Beach on 12-14 June and entering combat five days later, the division attacked on the high ground west and northwest of Valognes and the high ground south of Cherbourg.

After taking Fort du Roule, division troops entered Cherbourg on 27 June. After Cherbourg, the 79th held a defensive line at the Ollonde River until 2 July, when it returned to the offensive to take La Haye du Puits on 8 July.

Three members of the CIC detachment with the 79th Infantry Division--1st Lt. Irvin Bogatin, Detachment Commander and agents William C. Burton and J. A. Forsyth--landed in France on 14 June with Division Headquarters, and the remaining members of the detachment joined them several days later.**

Agents Arrest Two Inquisitive Frenchmen

On 19 June, the day after the division entered combat, the first CIC report disclosed that the 79th CIC was searching the highway between Negreville and Valognes for a German Headquarters reported to be near this main avenue of travel.

Numerous suspects were encountered by CIC in these first days. Two Frenchmen, found loitering near American ammunition dumps, were arrested, and the activities of a young French girl who reportedly collaborated with the Germans were investigated because she was suspected of attempting to communicate with the departed Nazis.

** Interview with J. A. Forsyth, former agent, 79th Inf Div CIC Det, 28 October 1954, Baltimore, Maryland.

Agents, besides questioning numerous civilians and checking curfew enforcement, also reported to tactical troops the presence of a group of German soldiers in a chateau near Negreville.*

Belgian Informers Puzzle Agents

By 22 June, 79th CIC was processing its first group of dangerous CI personalities in Brix. A German soldier, a volunteer Organization Todt worker, a collaborator, and two anti-Allied Belgian informers comprised this group.

The two Belgian informers proved to be the most puzzling suspects. Fluent in several languages, the two men had first attracted CIC's attention when they were picked up for suspicious conduct on the main highway to Cherbourg. Released after preliminary questioning, they were apprehended again when they were observed carrying small packages in and out of their homes in Brix. Informants added that the two Belgians, who were later arrested and sent to the rear, had also revealed to the Germans the identity of two resistance movement saboteurs.

While in Brix, 79th CIC Detachment members secured the names of several people known to be decidedly hostile to the Allied cause and investigated the suspicious behavior of a the was arrested and taken to the rear for possessing possibly to the Germans. CIC recommended that he be released "... with strong warning to stay away from Army installations."**

Safe-Opening Creates Furor

Shortly after 79th CIC entered Brix, detachment members had an unprofitable but significant experience with an abandoned safe found in one of the headquarters of the Todt organization.

First discovered by agents of the corps detachment, the safe had weathered efforts by agents to blast it open with hand grenades. But the 79th CIC Detachment attempt was more successful--at least in getting it open!

A master sergeant, an amateur blasting "expert" borrowed from Division Headquarters, used five pounds of dynamite to open the safe--a safe-opening that had far-reaching repercussions.

The resulting blast was momentous. It completely demolished the safe and the eight-room house containing it, scattered money and documents all over the

---

* 79th CIC Det Daily Rpt, 20 June 1944, in 79th CIC Det Jnl, 20 June 1944 to 27 April 1945, (Unclassified), (Historical Project Files).

** 79th CIC Det Daily Rpt, 22 June 1944, in CIC Jnl, 79th CIC Det, Ibid.

Normandy country-side, and started numerous small fires. The blast also brought an entire battalion from a nearby infantry regiment, who thought that the Germans might be launching a new offensive in the rear area.*

G2 Outlines Safe-Opening Procedure

This blast may have influenced Colonel Benhamin A. Dickson, First Army G2, in his decision to prepare an SOP for safe-opening. Such an SOP was outlined in a letter issued on 25 July, with a notation that the letter should be made "available to all CIC personnel."

The letter pointed out that "Safes and strong boxes belonging to the PTT, French Governmental agencies, or civilians should not be blown open or forced in the search for tactical intelligence or counterintelligence."

It directed that such safes and strong boxes be placed under guard when necessary and an effort made through Civil Affairs to locate the owner or responsible person who might be able to give access to the contents without using destructive means.

An added note explained that if immediate action was necessary and the owner could not be found, authority should be obtained through the G2 of the appropriate corps or division for use of destructive means.**

Agents ask: Can Frenchmen Enlist in U.S. Army?

During this period, agents encountered an unexpected problem: What was the procedure a Frenchman should follow in enlisting in the U.S. Army? Was this even possible? An excerpt from one daily report read: "Request that information be supplied this Detachment on the possibility of Frenchmen enlisting in the Army of U.S. Numerous questions have been asked members of this Detachment regarding this widespread desire."***

As June drew to a close, agents were spending a great deal of time processing civilians seeking haven south of Cherbourg. One such civilian considered suspicious by agents was Georgette Beck, found in a pillbox with German soldiers where, she alleged, she had taken refuge to escape the bombardment of Cherbourg.

*** 79th CIC Det Daily Report, 24 June 1944, in CIC Journal, 79th CIC Detachment.

Believing her story, agents gave her a pass and instructed her to continue her southward movement. Evidently Mlle. Beck did not heed CIC's advice for on 26 June she was again picked up, this time near La Glacerite. This time she was not released.

79th CIC Enters Cherbourg

On 27 June, the 79th CIC entered Cherbourg to initiate counterintelligence coverage. Immediately the agents called a meeting with the mayor and other town officials to discuss security measures. While recommending that police be placed around all former German-used buildings, telephone buildings and the post offices, CIC also made preliminary arrangements for temporary jail facilities.

"The other various steps necessary for occupation by CIC and Civil Affairs were taken, and a report thereof submitted to Captain Dorsett (VII Corps CIC CO)," one daily report explained.*

The last two days of June were eventful ones for agents of the 79th CIC. On 29 June, agents established liaison with VIII Corps CIC, overhauled a detachment vehicle, directed division troops to the hiding place of six German soldiers, prepared a tentative road control plan, and obtained information on informers and suspects in the area.

One line crosser, apprehended on 30 June as he attempted to pass through American lines in the area of the 313th Regiment, declared that he had been given a mission by an American soldier to get tactical information. He added that he had been given a hand grenade and promised 500 francs upon successful completion of his mission. When a check with VII and VIII Corps CIC and the OSS failed to corroborate the story, he was evacuated through POW channels.**

Chapter 3

STALEMATE IN THE SOUTH

While VII Corps was busy liberating the Cotentin Peninsula, V Corps and the newly formed VIII and XIX Corps were assigned to hold the line across the base of the Peninsula joining the British forces east of Caumont, about twenty miles inland.

V Corps, consisting of the 1st and 2d Infantry and the 2d Armored Divisions, held the line nearest the British and on west to a spot about four miles northeast of St. Lo. At the center of the line, XIX Corps was given the 29th Infantry Division and, a day or two later, the newly arrived 30th. Before the end of June, the 3d Armored Division was added. VII Corps, which, along with XIX Corps became operational on 15 June, took over the front toward the west coast. At first it included only the 101st Airborne Division, but, as VII Corps shifted toward the north, the 82d Airborne and the 90th Infantry Division were left with VIII Corps, and, before, the end of June, the newly arrived 83d Infantry Division was added.

With First Army's principal attack steered toward Cherbourg, and with ammunition rationing necessitated by supply shortages, the offensive in the south rumbled to a halt, the fronts ". . . half drowned in the rivers and marshlands of the Cotentin neck. And everywhere the battleground was boxed in by hedgerows.*"

Stalemate Helps CIC Consolidate Operations

This stalemate period with its lack of movement provided CIC the first opportunity for systematic counterintelligence coverage. For all detachments in the area, it also was a period for developing coverage techniques and for setting up liaison with interdependent organizations and with other CIC detachments.

Most of the detachments for which documents are available had by this time adopted the plan of splitting into several teams for better coverage. The 219th CIC Detachment (XIX Corps), which had begun operations on 15 June, divided the corps area into three sectors with a team of two agents operating from the largest village in the sector. The remaining agents were based at the Corps Command Post as a reserve to handle "spot incidents" and to maintain liaison with other CIC units. Captain Baker reported that ". . . this system of coverage has worked efficiently from the viewpoint of detailed knowledge of the area and quick awareness of all matters of counterintelligence interest occurring therein.**"

---

* A Soldier's Story, General Omar N. Bradley, (Henry Holt and Company, 1951), pp. 284-316.

** "After Action Report, Section II -- Intelligence, CIC Det 27," dtd 30 Jun 44, in Opns Rpts, L13 (L), XIX Corps, June 1944, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

A similar procedure was adopted by the 208th CIC in order to provide security coverage for its rapidly expanding area, which soon grew to an eighteen-mile front. When the detachment started its work on 18 June, only six agents were available, but a few days later, the remainder of the detachment joined the advance party.* Soon after beginning operations, Lieutenant Bowen divided his detachment into a number of teams which he sent into neighboring towns to set up field offices, a practice which was followed throughout the campaign across France.

After determining what major towns in the area immediately behind the division's rear boundary merited security coverage, Lieutenant Bowen would dispatch two-agent teams to these towns. In many instances, only one agent was available, and Lieutenant Bowen would, in his own words have to, "beg, borrow, or steal" additional personnel to assist in initiating counterintelligence work in a town. Quite often, he would borrow an interpreter from the Military Intelligence Interpreter Team, a driver from the motor pool, another man from the Order of Battle Team, and perhaps some other unoccupied soldier wandering around the detachment area. These "recruited" assistants, along with the agent, would speed for the town by jeep.

On arrival, the agent and his three or four helpers would pick out the most accessible building for their center of operations. These quarters often turned out to be the former headquarters of the Gestapo or a similarly privileged organization. Actual CIC work would then begin.

Interpreter Handles Interrogations

At the outset, the lone agent had to handle almost all of the interrogations, a task that usually kept him occupied for eighteen or more hours every day.

However, once the agent's assistants caught the drift of CIC procedures, the burden of the agent's shoulders was greatly lessened. The interpreter, after working with the agent for many hours, assumed the responsibility of handling almost all of the interrogations, and the other helpers were of great aid in receiving and processing the suspects and informants and recording the information that had been obtained.

Freed from many of his initial duties, the agent was able to recruit and satisfactorily clear indigenous personnel to augment his staff. Resistance group

* VIII Corps G2 Jnl and File, 20 Jun 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).
NOTE: Probably ten men.

members, ex-town policemen and the former mayor or other reliable city officials were usually the people selected because they possessed detailed knowledge of the town, its environs and inhabitants.

In the course of their stay in Normandy, the VII Corps CIC agents developed an expeditious and thorough procedure, arrived at mainly through trial and error, for screening the hundreds of constantly shifting civilians. A variety of civilians would be assembled by the agent and his staff. These groups often reached 200 individuals per day. Using reliable indigenous help, the CIC agent could usually reduce this total to approximately fifteen suspects. Further detailed interrogation would cut this number to perhaps half a dozen and these individuals would be evacuated through Prisoner-of-War channels to the First Army Interrogation Center.*

Division Detachments Work in Teams

Division detachments, like the corps detachments, also found that the team method was the most effective way of providing area coverage. During the latter half of June, the 1st CIC Detachment was split first into three and then into four teams. The agents were stationed in the towns of Foulognes, Planquery and Cormolain, from three to five miles behind the lines, and at the Division Command Post, southeast of Balleroy, about six miles behind the front. Remaining throughout the period, the CIC teams were able to cover these towns and the surrounding areas thoroughly. In addition to their regular duties of impounding mail, searching former German positions for documents, and checking enforcement of security measures, they were also able to obtain much information of tactical value from refugees fleeing the combat area.**

---

* Interview with Mr. Albert Bowen, Jr., Baltimore, Maryland attorney, 26 November 1954. Mr. Bowen added the following commentary on the information given above: "The success of this system reflects on the calibre of men with VIII Corps CIC. The average enlisted man in the U.S. Army -- and most of these men were corporals or sergeants -- would have been totally incapable of initiating and supervising an operation of this nature. Diplomacy, imagination, sound judgment, and the ability to make decisions rapidly were qualities that the lone agent had to have in abundance when he set up his office in a town of several thousand inhabitants. VIII Corps CIC was able to provide fairly thorough coverage of the corps zone only because the detachment had agents who could combine a professional background and sound judgment with practical experience. Coordination of the efforts of these separate field offices was attained by constant daily supervision by the CO."

** 1st Inf Div CIC Daily Situation Summaries and other rpts, 15-30 Jun 44, in. 301-2.2 (Master 22292), 1st Inf Div G2 Jnls, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Even before its first day of operations, the 30th CIC Detachment was divided into teams, with one assigned to each of the regimental areas and one held in reserve at the Division Command Post. Since there were no towns of more than 100 population in the 30th CIC's area, no town headquarters were established.* Members of the reserve team were sent out as needed to augment regimental teams.**

Teams from the 30th CIC Detachment and Military Intelligence Interpreter Teams worked in close coordination, and the G2 often combined the two agencies, sending out units comprised of both CIC and MII personnel to handle investigations, falling within either's jurisdiction.***

Other division detachments, notably the 503d (3d Armored Division), manipulated teams freely. On some occasions 503d CIC teams joined with teams from other divisions for town coverage when their areas were contiguous or when the other division was expected to move into the town after the 3d Armored left.****

Corps Detachments Work Out Coordination Procedures

This period of comparative quiet gave Corps CIC detachments the opportunity for developing procedures for coordinating the activities of the divisional detachments within their areas and for planning orderly take-over procedures. For example, the 219th CIC Detachment daily sent a team to the headquarters of the 30th, 29th and 503d CIC Detachments where names of contacts and suspects and other counterintelligence information were exchanged.*****

To encourage the divisional detachments to prepare records to leave with the next incoming detachment, the 708th kept all the divisional detachments supplied with five by eight inch slips of paper, on which they were to record notes on every investigative activity. Experience had already proved that, in a fast moving situation, much of the work performed by the first detachment was lost when the detachment moved on. These notes also facilitated the compilation of the comprehensive monthly report which the corps detachment submitted to First Army.

On one occasion, Lieutenant Bowen had cause for regretting his zeal for maintaining close contact with all the divisional detachments in the Corps. He went to visit the headquarters of the 90th CIC Detachment which, under command of 1st Lt. Walter D. Osborne, was situated in a spacious chateau high on a hill near St. Sauveur le Vicomte. Evidently the activity attendant upon Lieutenant Bowen's arrival focused the attention of a German artillery unit. The resultant fire from their 88's leveled the chateau, destroyed several jeeps, and gave everyone first-hand experience in practicing cover and concealment.*

Several divisional detachments developed innovations to assist in orderly takeover, perhaps the most notable of which was 1st CIC detachment's "town plans" that contained a summary of all pertinent information and recommendations for future handling of an area. Similar "town plans" were used on many later occasions by other detachments.**

Liaison Considered Paramount

Perhaps the most important lesson learned by all CIC detachments during this period was the absolute necessity of liaison, as CIC interdependence with other organizations was clearly demonstrated. Most essential was close cooperation with Civil Affairs (CA), whose work in reinstating governments had to be surveyed from a security standpoint by CIC. Several CIC detachments went through irritating experiences in their dealings with Civil Affairs before it was clear that the two organizations had to cooperate. When CIC agents entered a town ahead of Civil Affairs, as they usually did, they were forced to begin preliminary organization of the town's government, later relinquishing its supervision to Civil Affairs officials.

Although well versed in theory, many of these Civil Affairs officials had little practical experience, Lieutenant Bowen said, and, at first, could not understand CIC's insistence upon travel restrictions and other security measures. To add to the difficulty, Civil Affairs sent a new team into each liberated town which

* Interview with Mr. Albert R. Bowen, Jr., Baltimore, Md., 26 November 1954.

resulted in ". . . experienced CIC officials running into these green Civil Affairs officials in every town. The ritual of educating Civil Affairs personnel in proper security measures continued throughout Normandy."*

Difficult as the "ritual of education" may have been, records indicate that, by the close of the Normandy campaign, Civil Affairs and CIC were working generally in close collaboration. Before the end of June, Civil Affairs teams in the VIII Corps area were referring strangers and other suspicious persons to CIC for investigation and, whenever possible, were turning transients over to CIC to screen for use locally as labor.**

The 30th CIC Detachment also reported numerous instances that indicated close cooperation with Civil Affairs. In mid-June, curfew regulations were established by Civil Affairs in Les Veys and Montmartin-en Graignes at CIC's request,*** and, later in June, when the refugee problem became pressing, CIC, Civil Affairs and other interested agencies held several conferences which resulted in tightened travel controls. The new directives prohibited civilians from travelling more than six kilometers from their homes without Civil Affairs permits and from entering any area within two kilometers of the front lines. When dissemination of the order became difficult, Lieutenant Handville volunteered CIC's aid in distributing the notices and in enlisting the assistance of mayors and village priests to inform the inhabitants.****

CIC, Civil Affairs Collaborate in Civilian Control Plans

In the 29th Division area, while the Division was slowly pushing its way toward St. Lo, CIC and Civil Affairs collaborated in plans for the control of the civilian population, which was by then posing a security threat. Front line troops had discovered that when civilians were permitted to remain in their homes close to the battleground, good cover was provided for enemy snipers and artillery and mortar fire. Movement of refugees in the areas of heavy fighting, particularly along the Lison-Isigny road, also offered excellent cover for enemy agents or German soldiers in civilian clothes.

**** 30th Inf Div, "Weekly Recapitulation of CIC Activities," 2 Jul 44, /s/ Handville, in rg 207.03, L-39(5), 30th Inf Div, G2 Jnl & File, 5-6 Jul 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

To remedy this situation it was decided all civilians in the immediate vicinity of the lines were to be evacuated to varied locations according to personal classifications. Voluntary evacuees and those who had to be evacuated because of military necessity were to be moved back to a civilian collection point in the rear of the regimental command post, there to be handled by Civil Affairs. Persons considered suspicious by CIC were to be removed to the Prisoner-of-War collection points. If further investigation proved a suspect harmless, he was to be turned over to Civil Affairs, but if still considered dangerous, he was to be taken rearward and sent to the civilian cage at First Army.

Civilians from points far in the German lines who had voluntarily evacuated were to be taken to the Division civilian assembly area where they could be housed and fed by Civil Affairs. Spies and suspected spies were to be handled in accordance with SOP for CIC, First Army, 12 May 1944.*

An additional provision of this new security policy stated that in all cases civilians who had been evacuated rearward would not be permitted to go forward except to recover personal belongings or cattle, and then only under guard. With the adoption of this new policy, civil security in the Division was greatly improved.

Continuous spot checks on civilian identification cards were made by CIC agents and by Civil Affairs personnel and, although there were rumors of Germans in civilian clothes, no such persons were actually found.**

CIC agents spot-checked and, in some instances, assisted Civil Affairs in manning control posts in the forward areas. In a single day, the 83d CIC Detachment, which had come in with the Division southeast of Carentan on 27 June, reported the screening of six hundred civilians.***

Liaison Maintained With Other Organizations

Among the organizations with which CIC found liaison to be of great benefit, in addition to Civil Affairs, were Office of Strategic Services (OSS), Office of Naval Intelligence (ONI), French Securite Militarire (SM), Military Intelligence Interpreter Teams, Censorship Teams and the Provost Marshal.

*** A/A Rpt, CIC Det 83d Inf Div, /s/ Vieter, for Jun 44, in 382-CIC-0.3 (Master 11786), (Unclassified), (Departmental Records Center, AGO, Alexandria, Va.).

The Detachment Commander of the 208th CIC was in a unique position to accomplish liaison, since he served also as the Counterintelligence Officer on the VIII Corps G2 Staff. Although his dual capacity prevented him from devoting full time to his detachment, Lieutenant Bowen found that this disadvantage was outweighed by his personal daily contact with the Corps G2 and the Chief of Staff which made it possible for him to map out his policies and then execute them. This liaison helped Bowen to simplify administration matters. Finance, personnel and supply for the detachment were all handled by the Corps Headquarters Company. The only administrative duty left to the detachment was filling out the Morning Report.*

One of the first handicaps encountered -- the acute shortage of French-speaking personnel -- was quickly overcome by borrowing two French linguists from a Military Intelligence Interpreter team which operated under direction of an VIII Corps G2 Officer. These two men were replaced by French civilians at CIC's earliest opportunity. One such civilian, a student at a French Academy who was fluent in several languages, was easily cleared because an officer in VIII Corps had known the young man's parents when they were active in diplomatic circles. This man, who stayed with the 208th CIC throughout France, was able to recruit and clear other students to work with the agents and to develop valuable contacts. In addition, a major and a lieutenant from the Free French Forces "joined" the Detachment soon after the landing in France.

A heterogenous group of individuals could usually be found working or conducting business in the CIC tent since, throughout the Normandy campaign, the CIC detachment remained close to Corps Headquarters. Elements of the OSS, the ONI, the US Censorship Staff and the Free French Forces were at one time or another working out of the CIC tents, and CIC received help from all of them and, in turn, assisted them.

The ONI representatives with CIC included several Naval Intelligence Officers who were interested in the coastal areas, the major ports, and some coastline towns which VIII Corps might overrun. Since they had little to do during the early days of activity in Normandy, they "attached" themselves to CIC. Among the "extras" who stayed with CIC most of the time and lent a hand when needed was a censorhsip official who had no particular reason for being there, the Commanding Officer recalled in an interview ten years later, but "probably went along because he enjoyed CIC fellowship and food, particularly the latter."

When the Office of Strategic Services representatives first came in, Bowen said, "with just about everything" -- linguists, radio men, interpreters -- they adopted a rather mysterious attitude, and seemed to "look down" on VIII Corps

* Interview with Mr. Albert R. Bowen, Baltimore, Md., 26 November 1954.

2058

CONFIDENTIAL

CIC. But after CIC had caught several of the agents that OSS had sent through the line, their attitude changed and OSS men became extremely cooperative. A code word system was set up so that CIC would not interfere with OSS agents and OSS personnel assisted CIC by contributing their language and technical skills to counterintelligence operations. This assistance did not prevent OSS from concentrating on its own mission of obtaining positive intelligence.*

The 30th CIC Detachment reported close cooperation with Office of Strategic Services, but whether this had existed from the beginning of the Normandy Campaign is not indicated in the records. This cooperation may have stemmed from CIC's capture of an Office of Strategic Services civilian who, equipped with both CIC and Civil Affairs passes, was attempting to cross into German-held territory near St. Lo. Office of Strategic Services took over responsibility for the man and agreed upon plans to avoid such a situation in the future.**

Other detachments reported finding, and turning over to Office of Strategic Services informants who had knowledge of resistance personnel in areas still under enemy control. One such informant who could give information on St. Lo and Torigni-sur Wire was found during this period by the 1st CIC Detachment.***

3d Armored CIC Broadens Its Liaison

Divisional CIC detachments were as keenly aware as Corps CIC of the importance of liaison during this period. Reports from the 503d CIC Detachment indicate that agreements had been made whereby teams from the 29th CIC Detachment would enter towns with teams from the 503d, since the 29th Infantry Division was assigned to hold towns after the 3d Armored had moved on. The 503d CIC also established liaison with the 219th CIC Detachment (XIX Corps) and the 30th Detachment. A daily messenger service was maintained between the 503d and the 219th CIC Detachments and the practice was set up of sending teams from the 503d to Corps headquarters for a few days at a time in order to broaden their understanding of the work being accomplished at corps.

Agents from the 503d CIC met with Agents John J. Kenny and George F. Kavanaugh of the Port CIC Detachment and Agent Leonard E. Hanson of one of

the 12th Army Group teams then stationed at Isigny, and exchanged information on the area. The Isigny office, unable to get maps of the area, were furnished a full set by the agents of the 503d.

30th CIC Disseminates Card File Data

The 30th CIC Detachment began the compilation of a card file of information received from civilians, who by this time had become much more willing to talk. By 25 June this file contained data on seventy informants and thirty-five suspects. Information on persons outside division boundaries was disseminated to other CIC units; information on members of the French underground was given to the Office of Strategic Services; and a representative from Psychological Warfare was briefed on available information.*

The 30th also maintained a mutual advisory arrangement with Civil Affairs and Military Intelligence Interpreter exchanging with both organizations information of interest.**

503d CIC Makes Troop Movement Security Plan

At the end of June, while the 3d Armored was situated near Oubeaux, the 503d CIC Detachment had an opportunity to make use of all it had learned about security, both military and civil, and to draw upon the sources of liaison which it had so painstakingly developed. The agents received from Lt. Col. A. Barr, Division G2, their first large-scale assignment in security planning.

Colonel Barr, in anticipation of the possibility of a concealed withdrawal, directed the Detachment to prepare a security plan covering their present bivouac area and the one to which the move was contemplated.

Lieutenant Black, Commanding Officer and Agent Anderson first visited Maj. W. H. Taylor, Assistant G3, who indicated on the XIX Corps Assembly Area map the sub-sections of Area "A" then occupied by the Division units and those to be occupied after the move.

---

* 30th Inf Div CIC Periodic Counterintelligence Rpt #2, 25 Jun 44, /s/ Handville, in Opns Rots rg 207.03, L-39, 30th Inf Div, 1-2 Jul 44, G2 Jnl & File. (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

** 30th Inf Div, "Weekly Recapitulation of CIC Activities," 2 Jul 44, /s/ Handville, in rg 207.03, L-39(5), 30th Inf Div, G2 Jnl & File, 5-6 Jul 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Following this briefing, the CIC men prepared an overlay showing the perimeter of the Division area as it would be, the dividing line between the jurisdictions of 30th Infantry and XIX Corps CIC, and the points on the Division perimeter where roads or trails entered the area. This overlay revealed that there were thirty-eight points on the perimeter where roads entered the area. If three-man reliefs were used at each point, a total of 114 guards, furnished by Civil Affairs, would be needed to cover every entry.

According to the CIC plan, each guard was to inform civilians entering the area that they must pass through without stopping. The only exceptions would be those civilians who had residence or legitimate business within the area. Guards of division units, posted at the bivouac area entrances, would be ordered to prevent loitering along roads within the prohibited zone. Furthermore, each bivouacked unit was to be responsible for preventing access to their area to civilians without legitimate business.

At all junctions where two roads entered the area at a single point, two guard posts were marked, but it was recommended that if traffic proved light enough to enable one man to handle both roads at once, these junctions could be combined into single post points.

CIC detachments of the 30th Infantry Division and the XIX Corps were to furnish security clearance on civilians living within the designated area; and a CIC team from the 3d Armored Division Detachment was to be stationed at Neuilly-la-Foret, Le Neufbourg, and Les Oubeaus-la Croix, to be available immediately for interrogation of suspicious civilians and to perform spot identity checks.*

Instructions Given to S2's

CIC also drew up a set of instructions for unit S2's regarding the tightening of civilian controls, the placing of guard posts, the location of CIC posts, and other security measures that were deemed necessary. These instructions would be disseminated at the same time units were notified of movement plans.

According to these instructions, the 30th and 219th CIC Detachments would be responsible for counterintelligence and civilian security matters in the area then occupied by the 3d Armored Division, with general coverage assistance from the 503d CIC Detachment, whose teams were then situated as follows:

* 3d Armored Div CIC Memo for G2, subj, "Movement Security," 29 Jun 44, /s/ T.M. Black, CO, CIC Det #4, 503d Det File Rpts, (C), (Kansas City Records Center, Box 25104).

Team "A" Agents George L. Kiley and U.S. Collins at Louis Andre farm, Le Neufbourg.
Team "B" Agents Albert C. Monteferrato and George W. Bogotay, at old German Headquarters, Neuilly-la-Foret.
Team "C" Agents Lawrence E. Dow and John H. Romey, at schoolhouse, Les Oubeaux.

Since these CIC teams had contact with local police authorities, and with reliable persons who could identify individuals claiming to be local residents, unit commanders were told that they could refer civilian suspects to the nearest town team for check of identity and preliminary interrogation.

This summary notified unit commanding officers that Civil Affairs' regulations provided, in general, that civilians could travel six kilometers from their homes without special permits other than local identity cards, issued by the French.

However, civilians travelling further than six kilometers from their homes would be required to have travel permits issued by local authorities under Civil Affairs supervision, specifying details of permitted travel. Although enforcement of travel and curfew restrictions was a local police function (under Civil Affairs supervision), civilian violators found under circumstances warranting suspicion of espionage were to be reported to CIC for interrogation.

Upon receipt of notice that the division was about to move its location, unit commanding officers were reminded to take all precautions to insure that guards at points of entry to their areas were preventing circulation of civilians without legitimate business. Guards were also to prevent civilians from loitering at entries and to keep civilian traffic, on foot or by vehicle, moving along the roads.*

3d Armored CIC Teams Dispersed

A memorandum to the G2 summarizing CIC's activities for the period 26-30 June indicated that the security plan made by Lt. Black and Agent Anderson was carried out. Teams from the 503d CIC Detachment were sent to Neuilly-la-Foret, Les Oubeaux and Le Neufbourg, where they arranged with local authorities for office and living space, and made their purposes known to local and American officials in the towns. They questioned suspicious civilians reported by division units and civil authorities, and cases and incidents were brought to the attention of the CIC 30th Detachment (for Neuilly and Le Neufbourg) and 219th CIC Detachment

* 3d Armd Div CIC Memo for G2, subj "CIC Information Sheet for Unit Commanders," 1 Jul 44, /s/ T.M. Black, CO, CIC Det #4, 503d Det Case Rpts File, (C), (Kansas City Records Center, Box 25104).

(for Les Oubeaux). As soon as these branch headquarters were established and the necessary contacts made, other teams were sent into the adjoining areas.

With Civil Affairs handling the routine controls of civilian movement, as set forth in CIC's plan, CIC agents had the opportunity to set up "snap control" stations and thereby gain experience of future value in recognizing French identity documents, in speaking French, and in performing interrogations.

A team consisting of Lt. Olan Parker and Agent Ralph E. Dietz went forward with Combat Command A to cover the expected capture of Villers-Fossare and la Luzerne.*

82d CIC Captures First Established Espionage Agents

Although CIC arrested a number of suspected short-term espionage agents and collaborators and investigated many rumors concerning additional ones during the first weeks in Normandy, records indicate that the first positively identified German Intelligence Service (GIS) agents -- Jean George Tournu and Roger Victory Leroy -- were captured by 82d CIC Detachment agents on 26 June, about ten miles southeast of St. Sauveur-le Vicomte.

The details of their capture and disposition are sketchy, but their background -- as pieced together from their confessions -- was significant although not too different from that of other low-level agents who were to be apprehended in later months.

Two weeks prior to his capture, Leroy was roaming the alleys of Paris without work or money. Then he met Tournu, a student, small-time opportunist, member of a pro-German political group, and not one to spurn a few francs. Over a bottle of wine along the Boulevard St. Michel, Tournu persuaded his new friend to accompany him the next day to the German Intelligence Service in Paris. There, approved by a Herr Eckermann, "le Grand-Pere," as he was called, briefed by a M. Leger and coaxed by 2,000 francs, Leroy became a German spy. The next morning, he and Tournu, accompained by a guide, were on their way to Normandy, with instructions to note insignia, tanks, air fields, and supply routes.

At Le Mans, six more young men joined them. Of the six, Leroy could name only two: "Jean Goerges and a quiet young one, Bernard." With 4,000 francs as added encouragement, they moved to the battle zone.

* Memo for AC of S, G2, 3rd Armored Div, from 3d Armored Div CIC Det, /s/T.M. Black, CO, CIC Det #4, subj, "Summary of CIC Activities 26-30 Jun," dtd 29 Jun 44 (Confidential) in 503d Det File Rpts (Kansas City Records Center, Box 25104).

Leroy and Tournu were driven to a field near St. Jores and pointed along a road to Baupte, but lost their way and turned back. Then they were sent off on another road, to Coigny.

A three-day itinerary had been set up, but they did not follow it. Leroy's enthusiam had waned; as he later said, "We did not follow these instructions because I had the intention to give myself up to the Americans as I did not want to do that kind of a job."

Nevertheless, the two flitted freely behind U.S. lines, then headed back to the front. Leroy explained that he had "consented" to let Tournu return, but for himself, he was going back to U.S.-held Ste, Mere-Eglise ". . . to volunteer in the recruiting office." As they neared the German lines they were spotted and arrested by CIC.

The would-be espionage agents admitted their assignments and were hustled off to the Division G2. Leroy pleaded a change of heart. Tournu offered a variety of information on German troop movements he had observed. But his CIC and Prisoner-of-War interrogators saw exaggerations in his statements, as Tournu made an attempt to prolong his life by seeming cooperation.

Tournu and Leroy were ultimately tried by a French Military Tribunal in Cherbourg on 8 July, convicted of treason, and sentenced to life imprisonment at hard labor. However, the results of this trial were not considered satisfactory as a deterrent to others considering an espionage mission for the Germans. A First Army G2 report mentioned that " . . . it is understood that a new Military Tribunal is to be appointed for future trials."

This trial brought to attention the difficulties involved in convicting a self-confessed agent of espionage, and the G2 report added that: "Intent to transmit information to the enemy is a point which has to be established.*"

---

* Translation of confession by Leroy, G2, 82d Div, 26 Jun 44; Memo, entitled, "Military Information Obtained from Two Enemy Agents," annex 1 to G2 Periodic Rpt #78, 82d Abn Div, 27 Jun 44; Arrest Rpt, /s/ Salstrom, 26 Jun 44; and G2 Estimate #8, Counterintelligence, 3 Jul 44, G2, FUSA, /s/ Dickson, in G2 Jnl, 1st Inf Div, 5-6 Jul 44 (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.); and ADSEC CIC Information Bulletin #1, 29 Jul 44, (SECRET), (AIS Staff and Faculty Library).

sent back to Master Interrogation Center. Among these were two women, and her daughter, of Besneville, investigated by the 208th CIC Detachment because they reportedly harbored German soldiers. Search of their premises revealed some German documents and even a German army uniform.

Denunciations by gendarmes who had worked for the French underground and by residents of Besneville also led to the arrest and internment of three possible enemy agents, one of whom was distinctly anti-American in sentiment.*

2065

By the end of June, the 219th CIC reported that six persons had been taken into custody: a young woman who was being interrogated as a suspected enemy agent; one suspect who had been determined to be a member of the pro-German "Group Collaboration"; and four people with backgrounds of collaboration who seemed to be active threats to security.*

One case which pin-pointed the need for greater security education of front line troops was encountered by the 29th CIC Detachment, after it was too late for action. A man wearing a Canadian officer's uniform and riding a British motorcycle was stopped by an officer of the division in the area of one of the regiments. When questioned as to where he was from and why he was there, he stated that he was from the "Caen sector" and, since it was quiet, he thought he would tour the front.

When asked for identification papers, he produced a card showing his name as " and a 21st Army Group card, adding that he was from "C-Ops." Upon this identification he was released, but when the matter was reported to CIC, all units were called immediately to arrest this person. However, he did not present himself to any headquarters from army down to battalion and was never apprehended.**

Arrested

During the last week in June, members of the 503d CIC Detachment arrested and sent to the rear for further interrogation a who had no identity card and who reportedly had worked for the Germans.

who was picked up while wandering around the town of Neuilly-la-Foret and interrogated initially by Lieutenants Theodore M. Black and Olan Parker and Agent Albert Monferrato, was hazy in recalling his experiences while working for the Germans in a naval watch and dial establishment in Hamburg and likewise was vague in giving his reasons for being in Normandy. But rumors in Neuilly concerning indicated that wherever he had gone in his wanderings, German artillery fire had followed shortly thereafter, especially in American-occupied towns.

* "After Action Report, Section II -- Intelligence, CIC Detachment 27," dtd 30 Jun 44, in Opns Rpts L13(L), XIX Corps, Jun 44 (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

2068

Because the CIC interrogators' knowledge of German was inadequate and time was insufficient to digest the multitude of documents carried by he was turned over to the Army Civilian Cage in Isigny for further questioning.*

The 30th CIC Detachment reported a variety of investigations for the period, most of which turned out to have been based upon false rumors. Among the alleged suspects was a woman reported to be harboring German soldiers; a farmer cutting his hayfield in such a manner as to leave an arrow pointing to a command post; and numerous "spies" and "line crossers." Other cases concerned carrier pigeons, blackout violations, Frenchmen with German relatives, military security violations, overly inquisitive citizens, and a farmer who worked after curfew in his garden.

One case, typical of those pending at the end of June, concerned had engaged in commercial relations with Germans and "appeared to have some definite connection with the military units in the area." Since the Germans had appeared to be protecting and had authorized his presence even though he did not qualify for a French identity card, French authorities considered him to be "of doubtful loyalty and an unscrupulous merchant."

Many informants considered as intelligent and capable of espionage, but since no evidence of an overt act of collaboration had been developed, CIC reported that the investigation was being suspended until the bank in Isigny could be cleared of debris and safety deposit box examined.**

Suspects Released by Higher Authorities

An unsatisfactory situation was disclosed near the end of June when it was learned that numerous persons who had been sent to the rear by lower echelon CIC units under suspicion of espionage, or at least as serious security threats, were being released by higher authorities without explanation to the arresting unit. These persons often reappeared in the area where first apprehended. When the original arrest had been made on the basis of informed local denunciation, a particularly difficult situation was likely to arise.

** 30th Inf Div, "Weekly Recapitulation of CIC Activities," 2 Jul 44, /s/ Handville, in rg 207.03, L-39(5), 30th Inf Div, G2 Jnl & File, 5-6 Jul 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).
Note: Nothing further on this case is revealed from available records.

[redacted], encountered by the 29th CIC Detachment, was covered in a long, hotly-worded report. It is evident that the CIC agents found the case of [redacted] a most irritating one, not only because she had reappeared in the area when they thought her properly restrained, but because she proved to be the most incredible liar they had encountered. Her original arrest had been predicated on denunciations by numerous local townspeople and the request of the S2 of the 115th Infantry, who felt that "her activities in riding around the area on a bicycle in the midst of the fighting" gave cause for suspicion. The arrest had been accomplished on 16 June by French authorities, who turned [redacted] and a few possessions, including torn pieces of a ration book, over to CIC. Preliminary questioning produced "an incredible story" to explain the ration book, and a succession of stories concerning German acquaintances, each account considerably different from the last. A report of this preliminary interrogation and of interviews with her denunciators was sent along with the prisoner to the First Army Civilian Cage.

A search of [redacted] residence on the day following her internment revealed 21,000 francs, two silver fox furs with a receipt showing that they had been purchased in Paris on 26 June 1943 for 30,000 francs, several ration books, a small notebook containing highly complicated formulas which appeared to pertain to electrical, radio and chemical matters, and certain personal papers. These were sent along immediately to Army Cage.

When the St. Clair Chief of Police reported to CIC on 24 June that [redacted] was again free in the area, Lieutenant Mayfield, Detachment Commanding officer, went to the First Army Civilian Cage where he learned "that none of the witnesses listed had been interviewed; that Subject had not been questioned regarding the notebook with electrical and radio formulas; that Subject's story about the ration book had been accepted; that none of Subject's personal papers were used in the interrogation. Subject had been released upon the strength of her own story against the word of known and reliable informants who had been on the ground and who had Subject under observation for more than a year. . . ."

Upon his return, Lieutenant Mayfield and Agents Lynn E. Neuenschwander and Sam D. Beall went to [redacted] home where they discovered that she had a visitor, a woman whom they had arrested on 14 June and sent on to the Cage. She also had been released without investigation and without notice to the arresting detachment.

Another search of the house revealed a note which indicated that a hunted German officer had visited [redacted] since her return. Agents found a radio, a pair of ten-power binoculars, a map showing German installations in Paris and numerous miscellaneous papers.

2068

CONFIDENTIAL

After many hours of interrogation, during which changed her story again and again without ever giving a credible answer to anything, the agents gave up. Her final attempt at bulldozing the agents was to throw a case of hysterics, exclaiming that she would admit anything which was required of her and demanding that she be shot as a spy. They again sent her to the civilian Cage with the strong recommendation that she be held until all tactical troops and installations had been advanced past St. Clair. Since had been arrested by French authorities, CIC suggested that once the Allied troops left she be turned over to these local authorities. This was as strong a recommendation as CIC could make. It was impossible to prove that had committed any overt act of espionage although "the very unusual circumstances of this case render this woman highly suspect of being an enemy agent.*"

Other Units Also Object to Releases

During this period numerous other lower echelon CIC detachments voiced similar complaints about releases from civilian cages. Some had found that the French were also freeing persons with what CIC considered insufficient investigation.

The V Corps log for 1 July reported that Agents Philip J. Daily and Thomas E. Kearns had learned from the 2d Armored CIC Detachment that they had found two released suspects back in their area.** The First Army Counterintelligence Branch promised that in the future the arresting detachment would be notified immediately upon the release of any person from Master (First Army) Interrogation Center and also obtained assurances that French authorities would follow the same procedure.***

CIC Agents Venture Outside Their Mission

During this period, as throughout the war, CIC agents often were called upon, or took it upon themselves, to perform tasks outside their mission. On 16 June, one team of the 1st CIC Detachment organized a "soup kitchen" for refugees moving to the rear and, two days later, reported that they were serving 250 to 300 persons a day. The 1st CIC also set up a "listening post" to attempt to locate a clandestine radio transmitter that apparently was operating near Cormolain near the end of June.

*** CIC Information Bulletin #2, 1 Aug 44, ADSEC (SECRET), (AIS Staff and Faculty Library).

Several detachments reported the capture of German soldiers in hiding. Three of these were apprehended when 1st CIC Detachment agents searched a woods behind American lines.*

But perhaps the most unusual of the special CIC activities was a kidnapping, performed by agents of the 101st CIC Detachment under the very noses of the Germans. During the last week of June, Captain McGuire and his men learned that the wife of a Nazi-murdered Normandy underground leader was hiding in a villa just inside German lines. Realizing that she would have much valuable counterintelligence information, McGuire organized an expedition to rescue her. The detachment had no vehicle but after confiscating an old French truck, Captain McGuire, Agent Curtis M. Foster and an unidentified French woman who had provided the tip, started out for the villa.

The party was under constant German observation and received the attention of various German 88's as the truck bounced and weaved across no-man's land. Once it became mired in the mud, but with the aid of some nearby GI's, the agents were able to push it out.

Shortly before nightfall, the group reached the woman and then brought her back safely to the American lines. She proved to be a valuable informant, giving the names and addresses of numerous blacklist personalities.**

Sabotage Always a Problem

Although in fulfilling its missions CIC encountered many rumors of sabotage, CIC actually found few real cases during this period. Only two incidents in which an attempt at sabotage was evident are shown in available records. In both of these, the evidence was removed before the cases were reported to the 208th CIC. A wireman of the 79th FA Group found a telephone wire shortcircuited by two phonograph needles which had been inserted into the wire. He removed the needles and gave them to a FA officer. On the same day, about two miles from the scene of the first incident another 79th wireman discovered a German rifle grenade attached to a telephone wire. About sixteen inches long, the grenade had been tied to the wire with a piece of cloth and covered with a bundle of sticks. The

** Interview with Major Martin E. McGuire, 24 August 1954, Fort Holabird.

wireman reported that he removed the grenade and tossed it into a nearby field, but subsequent search by CIC failed to locate it.

A thorough check of all persons in the vicinity failed to produce any further evidence. All signal units were alerted to report such incidents to CIC before destroying the evidence. *

Agents Collect Tactical Information

The collection of tactical information, both from line informants and from documents found in searches of former German buildings, constituted one of CIC's important contributions in Normandy. The 2d CIC Detachment, working in the front line area immediately west of the 1st CIC Detachment, was regularly sending back tactical information, obtained by observation, interrogations, and seizure of documents. On one day, the detachment reported the new location of a large ammunition dump which had been moved by a company of North Africans; a chateau which the Germans had made into a stronghold with deep cement dugouts, trenches and gun emplacements; the location of road block houses and gun emplacements on the roads into St. Lo; an underground installation in St. Lo and a gasoline dump near St. Germaine D'Elle. **

On 16 June, the day after the 219th CIC began operations, Agents Lawrence A. Meyers, Ralph J. Jeka and Samuel J. Roundless obtained and forwarded to the Corps G2 numerous bits of tactical information. This data included descriptions of two German observation posts; location of a nearby German headquarters; mine emplacements at a road junction; and the information that, six days before, there had been 200 German troops in a village close by. Although this information was forwarded as "believed to be reliable," the report carried a request that, as troops overran these locations, the detachment be informed as to its accuracy. Agents evidently were trying to set up for themselves a pattern for evaluating the type of information which they expected to continue to receive. ***

Tactical information concerning enemy gun emplacements, fortified positions and troop concentrations were obtained by the 219th CIC from civilian informants,

and searches of abandoned German headquarters revealed, among other things, "a most secret Navy code book on recognition of signals." Materials including mines, shells, "Molotov cocktails", small arms ammunition and a field kitchen were located and turned over to Corps Ordnance, Chemical and Quartermaster officers.*

The 30th CIC Detachment collected much information on enemy order of battle, consisting of overlays and other documents which they turned over to the G2. On 18 June, the agents reported to Ordnance the location of unguarded enemy munitions dumps within Allied territory, a source of danger because of their accessibility both to children and saboteurs.**

One of the first investigations conducted by the 503d CIC Detachment after it began operations in the XIX Corps area late in June, was concerned with a buried German cable south of Isigny. Agents Hilding A. Anderson and Thomas N. Duncan, following an informant's tip, traced the cable by depressions across some fields, although the area had been sodded after the excavations. They passed this information on to the 30th Detachment, since they were leaving the area.***

CIC Conducts Troop Security Education Program

During the initial weeks, all CIC detachments were buried under an avalanche of reports concerning alleged German parachutists, enemy blinking signal lights and numerous other incidents which could have been cleared by on-the-spot investigation by the observing troops.

Security lectures to the tactical units helped curb these reports. Agents of the 208th CIC Detachment visited every troop unit with corps and discussed with them the issues of civilian control, flashing lights and German parachutists, pointing out simple means whereby they could establish immediately the validity of their suspicions. For example, the agents pointed out that a man who had jumped from a plane would have red welts under his arms for at least two or three hours. As a result of the indoctrination program, the volume of false reports sent in to CIC by tactical units dropped off considerably.

CIC Accomplishments Studied

As June drew to a close, and the Allies began concentrating on the build-up for the COBRA breakout, most CIC detachments who had been held in the stalemate around the base of the Cotentin Peninsula studied their accomplishments for the period and reorganized their future plans in the light of what they had learned.

Certain equipment was lacking and several detachments were short on transportation. One detachment, the 208th, had discovered that a portable electric generator was a necessity, since many of their reports had to be written at night. By "scrounging," the agents located one which they hauled about in a trailer.*

Effective control of civilians had turned out to be CIC's biggest problem. The handling of refugees alone was a monumental task and required the utmost cooperation between CIC, Civil Affairs, Military Police and line Intelligence Officers. Added to this was the task of investigating a flood of denunciations; most of the accused turned out to be black marketeers, prostitutes, and others who had collaborated with the Germans for profit, and, as such, should have been handled by French authorities.**

One recommendation, submitted by Lieutenant Handville of the 30th CIC Detachment, requested that higher authorities give to indigenous authorities instructions on the handling of persons "not of security interest," evidently in an attempt to relieve CIC of part of this burden.***

The long coast line on VIII Corps' right flank posed a special problem in that persons were constantly slipping ashore from small craft and hiding in sand dunes. Tactical troops were alerted to observe activity along this coast line, and artillery liaison planes flew reconnaissance missions. These measures, combined with regular patrol work under CIC direction, were believed to have alleviated the situation.****

**** Interview with Mr. Albert R. Bowen, Baltimore, Md., 26 November 1954.

Agents of the 503d CIC felt that they had learned much about operations in a combat zone and came up with several recommendations. The principal suggestion dealt with the use of agents during temporary lulls in fighting. It was recommended that, during such periods, agents be distributed among the towns in the area, with sufficient personnel retained at a central headquarters to meet calls on a twenty-four basis and provide an adequate pool for unexpected combat operations. The 503d Agents also emphasized that the practice of setting up city offices for questioning civilians should be continued so that civilians would never be brought into command posts or unit areas.*

In commenting upon various factors which had affected the 208th CIC's operations in Normandy, the Detachment Commander felt that security consciousness among the tactical troops was enhanced because they were never permitted to know exactly how many agents were in the CIC unit. Some soldiers thought that the 208th CIC had as many as two hundred men, while others thought that the CIC men were civilian FBI agents with the Army. These conjectures and rumors may have been of some benefit to CIC's effectiveness because unit commanders, hearing that there were two hundred agents planted throughout the Corps area, undoubtedly became, and caused their troops to become, more security conscious.**

Chapter 4

PREPARATION FOR OPERATION COBRA

By the end of June, VII Corps had captured Cherbourg and was moving south to take up positions between VIII Corps at its right and XIX Corps at its left, with V Corps at the extreme left, along the eighty-mile Allied front.

U. S. soldiers faced the Germans along a line that still stretched across the neck of the Cotentin Peninsula, through the Carentan marshes and behind St. Lo, to the bulge at Caumont. The British front fell off steeply from Caumont beyond Bayeux, bulged out just west of besieged Caen, and included a bridgehead east of the Orne River. The four U. S. corps with thirteen divisions and the four British corps with sixteen divisions, a total of more than one million troops, was already a greater force than the Allies had in Italy. The lodgement was near completion, and First Army readied itself for the offensive move from Normandy to the Seine.

One step remained prior to First Army's breakout from Normandy, codenamed COBRA. VIII Corps was to push down the west coast through La Haye du Puits and Lessay to Coutances. As German units to the east retreated from the threatened encirclement, the road from Coutances to St. Lo would provide a sound line of departure for the move across France.

However, VIII Corps' offensive, which began on 3 July, harried by marshes, minefields and heavy German resistance, bogged down. After a gain of only seven miles in twelve days, the objective was recognized as too costly. In the meantime other forces maintained pressure along the front; the British mopped up Caen, and the U. S. 29th Infantry Division took St. Lo on the 18th. The road from St. Lo to Perriers was then recognized as a more accessible springboard and by mid-July American strength was being reassembled for Operation COBRA, finally set for 25 July, which was to be the most decisive battle of the war in Western Europe.*

During this period the 82d and the 101st Airborne Divisions were returned to England for overdue refitting and preparation for their next operation. Four new Infantry Divisions, the 5th, 8th, 35th and 28th, and three Armored Divisions, the 4th, 5th, and the 6th, came in to join the other Divisions on the line during this build up period. CIC detachments came in with each division, and there is

* Bradley, op cit, p. 315-331.

evidence that the first weeks proved a period of perfecting techniques, strenghtening liaison, and planning future operations, but the 506th CIC (6th Armored Division), arriving on 18 July, the 28th CIC, on 22 July, and the 505th CIC (5th Armored) on 24 July, had little time for studying the lessons learned by other detachments or even in effecting liaison with them.

Commanders of the new units were: 5th CIC Detachment, Capt. Lyndon B. Allen; 8th CIC Detachment, 1st Lt. John C. Mcquade; 35th CIC Detachment, 1st Lt. Allenby H. Ayr; 28th CIC Detachment, 1st Lt. Albert B. Miller; 506th CIC Detachment, Capt. Judson B. Deloach; 505th CIC Detachment, 1st Lt. John P. McKenna, and the 504th CIC Detachment, 2d Lt. Wilson A. Rood.

The 303d (Third Army) CIC Detachment under Maj James F. Foothorap, who had arrived from the office of the Chief, CIC, shortly before the invasion, and the 215th (XV Corps) under Capt. Theodore R. Fossieck became operational during the COBRA buildup period.

There was considerable shifting of divisions from one corps to another as the line-up for the breakout was being organized. To VII Corps, which was to bear the brunt of the attack, were assigned the 1st, 30th, 4th, and 9th Infantry and the 2d and 3d Armored Divisions.

To VIII Corps on its right were assigned the 79th, 90th, 83d and 8th Infantry and the 4th Armored Divisions, and, just on the eve of the break-out, the 5th and 6th Armored Divisions. To XIX Corps, on the VII's right, went the 29th, the 35th and the 28th Infantry Divisions, while to V Corps, on the extreme left, went the 2d and 5th Infantry Divisions.

Except for some bitter fighting in the V Corps area near Caumont and the capture of St. Lo by the 29th Division, the whole area was comparatively quiet.*

Team Method of Operation Continued

All detachments continued their team method of operation with rapid shifting about as the occasion demanded. For example, the 79th CIC Detachment reported that just prior to the capture of La Haye du Puits on 8 July, one officer and four agents were operating in the town of Barneville sur Mer, two agents were at the division prisoner-of-war cage, and one agent was with each of the regiments of the division. The following week, agents were still operating at the division CP and the PW cage, a six-man team was in Portball and a two-man team was at a refugee clearing point in St. Sauveur de Pierre-Pont.**

** VII Corps CIC Rpts, 3-24 Jul 44, in VIII Corps G2 Jnl & File, L-28 (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va).

Inter-CIC Liaison Maintained

Liaison with other CIC detachments was by this time the accepted order of the day. As an example, when the 4th Armored Division came onto Utah beach on 12 July, the first activity of the 504th CIC Detachment was to contact as many other detachments as possible. During the five days before the division entered combat, Lieutenant Rood and 2d Lt. Thomas E. Flinn and Agents James F. Bray and Jack H. Peters had made liaison with CIC detachments at First Army, XIX Corps, 3d Armored Division and the newly arrived Third Army and XV Corps. Within a few more days they had met with CIC detachments of the 4th, 8th and 83d Divisions.* Records also indicate that, during a three-day period in mid-July, the 79th CIC Detachment was visited by representatives from the 301st, 90th, 8th and 504th CIC Detachments, who came to discuss the handling of enemy agents and collaborators and CIC duties at PW cages and CPs.**

Security Techniques Developed

Perhaps the most important techniques developed by CIC detachments during this period concerned methods for tightening up security. Almost every detachment reported newer, more explicit rules for handling refugees, instructions to tactical troops on methods of recognizing and handling suspects, and methods for disseminating travel and curfew regulations to civilians in the area.

But behind this improved situation lay a high degree of coordination with other organizations -- with Civil Affairs, Provost Marshal local French authorities, and adjacent British military units. It had become obvious that counter-intelligence weakness in the control lines in any sector of the front would endanger every other sector.

Early in July several CIC detachments found "...certain civil officials to be reluctant to put into effect security regulations recommended by U. S. military authorities without a mandate from French authorities who are now recognized as the responsible government." This situation was partially remedied by the addition of Securite Militaire liaison officers to army and corps G2 staffs.***

Records indicate that on 9 July, one day after the arrival of the 8th CIC Detachment, an officer from the detachment and the French liaison officer met with Civil Affairs and approved the appointment of a mayor in La Haye du Puits. As the front moved forward, Civil Affairs set up a new refugee collecting point at Milliers where, "in conjunction with CIC, several hundred refugees were screened and fed emergency rations."*

"In conjunction with Civil Affairs," and "In cooperation with Civil Affairs," were two characteristic comments during this period. One CIC report tells of a meeting held in Caumont in mid-July attended by the agents from the 5th and 502d CIC Detachments, 5th and 1st Division Civil Affairs Officer and the Civil Affairs Officer at Caumont.**

In the latter part of June, Lieutenant Steinway, CO of the 1st CIC Detachment, reported frequent contacts with the Corps G2, Civil Affairs, OSS, corps unit commanders, and the Field Security Section of the adjacent British 7th Armored Division, as well as with other CIC detachments in the area.***

After evacuation of all civilians from the forward area of 1st Division's sector early in July, two interrogation points were set up; one manned by a Civil Affairs detachment, the other by French gendarmes. CIC investigated suspects netted by both.****

CIC worked with Civil Affairs in screening civilians and checking traffic, according to a 219th CIC Detachment report at the end of July, and, during one twenty-four hour stretch, the CIC agents interrogated 402 civilians.*****

***** XIX Army Corps A/A Rpt Jnl Jul 44L-45 (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

The above reports were typical; similar coordinated activities with Civil Affairs were carried out by nearly every detachment. Through this constant liaison and integration of effort, newer, firmer policies were promulgated and enforced throughout the front.

Liaison with Other Agencies

CIC also found that, among its many liaison activities, one of the most important was its contact with the Military Police, especially since they often had to call upon the MP's to furnish additional men when reinforcements were required and also for evacuating arrested persons.*

The 170-mile coast line along the west side of the Cotentin Peninsula caused official concern, offering as it did opportunity for the entry of German infiltration agents. To counter this threat, a coordinated system of naval and air patrols, French customs officials, volunteer fisherman and watchers and patrols by ADSEC CIC detachments was set up. Fishing fleets were subjected to strict security measures and were required to report to CIC any suspicious activity. OMAHA and UTAH Beach regions were made restricted areas, with special passes required, even of military personnel, for entry. All ships arriving at Cherbourg were carefully checked, since it had been learned that some merchant seamen were entering the city.**

Detachments Prepare for Action

The 4th CIC Detachment, under Lieutenant Appleton, reported on 4 July, shortly after the division had moved from Cherbourg to the battle area southeast of Carentan, that eight security measures had been put into effect in the division's forward area, and the Civil Affairs Officer had agreed to disseminate these restrictions to all civilians in the area. Under no circumstances were they to be permitted to cross over the front lines, and all were to remain at home, except those who were engaged in the pursuit of livelihood in the immediate vicinity of their homes.

2079

All troops were instructed to watch for and take into custody all civilians circulating in the forward area. Road control posts were to be established at all road intersections leading from Allied lines, and mobile patrols were to search all roads, lanes and field for civilians out of their homes without legitimate cause.

All civilians found at large after curfew were to be brought to a spot near a Regimental Combat Team Command Post for screening by CIC, and those who could not be identified as living in the immediate area, and having a sound excuse for being outside their homes, were to be declared suspect and to be evacuated to the rear through prisoner of war channels.

Lieutenant Appleton pointed out that, although few civilians were being encountered in the forward areas, it was anticipated that, when the fighting started again and the Germans began retreating, large numbers of refugees would pass through American lines, thereby furnishing cover for enemy agents. CIC was then working out plans for orderly methods of screening these anticipated civilians and moving them to the rear without interfering with military traffic.

After commenting on the frequently-noted use of parts of the German uniform by French civilians, Appleton recommended that such apparel be prohibited, since there was a possibility that American soldiers might mistake these Frenchman for Nazis.*

As division lines moved several miles forward in early July, CIC enlisted the help of mayors in the control of local traffic and, with detachment funds, hired reliable citizens to man control posts. CIC checked these posts regularly and, during one three-day period, arrested six strangers detained by the guards. When the division again shifted on 16 July, CIC recommended to the 83d CIC Detachment that they continue to employ these guards.**

The 4th CIC Detachment also obtained approval for an additional plan for splitting the division area into two parts, forward and rear areas, but this system's implementation was delayed when the division was shifted for a few days to the VIII Corps sector. Under this plan, French civilians operating the control posts were to be enlisted in the French Army for administration, discipline

and pay, and special care was to be taken that corps was notified of the location of each post so that operations would not be disrupted when division moved forward.*

The 83d CIC Detachment, which, with its division, was concerned with the hedgerow struggles just beyond Carentan in early July, maintained three control posts which had originally been established by the 101st CIC Detachment, and were attempting to enforce a six kilometer travel restriction. However, in spite of these controls, they apprehended approximately seventy-five civilians circulating in the division area without proper pass forms during the first half of July.**

The 29th Division CIC Detachment found that the congestion created by civilians wandering throughout the sector was so great that it was hindering operations at regimental level. Consequently it was recommended that a cage be set up in each corps area for the internment of these individuals deemed to be security threats until the tactical situation permitted their release.***

Early in July, the 1st CIC Detachment made a similar recommendation. They had discovered the need for an enclosure in the forward corps area for the control of civilians pending CIC investigation. The civilian jails were totally inadequate. Besides being too small, they were unsanitary, inconveniently located, and afforded poor security. Later, Lieutenant Steinway arranged with the S2 of the 26th Infantry Regiment for a civilian detention area within the division's prisoner of war enclosure. However, he continued to argue for a more permanent arrangement.****

Not only did the careful screening of refugees coming through the lines serve to prevent infiltration by enemy agents, but this questioning often revealed

valuable counterintelligence information. Refugees coming through from St. Lo were able to give the 35th Detachment, which had arrived during the first week of July, information on the activities of subversive organizations in that city and the names of citizens who might be able to assist CIC there.*

Numerous Espionage Suspects Investigated

The increased rigidity of civilian controls plus the developement of informant nets resulted in the capture of numerous suspects as well as a few bona fide spies. Two German Intelligence Service (GIS) agents, Henri Mathieu and Michel Scognamillo, were arrested by the 83d CIC Detachment at the end of June. Under interrogation, Scognamillo gave detailed information concerning German intelligence procedures. Both were sent to First Army cage.

Two collaborators, who had led German patrols to where American parachutists were bivouacked, and had possibly given other information to the Nazis, were also apprehended by CIC agents close to enemy lines. They too were sent to the cage.**

The 83d CIC also handled the case of apprehended in one of the regimental areas, who was believed to have engaged in some sort of communication across the lines. He was turned over to a CIC Port Detachment for further investigation.

Careful screening of refugees being evacuated from the front paid off when the 83d CIC apprehended two women who were alleged to have told the Germans about French civilians who had tried to hide Allied aviators and parachutists. The women's informing had led to the execution of the loyal Frenchmen.***

In another case, two young Frenchmen who claimed to have entered liberated territory to join the French Army were arrested and sent on to First Army Interrogation Center by the 219th CIC, since their story was one known to be used by German espionage agents.****

UNCLASSIFIED

Reports that two men, nicknamed "The Gentlemen," had been riding around in an American jeep in a suspicious manner resulted in alert notices to surrounding units, including the British.*

Agents of the 503d CIC Detachment spent much time hunting for a Frenchman, who, accompanied by a small boy, had wandered through the 32d Regiment area asking many questions about the uniform worn by the Free French, the date that the regiment expected to leave and its destination. When his visit was followed by German artillery fire, they became suspicious. Agent Denton contacted the French police in the nearest town and soon learned that the mysterious Frenchman was , former German prisoner and a trusted local citizen. The police vouched for him, and the whole episode was labeled as one of curiosity.**

Another inquisitive farmer wandered into the 35th Division area, where he was observed watching the signal company for some time. The man was arrested and turned over to CIC. When interrogated, he explained that he was curious to see the new kind of machines being used. He was vouched for by enough trusted informants to verify his harmlessness, but the incident pointed up the need for even tighter control of civilians.

About this time, the 35th CIC also investigated a at the request of Civil Affairs, who had received word that she was a collaborator. When it was learned that the 29th CIC had previously investigated her and determined her to be merely a prostitute, she was evacuated from the area.***

Two small French boys, alert for spies, reported seeing a German parachutist in a British uniform, but investigation by the 5th CIC Detachment indicated that they probably had seen a British officer.

No such simple solution could dismiss the report by two Frenchmen that they had been approached by a man dressed in American combat uniform, carrying a German helmet who, with the aid of a French phrase book, had asked them for directions. They became suspicious when they realized there were numerous

British and Americans in the area from whom he could have sought help. CIC could merely advise them to report the man immediately if he should reappear.

Every detachment had its share of fruitless investigations -- fruitless because they were based upon incorrect or biased information, or because someone bungled. In the latter category was the case of four Frenchmen who were picked up as they were coming from enemy occupied territory. Agents of the 5th CIC Detachment, which had arrived on 9 July, and members of the Military Intelligence Interpreter Team interrogated them and, considering them suspect, turned them over to French authorities, who turned them loose after obtaining their promise to register for ration cards and enlist in the French Army. The men promptly disappeared. CIC then launched an investigation and, through informants, learned that they were in Coulton, a village near Bayeux. Since this was in British territory, CIC turned over the information with the request that they report to corps the final outcome.*

Information from a biased source - or at best an alarmest - led 4th CIC Detachment Agents to investigate a priest who had remained in his village near the front after it had been otherwise evacuated. He was suspected of directing enemy artillery fire, one informant maintaining that every time the priest left his house, a nearby bridge was shelled. However, many informants declared him to be loyal, and he claimed that he had remained to protect church property from looting soldiers.**

Agents of the 29th CIC Detachment, on one occasion at least, failed to catch their suspect. The who lived was outspoken in her denunciation of . The claimed that had traded with and done favors for the Germans. When, on 15 July, the agents went to the refugee center where had lived since July, they discovered that he had that morning departed in haste rather than take the bath with which Civil Affairs authorities had been threatening him.***

Acting on the tip from an informant that a man in a near-by town was behaving in a suspicious manner, 79th CIC agents sped there by jeep, expecting to find an

In St. Jean de Savigny, for instance, American soldiers looted the home of the mayor, a reliable CIC informant, carrying away approximately 150 bottles of wine, three of which were later recovered by Agents Lynn E. Neuenschwander, Sam D. Beall and Bryant W. Gillespie. These three agents, while in St. jean de Savigny, also observed a group of fifteen American soldiers breaking into stores, homes and other buildings, sometimes by shooting off the locks. These incidents were reported to the Civil Affairs officer at St. Claire. In Couvains, the office of the mayor had been completely wrecked by U. S. troops, an action that prevented members of the 29th CIC Detachment from securing several desired documents. The rest of the town had fared little better. An inspection by agents of the 29th CIC showed that almost every house in town had been completely searched for wine, money and other valuables.

That this behavior by American forces was causing an ever-increasing amount of concern is evidenced by a letter written by Lt. Ellis O. Mayfield, Commanding Officer of the 29th CIC Detachment, to the AC of S, G2, which observed:

"This [the looting] is considered a very serious matter, not only from the standpoint of friendly relations between the French and the Americans, but from the standpoint of the continued success in the operation of this Detachment and MII. In the past, all civilians have been more than willing to give information, and their cooperation left nothing to be desired. If the troops continue to loot as in the instances mentioned, it would not be at all surprising if the civilian populace turned against us entirely."*

This situation as it applied to the forward areas was brought partially under control, but in mid-July it was reported by 4th CIC Detachment as "again" reaching a state that could end established friendly relations. Enforcement of an order prohibiting U. S. soldiers from entering any house except on official business and from being in possession of any articles of French origin helped the situation considerably.**

In the rear areas, however, the brash and objectionable behavior of American troops, continued. Numerous cases of attempted pillage and house-breaking in Periers, and in the Carentilly, Coutances, Cherbourg and St. Vaast areas were reported late in July. ADSEC CIC teams investigated many of these cases and recognized their effect upon the attitude of the French toward the U. S. troops in

Up to this time radio agent activity had been considered slight. One transmitter had been seized in Carentan, the British had captured one agent with radio in Bayeux, and evidence pointed to a similar agent working in Isigny.* It was anticipated that increasing numbers of these agents would be left behind with the principal mission of collecting military information.**

Espionage Techniques and Counterintelligence

Numerous intelligence publications issued by First Army and 21st Army Group as final plans for COBRA were being made contained additional warnings of the threat of espionage and outlined means for countering it. A First Army periodic CI report issued one week after the G2 Estimate mentioned above, stated that six agents captured during the period 26 June to 2 July had supplied descriptions of eight other agents known to be on missions of infiltrating Allied lines.*** This report warned that "Information available from shoulder patches, bumper markings, road signs and C P markings makes employment of numerous low-grade agents a profitable enterprise even though some are captured.****

Much thought was given to the various cover devices which the enemy might use in infiltrating Allied lines. Anticipating a situation which later reached large-scale proportions; V Corps CIC recommended that an attempt be made to collect from local French people any articles of U. S. military clothing which they possessed and that soldiers be warned against discarding or giving away any of their uniform.

Germans who appeared in civilian clothing, presenting U. S. propaganda leaflets to show they had surrendered voluntarily, were to be viewed with suspicion. Colonel Dickson, First Army G2, directed that these soldiers were to be classified

as suspected war criminals* until interrogation established that they were entitled to Prisoner of War status.**

The Germans who came through the lines claiming to have information for Allied Intelligence were to be viewed with still greater skepticism, even when the information they gave could be verified. This technique had been recognized as a probable ruse of the espionage agent who hoped to be "doubled" and thus assured safe passage back through the lines. Another device was to pretend to turn informant after being caught. This had already occurred in the British sector. One Abwehr agent, when apprehended by front line troops, had immediately given information about mine fields in German territory. However, by bluffing him with the story that his companions had been caught, interrogators were able to learn the descriptions of his two companions and obtain a full confession as to his intentions. The other two were quickly caught.

Interrogators were directed to give especial care to the questioning of persons who claimed knowledge of the Gestape or other German intelligence or security units, since the chance was great that such persons were "plants."***

Resistance groups were recognized as ideal infiltration targets for the enemy. A few days before the COBRA breakout, Colonel Dickson pointed out that the Germans were known to have recruited persons from collaborationist parties, especially the Milice, to infiltrate resistance groups for the purpose of disclosing their membership and activities to the Germans. Since these infiltration agents would unquestionably serve also as stay-behind agents for the Germans, CIC and all other U. S. personnel were warned to remain aware of this danger in all their dealings with resistance personnel. In the Caen area, the British had already apprehended one German agent wearing a resistance group armband.

It was anticipated that the cover of Red Cross doctors and nurses would be used by agents infiltrating from enemy occupied territory as would the pretense of being escaped Allied soldiers. One such impersonator had been captured in the

British sector and had fooled lower echelon Intelligence officers for a time. He had bluffed his way by mentioning the name of a British officer in I.S. [illegible] (V Gp), the section which handled their penetration agents.

These fears of a concerted espionage drive were not based upon idle speculation. A captured order from the German 17 SS Panzer Grenadier Division alerted lower echelon commanders to be prepared to receive French civilians coming through the lines on German espionage missions. First Army had also come into possession of a forged Office of Strategic Services pass, printed in both French and English, the English being particularly poor. Information was received that large numbers of the passes had been printed for use by German agents. Since no official OSS passes or identity cards had been issued, all echelons were warned that anyone presenting such a pass should be handled immediately as a suspect enemy agent.*

At the end of July, 21st Army Group, in a summary of enemy intelligence activities, pointed out that the number of enemy agents captured had run into "double figures." Practically all of the prisoners were French, and almost half had had recent connections with collaborationist groups. Few of these had worked for ideological reasons; the desire to avoid labor service in Germany or to obtain money were the principal motivating factors.

21st Army Group intelligence officials stressed that the fact an individual had been in recent trouble with German police or labor authorities was not to be accepted as an indubitable recommendation. Often enemy agents were drafted from these people who had come to German attention.**

Before the COBRA outbreak, it had been discovered that, in addition to security information about Allied military strength and dispositions and the activities of resistance and underground groups, enemy agents were collecting information on political developments and public opinion in Allied-occupied France for use by propaganda agencies. Relations between troops and civilians, dismissal and appointment of French officials, food prices and new laws published by allies were among the targets. Enemy propaganda broadcasts reflected that some of this information was getting through.

Still greater tightening of control lines in the forward areas and the development of stronger ties with local people were seen as the best means of countering the expected build-up of enemy espionage activity.*

First Army Publishes Arrest Policy

In an attempt to overcome the confusion which had existed from the first day of the invasion as to the handling of various types of security threats and to meet the anticipated influx of espionage agents, First Army published an arrest policy on 1 July. This policy made no changes in the handling of suspected espionage or sabotage agents, but dealt principally with local collaborationists, specifying that in those cases where activities appeared to have been political rather than actual, CIC should confine itself to advising Civil Affairs detachments. All members of German para-military organizations found in uniform were to be considered prisoners of war; if not in uniform, as "war Criminals." Members of collaborationist parties and persons against whom denunciations had been made were to be investigated locally and to be arrested only if their guilt was rather firmly established.

Stress was made upon the preparation of detailed arrest forms, which were to include, in addition to the scope of information obtained against the person, leads for further investigation. Publication of this arrest policy, however, did not solve all the problems concerning arrests. Throughout the war, it was all too common that an incoming detachment would find arrestees in the local jails, with no records to show the reason for the arrests.**

Behavior of U. S. Troops Endangers Security

By the middle of June, the behavior of U. S. troops became a matter of concern to officials throughout First Army, since it threatened to affect adversely the excellent relations that had existed with the French. This situation was of particular concern to CIC since, if it could not be curbed, the whole civil security system might collapse and CIC's chief sources of information might be lost.

Several sectors reported disgraceful behavior of U. S. soldiers, but one of the worst was 29th Division area where, in the towns of Grandcamps, St. Jean de Savigny and Coucains, numerous cases of looting, burglary and one attempted rape caused fears that the entire population might turn against the Allied Forces.

2091

CONFIDENTIAL

general. CIC in these areas also discovered that, once the battle had swept on, the French began to show their resentment for the previous bombings of some of their towns which, they claimed, had never been military objectives and actually had contained few Germans.*

Rumors of CIC Interest

Because of their effect upon morale and also the possibility of subversive origin, rumors of all sorts had to be tracked down and dispelled by CIC agents. A fast-spreading report that the Allies were using gas was punctured by the 83d CIC Detachment; investigation revealed that the report had originated when a large volume of toxic smoke settled over the area of a U. S. engineer combat battalion following the explosion of 11,000 tons of TNT during enemy shelling.**

In mid-July the 35th CIC Detachment looked into a rumor based upon a speech made by Goering to all German troops, which affirmed that the Germans still had three secret weapons and that on 20 July, "all people would see a new world." This rumor had been widely repeated but seemingly had evoked little reaction from U. S. troops.***

Two of the most far fetched rumors widely circulated in the VIII Corps area concerned a speedy ending of the war. According to one oft-repeated story, Walter Winchell had offered $1,000 to the Red Cross for each day the war with Germany continued beyond 27 July, while another version had Winston Churchill making the same offer to an unidentified person, setting the date at 29 July. ADSEC CIC detachments had to trace the origin of these rumors.

Troops Lacking in Security Consciousness

During this period it also became apparent that the attitude of the troops toward security left much to be desired. There were some red faces and undoubtedly some serious discussion of security measures by personnel of the 217th AA Batallion located in the vicinity of St. Clair following a breach of security report made by agents of the 29th CIC Detachment on 22 July.

---

Two 29th CIC Detachment agents had walked through an antiaircraft area in the rear of a farm approximately one and one-half miles southwest of St. Clair. Although the agents did not identify themselves, the men of the unit had talked freely with them and had revealed among other data, information concerning their parent unit, their previous attachment, the date of their arrival and the number and range of their guns. They also had spoken about a new type of radar-controlled AA shell which would explode upon passing within sixty yards of an airplane. The missile was so secret that it was being used only over water to keep it from falling into enemy hands. The equipment, the gunners explained, was to be tested to see whether enemy mortar and artillery locations could be determined with its use.*

The 83d CIC Detachment also had cause to worry about military security when it was learned that officers of the division were carrying classified documents into the front lines, and these documents in the hands of captured officers had revealed to the Germans the division's complete order of battle.**

Civilians Menace 29th Division Security

During a security check conducted in the 29th Division area the second week of July, it became apparent that local inhabitants had too much knowledge of the units which were operating in the section. It was reported, for example, that a column of 3d Armored Division vehicles, located in the vicinity of St. Clair sur L'Dile, was shelled as it passed through the town. Furthermore, the Civil Affairs officer stated that several hours before the movement civilians had informed him of the time the unit was to advance. The shelling coincided with the time mentioned.***

S2's Briefed on Security, Past and Future

After St. Lo had been overrun by American troops and before the units of the 29th Infantry Division returned to the line for the forthcoming drive toward Vire, the S2's of the divisional units met to discuss military security of past as well as future operations.

2093

Almost every one agreed that the security in the first phase of operations had been excellent, but with few exceptions, and representatives of each unit were urged to point out to all troops the fact that American soldiers had been extremely close-mouthed when taken prisoner.

It was agreed that troops had been talking too much to civilians near bivouac areas, and it was further conceded that replacements were not as security-conscious as men who had been with the division throughout the training period and the invasion.*

The meeting helped considerably to clarify in the minds of the S2's the problems which confronted the division from a counterintelligence viewpoint. It also brought home to several officers the actual function of CIC.

Continued vigilance regarding loose talk, telephone security, security of installations, safeguarding of classified documents, and proper instruction of replacements were considered. The officers discussed the past civilian evacuation problems and the possibility of active sabotage in the liberated area of the division.

The probability that civilians evacuated by the Germans from the forward areas would be herded into Allied lines en masse was considered, and Battalion S2's were advised to round these people up and place them under guard to be taken to regiment where they would be escorted on to rear areas and screened by CIC.

All S2's were told to be wary of refugees, especially when a Schutz Staffeln (SS) unit was faced.** They were warned about persons claiming to be resistance group members; persons in Allied uniform claiming to be escaped PW's; and officers who had come to forward units "for the purpose of seeing what is going

---

* 29th Inf Div CIC CI Rpt for week ending 30 Jul 44, 29th Inf Div Correspondence File, (SECRET), (Kansas City Records Center, Bx 25096).

** The Schutz Staffeln (Protective Guard), commonly called SS, was considered the most important of all Nazi formations. Its original function was to guard Party leaders; by the time of World War II, its task was officially defined as that of ensuring the internal security of the Reich. The SS was organized into three main divisions: the General (Allegemeine) SS; the Armed (Waffen) SS; and the Security Service (Sicherheitsdienst or SD) of the SS. The Waffen SS acted as part of the normal armed forces of Germany, but because of their fanatical devotion to the "cause," greater field intelligence activity was to be expected of them.

on," without clearance through proper channels. G2 clearance would be required for such persons, and for civilians claiming to be Red Cross doctors or nurses or presenting Office of Strategic Services credentials.*

1st CIC Detachment Reports Security Violations

In mid-July, 1st CIC Detachment agents learned that both officers and soldiers of the division had committed a serious security breach when local laundresses were told that their services would no longer be needed since the division was moving out. The news had spread rapidly in the town, and the entire civilian population knew of the impending move. This incident furnished the basis for further warnings to tactical troops.**

CIC Plagued by Sniper Reports

While the 3d Armored Division Headquarters was situated near Les Obeaux, the problem of suspected enemy sniper activity caused some degree of consternation in the ranks of U. S. Engineers, tactical troops and, in the end, the CIC detachment.

First knowledge of sniper activity came in connection with a message received from the Assistant S2 of Combat Command B, requesting the investigation of the occupants of a house along a railroad near Les Obeaux from which shots were believed to have been fired at an Engineer Company sentry stationed on a nearby bridge. Agents Udoff, Robinson and Travis, after questioning several members of the Engineer Company, reported that a shot probably was fired from the house along the hedge toward the sentry post; that German coveralls were hanging on a laundry line near the house; and that after four railroad workers, source of employment unknown, had come to the bridge on bicycles, artillery fire had been directed at the bridge for a period of eight to nine days.

After this preliminary investigation by the three agents, the case was turned over to the Isigny CIC office because the incident had occurred in the XIX Corps area.***

*** Memo to ACofS, G2, 2d Armored Div, from 3d Armd Div CIC, signed by T. M. Black, CO, subj, "Snipers," 6 Jul 44, contained in 503d Detachment Case Reports File, (CONF), (Kansas City Records Center Bx 25104)

2095

Assuming that the sniper problem would be a recurrent one, Lt. Black, Commanding Officer of the 503d CIC Detachment, requested the 3d Armored Division G2 to remind the tactical units that they were authorized to return sniper fire and make an immediate investigation, with the further assurance that CIC would also check names of persons living in the locality against their suspect lists and through their informants.*

Advertising Campaign Suggested

In the midst of a variety of activities that included checking on reports of enemy sniper activity, security violations, denunciations and suspicious French civilians, CIC found time to consider an advertising campaign. The campaign, as suggested by Philip S. Udoff, agent with the 503d CIC Detachment, was offered as a possible aid in the apprehension of persons giving information to the enemy, especially in the areas such as Neuilly-la-Foret, only a short distance from enemy lines.

According to Udoff's plan, notices would be posted offering a reward to anyone who would bring to the CIC office enough conclusive evidence to warrant the conviction of a person who had given information to the enemy. Agent Udoff believed that a monetary reward would supplement the patriotic feelings of a great many individuals who otherwise would be hesitant to come forward and give information against a fellow countryman.

The provision that the reward would be paid only if the evidence were definite enough to support a conviction would serve, Agent Udoff argued, "... to discourage those who have 'spite stories' and rumors."

Although many believed that the reward system would prove valuable in rooting out persons who continued to aid the enemy by slipping across the lines at night, officials at higher echelons disapproved the suggestion in the belief that it would encourage a profusion of false reports of no counterintelligence interest.**

Take-Over System Developed

Early in July, all the corps CIC detachments were working at coordinating the efforts of the divisional CIC detachments and attempting to set up orderly take-over

*Memo to ACofS, G2 2d Armd Div, from 3d Armd Div CIC, signed by T. M. Black, CO, subj, "Snipers," 6 Jul 44, contained in 503d Det Case Rpts File, (Conf), (Kansas City Records Center, Box 25104).

systems. The 219th CIC Detachment continued to assign its teams to sub-areas, often to work with divisional teams. After the fall of St. Lo, six agents were sent to work with the 29th CIC Detachment there. The 219th CIC Detachment also maintained close relations with the 205th CIC and, late in July, turned over to this detachment the town reports and other records for six towns which XIX Corps was vacating, as it prepared to move out on Operation COBRA.*

The 205th CIC Detachment also used this period to strengthen liaison with detachments under V Corps as well as those in adjoining sectors. Through personal contact, town turn-over reports and daily reports of activities, the detachment was attempting to set a pattern in anticipation of the time when rapid movement would make coordination much more difficult.**

Before the 1st CIC Detachment transferred with the division to a rest area prior to the breakout, it briefed members of the 5th CIC Detachment, that had arrived on 9 July, on completed operations and turned over its files on suspects, informants, resistance personnel, and uncompleted cases.***

Nor was this turn-over system restricted to exchange between U. S. units. When, later in July, the 5th Division was changing its area of operations, two CIC teams which had been operating in Cormolain turned over their records to the Field Security Section of the 15th Scottish Division.****

An interesting variation of the take-over system within a division detachment was practiced by the 35th CIC Detachment. This variation was described as a "leap frog" technique. The detachment was divided into two sections, one commanded by Lieutenant Ayr, Detachment Commanding Officer, and the other by 2d Lt. Charles W. Colgan. Colgan would take his section in, right behind a

regiment, and occasionally even ahead of it. The agents would immediately contact resistance leaders, interview informants, apprehend collaborators, and reduce specific intelligence targets such as radio stations, post offices, police departments and German officers headquarters and billets. Later, possibly two or three days at the most, Lieutenant Ayr's section would enter and receive from Lieutenant Colgan's section all pertinent information, enabling the second group of agents to begin developing informant nets and setting up routine security measures. In this manner, continuity of coverage was achieved, and the incoming section could accomplish surprisingly effective counterintelligence work based upon an already-established CI foundation.

The reduction of St. Lo was an example. Although the 29th CIC Detachment entered St. Lo first, Colgan's section of the 35th CIC followed shortly thereafter. In fact, the agents entered one section before the Germans had evacuated it and, evading detection by a German patrol, were the first to inform the dazed inhabitants that the Allied Forces were coming.

From a list obtained previously, they located a contact, a worker in an ice plant, from whom they received a list of all women collaborators in St. Lo. They searched desperately for a well known spy and collaborator named DeGroote, but finally had to assume he had fled with the Germans. Later, when Lieutenant Ayr and his team arrived, Lieutenant Colgan was able to hand over lists of reliable persons, suspects, collaborators, and a report concerning an Abwehr agent alleged to be in the area.*

Reinforcements

Teams from the Twelfth Army Group Detachment, known as the 418th CIC Detachment, began arriving early in July and assuming their places in the take-over system. Team #3 came in over UTAH Beach on D plus 28 and by 12 July had become responsible for coverage of Trevieres and ten surrounding towns. Central office and living quarters for the team were located in a chateau in the middle of a large replacement depot, a depot which drew at least three air raids nightly for six weeks.

After a branch office had been established at La Mine and two men sent to Balleroy on liaison with V Corps, hundreds of refugees were screened, and, as a highlight to the numerous cases investigated, a two-week surveillance of an espionage suspect was conducted mostly at night in open fields under air attack.

* Interview with Charles W. Colgan, Baltimore, 28 Nov 54.

2098

A system of case records was instituted that provided the foundation of the team's procedures thereafter and furnished teams that followed with orderly records and useful procedures which were not available to Team #3 when it landed in France.*

ADSEC Teams Join Take-over System

By the end of July, eighteen ADSEC CIC Teams with 246 members were in Normandy operating throughout First Army's rear area, covering much of the territory north of a line running from Barneville through Carentan to OMAHA Beach.** In theory, these teams, operating initially under army control, were to take over from Army Reserve teams that had moved in behind the division and corps tactical teams. They would then revert to ADSEC control until ADSEC moved on, turning control over to Base Sections. As needed, new ADSEC CIC teams would be formed from the Com Z Pool. It also had been anticipated that the bulk of counterintelligence work could be turned over to indigenous authorities at an early date, with only small liaison detachments of CIC personnel remaining.***

Although there is ample documentary evidence to show that ADSEC teams continued to operate close behind the army's rear and, in some instances, well to the front of this area, there is a dearth of information concerning the activities of the Base Sections, and little evidence of their work in an orderly take-over system.

Excerpts from a history of the Normandy Base Section disclose that, during the early existence of this Section, five ADSEC CIC units were attached to the Base, but as the front moved forward, the CIC detachments also moved, leaving the base with only one detachment which had headquarters in Cherbourg. Later, another detachment was attached to the Base Section with headquarters in Granville, and was supplemented by a Military Intelligence Interpreter team. When the Allies established the Brittany Base Section and part of the Channel Base Section, one CIC detachment and two MII teams were attached. But, this history related, lack of adequate personnel and the continued recalling of intelligence personnel by higher headquarters for new assignments made it impossible to cover the additional territory properly.****

2099

The eighteen "lettered" ADSEC detachments, with commanders as indicated, which had arrived by the end of July, had settled in the following locations just before the COBRA Breakout: "A", Captain Alvin Johnson, Cherbourg; "B", 2d Lt. Meredith Wilson, St. Honorine; "C", Capt. T. Rungee, Cherbourg; "D", (Headquarters Team) Capt Thomas P. Sweeney, Catz; "E", 2d Lt Grover Schantz, Beaumont Hague; "F", 2d Lt Thomas Dowd, Valognes; "G", 2d Lt. Elbert M. Ryan, Carentan; "H", Capt. Donald M. Graham, Cherbourg; "I", Maj. Leonard Millman, Carentan; "K", Capt. Julian P. Prescott, Pouppeville; "L", Capt. L. C. Hill, Bricquebec; "M", 2d Lt. R. C. Cahoon, Negreville; "S", 2d Lt. William J. Sexton, St Vaast; "T", 2d Lt Joseph A. Lowther, Carteret; "W", Capt. William J. Wallace, Les Pieux; and "X", 2d Lt. K. T. McCarthy, St Pierre Eglise. Maj. Ernest E. Larios was in charge of the CIC Headquarters at Cherbourg and Maj. Oswald C. Michelmann was chief of the CIC section in the CI Branch, ADSEC.*

These eighteen detachments operated numerous sub-offices and their 246 agents were distributed over thirty-one towns. These agents were occupied with the same type of activity as the other CIC men: investigations involving denunciations of local inhabitants and alleged collaborationist activities, checking of proposed employees, sabotage and espionage investigations, and the enforcement of travel controls. But travel control consumed most of their time. They found that enforcement of the six kilometer rule by French authorities was spotty and required close CIC supervision. In some areas, local officials had not received the French Government's official travel control restrictions and were therefore hesitant to enforce the CIC rulings, and in other areas the travel regulations had not been supervised because of shortage of personnel. The situation was further aggravated by the lack of sufficient Civil Affairs sections operating in forward territory to take care of issuance of passes and the fact that, in several instances, the Civil Affairs detachment moved from towns without giving notice to the mayor of the territory or to CIC.

Additional burdens were placed upon the CIC agents by the widespread habit of U. S. troops, in spite of regulations to the contrary, of transporting civilians in military vehicles, and also by the reprehensible behavior of some troops toward the local inhabitants. Well enforced off-limits restrictions in towns helped alleviate both situations.**

One particular mission of the ADSEC detachment in Normandy was to guard the sparsely populated west coast of the Cotentin Peninsula, a problem that was mentioned earlier in the plans for countering the increased threat of espionage.***

ADSEC CIC Agents Act As Paymaster

The main task of the Headquarters CIC Team in the ADSEC Zone was to guarantee the security of the Headquarters against spies and saboteurs and direct the CIC agents in the ADSEC area in France, then Belgium and later Germany. Lieutenant Francis Carpenter had a major role in one maneuver that boosted the morale of these agents. During the days when an apple orchard in Normandy served as ADSEC Headquarters, Lieutenant Carpenter was ordered to serve as Finance Officer for ADSEC CIC and pay the agents, many of whom had not drawn pay for a considerable time. Equipped with one million francs in new currency -- a sum equal to $20,000 in U. S. money -- he toured the area and, naturally enough, received a welcome wherever he went. According to Lieutenant Carpenter, the Headquarters ADSEC team acted as "Father Confessor" to the other teams throughout the war, as well as a security force for Headquarters.*

CIC Gathers Tactical Information

As in the previous period, CIC was able to contribute a great deal of tactical information, obtained from informants, resistance workers and captured documents. One of the most productive hauls, made by the 35th CIC Detachment their first day in St. Lo, was labeled by the detachment as "The case of the Fabulous Fountain Pen."

An old Frenchman, disheveled and destitute, his feet bruised and bleeding, hobbled into the CIC office and offered to give CIC some information in exchange for a pair of shoes. It was evident he needed the shoes, but it seemed unlikely that he could furnish much information of value. However, the bargain was concluded, and the old man brought from his pocket a fountain pen. Slowly taking it apart, he finally reached the plunger, which proved to be hollow. From this hollow plunger he took a piece of tissue paper which, when unrolled, was about one foot long and four inches wide.

In tiny script, there was recorded on this piece of paper the position and deployment of almost every German unit for approximately 200 miles in front of the Allied forces and the location of numerous enemy road blocks, observation posts, mine fields, ammunition dumps, radio stations and other pertinent data. The observant little Frenchman had even jotted down reports concerning an alleged woman spy, the size of the resistance groups and their key men in the major towns of the area and the location of air fields in the path of the Allied advance. A pair of GI shoes was probably never exchanged for anything more valuable.**

---

* Interview with Major Francis W. Carpenter (Reserve) former Hq ADSEC Team CO, 23 Jul 54.

** Interview with Mr. Charles W. Colgan, Baltimore, 28 Nov 54.

2101

Numerous instances of CIC's collection of tactical information are included in the records of the various detachments. Early in July, 2d CIC Detachment agents captured a map showing the disposition of the German 9th Parachute Regiment,* and about the same time, 29th CIC Detachment agents learned from an informant that for about a year the Germans had been making underground excavations in the quarries near Esglandes and Rampan, and that similar excavations had been prepared in two towns near Ma Mesuffe.**

Other routine search of former German headquarters continued to net valuable documents. In St. Lo the 219th CIC seized documents from offices of the Sicherheitsdienst (SD) and the Parti-Populaire Francais, (PPF), the most active French Fascist organ.*** And in Neuilly-la-Foret, on 4 July, Agent Albert C. Monferrato of the 503d CIC Detachment, while searching the billets of the paymaster of the 914th Grenadier Regiment, found nineteen lists of French workers impressed by the Germans for labor in the Spring of 1944.****

CIC Agents Interrogate Liberated Americans

During this period CIC agents also began an operation that was to be more and more time-consuming as the war progressed: the interrogation of all U. S. soldiers escaped or liberated from German prison camps. On 22 July, agents of the 79th CIC Detachment interviewed an American fighter pilot who had been shot down on 4 July behind German lines and an American paratrooper who had been a prisoner since D Day plus two.*****

Following the capture of St. Lo, agents of the 29th CIC Detachment had opportunity to learn, from an American soldier who had escaped from a German

Prisoner-of-War camp and made his way back to friendly lines, how American soldiers were conducting themselves after capture. According to this soldier, the Germans had little success in questioning five selected from a group of twenty American Prisoners of War. Dismayed and disgruntled over their inability to extract information from American troops, the Germans shortly thereafter officially stated that "... no time should be lost in attempts to question American prisoners, as they will not talk."*

Promotion for CIC Agents Needed

By mid-July, there was official concern over the "provisional"** nature of CIC detachments, since this status prohibited promotions of CIC agents in accordance with the CIC Table of Organization. Lt Col Harry F. Hansen, G2 of the 4th Division, pointed out that the detachment had successfully carried out its mission in combat and had demonstrated that it was a necessary adjunct to the division. He recommended that the "provisional" status be eliminated.***

On the same day, Col. Dickson, 1st Army G2, in a letter to Colonel Bryan Conrad of the Theater G2 office, stressed the inequities in promotion of CIC officers. "CIC officers in the normal performance of their duties do not have the opportunity to participate in battle field promotions ...it appears that special consideration should be given recommendations from combat units in combat for the normal promotion of CIC officers who serve their unit well."****

CIC Readies for COBRA

In mid-July, various CIC detachments in Normandy began to draw up specific plans for their activities in Operation COBRA. The most explicit of these plans found in the records were made by the 503d CIC Detachment. These plans called for the detachment to set up liaison with 1st CIC Detachment, Civil Affairs, Military Intelligence Interpreter teams and for the assignment of specific missions to the detachment's various teams.

Lieutenant Olan Parker and Agents Laurence Dow, Albert Monferrato and Ralph E. Dietz were to proceed with Headquarters, Combat Command A, and

search for documents and other items of counterintelligence interest in enemy headquarters in the town of Cerisy-la-Salle and the Cerisy-la-Salle-Mortpinchon area. This group was also responsible for establishing liaison with Civil Affairs and Military Intelligence Interpreters officers for the screening of refugees in Civil Affairs clearing stations enroute.

Another group led by Lt. Theodore Black was to go with the G2 section, Advance Division CP, to provide CIC coverage in the areas of Cametours, Savigny Belval and Couroy.

Agents George L. Kiley and Ulysses S. Collins were to work at the division prisoner-of-war cage, screening civilian suspects turned up in rear areas, who were evacuated through prisoner-of-war channels.

CIC coverage for the northern column, including Combat Command B, was the responsibility of the 1st Infantry Division CIC. After the occupation of Coutances by U.S. troops, members of 3rd Armored CIC were to share coverage of the town with personnel of the 1st CIC.*

Poised for COBRA Breakout

On the eve of the COBRA breakout, finally scheduled for 25 July 1944, twenty divisional CIC detachments, five corps detachments and two army detachments were poised on the crowded Peninsula, waiting to accompany their tactical units; and group, ADSEC and ComZ units were organizing themselves to fall in behind.

FORT HOLABIRD, BALTIMORE 19, MARYLAND

AGSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter 1

ON THE MOVE TO PARIS

The Northern France campaign, which began with the COBRA breakout on 25 July 1944, officially ended on 14 September, three days after the Seventh Army, coming up from the south, established liaison with elements of Patton's Third Army near Dijon in central France. During these seven weeks, the Allied Armies broke out of the Normandy lodgement, cut off and reduced the Brittany Peninsula, annihilated a German army in the Falaise Pocket, captured Paris, crossed the Seine River, moved across the remainder of France, and penetrated into Belgium and Luxembourg and even into the Reich.

The official dates for the campaign were set by War Department order as 25 July to 14 September, but for the millions of Allied soldiers racing across France, and even for the rest of the world, it actually fell into two campaigns, "Before Paris," and "After Paris." The liberation of Paris had become of tremendous psychological, although not tactical, importance. As General Bradley phrased it: "To a generation raised on fanciful tales of their fathers in the AEF, Paris beckoned with a greater allure than any other objective in Europe. Yet tactically the city had become meaningless. For all its past glories, Paris represented nothing more than an inkspot on our maps to be by-passed as we headed toward the Rhine. Logistically it could cause untold trouble, for behind its handsome facades there lived four million hungry Frenchman. The diversion of so much tonnage to Paris would only strain further our already taut supply lines. Food for the people of Paris meant less gasoline for the front."*

30 Days From Normandy to Paris

The thirty days from the COBRA breakout to the liberation of Paris were eventful ones for CIC agents as they learned for the first time in the ETO to operate under a rapidly changing situation. Two more corps were committed to the campaign during this period and with them their CIC detachments: the 212th CIC Detachment (XII Corps);** and the 220th CIC Detachment (XX Corps), with Captain Anthony Lobb as CO. The 418th CIC Detachment, under command of Lt Col. Norman J. Hearn moved to the Continent when 12th Army Group became operational, on or about 1 August, although at least one of its teams had been operating on the Continent for some time. Two more division detachments came in: the 507th (7th

* A Soldier's Story, by General Omar N. Bradley (Henry Holt & Co., 1951), p 384.

** The CO of 212th is not known. Major Edwin Bennett later become CO, exact date unknown.

Armored Division) CIC Detachment, and the 80th CIC Detachment, the latter commanded by Captain Thomas R. McMillen.* The SHAEF CIC Detachment, with Capt. Paul A. Heegaard-Jensen in command, and the ETO Detachment, with Major Howard E. Wilson in command, also moved to the Continent.**

Allied Line-up on Eve of COBRA

As First Army girded itself for the breakout, the forty-mile U.S. front was divided into four corps sectors: V Corps occupied the "quiet" left flank; XIX Corps held the depression behind St. Lo; VII Corps was entrenched in half of the Cotentin neck after having moved down from Cherbourg; and VIII Corps was stretched across that neck to the west shore.

The basic strategy for the attack out of the Normandy lodgment, which had been written into the OVERLORD Plan, called for the British Second Army to hold the pivot at Caen while the U. S. line wheeled eastward. The First U.S. Army was to generate the momentum with an assault on the western end of the line, and American troops were to sweep south of Cotentin past Avranches and there cut off the Brittany Peninsula at its base. The remainder of the Allied line was to pivot with the advance and roll east to the Seine between Paris and the English Channel. VIII Corps was dispatched to capture Brittany; XV Corps to drive south to Laval, then to turn north on Argentan; XII Corps to advance on Orleans along Third Army's southern flank, and XX Corps to attack towards Chartres.***

Germans Had Fallen for Allied Hoax

When British and U.S. Forces linked at Chambois, fifteen miles southeast of Falaise on 19 August, the German Seventh Army was trapped. In this Falaise Pocket, nineteen enemy divisions were chewed up, and approximately one hundred thousand German soldiers were killed. The degree to which the Germans were fooled as to Allied intentions surprised even the planners who had arranged the hoax. A cover tactic, evolved during the planning for OVERLORD, had been built around phony radio nets and a mock invasion fleet. Misleading information had been fed to known German agents. All these measures had been taken in the hope of tieing down German defensive forces at Pas de Calais only until enough divisions could be moved ashore to secure the Normandy landing. None had counted upon the possibility that the Germans might believe that even the Normandy invasion was a diversionary move. But this they did believe, and accordingly, for seven decisive weeks, held nineteen divisions in reserve, waiting for the invasion that never came.****

---

* Records do not indicate the name of the CO of the 507th CIC Detachment; and it is not certain that Capt. McMillen was the original commander of the 80th CIC Detachment, although by early in 1945, he was the CO.

** Interview with James F. Foothorap (Lt Col. MI, Res) September 1955.

*** Bradley, op. cit., p 319.

**** Ibid, p 379; pp 344-5.

In April 1945, interrogation of a German prisoner of war, who had served in the G3 branch of the German Commander-in-Chief West, revealed why the German High Command had been so thoroughly duped. Because of insufficient air reconnaissance, the Nazis were forced to depend largely upon information supplied by their agents in England, "who were evidently liberally supplied with counterintelligence plants." CIC agents in England had had a share in this "greatest hoax of the war."*

Rapid Advances Hamper CIC Work

As the Allied offensive gained momentum and registered gains of fifty miles in some sectors during a single day, First and Third Army CIC detachments at corps and divisional level were confronted with serious problems.

Not only was the front moving forward rapidly, but often the direction of advance for the armies would be changed with a consequent altering of the respective areas of responsibility behind the front lines. One example cited was the time Third Army's direction of attack was turned southward, leaving almost half of its CIC personnel operating in towns of First Army's responsibility. It was at least forty-eight hours before Third Army could get in touch with First Army and have its agents released for operations in its own area. This situation also caused difficulty in the distribution of area and town counterintelligence plans. In many instances these plans, including the black and white cards had to be exchanged hastily and often did not arrive in time to be of help. In one instance, when there was a shift in areas a town plan was sent to First Army. The areas shifted back again and Third Army had no data to send to its division which entered the town.**

One of the more serious problems caused by the rapid advance and the shifting of areas--and certainly a frustration to agents involved--was the lack of time available to complete investigations. A detachment would no more than initiate an investigation than the division would receive orders to race ahead to the next town or objective. Prior to leaving Gorron, for example, the 1st CIC was so rushed that it had to entrust to the Civil Affairs detachment the report of counterintelligence activities for transmission to VII Corps CIC.*** Agents of 1st CIC were not the only ones moving too fast. The 79th CIC Detachment was forced to refer many incomplete cases and many promising leads to VIII Corps CIC. One entry in the detachment journal for 30 July stated: "Three persons who were alleged to be members of the Gestapo were turned over to the gendarmerie to be detained for Monarch (VIII Corps) CIC."****

*** 1st Inf Div CIC Daily Rpt, 23 Aug 44, G2 Jnl, 1st Inf Div. 23-26 Aug 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

**** 79th Inf Div CIC Rpt, 30 Jul 44, CIC Jnl, 79th Inf Div, (Unclassified), (Historical Project Files).

When a division received orders to move out, two or three agents, sorely needed up the road, usually had to be left behind until the corps detachment or part of it arrived. Once it did, the division team briefed the corps agents on all pending cases and then struck out in the general direction of their parent organization. Sometimes it took agents several days to find their detachment, so rapid were the advances.*

Occasionally a division detachment would leave behind several agents, only to have them stranded when the division was reassigned to another corps. The varying tactical situation during and following the breakout dictated this constant shifting of divisions and corps.

This practice worked a decided hardship on tactical CIC detachments because the former parent CIC organization usually refused to send a relief team into a town once the area no longer was a responsibility. To complicate matters, the new parent CIC organization many times had previous commitments for its agents and could not immediately spare the men for a relief team. Thus, there was nothing left for the stranded agents to do but pursue what investigations they could until finally relieved.

The lack of coordination in the field between corps and divisions detachments constituted a main CIC difficulty during the initial phase of the breakout. For a while agents were borrowed by neighboring detachments until a particular investigation was completed, but this did not prove to be the answer.**

Two-man Teams Attached to Divisions

Finally, a system was arranged whereby two-man teams of agents from the corps detachment were attached to each division detachment for operational purposes. When the corps detachment arrived to relieve a division detachment of counterintelligence responsibilities, the team was in an advantageous situation to brief corps on all pending cases in the area.

The first team's place was taken by another two-man team which went on ahead with the division unit. This technique worked out more smoothly than the original system of leaving agents behind, and soon the First and Third Army CIC detachments were forwarding agents to corps detachments in the same manner.

At the same time, division detachments made every effort to save valuable time when relinquishing a town to corps by submitting town turn-over reports, which covered in detail the counterintelligence situation in the area.

** 1st Inf Div CI Rpt, 31 Jul - 7 Aug 44, in G2 Jnl, 1st Inf Div, 7-9 Aug 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Various corps detachments continually attempted to improve the coordination and continuity of coverage by the division detachments in their areas. In mid-August, Captain Fossieck, Commanding Officer of the 215th CIC Detachment (XV Corps) requested that the divisional detachments under XV Corps forward tactical work sheets on each town twenty-four to forty-eight hours after reduction.*

Teams from 418th CIC Detachment Join Take-over System

Early during this period the bulk of the 418th (Twelfth Army Group) CIC Detachment arrived and its teams began to fall in behind army detachments to carry on CIC work until the arrival of ADSEC detachments. Actually the "falling in behind" process often was more than counterintelligence mopping up because much of the area the 418th CIC teams covered had not previously been touched by a CIC detachment. A resume of the activities of one of these teams illustrates the variety of duties that fell to them. The 418th's Tactical Reserve Team (TRT) #3, had many hazardous experiences after it moved from Normandy into the American offensive on the Brittany Peninsula. On 5 August, early in the COBRA breakout, TRT #3 was transferred to Third Army and attached to VIII Corps.

Shortly thereafter, the team received orders to proceed across the front towards Rennes. Unescorted during the entire journey, the team made the last leg of the trip, from Fougeres to Rennes, through German-controlled territory over a road which was not deemed safe until more than a week later.

In this period TRT #3 consisted of 2nd Lt. Kenneth E. Hardin as CO, 2nd Lt. Donald C. Stroud as executive officer, and twelve agents.

TRT #3 Splits into Four Groups

After reaching Rennes on 10 August, TRT #3 split up into four groups. Group 1, consisting of three agents, accompanied by four VIII Corps agents left for Morlaix in Western Brittany, a journey of 100 miles, most of which was through enemy-held territory. On one occasion, the group narrowly missed being ambushed when they passed through an area where, only five minutes before, a German patrol had been wiped out.

Later, when the team entered Morlaix, they discovered that the city was held by only 300 U.S. cavalrymen and that several battalions, the only other U.S. troops in all of Western Brittany, were containing approximately 40,000 Germans at Brest, twenty-eight kilometers away.

Until the surrounding countryside was liberated, the agents were forced to confine their operations to the city limits. Several espionage cases were initiated, one

* 79th Inf Div CIC Rpt, 17 Aug 44 in CIC Journal 79th Inf Div (Unclassified), (Historical Project Files).

of which resulted in the execution of a leading French Milicien of Western Brittany. Later, agents visited the nearby villages, arresting collaborators and alleged German agents. Numerous former German headquarters, most of which were still mined, were searched.

CIC Agents Work under Constant Fire

After most of the counterintelligence targets in and around Morlaix had been reduced, Group 1 moved to Landerneau to join in the battle for Brest. For the next five weeks, until the fortress fell, the group was under constant shell and small arms fire. During the siege, agents made a search of a naval arsenal only 150 yards from the advance German positions, a search which eventually had to be abandoned because of several time-fused 88 shells. However, the following day these same agents were able to search for enemy agents in a heavily-mined German strong point and in a series of caves in the forward areas.

CIC Group 2 Moves Toward Pontivy

While Group 1 agents were assisting in counterintelligence work before the port city of Brest, Group 2, consisting of two officers and three agents, departed from Rennes for Pontivy, which was expected to fall within a day or two. Enroute, the group stopped briefly at Locmine to assist prisoner-of-war interrogation teams in the questioning of German captives. While in Locmine, these agents were cautioned against driving on to Pontivy because scattered bands of Germans were believed still to be quartered along the main roads; however, the urgency of the situation demanded that CIC operate in Pontivy, and the journey was made without incident.

Lieutenant Hardin and his men learned, shortly after entering Pontivy, that with the exception of two U.S. paratroopers and some civil affairs officers, there were no other Americans present. After establishing a road block system, the agents searched former Nazi installations and buildings. Refugees were screened, deserters apprehended, and a basic counterintelligence plan developed.

CIC Operates in Advance of Infantry

From Pontivy, Group 2 moved to Hennebat, approximately 500 yards in front of American infantry positions before Lorient. CIC operations were carried on despite intense shelling which eventually destroyed the town. Strong German patrols frequently passed through Hennebat at night while Lieutenant Hardin and his men lay hidden in the cellars of ruined buildings, but the Germans evidently believed the town to be deserted except for the civil population. This situation continued until a German patrol fired on a French Forces of the Interior (FFI) band near the CIC office, prompting the local U.S. infantry commander to order the town temporarily evacuated.

Group 2 next moved to near Pont Scorff, where they made numerous forays in the vicinity of Auray, obtaining information that led to the destruction of a German ammunition ship off the southern coast of Brittany.

FFI Assists Group 3 Agents

Meanwhile, agents of Group 3 had shifted from Rennes to Dinan. Here, with the aid of FFI volunteers, they apprehended numerous German soldiers in civilian clothing who were attempting to reach their own lines.

From Dinan, agents of Group 3 journeyed to Chateaulin, situated across the bay from the German-held Crozon Peninsula. FFI personnel, who were the only other pro-Allied force present, guarded the shore line for traces of infiltrating German agents, while the CIC agents made several night trips across the bay to collect counterintelligence information.

Group 4 Agents Work Near German Lines

After leaving Rennes, Group 4 drove to Vannes, near the German lines, a journey which took them through territory still populated with scattered German units. After completing their mission in Vannes, they moved on to Nantes, then held by a small reconnaissance party with the Germans just across the river. Although the city was shelled sporadically by the enemy, the agents completed the reduction of a number of local counterintelligence targets.*

Liaison Proves Vital

In addition to solving problems arising from the extremely swift Allied advance, CIC agents expended considerable efforts establishing liaison with other Allied army units. Although time-consuming, this liaison was absolutely necessary for the efficient accomplishment of CIC's mission in the European Theater of Operations. Constant contact with civil affairs staffs and detachments was required to dispose of mutual problems such as handling of evacuees and the selection of loyal and trustworthy town officials.

Among the most important contacts were the military police, who, in addition to their regular duties in connection with the evacuation of refugees and the detention of arrested persons, furnished men to CIC for special details when needed.**

Detachments Accomplish Much in One Working Day

The varied activities of all CIC detachments operating in Northern France made every day a busy one. Daily reports from the period revealed the great amount of counterintelligence work which could be crammed into a single day.

Entries in the 79th CIC Detachment Journal for 2 August, for example, disclosed that on that day the detachment, while working in Granville, screened 260 civilians and informed civil affairs there was no objection to issuing them passes. The agents turned over to Third Army CIC Detachment several leads on places where Germans were reported to be hiding and signaling to German planes; numerous denunciations; membership lists of collaborationist parties; a complete list of all trustworthy informants in the city; information concerning the location of numerous ammunition dumps, four American bodies, and the hiding places of 20 Organization Todt workers; and one alleged spy whom they had arrested.

These same agents arrested and lodged with the French police eight alleged collaborationists and a Frenchman charged with stealing American equipment, and apprehended two Organization Todt workers and two German prisoners of war who were sent to the rear through channels. But still more was accomplished during the day. The agents completely searched all German headquarters, including the Normandy Hotel, from which papers of intelligence interest were forwarded to the division order of battle team, and they maintained routine liaison contacts with Civil Affairs, Office of Naval Intelligence, and the local police. Agent David Zintz, who was on detached service with the 6th Armored Division CIC Detachment then operating on the outskirts of Pontorson, captured five German soldiers from the 753d German Infantry Regiment.*

Another detachment's daily account revealed equally impressive accomplishments. On 19 August, teams of Lieutenant Steinway's 1st CIC Detachment were working in the towns of Counterne, LaFerte Mae, La Chapelle Moche, Bagnoles de l'Orne, and Periers. Among other numerous duties, the agents issued passes to seventeen electric company employees to permit the repair of damaged electric lines. In one town they screened fifty refugees for Civil Affairs and arranged for evacuation of forty-five Sengalese and North Africans, former French Army soldiers who had been German prisoners. In another town, the 1st CIC Detachment agents evacuated fourteen French African soldiers who had been held as prisoners by the Germans. Agents also tried to explain America's position in France, without much success, to Cure Francois Modeste of Periers, who was disturbed and angry because American bombing raids were killing large numbers of French civilians.**

Chapter 2

ESPIONAGE ACTIVITIES INCREASE

In the initial days of the COBRA offensive, few German espionage agents were apprehended, due probably to the speed of the Allied advance and the disorganization of the German retreat which allowed the enemy little time to plant stay-behind agents. However, as Allied armies moved relentlessly through France and nearer to the Siegfried Line, enemy intelligence activity increased.

The Germans made extensive use of untrained line crossers, recruited for the most part from French collaborationist parties and French persons who wished to evade forced labor service.* Informants stated that there were many cases of involuntary membership in collaborationist parties since frequently the Germans gave a Frenchman who had been apprehended in a crime the choice of joining a collaborationist party or of facing a death sentence or long imprisonment. Typical was the case of line crosser M. Jouslt, baker of St. Hilaire, who, as a condition of his release from prison for a fake ration ticket offense, had joined Parti Populaire Francaise (PPF). Another St. Hilaire man, named Rougeray, apprehended as a line crosser, had been reportedly forced to join La Volonte Francasise (LVF) or face a firing squad as punishment for killing a German in a fight over a girl.**

The German Intelligence Service (GIS) had only limited success with these short-range agents. Most of them were poorly trained, had inadequate cover, and generally lacked the incentive to accomplish their missions. Although the GIS had two months after D-Day in which to recruit and train personnel for low-level missions, it failed to anticipate the rapid penetration into the heart of France by the Allies. Moreover, in the fluid situation which characterized the early weeks of the offensive, it was almost impossible for the line crosser to return with information because, with a few days, he found himself deep in the Allied rear area.***

In addition to the short-range agents, the German Intelligence Service began sending through agents of two different types: specially selected and trained personnel, both French and German, and German soldiers who, without training, were disguised as civilians. It was easy for German soldiers to don civilian clothing and, if apprehended, state that they were deserting. The matter was a delicate one for Allied authorities. No announcement could be made that German soldiers in

* G2 Estimate No. 19, First U.S. Army, 20 Aug 44; in G2 Jnl & File, 30th Inf Div, 22-23 Aug 44 (Unclassified), (Departmental Records Br. AGO, Alexandria, Va.).

** 3d Armd Div CIC Memo to VII Corps CIC, subj. "Agents and Collaborators," 3 Aug 44 in 503d CIC Det Arrest & Investigation Rpts, 5 Aug 44 (Conf), (Kansas City Records Center, Box 25104).

*** G2 Estimate No. 19, 1st U.S. Army, 20 Aug 44; in G2 Jnl & File, 30th Inf Div, 22-23 Aug 44 (Unclassified), (Departmental Records Br, AGO, Alexandria, Va.).

civilian clothes would be treated as spies, because such an announcement would have lowered the number of desertions. As a rule the problem had to be resolved in each individual case. CIC, through interrogations and other methods of investigation, attempted to determine the exact status of the case. When an individual surrendered immediately, he was automatically treated as a deserter, whereas suspicion increased in proportion to the distance he was found from the front.*

German Intelligence Service Schools

From six espionage agents captured by three different CIC detachments early in August, CIC was able to obtain much information concerning German Intelligence Service recruiting and training methods and the location of training schools, as well as detailed descriptions of other agents who had trained with them. Three of these agents, Henri Mathieu, Henri Roger, and Michel Scognamillo, were captured by Lieutenant Victor's 83d CIC Detachment; two, Roland Bell and Claude Lombart, by Captain Dorsett's 207th CIC Detachment; and one, Bernard Seys, by Lieutenant Beebe's 502d CIC Detachment.

From these men CIC learned that the work of recruiting German agents was closely supervised by higher level agents of the Abwehr or of the Sicherheitsdienst. Potential agents from among the French for both low-level and high-level missions were recruited by other young agents who usually approached them on the basis of mutual interest in collaborationist youth movements, all of which were affiliated with German intelligence agencies.

The location of three espionage and sabotage centers from which agents were being sent to operate behind British and American lines also was disclosed. One of these was at La Montagnette, a school originally designed to train countersaboteurs to be used against French Resistance groups. After the invasion, the training was quickly turned to sabotage. Another center was at Chateau Antoignet, near Le Mans, which appeared to be an Abwehr headquarters. One of the duties of the German personnel at this center was the dispatching of agents to the Chateau de Maulny, another center about two kilometers away, and on through the front lines.

Maulny Briefing Point and Sabotage Training School

Maulny, a training center for low-level agents, was also used as a briefing point for other agents being sent through Allied lines. Both La Montagnette and Maulny were thought to be under the direct control of the Waffen Schutz Staffeln (S.S.), although they were camouflaged as "Organization Todt" training camps. The Maulny training course, while varied, was often accomplished in much haste. Instruction in the use of maps, radios, explosives, small arms, night reconnaissance, ambushes, and sentry killing comprised the course of study for most of the inexperienced agents.

* Report of Operations (Final After-Action Report), 12th Army Group, Vol IV, (Restricted), (AIS Staff and Faculty Library), p. 206.

After graduation, Maulny-trained agents were paid 3,000 francs [$60.00] per month, plus rations and quarters. When sent out on missions they received extra pay and were promised bonuses on their return. One of the captured agents had received 15,000 francs. Agents usually were sent out in pairs, sometimes in larger groups, although their missions were assigned individually.

In general, these agents were given one of several broad missions: to observe Allied troop and vehicle identifications; the location of airfields, ammunition dumps and tactical headquarters; the reception given Allied troops by the civilians; and the degree of cooperation offered by French officials and resistance groups; or to perform small-scale sabotage.

A Todt Worker Cover Story

All the six agents interrogated said that, if caught, they were to claim to be Organization Todt workers from Paris who had come through the line to get food or other provisions. However, in a report prepared for dissemination throughout the area it was pointed out that this story could not be expected to be used in the future, since the German Intelligence Service would soon realize that the Organization Todt cover story had become well known behind U.S. lines. A "volunteer informer" or "resistance member" story would be more likely to be encountered, according to the report which warned that either "cover" demanded careful cross examination because they would probably be used extensively by young French agents in the German Intelligence Service.

Thumbnail Sketch of Typical Agent

From the interrogation of the six agents, CIC compiled a composite "thumbnail sketch" of the typical low-level agent:

> "Age 20, height 5'7", curly brown hair tortoise shell glasses, slender to medium build, student type, member of Jeunesse de l'Europe Nouvelle, aliases beginning with the same letter as real initials, carte d'identite issued from the Paris area, student dress--light trousers, darker coat or sport jacket."*

22 Enemy Agents Thought to be Behind Allied Lines

From information obtained from captured spies and from voluntary informants, CIC estimated, early in August, that there were only twenty-two German agents--

* CIC Rpt, subj, "German Short-Range Espionage", undated, in 503d CIC Det Arrest & Investigation Rpts, Aug-Sept 44, (Conf), (Kansas City Records Center) (Box 25104).

possibly a few more--as yet unapprehended, operating in Allied-occupied territory. By mid-September German Intelligence Service activity was at a virtual standstill, prompting some overly optimistic Allied intelligence authorities to forecast a quick end to the organization.

One counterintelligence report for 4 August disclosed the names and descriptions of eleven enemy agents;* another from the First Army G2 for 20 August mentioned: "The four agents listed...operated out of an espionage organization situated in Angers the beginning of August. They were brought to the lines in the vicinity of Le Mans on 4 August by an Abwehr noncommissioned officer. These men are now believed to be behind our lines."**

Three days later additional information on seven more enemy agents thought to be behind Allied lines was sent out to CIC detachments in Northern France by VII Corps and FUSA CIC. Names and outstanding characteristics of five of the seven were obtained from the gendarmerie chief of Mayenne.***

Many of these agents, equipped with radio transmitters and carefully constructed cover stories, attempted to plant themselves near the main communication lines over which U.S. troops and supplies were flowing. The First Army CIC Detachment, commanded by Major Horace M. Miner, found that the most effective defense against these wireless transmitter agents was the large scale evacuation of civilians from critical areas.

In one important way, the speed of the advance operated in favor of the Allied counterintelligence services. Enemy long-range agents usually planned to remain inactive during the initial phase of the Allied occupation. However, by the time an agent was ready to swing into action, the swift-moving Allies had made the prospect of a quick German defeat often great enough to convince the agent to abandon his mission entirely.****

Case Histories

According to the Twelfth Army Group Report of Operations, the first bona fide German spy to be tried by the U.S. Military Commission in the European Theater of Operations was who was captured by CIC on 14 August while he was making a reconnaissance of U.S. Army military positions. Dressed in civilian clothes, carried a note which authorized him to pass through German lines. He was taken to First Army Interrogation Center, was tried by a U.S. Military Commission and sentenced to death by hanging. The sentence was executed by Seine Base Section, Communications Zone, on 7 October 1944.

A short time later the 220th CIC Detachment (XX Corps) apprehended two German espionage agents who also had entered U.S. lines in civilian clothes to obtain military information. They were taken to Third Army Interrogation Center at Toul and later after trial, were shot.*

Numerous Other Agents Encountered

During the four-day period from 7 to 11 August, 83d CIC Detachment made a haul of five probable espionage agents. Three of these came from one family: his wife, and his wife's sister. Arrested on 9 August, all were denounced as German spies. A search of their home revealed many incriminating documents, and they were sent to the Third Army Civilian Interrogation Cage for further action.

Just one day after the apprehension of the family, 83d Detachment agents took into custody one of the most experienced spies in the employ of the Germans. Arrested in the company of a German officer, was first taken to the division prisoner-of-war cage where she came to the attention of CIC during screening. After a search of her home revealed a quantity of documents, she was taken to the Third Army Civilian Interrogation Cage. Considered a highly dangerous and adroit woman, had handled many significant assignments for the German Intelligence Service (GIS).**

The other enemy agent taken into custody by 83d CIC was less impressive who was arrested in Chateauneuf after she had been denounced as a spy by the resistance and the mayor of She was turned over to VIII Corps CIC Detachment.***

CONFIDENTIAL

Gestapo-Hired Woman Lured Frenchman to Death

Another woman suspected of crossing the American lines to seek intelligence information for the Germans was first apprehended by the 29th CIC Detachment agents as she was travelling toward the American lines with three female companions, from Guilers. Informants in Guilers suspected her of dealings with the Germans.

Interrogation of companions, two of whom had first met her in a hospital in Brest, indicated that had long been the mistress of a Gestapo officer. told her companions that she could not afford to live with her husband because he was just a lowly clerk with an income of only 2,500 francs a month. Her activities were believed to have been as follows: accompanied by a Gestapo officer, frequented certain cafes where, using her personal charms, she obtained from the cafe owners information on Frenchmen who were wanted by the Germans. She also had sought the companionship of anti-German Frenchmen, who, in the course of their association with her, would be coaxed into revealing their true identity and work. Within a short time after dates with these men mysteriously disappeared.

After compiling a detailed picture of background, the agents brought her in for interrogation. At first she adopted the pose of a poor, bewildered woman, who had managed to obtain work as a maid for the Germans at the Place Chateau in Brest after her husband had deserted her early in 1944. She said she had entered a hospital in Brest for treatment of a nervous disorder but had to leave by German evacuation order. From there, travelling with three other ex-patients, she had proceeded on foot to St. Renan, and on to Guilers. Shortly thereafter she was apprehended as she approached the American lines. She did not deny knowing the Gestapo officer, but she refused to disclose any additional information on her former associations, although she added that she "... expected to be shot for her past activities."

Later in the interrogation, when confronted with the accusations of her companions and photos of the Gestapo officer, personality suddenly changed and she became obdurate and haughty. She refused to give a complete account of her activities, but she did not deny the accusations. Because agents could find no tangible evidence that she had obtained information for the Germans, and because there was a lack of sources from which conclusive facts could be obtained, the best CIC could do was to see that she was interned at the French Forces of the Interior concentration camp at St Pabu.*

4th CIC Apprehends Potential Subversive

Two days after the COBRA offensive had begun, the 4th Division CIC Detachment processed its first potential subversive, a who claiming to be an evacuee from Marigny, was apprehended in a farmhouse in the division area. He could produce no identification and fellow evacuees could not vouch for his loyalty. Because he did not look like a Normandy Frenchman and because a slight German accent was detected in his speech, agents turned him over to the prisoner of war cage for disposition.*

Another potential subversive apprehended by 4th CIC on a much-travelled highway was a who told agents that she was on a vacation for her health, and that she could not return to Paris because of the high cost of living there. This story apparently did not satisfy the investigating agents because they held her at the 12th Regiment for further interrogation and disposition.**

Frenchman With Field Glasses Apprehended

Later, when 4th CIC Detachment agents were working in Hambye and Le Guislain, they picked up two collaborators and a possible low-level German agent who evidently lacked the intelligence and finesse to carry out even a simple espionage mission. One of the collaborators, a former resident of St. Lo, admitted working for the Germans, but argued that she did so only to gain money to support her husband and child. Although no security threat, she was told to remain in her home until American troops had departed from the area.

The second collaborator, a was arrested on 30 July. Strongly anti-Allied in actions and sentiment, according to three informants, had revealed American gun positions to the Germans when American forces were attacking Hambye. He was turned over to VII Corps CIC. Another possible enemy agent was first encountered near the 42nd Field Artillery Battalion command post (CP). Accompanied by a small child, he had field glasses and a forged identification card. Other Frenchmen, found in the immediate area, could not identify him. Since he had "... no logical story," he appeared to be a remarkably stupid agent. CIC referred him to the prisoner of war enclosure for disposition.***

*** Ibid., 31 Jul 44.

Suspected Espionage Case Investigated

Agents of the 4th CIC Detachment were told by a French woman living near the 8th Regimental CP that an American officer and a sergeant had visited her, asking the locations of American fuel dumps and names of American troop commanders. The officer, according to the woman, spoke good French but with a slightly noticeable German accent. Since it was unlikely that an American officer and sergeant would be questioning French peasants for detailed tactical information, agents thoroughly searched the area, but no trace of the two men could be found.*

Boastful Gestapo Informant Interned

Besides agents, potential subversives and collaborators, people who had served as informants for the Germans often attracted CIC's attention. One such person, an alleged Gestapo informant who was reported to have boasted that he had earned 10,000 francs [$200.00] for information sold to the Germans after D-Day, was investigated by the 9th Division CIC Detachment on 18 August.

The suspected informant, a had been consistently pro-German and a member of the Rassemblement National Populaire (RNP), an organization with a long history of collaboration with the Germans. He made frequent trips to RNP meetings in Paris and regular calls at the Kommandateur at La Ferte Mace. He admitted having told a Gestapo agent about the resistance group in Ligniere La-Doncelle, an act that resulted in thirteen people being killed by the Germans in a surprise raid on 13 June 1944. and his wife, who was considered equally dangerous, were later evacuated to the civilian interrogation center, along with all papers, including their signed confessions.**

False Alarm

In mid-August a verbal order from the 4th Division G2 prompted CIC to investigate one case of alleged subversive activity. The occupants of a chateau were suspected of sending messages to the Germans via a transmitting set. Agents did uncover one signal generator used to power radio receivers and one small receiving set with a possible range of five miles, but the owners, after lengthy interrogation, were cleared of any suspicion of espionage. The confiscated equipment was turned over to a division signal company.***

Agents Reprimand Young Girl

A young French girl proved to be the security violator in one case solved by 4th Division agents in late August. As reported by the Inspector General, 4th Division, lights in a house in the division area were thought to be used to communicate with the enemy. In the course of this investigation agents interviewed a young French girl who admitted responsibility for the incident. She maintained that she had struck the matches in order to look at her wrist watch. She was warned that if it happened again, she would be taken into custody. This flickering light case was one of many inconsequential cases that had to be investigated.*

CIC Discovers Enemy Agent While Impounding Mail

Impounding all mail in a newly-overrun town, although tedious, was often rewarding. One such incident occurred in late July when agents of the 503d CIC Detachment were busy in the villages of Va Baleine and Le Parce. From letters addressed to two collaborators who had retreated with the Germans, agents were able to determine that a had been a collaborator and spy for the Germans. She was arrested.** Records do not reveal her disposition.

Suspects Refuse to Admit Guilt

When the advance of the 3rd Armored Division slowed down during the first week of August, the CIC Detachment with the division had time to consolidate its operations in Ambrieres. While in Ambrieres, agents attempted to obtain confessions from two possible enemy agents, who had been brought to the CIC office by local resistance members. The two men, of Polish origin, were denounced as being decidedly pro-German.

was the more suspicious of the two. Although he denied any connections with the Germans, had been observed selling black market rubber goods to the farmers; wandering around sometimes in ragged, sometimes in neat clothing; and frequenting various railway stations.

companion, proved to be a much more garrulous person, and after considerable interrogation, admitted that was a Nazi and an informant for the Gestapo. Despite these statements and other evidence that tended to prove that the two were agents, CIC could not get them to admit their guilt.

The disposition of the two men was noted in a memorandum to the division G2 which read: "... it was decided that was a dangerous enemy alien,

almost certainly an agent of the Germans, and that as his accomplice, was equally dangerous. They were conducted to Corps Interrogation Center for further interrogation."*

Red Cross "Cases"

a Frenchman recruited as an enemy agent, was arrested near Chateau Maulny by Lieutenant Steinway's 1st CIC Detachment agents on 8 August. After having crossed the lines on a bicycle, was posing as a Red Cross worker and a refugee from Paris. He was transferred to England for further interrogation.**

Use of U.S. Uniforms by German Spies Anticipated

The probability that German agents would infiltrate the lines in U.S. uniforms caused numerous warnings to be issued.*** One case which pointed up the dangers in American personnel unthinkingly giving or loaning uniforms to unauthorized persons occurred in the 6th Armored Division sector in mid-August. While working in Plouavy, agents Albert J. Tahmough and William J. Mulkeen, of the 506th CIC Detachment, spied a teen-age French boy wearing a U.S. uniform, complete with shirt, trousers, leggings, helmet, and web belt. The agents halted the youth and asked for his identification card, which he could not produce. He gave his name as and his nationality as Canadian. He had been given the uniform by Americans at Third Army's 53d Field Hospital where, later investigation disclosed, he had been allowed to eat, sleep, and serve as KP for several days without any check on his identification or loyalty.

Disturbed at this casual "adoption," CIC agents explained to the hospital commanding officer the security procedure to be followed in such cases. Satisfied that their security lecture had convinced the commanding officer that hiring uncleared civilians was risky business, the agents transported Daniel to Plouavy where he was relieved of his uniform and handed over to the gendarmerie.

One result of this case was a memorandum sent forward recommending that all units be reminded again of the proper procedure to be used in employing civilians.****

[redacted]

The German Agents Who Couldn't Surrender

The difficulties that original bungling of an investigation could cause were brought home emphatically to the 503d CIC Detachment. This case, which no doubt became known as "The Case of the German Agents Who Couldn't Surrender," began on the morning of 13 August when Combat Command A of the 3rd Armored Division attacked through the town of Pre-en-Pail. Accompanying the attacking force were agents Laurence E. Dow and John H. Romey, and a Lt. Edward Tresca, French Intelligence Liaison Officer attached to the division G2.

These three men, after entering the town, set up operations in the city hall where they were besieged by civilians with questions and denunciations. While thus occupied, Lieutenant Tresca was interrupted by a man who identified himself as Martial Durand, who had "... very valuable information of great importance to offer." Tresca, busy and faced with the immediate prospect of moving up with a column, instructed Durand to call back later and speak to Lieutenant Black, who was apparently expected to arrive with the main body of the CIC detachment in a matter of hours.

The same afternoon a woman reported to the Division's 3d Armored Regiment that there were two suspicious-looking men in her hotel. She had seen them with a German officer, they had a large amount of money, and, she thought, they had a radio in their room. A lieutenant and an enlisted man accompanied the woman back to her hotel where they found the two men, one of whom was M. Durand. Before speaking to them, the Americans went upstairs to search their room. The lieutenant was called away at that moment, but instructed the other soldier to continue the search. When he returned and learned that a radio transmitter had been discovered beneath a pile of clothing in a cabinet, he ordered Durand searched, but not his companion. When the search revealed a large sum of money and French identity papers, the lieutenant questioned Durand, who claimed to be a British intelligence employee. The lieutenant then directed two of his men to escort the suspects, along with the radio, back to division G2.

After several hours of wandering, the group, unable to find G2, ended up in the Division's 83d Armored Reconnaissance Company. The escort told the company commander the situation and gave him the radio. By this time, however, the corporal, who spoke some French, had apparently accepted the two men's story that they were intelligence workers, although it was French intelligence they were working for now. The gullible corporal then drove the two men back to Pre-en-Pail and released them. The company commander, despite a G2 directive that all units turn in captured or recently confiscated radios, kept the radio because he thought it was not a transmitter.

The following morning, Durand appeared outside the 3rd Armored Division CP, affirming that he had valuable information regarding the Gestapo, and that this

information concerned a "post box" setup for delivery and collection of agents' information. CIC was immediately called in to check on Durand's story.

When questioned, Durand admitted that he and Robert Charrier, his companion, had been working for the Germans. Further interrogation brought out many details in the espionage career of these two agents. Durand admitted that he had been first introduced into the German espionage system by a Robert Rosseau, who had since been arrested by the Germans for reasons Durand did not know. Durand had worked in a German espionage unit which had posed as a part of Organization Todt, and had received 61,000 francs [$1220.00] from the Germans for espionage work in July and August. He had been dispatched to Pre-en-Pail to observe and report American troop movements after the city had fallen to the Allies.

Durand's companion, Charrier, had a similar record. He had worked with the Germans since 1943, and was a skilled radio operator, having completed a three-month course under German supervision. His first assignment had been in St. Lo, his second in Le Mans, and his third in Pre-en-Pail. He, too, had been assigned to watch and convey information on Allied troop movements and was paid 6,000 francs [$120.00] a month.

The radio was finally obtained and sent to VII Corps CIC. The 503d CIC Detachment also arranged with the resistance to keep a twenty-four hour guard over Durand's "post box," a hidden location in which unknown agents were to leave messages for Durand's transmission to German intelligence. The capture of Durand and Charrier "... eliminated the central channel of enemy agents' radio communication in this area," one CIC report noted.*

A packet of papers, previously neglected, was forwarded to VII CIC, where it was found to contain complete details on Paul Maurice Elebert, the German agent in charge of Durand and Charrier and other agents in the area. The delay in blocking off the espionage system of which Durand was a central figure proved the sole harmful effect of the blunder in this case. But matters could have been far worse if M. Durand had not been such an obliging enemy agent.**

Hundreds of Minor Suspects Encountered

Besides investigating the comparatively few major counterintelligence personalities encountered, CIC agents spent much time in dealing with German soldiers in civilian clothing, collaborators, refugees, and sundry other minor security risks. For example, in mid-August, 1st CIC agents took charge of sixty German soldiers apprehended by French Forces of the Interior members and arranged for their transportation to the division prisoner-of-war cage, arrested and evacuated fifteen Organization Todt workers; supervised the evacuation of approximately eighty-five French soldiers who had escaped from German prisoner-of-war camps, and processed eleven other minor cases.* Other detachments were performing similar tasks.

* 1st Inf Div CIC Periodic Rpt, 21 Aug - 4 Sept 44, G2 Jnl & File, 1st Inf Div, 301-2.2 (22292 Master), (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Chapter 3

NEW PROBLEMS, TECHNIQUES AND TASKS

During the rapid push across Northern France, the control of refugees became CIC's most serious concern, and agents were taxed to the limit of their ingenuity to find means of handling the problem. Each detachment developed new techniques as new situations arose. In the VII Corps area, each town mayor was required to compile a list of all refugees in his town and its environs for submission to the CIC team operating there and to turn over to the team all unidentified civilians. Mayors and resistance workers, particularly in the 4th Infantry Division sector, were also asked to appoint reliable Frenchmen to direct and inform refugees regarding travel and curfew regulations and to help spot suspicious individuals.*

Near the end of August, while 4th CIC Detachment agents were operating in Notre-Dame-le-Cenilly, town officials, priests, and resistance leaders were assisting CIC by vouching for the loyalty of local residents, but due to the unsettled conditions, many strangers were still moving through without being halted. CIC set up civilian check points which quickly brought results. Near Soulles, three civilians with names similar to those on the First Army's "potentially subversive" list were picked up and held for interrogation.**

In the V Corps sector, Lieutenant Riddle of the 205th CIC Detachment made arrangements with Captain Uff, Field Security Officer for the 15th Scottish Division, for coordinated patrolling of roads parallel to the front in their adjoining sectors. Agents of both the 205th and the 5th CIC Detachments participated in these patrols.***

Refugees Crowd Roads

Early in August, CIC detachments with VIII Corps down on the Brittany Peninsula were finding the refugee problem particularly serious, as a steadily increasing number of civilians from the St. Malo area came streaming through the line. Civil Affairs had not yet set up a collecting point and was permitting refugees, once they had come through the lines, to go any place they pleased as long as they did not hinder orderly movement of traffic. With the help of resistance leaders who, in this area, were well organized, the 83d CIC Detachment established three

screening posts at the most critical road junction in the St. Malo area. These posts, plus the cooperation of Civil Affairs in publicizing curfew and travel regulations, improved the situation.*

As the Allied forces converged on Brest, which the Germans did not surrender until 19 September, CIC was confronted with the problem of dealing with 35,000 refugees who had been displaced "by agreement with the opposing forces before the siege began."** The possibility for infiltration of enemy agents among these refugees called for a rapid, practical solution, and the 29th CIC Detachment came up with one that was considered unusually effective. This plan established an arbitrary line behind the front past which civilians could not travel and arranged, with the help of Civil Affairs, for the distribution of notices and maps designating the restricted areas to all town mayors in the zone. The aid of resistance forces was obtained to man CIC control points at all intersections. One area which was considered particularly critical, the sector along the south coast directly across from the enemy-held Crozon Peninsula, was turned over entirely to a French Forces of the Interior commander and his group, which maintained a continuous patrol, checked residents in the area and restricted travel to one kilometer. All offenders against restrictions were confined for at least one day and their names posted on town bulletin boards, a practice which CIC found effective.

The unsettled condition of the area, however, made complete investigations of individuals impossible, since fellow workers, neighbors, and their local civil authorities were not available. CIC had to handle suspects on the basis of information gained through interrogation, suspicious actions, papers and personal effects carried, and local denunciations. Recognizing this inadequacy, a CIC report stated: "It is entirely possible that a number of persons who were checked by this detachment and subsequently released were collaborators of the highest order. In addition, there are doubtless hundreds of others not apprehended among the refugees throughout the area."***

Lessening of subversives and security threats was not the only result of careful refugee screening. During the period when the 6th Armored Division was halted before Brest, 506th CIC Detachment agents were able to produce, out of the fragmentary bits of information obtained from refugees, an overlay map of prime counter-intelligence targets, which later proved invaluable during the CIC operations in the

Brest area. They also gained information concerning a high-ranking Organization Todt member who was wanted for questioning by French Forces of the Interior, and two agents traveled more than 100 miles to arrest him.*

Resistance Personnel Sometimes Unreliable

Although CIC had to place great dependence upon resistance personnel throughout the campaign in France, occasional mishaps reminded agents that they had to deal cautiously with these persons.

One incident in mid-August, which easily could have resulted in needless American casualties through faulty tactical deployment, involved a so-called "captain" in the Brittany Resistance, and caused grave concern among members of the 506th CIC Detachment.

Information obtained by the French Forces of the Interior through a wire tap of a German telephone line was passed on to CIC by a French naval lieutenant who had directed the wire-tapping operation. His report disclosed the point of an impending German attack, the disposition of the troops involved, and their probable methods of attack. However, before the French naval lieutenant passed this tactical data on to CIC, he knowingly and willingly allowed an unscrupulous "captain" in the resistance to insert the false data that the forthcoming attack was scheduled for a water point near Landernau. CIC, in checking on the report, discovered that this false information had been added. The agents, infuriated by this double-dealing, immediately confronted the French naval officer who readily admitted that he had allowed the addition of false information, but claimed that he did it only because "... he wanted more American troops to defend the Landernau area...." Determined to see that some form of disciplinary action was taken against the lieutenant, but puzzled about where to send him, agents finally closed the case and disposed of the lieutenant by handing him over to the naval liaison officers of the 6th Armored Division's Combat Command A. The resistance "captain" could not be located.**

Brest Area FFI Chief Aids CIC

The majority of the members in the Brittany resistance were believed to be motivated by patriotism and a desire to see the Germans get their just dues. Typical was one Brest area resistance chief who assisted agents of the 506th CIC Detachment

* Hqs 6th Armored Div, CIC Jnl covering 23 Jul 44 - 21 Aug 44 incl, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

** 6th Armd Div CIC Jnl Entry, 18 Aug 44, CIC Journal, 6th Armd Div, 23 Jul - 21 Aug 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.). (NOTE: Records do not indicate how the Agents learned of this "double dealing.")

in their investigation of two men, who were first picked up in mid-August when they came through the front lines from Brest. When apprehended, the two men had passes authorizing them to circulate freely in and out of the German lines. The suspects contended that these passes had been issued to them so that they might travel about the countryside in search of food for the German soldiers besieged in Brest.

Agents were not satisfied with the story, but because they lacked concrete evidence they could not disprove it, until the chief of the resistance groups in the Brest area appeared and volunteered the information that the two men in question had been collaborators in the city of Brest. On the basis of this information, the pair were sent to the prisoner-of-war enclosure.*

Investigative "Spadework" Delegated to Resistance

As the Allied armies continued their race toward the Siegfried Line, it became apparent that the majority of suspects were economic and social collaborators, not dangerous security risks. So, to reduce the number of persons being processed and to cut down on the number of hours that agents were spending in countless futile investigations, various detachments began to delegate more of the preliminary investigative "spadework" to the resistance. For example, upon entering a town, the 79th CIC Detachment would direct the resistance leaders to prepare a list of all suspects in the area, broken down into three categories: Frenchmen who had denounced their countrymen and acted as informers to the Germans; members of the PPF, RNP, the Milice and similar collaborationist organizations; and Organization Todt workers and other minor suspects. In this way, CIC agents were able to concentrate their attention on the prime counterintelligence targets.**

Special Post Office Technique Developed

Various other phases of CIC work required the development of new techniques. Notable was the handling of post offices as worked out by 79th CIC Detachment. After sorting and scanning approximately 5,000 pieces of mail in the Le Mans Post Office early in July, agents of the 79th CIC at the suggestion of Agent Sidney D. Wilgus, 215th CIC Detachment representative who was working with them, set up a procedure that relieved them of a great deal of laborious work and freed them to continue with other target reductions. According to this plan, the first step was a screening of all postal employees, with the assistance of police and resistance

sources. From among those screened, a capable, reliable man, experienced in postal affairs, was selected to supervise the operation. This man then was thoroughly briefed by CIC agents, who maintained close observation of all employees and of the operation.*

Military Security Situation Considered Good

In the first weeks of the COBRA offensive, the First Army G2 could claim that the military security situation, in general, had been good. The language differences and the ban on troops circulating in towns had reduced to a minimum the possibility of leakage of military information, and although military personnel had a tendency to discuss plans and operations rather freely, there was no indication that this practice had led to disclosures of information to the enemy. However, it was believed that security weaknesses in sending some radio communications in the clear had given the enemy valuable tactical information.

First Army G2 could also report, after scanning interrogations of enemy prisoners and information given by friendly escapees and evaders, that the security discipline of American troops, following capture by the Germans, had been excellent.** However, incidents of U.S. officers carrying classified information too far forward continued to occur. Late in August, after the 29th Division had turned west to take part in the siege of Brest, two incidents occurred which were first thought to be the result of enemy espionage: the shelling of the Division Command Post and the bombardment of a bridge in St. Renan. The espionage theory was dispelled when 29th CIC learned that the actual cause of the shelling had been the German capture of an American officer carrying a map showing the exact location of the vital points. To prevent such occurrences, at 29th CIC Detachment's recommendation, all documents and maps with general information regarding the Division were ordered marked "not to be taken below regimental headquarters." To insure compliance with this directive, points were established where CIC agents checked the possessions of occupants of all vehicles moving toward the front.***

Maquis, Communists Pose New Problems

During this period, CIC officials had cause to worry about two new elements which loomed as potential disrupters of civil security: the Maquis and the

---

** G2 Estimate No 19, Counterintelligence, First U.S. Army, 20 Aug 44, in L-111, 30th Inf Div G2 Jnl & File, 22-23 Aug 44 (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

*** CIC Rpt for period 5-20 Sept 44, in 29th CIC Det File (Unclassified), (Kansas City Records Center, Box 25094).

Communist Party. The Maquis consisted of armed civilians who were recognized as the combat section of the French Forces of the Interior. CIC believed, however, careful identification of members of Maquis groups and the responsibility of their leaders were such as to minimize any activities which might be subversive or disrupt civil security.

The Communist Party, determined to achieve its aims regardless of consequences, presented an entirely different, more threatening problem. As large cities were liberated by Allied armies with their populations and political machinery largely intact, CIC expected increased political activity by the Communists. Apparently planning to come more into the open and to attempt to secure strong political positions shortly after departure of the Germans, the Communists were expected to demand immediate trial of all "traitors," agitate for the early withdrawal of all U.S. and British forces, seize French and German governmental facilities, and insist upon government operation of all industry.

Although the Communist Party and its objectives were political matters not of direct concern to CIC personnel with and under First Army, these agents were warned that "... a rapid rebirth of Communist political activity may make for civil disturbances and disorders."*

CIC Agents Operate "Up Front"

In their efforts to contact resistance leaders and informants, to search buildings for important counterintelligence documents, and to screen or apprehend refugees, CIC agents often found themselves well up in the forward areas, at times even in advance of the assault troops. Lieutenant Gonzales and four agents of the 79th CIC Detachment were the first to enter Le Mans, one of the key cities overrun in the southern swing made by XV Corps. Their reception was anything but friendly. As the daily log entry cryptically stated, 79th CIC Agents "... entered Le Mans at 1700, 8 August 1944. Had meeting with Chief of Resistance, Police, etc. at 1900. Were driven out by Germans."**

This "up front" position of CIC often meant that agents had to perform many tasks which could not be considered a part of CIC's mission. Such was the case in Landernau where, for three days, men from the 506th CIC Detachment were the only U.S. soldiers within considerable distance. On the third day, rumors flooded the city that German troops, variably reported as ranging in number from 300 to

* G2 Estimate No. 19, Counterintelligence, First U.S. Army, 20 Aug 44, in L-111 30th Inf Div G2 Jnl & File, 22-23 Aug 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

** 79th Inf Div CIC Rpt, 8 Aug 44 in CIC Jnl 79th Inf Div (Unclassified), (Historical Project Files).

3,000, were converging upon the city from the direction of Brest. As the panic increased, all flags and decorations, which had been displayed to welcome the Americans, disappeared. Many citizens began leaving the city and even the French Forces of the Interior organized to meet the expected attack. The Germans were rumored to be only three kilometers from the city, and the mayor frantically appealed to Captain DeLoach, the 506th CIC's Commanding Officer, to contact higher echelons for help.

Realizing that the nearest U.S. units was several hours away, Captain DeLoach directed several of his agents to make a motor reconnaissance up to eleven kilometers outside the city. Within a few hours the team returned with the report that they had encountered no Germans and that a French Forces of the Interior patrol had assured them that there were no Germans within twenty kilometers.

With this information, Captain DeLoach was able to convince the mayor, his incredulous staff, and the jittery townspeople that the city was safe from German counterattack.*

CIC Agents Quell Riots

One team of the 506th CIC, working with resistance personnel at St. Fair, near Granville, was called upon to quell a riot of approximately 500 persons. The disturbance was brought on by friction between resistance leaders and civilians who were neither pro-Nazi, nor affiliated with the resistance movement. A flood of rumors that a pocket of Germans still in the area would become active again and return to gain revenge on the community swelled the rioting, and, in the melee, several persons were seriously injured.

CIC immediately placed a curfew on the town and ordered all persons to their homes. The remainder of the detachment was called to the town and, by splitting into teams and reconnoitering the area where the Germans supposedly were hiding, the agents were able to convince the anxious residents that there was no danger.**

Other CIC detachments, on the few occasions when the civilian population got out of control, also had to act to restore order as quickly as possible. Such was the case in the village of Chartres during the last week of August. Reports had reached the 9th Infantry Division G2 that a demonstration had taken place in Chartres between French patriots and alleged Nazi collaborators. Agents Joseph H. Thompson, George W. Morris, and Charles R. Managam of the 9th CIC were ordered to investigate the situation.

** Ibid.

Upon arrival at Chartres, they contacted the mayor who reported that a Madame Rough, her fourteen year old daughter, and a Mlle Ligauls were the targets of the rioters. Several residents of Chartres, embittered at the women for having slept with numerous German soldiers, had beat them and shaved their heads.

After stressing to members of the local resistance group that it was their responsibility to preserve law and order in Chartres until Civil Affairs personnel arrived, the agents, with the three women in custody, returned to 9th CIC Detachment headquarters.*

Varied Duties Fall to CIC

Acting as traffic coordinators, temporary town officials and virtual "father confessors" became routine activities to many CIC agents during the sweep across France. Many of the duties normally belonging to Civil Affairs often fell to CIC, since they usually were in advance of the Civil Affairs teams. As an example, one day in August, Team "A" of the 1st CIC Detachment had their normal counterintelligence duties interrupted when they had to spend most of the day "... refusing passes for civilian travel, answering questions for civilians on problems of wheat thrashing, reparations, enlistment in the French Army, etc."**

Agents William J. Mulkeen and Albert J. Tahmouh of the 506th CIC Detachment, found themselves in an unusual situation on 3 August while they were doing road patrol work on the outskirts of Combourg. They stopped to talk with officers of the 15th Tank Battalion who were disturbed because the reconnaissance unit responsible for clearing the main avenues of travel in Combourg had failed to do so. The two agents, in their jeep, sped toward the center of the city, where they found that the officers' anxieties were well founded, because the town was in an extremely unsettled condition. They ordered the mayor and resistance leaders to clear the principal avenues and to station gendarmarie to keep them open for the 6th Armored Division column which was rapidly approaching the city.

The orders were complied with and the convoy passed through the town without noticeably reducing speed, and without having to dodge French automobiles and pedestrians.***

CIC Agent on Surrender Mission

Second Lt. Charles W. Colgan, of 35th CIC Detachment, was called upon to perform an unusual mission while he was working with an advance group of the detachment in Orleans in mid-August. Crossing a river near Orleans under a white flag, Lieutenant Colgan talked with a German Corps Commander in an effort to persuade him to surrender all the troops under his command. Although obviously unsure of what course he should pursue, the commander declined the surrender offer. About one week later, however, an unknown American lieutenant succeeded in arranging the surrender of the German commander with approximately 14,000 men. This was one of the times when a CIC agent arrived too early, rather than too late.*

Valuable Discoveries Made by Agents

While ransacking former German billets, headquarters and sundry other buildings in their never-ceasing quest for intelligence information, agents often made valuable discoveries. In searching the German supply depot at a castle in Bazainville, 79th CIC Detachment agents found 8,000 litres of petrol, 12,000 litres of oil, and a sizeable stock of automobile tires. In the village of Vetheuil, they made another valuable "find," discovering a supply cache of approximately twenty tons of flour. Civil Affairs, always hard pressed to obtain enough food for the hungry French populace, was given the cache location.**

Deserted German command posts often proved to be most productive sources of counterintelligence information and other data. The 80th CIC Detachment early in the breakout discovered a hugh German depot near Argentan which contained approximately ten thousand maps, many of which were used in later Allied operations.***

9th CIC Obtains Tactical Data

The 9th CIC Detachment was performing similar duties in this period. Then operating in the town of La Pallu, agents obtained tactical information believed to be credible from thirty-seven refugees from La Ferte-Mace, Potigny and Caen during the second week of August. Furthermore, in nearby St. Patrice du Desert, two collaborators and some German documents were picked up.

Information obtained from the resistance members disclosed that thirty-five Senegalese, hiding in a forest near St. Patrice du Desert, had sabotaged over sixty German vehicles with equipment dropped to them by British and American planes. CIC notified French military authorities of the Senegalese's activities, asking the French to "take care of them."*

Rumors Occupy Agents' Time

Locating or attempting to locate the origin and motive behind rumors often consumed much of the agents' time. During the first week of August, while 29th Division agents were checking on the security of the various divisional units, they heard a rumor that an American officer had shot five civilians who had failed to give correct military information. This report was causing alarm among both military and civilian officials.

CIC established that the rumor, which had originated with soldiers who did not understand French, was untrue. Five civilians were shot, but by the Germans, not by an American officer. They were shot after the Germans had caught them passing through the lines and accused them of giving information to the Americans.**

Interpreter Jailed for Spreading False Propaganda

On 17 August, after pausing only briefly in Mamors and Nogent, an advance group of 79th Division agents entered Dreux, where they opened an office in the Hotel de la Paradis. After learning that the 5th Armored CIC Detachment had already searched all buildings of counterintelligence interest, agents began screening suspects. Shortly thereafter, they made their first arrest. An interpreter for the U.S. 106th Cavalry was arrested for spreading fear propaganda. The garrulous interpreter had been meandering from town to town, advising the French people to take down their flags as the Germans were returning. He was jailed in Nogent Le Roi for several days, then released, after being warned to stop disseminating false information.***

Excited French Mayor Provides Comic Relief

Few humorous incidents were included in the CIC reports for northern France, but one which occurred in Passais on 12 August undoubtedly amused the investigating

agents of the 4th Division CIC Detachment. Shortly after CIC entered Passais, the excited mayor made an appearance, demanding that agents investigate the mysterious ringing of a church bell, which he was sure was being used to send signals to the recently departed Germans. Complying with the agitated mayor's request, CIC investigated and found that the bell was rigged to ring automatically every evening at approximately 2115 hours. The red-faced mayor departed in silence.*

Chapter 4

"T" FORCE IN PARIS

As the Allied armies rumbled on toward Paris, special planning for the reduction of counterintelligence targets, which had been begun in June, at the very outset of the continental campaign, was accelerated. It had been recognized that organic army intelligence units would be inadequate to reduce rapidly all the targets to be found in the largest cities of Europe, the first of which was Paris. Basing their plans upon experiences of the "S" (security) Force in Rome,* planners at SHAEF decided to organize intelligence collecting units known as "Target" or "T" forces, with the mission of "seizing, safeguarding and facilitating the exploitation of important intelligence and counterintelligence targets in the larger cities." A SHAEF intelligence directive published on 7 July 1944 outlined the major organization and objectives.** As organized they became the first army intelligence task forces.

On 2 August 1944, Colonel Francis P. Tompkins of the G2 section of 12th Army Group was named as head of "T" Force. He proceeded to Italy to study the experiences of the Rome "S" Force, returning to France on 15 August, just ten days before the liberation of Paris. In the meantime, lists of principal targets in Paris were being compiled under the supervision of G2, 12th Army Group.

Colonel Tompkins gathered the nucleus of his staff, principally from the G2 section of 12th Army Group Headquarters, at Periers, France. Three days later, on 18 August, the 31st Chemical Decontaminating Company was designated as Headquarters Company for the force, and from then on until they moved into Paris on 25 August, other units were added rapidly. Since the "T" Force was to move into the city within a matter of hours after enemy resistance had ceased, it was necessary that it be a self-contained mobile force with sufficient combat troops to guard building targets, remove mines, booby traps and stores of explosives, man a detention center, and supply physical security for intelligence personnel. A total of 1,805 persons, of whom 200 served as Headquarters and Headquarters Company and 1,057 as tactical troops, comprised the force. Aside from a bomb disposal squad and a small medical detachment, practically all the remaining 548 persons were representing some branch of Allied Intelligence.

For the Paris mission three units were provided: a cavalry squadron of 900, a Naval Assault force of 77 men, and a French Special Services unit of 80 men.

---

* Reference Chapter entitled "Italian Campaign."

** Intelligence Directive No. 17, SHAEF, dtd 7 Jul 44, subj, "T" Forces," in Vol IV, Report of Operations (Final After-Action Report) 12th Army Group.

2141

When the intelligence units were all assembled, CIC was spearheading a combined effort representing ten major agencies as follows:*

1.	CIC, including CIC antisabotage teams	114
2.	Propaganda and Psychological Warfare specialists	108
3.	Scientific & Economic specialists (CIPC)	63a
4.	OSS: Espionage & Special Counter Intelligence (SCI)	62
5.	Escape and Evasion Interrogators. (I.S.9 WEA)	47
6.	Air Intelligence: Strategic, Tactical & Technical	43
7.	Army & Navy Technical Intelligence Teams	35b
8.	M.I: Interpreters, Interrogators, PW; Document Section	34
9.	French Army Intelligence Service (SSM)	24
10.	Atomic Research and Development (ALSOS)	18
	Total Investigators & Analysts	548

a Combined Intelligence Priorities Committee.
b Included: Bomb Disposal Squad, 7; Medical Det., 7; Signal Intelligence, 6; Chemical Warfare, 5; Engineers, 2; ONI, 8.

Of the 114 CIC personnel, 26 were from ETOUSA, Counter Intelligence Branch, Communications Zone (Forward) and the balance from various units under 12th Army Group. On later missions most the CIC personnel were drawn from the 418th CIC Detachment of 12th Army Group.

These CIC personnel composed the bulk of the Target Assessment teams which surveyed targets upon arrival and made the initial estimate of their value. The variety of headquarters and types of personnel with which CIC worked is revealed by the composition of the Paris "T" Force:

#	Headquarters Represented:	T'tl	Off	Ems	Civ
1.	12th Army Group intelligence personnel	265	81	159	25
2.	Supreme Headquarters AEF, specialists	114	61	16	37
3.	ETOUSA, Communications Zone, (Forward)	45	15	30	0
4.	Air Force: USTAF; Ninth & Technical	43	27	14	2
5.	British War Office: Specialists	31	8	23	0
6.	French Intelligence SSM unit	24	7	4	13
7.	U.S. War Department (ALSOS) Mission	18	11	3	4
8.	U.S. Navy ONI (CTG 125.8)	8	6	2	0
	Totals	548	216	251	81

* Appendix 2, Annex B, Twelfth Army Group, History of Operations, Vol IV (Restricted)

These intelligence specialists were organized into small mobile teams whose first duty was to proceed to a target, inspect it and if the quantity of documents was too great for immediate removal, submit an estimate of the materials of intelligence or counterintelligence value. They were then to arrange for necessary guarding until such time as the target could be completely reduced by specialist teams which were to follow.

On 21 August, "T" Force moved from Periers to MeMans and on to Rambouillet, where organization and briefings were completed. At about 2200 hours on 25 August, traveling in 216 vehicles, the force moved into Paris and established headquarters in the Petit Palace. Mobility was stressed and as organized provided an average of one vehicle for each three intelligence personnel. Between that date and 6 September, when "T" Force offically closed its Paris headquarters and turned over its responsibilities to Seine Base Section and personnel of G2 Section, Communications Zone, the force had reduced 382 building targets and 514 personality targets. Sixty-four personality targets were arrested and processed through the "T" Force Interrogation Center, and an additional 181 cases were handled for detention purposes. All but fifty-four of the assigned building targets were covered before the "T" Force withdrawal.

Among the important items of intelligence derived from the operation were: the key to a rare cipher system obtained from a prisoner; a German map disclosing the plans of mining, demolitions and booby trapping in Dunkirk; and a great quantity of operational maps of eastern France.*

The report of Team 4, commanded by Captain Charles W. Hostler, an SCI officer (Special Counter Intelligence unit of OSS) gave a summary view of a "T" Force unit in action. Besides the commanding officer, this team consisted of CIC Agents Michael Varenick and Franklin Norvish of VII Corps CIC; one French Bureau Securite Militaire (BSM) and one Service Securite Militaire (SSM) officer; three enlisted men from the Special Counter Intelligence (SCI); two enlisted men from Chemical Warfare; and two French Interpreter Corps enlisted men. This team, which arrived at 0100 on the morning of 26 September, handled forty-five building and personality targets, arrested twelve persons, and obtained leads which formed the basis of seven supplementary reports. A large volume of documents was collected and forwarded to "T" Force headquarters. Of special interest among those found was a careful drawing of the V-1 rocket bomb.**

---

* Target Branch Report from Vol IV, Report of Operations (Final After-Action Report) 12th Army Group.

** Ltr, subj, "Report for War Diary on Activities of Team 4, T Force," to CO Paris "T" Force, s/ Charles W. Hostler, Capt AC, CO Team #3, T Force, Paris, dtd 3 Sept 44, obtained from Michael Varenick.

No records are available to indicate the 12th Army Group units from which the CIC agents for the "T" Force were drawn, but one report indicates that all the agents of VII Corps Detachment were assigned to "T" Force teams. There was still some fighting between remnants of the German Army and the French Forces of the Interior when Team 4 arrived in Paris, and in a few places their convoy had to take cover until the snipers could be routed. In one instance a captured German officer was brought out to order a sniper to cease firing and surrender. There was general restlessness among members of the French Forces of Interior (FFI), augmented by the heavy drinking they had done to celebrate the liberation, and at times they would fire at each other by mistake. At one time one of General LeClerc's tanks opened fire on the Petit Palace when a gunner mistook a CIC agent looking out a window for a sniper.* Two members of the force were wounded during one of these riots.

Immediately upon arrival of the "T" Force, a detention center was opened at the Petit Palace to house arrestees of CIC, SCI, and, in some cases, French Forces of Interior. After the first week of liberation, the Communications Zone Counter Intelligence Branch (CIB) arrived, took over the prison and moved it to the Rothschild Mansion on Avenue Foch and renamed it the Paris Interrogation Center. Counter Intelligence Branch maintained control of the prison until after the Bureau Securite Militaire (BSM) of the newly-arrived French government had passed through its uncertain trial stage and was able to take over. Almost from the beginning, however, most of the interrogations had been conducted by French inspectors and, after a few days, guarding was done by the Elite Republicaine de Paris. A motley crew of suspects was held in the prison: German military men in civilian clothes, miscellaneous German nationals, Gestapo agents, French collaborators, and even British and U.S. citizens who were subjects of suspicion because they had survived the German occupation without being interned. Although not a surprise, the biggest disappointment to CIC and Special Counter Intelligence agents was the fact that few ranking Nazis were caught, most of them having fled the city before its liberation.

Experiences with the Paris "T" Force convinced planners that this type of organization provided the most effective method for rapid reduction of targets in highly concentrated areas and, based upon reports and recommendations, plans were immediately set up for a more permanent type of organization for the reduction of cities yet to be entered. Since most of the personnel had been "borrowed," it was necessary for them to return to their parent organizations. For future operations most of the CIC agents were taken from 12th Army Group's 418th CIC Detachment instead of being drawn from the tactical CIC detachments as was done for the Paris force.**

CIC agents with the Paris "T" Force returned to their units and again resumed the forward march.

Chapter 5

OPERATIONS CHANGE AS FORCES NEAR GERMANY

Except for the fewer then 2,000 Allied soldiers who stopped off in Paris with the "T" Force, the reduction of that city was only a headline in Stars and Stripes. The others rushed on, with the Siegfried Line now as their goal. During the twenty-two days remaining of the period that was to be known officially as the Northern France Campaign, the Seventh Army and the Third Army joined below Troyes, thereby setting up a continuous Allied Line from the Mediterranean to the English Channel; Allied Forces pushed over into the Lowland countries and even, at a spot south of Aachen, broke over into Germany itself. But then the whole forward movement was jarred to a halt. The supply line emanating from Cherbourg had been lengthened to such a degree by the Allied advance, that many of the essentials of battle--gasoline, ammunition and bridging materials--became scarce enough to prevent further ground gains. The long supply route had accomplished what the German divisions had been unable to do.*

Several new CIC detachments joined the forward push during this period. Ninth Army became operational and with it its CIC detachment commanded by Major Donovan J. Ault, and III Corps with Major H. P. Wardwell as CIC Detachment Commander. Three new divisions arrived with CIC Detachment Commanders as follows: 26th CIC Detachment, Captain Noah A. Pennewell; 94th CIC, 1st Lt Carl K. Goodson; and 104th CIC, Capt Brooks P. Julian.**

Rapid Movement Curtails Investigations

The rapid advance during these weeks allowed division and corps CIC detachments only to scratch the surface of counterintelligence targets. More complete investigations had to be left for Army and Com Z detachments. For example, XIX Corps crossed the Seine on 1 September, the Somme on 2 September, and the Franco-Belgian border on 3 September, a distance of 170 miles in three days.

Even when large cities were captured, corps and division detachments paused only two or three days for rudimentary counterintelligence operations. Coverage admittedly suffered from this rapid movement. Lack of communications facilities often made liaison with other Allied intelligence agencies and even with other CIC detachments impossible. Detachments were forced to displace forward before effective informant networks could be developed and even before adequate liaison could be established with resistance leaders and local civil officials. CIC agents

** Unit Administrative Files, (Kansas City Records Center).

could only concentrate on reduction of routine targets and the handling of a few outstanding suspect cases, and attempt to aid local officials on major problems. The disposition of minor collaborators had to be left for local officials and the long-range investigations for the Com Z detachments who were to come in later.*

Civil security suffered from this rapid movement. There was not time to educate local officials sufficiently in their responsibility for the prosecution of travel restriction offenders. Some officials felt that, since these restrictions were in the form of military ordinances the U. S. military authorities should deal out the punishment. Finally the Regional Commissioner, appointed by General DeGaulle, promulgated the restrictions as civil laws. This helped only a little, however, due to the lack of mail or telephone service between the Regional Commissioner and local officials and a general disorganization in the chain of command. CIC spent much valuable time attempting to enforce rules which, by their very nature, could not be enforced during a disorganized situation.**

Resistance Groups Prove Less Helpful

Added to the civil security problem was the decline in the quality of the performance of resistance groups. These groups, once the good right arm of CIC, became in some instances more of a nuisance than a help. As the certainty of Allied victory became apparent, the Resistance developed into a haven for adventurous and criminal elements, furnishing a convenient background for the activities of young hijackers and self-styled Robin Hoods. In some cases, CIC found the French Forces of the Interior (FFI) intimidating duly constituted police authorities.

There were cases of counterintelligence target personalities penetrating "wildcat" resistance organizations and posing as "good patriots", of counterintelligence targets being killed by the Resistance before interrogation by CIC agents; of German agents being hastily arrested when their controlled freedom would have been more to CIC's advantage; of hundreds of persons being detained without records so that important counterintelligence targets were occasionally sheltered under false names as minor collaborators; and of undisciplined bands of armed "patriots" who were a greater menace than isolated groups of German soldiers.***

The usefulness of resistance groups was further lessened by the knowledge that many of the French Forces of the Interior (FFI) leaders were Communist and

*** Report of Operations (Final After-Action Report) 12th Army Group, Volume IV, p. 197-8 (Restricted).

that there was considerable antagonism between the many factions in the organization. CIC agents continued to encourage resistance workers to furnish information but were forced to adopt a "show me" attitude and to double check all information instead of accepting it as they formerly had been able to do.*

Resistance Workers Still of Tremendous Value

In spite of these difficulties, there were still many patriotic resistance workers who were of inestimable value to CIC. Resistance members continued to man road control points, guard buildings, and round up large numbers of collaborators and other minor suspects. One case, handled by the 83d CIC Detachment early in September, was particularly noteworthy. CIC's investigation revealed that the first picked up by the French Forces of the Interior (FFI) because she was asking numerous questions about the strength and disposition of American troops in her home town, had given every possible assistance to the Germans while they occupied Angers. Her personal papers contained names and addresses of many prominent Organization Todt officials in Germany. Unable to prove that the Countess had actually given intelligence information to the Germans, CIC turned her over to French authorities as a collaborator.

When the 83d CIC Detachment entered Tours, they found that much of their initial counterintelligence work had already been completed by the resistance, possibly because both the mayor and the prefect of police were resistance leaders. The officials handed over to CIC the records of the most dangerous persons, already lodged in jail, and a town plan showing the location of every German office and billet so that prompt searches could be made. They explained that resistance members were already at work in the former Gestapo headquarters, searching the files for information of interest to CIC.**

In the many areas where the resistance groups and civil officials were reliable, the civil security situation was satisfactorily handled in spite of the rapidity of movement. The 220th (XX Corps) CIC Detachment reported their area well under control during the latter half of August, due to the cooperation received from British and French Intelligence services, local police, gendarmerie, and resistance groups. CIC directives pertaining to curfew and travel restrictions were promulgated through the mayor's office, and road control points leading into the towns were manned by French Forces of the Interior (FFI) personnel under CIC supervision. "In all cases the public has reacted favorably," CIC reported.***

SECRET

With the help of resistance workers and civil authorities, the 220th CIC Detachment was even able to cope with the deliberate maneuver, launched by the Germans early in September, of releasing hundreds of forced laborers in the path of the Allied onrush in a desperate attempt to stall the advance by cluttering up the supply routes.*

In the VIII Corps area early in September, the 83d CIC Detachment reported valuable aid given by resistance personnel in screening Organization Todt workers and French civilians who were being evacuated from St. Nazaire through arrangements made by the division at the request of the Germans. Security control points were manned mainly by resistance workers and French civil authorities who reported any suspicious activities or persons to the two ADSEC CIC agents in the office in Angers.**

The 5th CIC Detachment reported excellent cooperation of the French Forces of the Interior (FFI) in maintaining control posts for the screening of refugees coming from east of the Moselle River early in September. Civilian traffic in this area consisted mainly of refugees from front-line homes and evacuees attempting to return to their homes to retrieve possessions left there. Not all the travelers were refugees and simple peasants, however. One Gestapo agent, one member of the German Workers Front (DAF), and a Nazi Party member were filtered out of the refugee crowd by 5th CIC Detachment. The detachment also sent sixteen persons to the prisoner-of-war enclosure and thirty-six to Civil Affairs for evacuation; and turned over seventy-three to local authorities, including the French Forces of the Interior (FFI).***

When four teams of the 1st CIC Detachment went into Liege on 9 September, they were told by one French Forces of the Interior (FFI) leader that he had 4,000 members willing to submit names of collaborationists and other dangerous persons and were informed by the Chief of the Army of Liberation that he had 67,000 members under his control ready to cooperate with the Allies. Whether these claims were exaggerated was not stated in reports that indicated that CIC received complete cooperation in this city. The Commissioner of Police loaned a lieutenant to CIC, and the governor of the Province of Liege placed all available facilities at CIC's disposal.****

CIC During Rapid Advance

A resume of three days' CIC activity with Patton's rapidly moving Third Army indicated the vital help given by members of the resistance, without whom little counterintelligence work could have been accomplished.

On the morning of 31 August, members of the 5th Infantry and 7th Armored Division CIC Detachments entered Reims, one of the first major objectives to fall to Patton east of the Seine. Within twenty-four hours, the majority of counter-intelligence targets had been reduced. French Forces of the Interior leaders gave preliminary information on suspects and explained that most of the prominent Nazis had fled. Search of abandoned German installations netted many documents, including 10,000 German maps in an old school house.*

Early the next morning, both detachments pulled out of Reims, leaving all pending cases with an advance team of the 220th (XX Corps) CIC Detachment. By nightfall, 5th and 507th CIC Detachment agents were in Verdun where they conferred with the 7th Armored Division Civil Affairs Officer, who had already made arrangements for curfew and travel restrictions. From a M. Martin, local French Forces of the Interior (FFI) Chief, the agents learned that all known Gestapo agents had fled, but probably had left behind some women accomplices. Martin furnished a list of all arrested collaborators, with brief statements of the charges against them, and all available information on Organization Todt workers and the chief of the local Parti-Populaire Francais (PPF), collaborationist party.**

From the French Forces of the Interior (FFI) and the Secretary-General, CIC obtained a list of thirty-three former German installations, and CIC agents from the 5th, the 507th, and the 220th CIC Detachments divided into five teams to search the buildings. This proved to be a laborious task. By the end of the next day, all but eight of the searches had been completed, and documents found had been forwarded to the 5th Infantry Division's Order of Battle team. Search of the remaining buildings was left for the 220th CIC, as were uncompleted investigations, when the 5th Infantry and the 7th Armored Divisions moved on at the end of the second day.

While in Verdun, CIC agents also arrested eighty suspects, based upon information obtained from the French Forces of the Interior (FFI) and other local informants. After preliminary screening, all but nineteen were released. Among those retained were one Legion Voluntaire Francais(LVF) member, four or five members

* 5th Inf Div CIC Daily Rpt, 31 Aug 44, in 5th Inf Div G2 Jnl (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

of the Milice, the local Parti-Populaire Francais (PPF) Chief, and several German and Italian nationals who were Organization Todt workers.*

From an informant, CIC agents learned that plans had been made to blow up the Citadel, a building being used as an air raid shelter. With the aid of French Forces of the Interior (FFI) members, agents searched the building and found approximately twenty-five thousand 105 MM. shells and a large quantity of dynamite, wired for instant detonation. French Forces of the Interior members were directed to neutralize the charges and place a guard about the structure. The former Commanding Officer of the local arsenal, who reportedly had been assigned the task of setting off the charge, was said to be hiding in Verdun, but could not be located.**

Increased Numbers of Collaborationists Found

Even before the Normandy Breakout, it had become obvious that one of CIC's major objectives during the sweep across France would be the apprehension of thousands of collaborators. In fact, endless numbers of these persons were arrested. Their offenses ranged from social relations with Germans to denouncing patriots and assisting in their apprehension and interrogation, often involving brutal torture and killings. These persons usually were turned over to French authorities for handling.***

As the Allied Armies swept past Paris and neared the German border, members of subversive organizations were being encountered in ever-increasing numbers. A survey of the Milice in Fontainbleau by the 220th CIC Detachment early in September resulted in the arrest of approximately fifty members, all of whom were turned over to French civil authorities for disposition.**** More than 100 members of the Sturm Abteilung (Brown Shirts) were arrested in Hayange by 220th CIC Detachment agents, who evacuated those above the grade of Sturm Fuehrer through prisoner-of-war channels and turned the remainder over to the French Forces of the Interior (FFI). A search of the Sturm Abteilung and the Hitler Jugend Headquarters netted many propaganda documents.*****

Most Espionage Suspects Minor Security Risks

During this period CIC was not yet encountering many trained German espionage agents but a number of low-level agents, line-crossers of limited ability, whom the German Intelligence Service (GIS) evidently considered expendable, were captured.*

A few seemingly bona fide espionage agents were captured, but even these seemed to be mainly of the collaborationist variety. Two individuals, picked up by the 83d Infantry Division CIC Detachment during the second week of September, had allegedly been Gestapo agents. arrested on 14 September, confessed that she had been an interpreter for the Sicherheitspolizei at Elois and mistress to the chief of the same office. After interrogation by 83d CIC agents, she was turned over to the civilian interrogation cage at LeMans with her confession and accompanying papers. who was arrested by the French Forces of the Interior (FFI) and denounced by a number of French citizens in Chatellerault as a Gestapo informant, was also released to the interrogation cage with signed denunciations and supporting documents.**

About the same time, the 220th CIC Detachment was processing two espionage suspects, arrested in Hayango on 14 September. was evacuated to the rear through 90th Infantry Division channels, but a blockleiter considered dangerous by the French Forces of the Interior (FFI) was held for further investigation.***

Minor Suspects

CIC agents doing road patrol work to intercept suspicious individuals often made unexpected discoveries. When agents of the 5th CIC entered the town of Vionville, they found a colony of thirty-one Russians who had worked for the Germans at a factory in Ars. Their location was reported to the division Civil Affairs officer and arrangements were made for evacuating them to Verdun, where they were to be screened by the Third Army CIC Detachment.****

6th Armored CIC in Montargis

As 506th CIC agents first moved into Montargis, which served as their center of operations for early September, they were handed lists of informants and suspects

and other pertinent counterintelligence data by the departing 35th CIC Detachment. After sending a former interpreter for the Germans to the Master Interrogation Center for further processing, agents began investigating a surly Frenchman and his daughter, who alledgedly had been voluntary informants for the Germans. The father, decidedly pro-German in his sentiments, had, it was alleged, threatened to shoot Allied parachutists, and his daughter had willingly served as the mistress of the German commander in Gien. Both were placed in the Gien Prison to await trial by a French court.*

Later, five political collaborators and twenty-eight prisoners of war, and a Polish national, charged by the French Forces of the Interior with espionage, were delivered to the Montargis Prison by the 506th agents.** At a point near Gien where boats shuttled back and forth across the Loire River, 506th CIC agents made arrangements for the establishment of a control point to check for possible enemy agents and line-crossers.***

Radio Transmitters Sought

Agents spent some time during the Northern France campaign searching for radio transmitters, hidden firearms and caches of sabotage materials. Agents of the 5th CIC Detachment, while looking through the home of a suspect in Thiaucourt, discovered a French-made short wave sending and receiving set. Investigation indicated, however, that the set had not been used to transmit information to the enemy.**** Another radio transmitter, belonging to a Captain Miltat, French Forces of the Interior (FFI) official, was found when agents searched a building in Les Baraques, but the captain declared that he had used the transmitter only to send messages to the FFI in Metz.***** One Alfred Py of Montargis was the principal figure in a transmitting set case handled by 506th agents in early September. Suspected of operating the set for the recently departed Germans, Py was investigated and his home searched, but the evidence found served only to link him with the black market.******

Chapter 6

"T" FORCES REDUCE LARGER CITIES

The weaknesses in counterintelligence coverage caused by the rapidity of movement were partially alleviated by continuation of the policy of using "T" Forces for the reduction of targets in the larger cities. With the personnel who remained following the Paris mission, "T" Force moved its headquarters to Verdun and prepared for future operations. Luxembourg City, Nancy and Metz were selected as future targets. In order to accomplish the three missions simultaneously, "T" Force was divided into three groups. The main party, under command of Colonel Tompkins, proceeded to Luxembourg City, while Captain William E. Johns led a group into Nancy and Lt. William L. Bell and his force struck out towards Metz.

Reconnaissance Made of Counterintelligence Targets in Luxembourg

On 11 September, on a reconnaissance of Luxembourg City to determine the status of target exploitation there, it was found that the only intelligence agency in the city was the 505th CIC Detachment. Two days later, the main body of "T" Force moved into the city, establishing its Command Post in the Reichsbahn Building.

Due to the speed of advance of American forces in Eastern France and through Luxembourg, target information had not been compiled or dispatched to members of the "T" Force for use in reducing Luxemburg City. Consequently, the bulk of target exploitation was based on targets of opportunity developed after the beginning of counterintelligence operations in the city. In all, 109 buildings and sixty-six personality targets were selected and exploited. A total of 572 persons and 128 vehicles were employed in the Luxembourg counterintelligence operation.

Perhaps the most outstanding single physical target in the Luxembourg area was Radio Station Luxembourg, captured by the 5th CIC Detachment in a condition which permitted its restoration and early use by Psychological Warfare personnel of Headquarters, 12th Army Group. "T" Force personnel assisted in repairing and subsequently in safeguarding the damaged station after it had been repaired.

After completing preliminary counterintelligence work in Luxembourg on 10 October, Colonel Tompkins' "T" Force group moved to Spa, Belgium, leaving responsibility for remaining targets with ADSEC CIC detachments with whom liaison had been maintained throughout.

CIC Sub-Force Enters Nancy

Meanwhile, a sub-force, headed by Captain Johns, entered Nancy on 15 September, where they met 35th CIC agents. Combining their activities, the two groups

reduced thirty-one buildings and fifty-four personality targets within seventy-two hours. Strength of this "T" Force was sixty-eight persons and eighteen vehicles.

Captain Johns' sub-force completed operations on 18 September and withdrew, rejoining the main "T" Force in Luxembourg City the same day. Since the Nancy operation had been designed only to assist 35th CIC, normal "T" Force files were not maintained and the division CIC unit was responsible for targets in the city.

The remaining sub-force arrived outside Metz on 12 September. While in a bivouac area, the force was subjected to a severe artillery bombardment, that caused casualties and vehicle damage. It soon became apparent that Metz was not going to fall as soon as had been expected. Therefore Colonel Tompkins ordered the sub-force to join the main force in Luxembourg City. Later, the mission of exploiting counterintelligence targets in Metz was withdrawn from the "T" Force. Following these French missions, "T" Branch of 12th Army Group began advance planning for "T" Force missions in Germany.*

Chapter 7

LOWLANDS CITIZENS LESS SYMPATHETIC

When American troops crossed the Franco-Belgian border and penetrated into Luxembourg and the Netherlands, they entered areas where the people were less sympathetic toward the Allied cause than were the French. Although the majority of the citizens sincerly welcomed liberation from Nazi tyranny, large segments of the population were either pro-German or apathetic toward the Allies.*

Of the three Lowland countries, Belgium, the Netherlands and Luxembourg, the first undoubtedly posed the most serious threat to security. Situated between two traditional foes, Germany and France, and having been compelled to deal with both, Belgium trusted neither until her independence and future security were guaranteed.

It was only natural, then, for many Belgians to have a double agent mentality. This situation required that CIC, as well as other Allied intelligence agencies, check and recheck the credibility, political tendencies and loyalty of Belgian officials, informants and employees.**

Belgium in Throes of Political Conflict

An additional hazard to counterintelligence operations was the fact that Belgium was in the throes of a severe political conflict, with the eventual outcome uncertain. Wide divergence of views between the Flemish and the French-speaking groups made even the final preservation of national unity doubtful. King Leopold was the source of much irritation, with the French-speaking people blaming him for having "sold out" to the Germans.

During their four years of occupation, the Germans had expertly widened the breach by showing strong favoritism to the Flemish. Germanophiles even before the war, the Flemish people were bribed and cajoled by Hitler to support the Fatherland. Flemish prisoners of war were returned, and Flemish officials were given pecuniary and political preferences as well as better food and other recommendations. All this naturally aroused the resentment of the French-favoring population.

By the time CIC arrived, several political parties were contending for the control of Belgium. On the extreme right were the Rexists, who, although quickly

** FUSA G2 Estimate, Sep 44, in L-379, FUSA G2 Jnl & File (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

arrested or driven underground, constituted the major sabotage and espionage threat. The Catholic Party, which had been the next most reactionary group in 1940, now appeared to be a middle-of-the-road party. The Socialist party had a pinkish tint, and the Communist party had reached such serious proportions that it was regarded as one of the most successful branches of the Third Internationale.

CIC To Observe "Hands Off" Policy

In recognition of this highly unstable political situation, CIC agents were instructed to take extreme precautions against expressing political opinions. No assurances, promises or prognostications were to be made by CIC or any other military agency while dealing with the civilian population. In fact, the subject of the future government of Belgium was to be avoided by First Army personnel at all costs.*

Since Belgium had to be regarded officially as liberated, not conquered, territory, and security regulations were tempered accordingly,** CIC had to base security plans upon the presumption that they would meet greater hostility than they had in France, due to both German sympathies and the unstable political situation. Travel controls were tightened and new efforts were made to apprehend collaborators and enemy agents.

Belgian Underground Composed of Four Groups

As was true in France, CIC soon became dependent upon local resistance groups for aid in seizing fugitives. Although armed belatedly, the resistance movement in Belgium, particularly in the French-speaking provinces, earned the respect of First Army intelligence personnel.

The underground, commonly referred to as the White Army, consisted of four groups. Major Emil Demey was the head of the White Army, but there was official doubt that he ever received the cooperation of more than half the organization at one time. Of the four groups, the Belgian Secret Army was the largest, consisting of from 12,000 to 15,000 men, but it suffered from a lack of weapons and a specific mission. The next largest, the Army of Liberation, was the one most commonly utilized by CIC as a civilian agency to deal with local political administration and police officials. The other two groups, the Front de L'Independence and the Belgian National Movement, contained many radical elements and were communistic in their

** Report of Operations (Final After-Action Report) 12th Army Gp, Vol II, p. 198.

allegiance. Prior to the arrival of the Allied troops, however, both of these leftist groups had done some excellent sabotage work.*

Nazi Collaborators Active

Typical of the Nazi collaborators whom CIC had expected to find in Belgium was Valentin Vandoorne, arrested by Agents Richard C. Lang and Adrian J. Pinsince of 1st CIC Detachment two days after their arrival in Mons, Belgium, on 4 September. Investigation revealed that Vandoorne was the leader of a ruthlessly pro-German unit, the Rexist Party. Local citizens accused him of sending information to Germany via radio transmitter at the time of the French retreat in 1940.

A search of Vandoorne's home revealed much Rexist literature and papers relative to the Waffen Schutz Staffeln. After preliminary interrogation, he was taken to the VII Corps Civilian Collecting Point for further questioning and disposition.**

Rexist Party Information Obtained

Marcel Dosweld, a patriotic Belgian who had penetrated the Rexist party, gave CIC agents vital information concerning the party's membership and activities. Dosweld reported that Leon Degrelle, national party leader, had agreed to recruit a quarter of a million persons for labor inside Germany in return for a promised generalship in the German Army. As a result, ruthless methods were used by the Rexists to obtain forced laborers.

During July 1944, the Rexists had organized a special group within their party called "Service B," with the mission of staying behind as German agents when the Allies liberated Belgium. The majority were recruited from the Hillsfeldgendarmerie, an auxiliary German military police organization. Dosweld gave CIC an extensive list of the personnel of "Service B," which later aided in the apprehension of many members of this special group.***

Carrier Pigeon Menace Becomes Serious

The danger of carrier pigeons as espionage couriers, which had been encountered throughout France, received renewed impetus in Belgium where pigeon raising was a national sport. It was estimated that there were at least eighteen

*** Ibid., 7 Sep 44.

thousand registered birds. Although the Germans had ordered all carrier pigeon lofts padlocked, it was common knowledge that the birds had been used to carry intelligence information between Belgium and England during the Nazi occupation.

CIC attempted to control this possible avenue of espionage by also ordering that pigeon lofts be locked. Violators were fined and sometimes imprisoned. Although numerous front line American units reported seeing pigeons flying toward enemy lines, it was never ascertained whether German Intelligence profited by the use of the birds.*

The Battle Moves to the Reich

On the afternoon of 13 September, on the 100th day after the invasion of Normandy, the lead tanks of the Third Armored Division broke across the German border through a soft spot in the Siegfried Line, just ten miles south of Aachen. After three successive invasions of Western Europe in 74 years, the German Army for the first time had to fight in its homeland.

The following day, 14 September, marked the end of the Northern France Campaign and also the end, for several months, of any rapid forward movement. The Allied Armies had run far ahead of their supply lines and had to wait until the long line from Cherbourg was replaced by another from Antwerp.**

Part III - Southern France (15 August - 14 September 1944)

Chapter 1

PREPARATION FOR INVASION

"Where are the Allied divisions being sent?"* This was the question of Kesselring's agents during the time plans were being made for the invasion of Southern France. But they did not find out in time. Official Seventh Army Reports say, "The shock and surprise of the landings in Southern France so disorganized the (German) Nineteenth Army that its commander, General Friedrich Wiese, never succeeded in assembling the bulk of his forces to attempt to contain the beachhead."** Not until 17 August, D plus two of the invasion of Southern France, did Colonel Meinhausen, Chief of Staff of the German LXII Corps, learn even the nationalities of the invaders, whom he had assumed would, for psychological reasons, be French. But Colonel Meinhausen and his entire staff were captured several hours after learning this information. Colonel Meinhausen further admitted that when the invasion convoy was seen to set sail, the German forces along the entire coast of Southern France and the north coast of Italy had to be alerted. But none of the forces could be moved to meet the brunt of the invasion. The Germans just did not know where the Allies were going to land.***

A Good Job!

Clearly those responsible for the pre-invasion security had performed an excellent job: five-hundred ships had carried 155,419 troops, 20,031 vehicles, and virtual mountains of materiel more than four-hundred miles into an almost undefended area in Operation DRAGOON.****

Serious planning for Operation DRAGOON, then called ANVIL, began on 12 January 1944, when the Planning Group under Command of Brigadier General G. H. Davidson arrived in Algiers from Sicily. Planning Headquarters, designated "Force 163," was located in the Ecole Normale, in the suburb of Bouzareah, high above Algiers.*****

2159

Major Kenneth Crowell was appointed commanding officer of the all-important Force 163 Counter Intelligence Corps Detachment. Under him were Technical Sergeants Alan Dinehart and Bertel Sparks, Sergeants Woodrow French and Marshall Haseltine, and Corporal George Perper.*

Force 163 security planners faced one problem which was possible unique to this operation. Algiers was then the heart of the Free French movement, the true seat of the Comitè de la Liberation. To local exiles, if not to German intelligence, an invasion of Southern France would seem the most obvious of moves. A slight slip here could easily develop a wide-spread rumor more quickly than anywhere else in the world at that time.

In the name of security, Major Crowell recommended that a very minimum of persons be allowed access to the planning. Sponge rubber maps in the War Room were zealously guarded, as were the thousands of air photographs, tourist reports, post cards, and old Baedekers, most of which pertained to the South Coast of France. Personnel working at Bouzareah told friends only that they were with AFHQ; no mention was made of Force 163.**

On 19 March 1944, its work over, Force 163 was officially discontinued and its CIC personnel were transferred to Seventh Army CIC.***

Major Crowell, Commanding Officer of the Seventh Army CIC Detachment, kept his efforts directed toward maintaining the security of the proposed landings. He placed agents under cover in a variety of spots; hitch-hiking officers and enlisted men were questioned by Seventh Army CIC; agents were scattered among the officers and nurses of the 45th General Hospital; agents were placed in the Naples Officers' Transient Mess and in a variety of clubs frequented by military personnel.

The results of such undercover and quasi-undercover operations were discouraging. It seemed common knowledge that a Task Force was forming. Worse, the 3d, 45th, and 36th Infantry Divisions were those chiefly, and correctly, named as constituting this Force. Rumors circulating the nurses' headquarters correctly named Southern France as the target area--with Yugoslavia running a distant second. The time of D-Day was well estimated; it was common knowledge that by 18 July the 3d Division had begun a three-week period of amphibious training so the landings were correctly expected to fall within 30 days of that date.

---

* CIC, AFHQ, Ltr. Subject: February CIC Situation Summary, to ACofS, G2, AFHQ, 21 Mar 44, Appendix "B", CIC, AFHQ Roster dtd 29 Feb 44, (Secret), (Staff and Faculty Library).

** Report of Operations, The Seventh Army in France & Germany, 1944-1945, Vol I, p. 27, (Unclassified), (AIS Staff and Faculty Library).

*** 2678th Hqs Co., CIC (Prov) AFHQ, Order No. 26, dtd 19 Mar 44. (Conf), (Kansas City Record Center, Box 25102).

Apparently little attempt had ever been made to keep secret identities of the component units; shoulder-patches were worn openly, and Seventh Army Headquarters was clearly marked as such.

On the other hand, it was reported that little talk was heard concerning the presence of French troops in this operation. Similarly encouraging was the conclusion that much of the gossip had been set in motion by a German propaganda broadcast of 16 July, obviously a wild shot in the dark, which warned American forces of a grim welcome prepared for them in France.

The conclusion was inescapable, however, that within Seventh Army, military security was not what it should be. It was suggested that a vigorous security program be initiated by CIC in cooperation with unit commanders.*

CIC Prepares for Its Part in the Invasion

While part of Seventh Army CIC's efforts were directed at security of the final staging area in Naples, the rest of the time was spent on clerical work. From material received from occupied France, CIC spent long hours compiling a personality card index and files on various areas and specific targets. However, the whole operation proved futile because the cards failed to arrive until long after the invasion and, more important, long after CIC had ceased to operate in the areas dealt with in the files.**

Seventh Army CIC established liaison with other Allied intelligence and counter-intelligence agencies. In addition, they investigated personnel engaged in confidential duties for the military.

Since Seventh Army CIC was running few of its own investigations, agents with Army were usually loaned to CIC of the lower units charged with active investigations. Seventh Army CIC did, however, run security surveys on all Army and Peninsula Base Section installations, and it continued to place undercover agents in establishments frequented by Allied troops.***

With activity now concentrated in the Naples area, corps and division detachments assumed the bulk of the investigative operations. Agents of the 206th CIC Detachment (VI Corps), commanded by Major Harry G. Costello, reported close liaison with local Peninsula Base and Port Security agents as well as with Naples

*** 307th CIC Det Aug 44 Situation Summary; dtd 31 Aug 44, (Conf), (Kansas City Records Center, Box 25099).

Servizio Informazione Militaire officials. Within the Corps area, communications were all but suspended during the final weeks before the embarkation. Mail was censored and all telephone calls were subject to monitoring. Travel control regulations were strictly enforced. During the last few days civilians found within restricted areas were apprehended and temporarily incarcerated.

A well-developed informant net was employed to determine evidence of enemy espionage activity. Undercover agents observed civilians who worked in establishments frequented by troops, while other agents spent much time among the troops, listening for promiscuous talk concerning military matters.

Within the CIC units, provisions of AR 380-5 were strictly followed, and attempts were made to obtain similarly faithful adherence elsewhere.*

Division detachments were no less occupied. The 36th CIC Detachment reported that "loose talk in the 36th Infantry Division has been brought to a standstill through the educational program instituted by the CIC Detachment of the Division." It was reported, however, that "units which have been attached to this Division for the first time have, in the past, been very lax in their security measures."**

A security check run by the 36th CIC Detachment of their new division area disclosed that the previous occupants there, an unidentified Air Force unit, had left behind pay records which included the name, rank, and serial number of every man in the unit. These documents were turned over to Peninsula Base Section CIC.

Another investigation disclosed the fact that a private of the 36th Infantry Division had managed to have two prostitutes follow him to the new division area. He admitted to CIC agents that he had given the girls a slip of paper telling his name, rank, and serial number, as well as his new address. CIC suggested that he be court martialed for this violation of AR 380-5.

The 36th CIC Detachment arrested 47 civilians for a variety of reasons. Of more importance was the capture of Alfonso Manzione, a man who was several times warned to stay away from military areas, but who, apprehended again trespassing a restricted zone, was unable plausibly to account for his presence.***

CIC School Operates in Naples

During the last two weeks of July many CIC agents within Seventh Army area attended CIC School at Naples to receive a comprehensive briefing in the problems

* 206th CIC Det, Monthly Situation Summary for Aug 44; dtd 31 Aug 44. (Secret), (Departmental Records Branch, AGO, Alexandria, Va.).

** Annex to 36th CIC Det Situation Summary for July 1944; dtd 31 Jul 44. (Conf), (Kansas City Records Center, Box 25095).

*** Ibid.

which they were soon to encounter. The first day of instruction, 17 July 1944, covered the history of the Corps in past campaigns and such general administrative matters as the relationship of CIC to G2. On the next day the mission of the Army and that of CIC were treated. Subsequent days covered: reading of American and foreign maps, care of firearms and jeeps, and field trips. Other classes were devoted to extensive training on France and the French. Police, resistance groups, and civilian agencies were explained in detail as were such American agencies as Office of Strategic Services, Civil Affairs, Provost Marshal, and Psychological Warfare Branch. Detailed review was given in the tools of CIC operations: the techniques of interrogation, office procedure, port security coverage, travel control, and a variety of others. Difficult problems of coordination between U.S. and French intelligence agencies at army, corps, and division level were discussed. Interspersed throughout the course were periods of weapons practice. Instructors were recruited from among agents of all ranks; all had experience in the specialized fields they were called upon to discuss.*

On D minus 1 (14 August), the four provisional detachments, the 6795th, 6796th, 6797th, and 6798th which had served as the Seventh Army Detachment, were deactivated and the 307th was activated with a strength of seventeen officers and fifty enlisted agents.** Other CIC detachments ready to go forward with invading forces were: 206th (VI Corps), commanded by Maj. Harry G. Costello, Jr.; 3d, Capt. Walter E. Greene; 45th, Capt. Rupert W. Guenther; 36th, Capt. John G. Hammond; 427th (Delta Base Section), Maj. Clarence E. Read; and the 429th (Continental Advance Section), Maj. John C. Schwarzwalder.

CIC Helps Fool the Germans

The attackers of Southern France employed deceptive feints of equal complexity with those of the Normandy invasion with the same overpowering success. To dupe the Nazis successfully demanded complete cooperation from CIC, which until the invasion proper played generally a passive role against the enemy.

Since preparations for a three-division landing could hardly pass unnoticed, a variety of measures were employed to confuse the enemy. CIC was in on the ground floor of such work. Enemy agents sent down by Kesselring, chiefly into Northern Italy, were captured with regularity. CIC placed these men at the disposition of Special Counter Intelligence (SCI) who managed to double most of them, and send them north with detailed and consistent misinformation concerning the next Allied move.***

---

* Seventh Army, Briefing and Training Schedule, CIC Det; dtd 14 Jul 44, (Conf), (Kansas City Records Center, Box 25102).

** Hqs, Seventh Army, General Order No. 28, dtd 14 Aug 44 (Conf), (Kansas City Records Center, Box 25102).

*** Condensed from Schwarzwalder, We Caught Spies, and Clark, Calculated Risk.

At 1800 hours on 14 August two diversion forces set sail from Naples. Accompanied by warships, they sailed north, the one headed west of Marseille, the other steaming toward North Italy. That night five aircraft left Corsica--equipped to appear as five times that number to enemy radar.

During that same eventful night of 14-15 August the First Special Service Force (English) ran commando assaults on the left flank of the target beaches, against the islands of Levant and Port Cros. So complete was the Germans' surprise that by the end of 15 August all resistance had ceased on Levant, while the 80-odd enemy left on Port Cros were huddled together in an old fort at one end of the island.*

In all, ten routes were used by the ships which carried troops and materiel into the landings. Some sailings were made from as far away as Oran, North Africa, or Brindisi on the east coast of Italy. The 3d, 36th, and 45th Infantry Divisions all sailed from the Naples area on 11, 12, and 13 August--timed so that the slower ships set out first. Generally the convoys followed closely the ten prearranged paths, for these were the areas which had been swept clear of mines, but sufficient deviations were employed to confuse the enemy as to the eventual destination.**

As the invasion fleet sailed away to the north, CIC agents who remained behind attempted to evaluate results of their work in order to make such operations in the future the more secure. Several serious breaches of security were discovered. For instance, in Corsica, when the fleet had stopped briefly, investigation disclosed that the roster for the officers' mess was missing. CIC believed that this roster, though it contained names of many officers enroute to France, would be of little aid to the enemy, and that fact, coupled with a complete lack of clues in the case, made them decide to consider the matter closed. Sufficient security measures were instituted, however, to prevent repetitions of such an occurrence.***

The 428th CIC Detachment discovered that several enlisted men of the 6654th Signal Message Company, who through normal duties had access to Top Secret information concerning the landing, had indulged in an appreciable amount of loose talk.

*** 427th CIC Det Monthly Intelligence Summary, Northern Base Section, dtd 31 Aug 44, (Secret), (Staff and Faculty Library).

CIC concluded that carelessness, rather than subversive intent, underlaid the breach of security.*

CIC Plans Operations In France

Having completed their vital work of contributing to the complete security of the invasion, or, at least of the invasion's destination, Seventh Army CIC agents looked forward to several of the more important aspects of their future work.

Preparations had been made to deal with friendly French forces as soon as possible after establishment ashore. CIC believed that there were between 15,000 and 20,000 armed members of the Maquis, or French Forces of the Interior, and upward of 30,000 members mobilized, but unarmed, in Southern France. Several areas of France were believed already to be under French Forces of the Interior control.

Already radio contact with the French Forces of the Interior was being carried on at a high rate of efficiency, and had developed much valuable information concerning the target area. General Cochet, appointed by General DeGaulle, had assumed command of the French Forces of the Interior several days before the landings. He had assigned the Forces the task of hampering the Germans in Southern France from the rear, with special emphasis given to the destruction of bridges, cutting of roads, blocking of railroads, and the seizing of telegraph and telephone lines.**

CIC agents maintained close contact with these French Forces of the Interior throughout the campaign in France. They were to prove both a boon and a bother. The existence of this often fanatically revengeful army helped to provide CIC with a reputation of being just and charitable, if only by comparison. And since the French Forces of the Interior were quick and willing to assume punitive powers, CIC would easily be able to avoid the stigma which would necessarily follow even the fairest punishment of Frenchmen by Americans, were they to assume the role themselves.

which they were soon to encounter. The first day of instruction, 17 July 1944, covered the history of the Corps in past campaigns and such general administrative matters as the relationship of CIC to G2. On the next day the mission of the Army and that of CIC were treated. Subsequent days covered: reading of American and foreign maps, care of firearms and jeeps, and field trips. Other classes were devoted to extensive training on France and the French. Police, resistance groups, and civilian agencies were explained in detail as were such American agencies as Office of Strategic Services, Civil Affairs, Provost Marshal, and Psychological Warfare Branch. Detailed review was given in the tools of CIC operations: the techniques of interrogation, office procedure, port security coverage, travel control, and a variety of others. Difficult problems of coordination between U.S. and French intelligence agencies at army, corps, and division level were discussed. Interspersed throughout the course were periods of weapons practice. Instructors were recruited from among agents of all ranks; all had experience in the specialized fields they were called upon to discuss.*

On D minus 1 (14 August), the four provisional detachments, the 6795th, 6796th, 6797th, and 6798th which had served as the Seventh Army Detachment, were deactivated and the 307th was activated with a strength of seventeen officers and fifty enlisted agents.** Other CIC detachments ready to go forward with invading forces were: 206th (VI Corps), commanded by Maj. Harry G. Costello, Jr.; 3d, Capt. Walter E. Greene; 45th, Capt. Rupert W. Guenther; 36th, Capt. John G. Hammond; 427th (Delta Base Section), Maj. Clarence E. Read; and the 429th (Continental Advance Section), Maj. John C. Schwarzwalder.

CIC Helps Fool the Germans

The attackers of Southern France employed deceptive feints of equal complexity with those of the Normandy invasion with the same overpowering success. To dupe the Nazis successfully demanded complete cooperation from CIC, which until the invasion proper played generally a passive role against the enemy.

Since preparations for a three-division landing could hardly pass unnoticed, a variety of measures were employed to confuse the enemy. CIC was in on the ground floor of such work. Enemy agents sent down by Kesselring, chiefly into Northern Italy, were captured with regularity. CIC placed these men at the disposition of Special Counter Intelligence (SCI) who managed to double most of them, and send them north with detailed and consistent misinformation concerning the next Allied move.***

*** Condensed from Schwarzwalder, We Caught Spies, and Clark, Calculated Risk.

At 1800 hours on 14 August two diversion forces set sail from Naples. Accompanied by warships, they sailed north, the one headed west of Marseille, the other steaming toward North Italy. That night five aircraft left Corsica--equipped to appear as five times that number to enemy radar.

During that same eventful night of 14-15 August the First Special Service Force (English) ran commando assaults on the left flank of the target beaches, against the islands of Levant and Port Cros. So complete was the Germans' surprise that by the end of 15 August all resistance had ceased on Levant, while the 80-odd enemy left on Port Cros were huddled together in an old fort at one end of the island.*

In all, ten routes were used by the ships which carried troops and materiel into the landings. Some sailings were made from as far away as Oran, North Africa, or Brindisi on the east coast of Italy. The 3d, 36th, and 45th Infantry Divisions all sailed from the Naples area on 11, 12, and 13 August--timed so that the slower ships set out first. Generally the convoys followed closely the ten prearranged paths, for these were the areas which had been swept clear of mines, but sufficient deviations were employed to confuse the enemy as to the eventual destination.**

As the invasion fleet sailed away to the north, CIC agents who remained behind attempted to evaluate results of their work in order to make such operations in the future the more secure. Several serious breaches of security were discovered. For instance, in Corsica, when the fleet had stopped briefly, investigation disclosed that the roster for the officers' mess was missing. CIC believed that this roster, though it contained names of many officers enroute to France, would be of little aid to the enemy, and that fact, coupled with a complete lack of clues in the case, made them decide to consider the matter closed. Sufficient security measures were instituted, however, to prevent repetitions of such an occurrence.***

The 428th CIC Detachment discovered that several enlisted men of the 6654th Signal Message Company, who through normal duties had access to Top Secret information concerning the landing, had indulged in an appreciable amount of loose talk.

CIC concluded that carelessness, rather than subversive intent, underlaid the breach of security.*

CIC Plans Operations In France

Having completed their vital work of contributing to the complete security of the invasion, or, at least of the invasion's destination, Seventh Army CIC agents looked forward to several of the more important aspects of their future work.

Preparations had been made to deal with friendly French forces as soon as possible after establishment ashore. CIC believed that there were between 15,000 and 20,000 armed members of the Maquis, or French Forces of the Interior, and upward of 30,000 members mobilized, but unarmed, in Southern France. Several areas of France were believed already to be under French Forces of the Interior control.

Already radio contact with the French Forces of the Interior was being carried on at a high rate of efficiency, and had developed much valuable information concerning the target area. General Cochet, appointed by General DeGaulle, had assumed command of the French Forces of the Interior several days before the landings. He had assigned the Forces the task of hampering the Germans in Southern France from the rear, with special emphasis given to the destruction of bridges, cutting of roads, blocking of railroads, and the seizing of telegraph and telephone lines.**

CIC agents maintained close contact with these French Forces of the Interior throughout the campaign in France. They were to prove both a boon and a bother. The existence of this often fanatically revengeful army helped to provide CIC with a reputation of being just and charitable, if only by comparison. And since the French Forces of the Interior were quick and willing to assume punitive powers, CIC would easily be able to avoid the stigma which would necessarily follow even the fairest punishment of Frenchmen by Americans, were they to assume the role themselves.

On the other hand, it was a force to be watched; it was powerful, and, for various reasons, many of its members were excessively vengeful. Public opinion would undoubtedly allow them a great amount of authority. Extremists within this organization would have a clear path toward positions of great personal power. Then again, by the nature of its militant anti-Fascism, the French Forces of the Interior would be a natural and ready home for French Communists.

Lastly, it was expected that traitors and collaborationists would be quick to dress themselves with French Forces of the Interior armbands, and offer their services to the Allied liberators.*

CIC advance planners realized that the drastic limitations on numbers of their personnel would make it impossible for them to cover the territory alone. Often they would require help from their French counterpart, Securite Militaire (SM).

One Seventh Army Memorandum stated the official policy: "The maintenance of French sovereignty, a principle subscribed to, in all confidence, by the Allied Forces must be assured."** CIC agents were studying, without complete understanding, the complex of administrative detail involved in the new patterns of liaison. CIC noted: "It must be well understood that bilingual reports are distinct from those prepared within the service itself, whenever an arrest on charges of actual espionage is made," and "In the event that any element of the CIC is not in permanent liaison with some French Securite Militaire, it must make up its bilingual arrest reports, not in one, but in three copies and submit them to Securite Militaire 163 through channels."***

Chapter 2

ENEMY TAKEN BY SURPRISE

In its attempt to discover Allied intentions for the invasion of Southern France, German intelligence had failed miserably; Seventh Army concluded that: "The disposition of German forces, including their espionage agents, was based more on Weltanschauung [overall world-view] than on facts discovered by the German Intelligence Service." Last minute Allied feints had led the German Command to anticipate landings near either Marseilles or Genoa, Italy, and to the very end they had supposed that only French troops would be employed in any assault.*

CIC Lands with the Troops

Some CIC agents attached to division units went ashore on D Day, 15 August. Agents with the first waves of troops went ashore at three points--Agay, St. Raphael, and Cannes. The principal duty of these agents was the establishment of FFI-manned road blocks and interrogation centers.

The 307th CIC Detachment followed on D Day plus 1. The initial command post for the 307th was established at St. Tropez. Kenneth Crowell, the 307th's commanding officer, recalled that in the early stages of the operations in Southern France combat intelligence was of much more importance than counterintelligence. The latter, for the time being, consisted primarily of control of the civil population. Crowell felt that, although FFI members were numerous enough to man any number of posts, the situation was altogether too fluid to allow any travel control system to be effective. In the initial landing, there was little inkling of what direction the Americans were going to take or how fast they were going to be able to move.

In spite of the fluid aspects of the campaign at this point, CIC was able to make some valuable contacts in the first few hours--contacts that would not have been made had CIC not come ashore with the tactical units.**

Nazis Leave Trained Agents In Southern France

In Southern France, however, waited a carefully organized network of well-paid and conscientiously-trained espionage agents--men who proved themselves

** Interviews with G. Kenneth Crowell, Chigago, Ill., at the NCICA Convention, Hotel Waldorf-Astoria, New York, N.Y. 6 Aug 55; Philip O'Brian, Worcester, Mass., at the NCICA Convention Hotel Waldorf-Astoria, New York, N.Y., 5 Aug 44; Victor de Guinzbourg, Brooklyn, N.Y., at Room 620, Library Building, United Nations, New York, N.Y., Aug 55.

far better prepared for the Allied landings than their uniformed compatriots. The Abwehr and Sicherheitsdienst (Security Service) had scattered many agents about Marseille, and in the attractive Riviera cities of Cannes, Nice, and Monte Carlo. Allied conquest of this area, in itself, did not disturb this espionage net, since its effectiveness began only when operating in other than German-held territory.

Most of the agents proved to be natives of France, men who had received their military training in the French Army. They were educated in espionage, and all had access to radio transmitters. For the most part comfortably and inconspicuously established, they lived with their families, and, since they had been instructed to steer clear of collaborationist activity and other overt manifestations of their ultimate loyalty, they were not to be easily spotted by either the French or the American counterespionage specialist. They were generally well paid so as not to be under the sort of serious economic pressure which would drive them to sell their services elsewhere. Few held employment of any sort. One of the few who did work was a commercial radio operator; his neighbors, naturally enough, took for granted his interest in radio transmission.

German intelligence had, in addition, placed along the Riviera long-range espionage agents, men who were intended to be a part of the German espionage system after the war.

Few Agents Captured

All German agents were instructed to refrain from any professional activity until the front line of the Allied advance had left their immediate areas. Under such circumstances it is understandable that arrests came slowly at first. By 1 September, 15 days after the landings, CIC had arrested only four espionage agents.*

Sixth Corps CIC reported, "It has been possible to hinder the operation of subversive elements and enemy agents to the extent that instead of operating they must hide out in the hills."** Faced with the same problem of explaining the paucity of arrest reports, 36th Infantry CIC presented a more detailed analysis of the affair: "The French Forces of the Interior, in their efforts to eliminate all the occupying forces as well as all the collaborators and would-be collaborators, are providing excellent counterintelligence security for Allied Forces. . . local patriots collect all and sundry persons suspected of German sympathies in the local jail." Furthermore, "A minimum of radio sets were used in this section of France, since

---

* There is a discrepancy here. Annex IV of the Seventh Army CI Summary, 15-31 Aug 44, (L-1136), (Unclassified), (Departmental Records Br., AGO, Alexandria, Va.); the document which has been most closely followed throughout this account claims only two agents. The Seventh Army Monthly Rpt No. 1, 15-31 Aug 1944, (written on the spot) claims four. It is possible that two of the arrests turned out to be duds.

** 206th CIC Det, Monthly Situation Summary, Aug 1944. (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Southern France had a low priority rating for such equipment." And even if all the agents were not being caught, the report explained, "so long as the front continues to move so rapidly, it would be difficult, if not impossible, for enemy agents to communicate with German forces."*

One of the VI Corps arrests indicated a pattern which German intelligence agents were to follow for many months. The arrest was of an agent who had hunted up CIC headquarters on his own volition, ostensibly wishing to serve the Americans as an informant and interpreter. Interrogation revealed that he owned a transmitter, and that his primary loyalties were to the Abwehr Einz Luft.**

Apparently the Abwehr and CIC fought to an uneasy standoff during the first days of the invasion. Though the German net remained well intact during these two weeks, most of the information which it wired northward was of little use to its employers, who were fast finding themselves in no position to take positive action based on such data. Then again, the information obtained and transmitted was often basic order-of-battle information, which, had it not been for the abnormally proficient security of the invasion, the Germans would have already had at the time of the landings.

The Germans had prepared for sabotage as well as espionage operations against the invading Allies. The sabotage machinery, however, was less easily concealed than their espionage equipage, and was soon located by Allied counterintelligence. At Avignon was found a sabotage school, run by the Sonderkommando organization (a Waffen Schutz Staffeln unit). The students were young Frenchmen, apparently involuntarily recruited and unenthusiastic over their lot. There was no evidence of any American installation's being sabotaged during the first two weeks after the landings.

A Big Haul

In Draguignan, a small city on the banks of the Le Muy river, 20 miles north of the coast, CIC agents captured the Gestapo headquarters with all records intact. Lists of informers were discovered, and numerous arrests followed easily.*** On 21 August 1944, agents of the 36th CIC Detachment discovered a deserted enemy command post at L'Ermitage. Among the important documents found there were mine field overlays, personality dossiers, an espionage and sabotage report on Germany and occupied countries for 1941-2, a manual of espionage and sabotage

[illegible] German intelligence situation summary dated 15 August 1944 [illegible] transmitter, and numerous codes.*

Such good fortune was exceptional, however. More typically, the file room [illegible] Gestapo headquarters in Marseilles was found completely burned. [illegible] learned that the Germans had shipped out 300 cases of documents before the arrival there of Allied forces. Throughout the campaign, even in the heat of their [illegible], the Germans carefully destroyed or removed all but very few of their non-operational intelligence documents.**

Nazi Propaganda Aimed at French

Seventh Army CIC reported that there was little danger of the Germans attempting to subvert Allied military personnel: "No efforts have been found to subvert Allied military personnel by propaganda or other activity; none is likely." However, there were concerted German attempts to alter the thinking of French civilians. During early September, a leaflet bearing a remarkably accurate reproduction of French currency appeared, with text suggesting that money equally well counterfeited had been circulated in France by Jewish interests. Another leaflet, apparently designed to upset American-French-Russian friendship, bore a counterfeited seal of the Communist Francs-Tireurs et Partisans Francais, and asked Frenchmen to oppose the "bourgeois Anglo-Americans," and participate in a civil war which would lead to the Communization of France.

FFI Often Injudicious

The French Forces of the Interior was charged with rounding up all known and suspected collaborators, Gestapo informers, Milice, Parti Populaire Francaise, and a variety of other miscellaneous categories of subjects. They acted with enthusiasm; Securite Militaire estimated that during the period 15-31 August the French Forces of the Interior took over 6,000 civilians into custody.*** CIC had the arrestees scanned for potential espionage agents, but, during these first two weeks, none were discovered. CIC and Securite Militaire turned 150 of their own arrestees over to the French Forces of Interior for punishment, since the nature of their [illegible] was not such as to warrant full scale investigation by either of the former agencies. Both CIC and Securite Militaire agents made numerous efforts to explain to French Forces of the Interior leaders just what manner of person was a genuine threat to security. Such indoctrination, it was hoped, would keep genuine

*** Seventh Army, Monthly Counterintelligence, Rpt No. 1, 13-31 Aug 44, (L-1136), (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

threats secured, and would, in addition, prevent injustices from being committed against those who were not really dangerous.

Even in cases of certain guilt, CIC felt that French Forces of the Interior often acted injudiciously. In several instances Schutz Staffeln (SS) and Gestapo agents were executed before CIC arrived in the town and much information was thereby lost. The fact that these officers were usually the first to be shot made the situation more unfortunate.

Except to request a prisoner for additional interrogation, neither CIC nor Securite Militaire made any effort to influence the fate of persons held by French Forces of the Interior. Having given French Forces of the Interior whatever information was available on all suspects, CIC and Securite Militaire withdrew completely from the picture.

The existence of French Forces of the Interior, an armed group of near fanatics, could well have posed a serious problem to American security forces. Fortunately, however, a growing annoyance on the part of the generally conservative French populace simplified CIC's handling of the organization. Gradually French Forces of the Interior was disarmed, though never by direct order from any American military authority. General Cochet, Commander of the French Divisions, directed that all men in the French Forces of the Interior who were under 18 or over 45 be demobilized. Thanking this group for their loyal service, he suggested that all who wished to continue their patriotic work could place themselves at the service of the French Army. The remainder were to be reserve police auxiliaries. In one city all French Forces of the Interior arms were collected and stored at the prefecture; were the police ever to need French Forces of the Interior assistance, these arms would be redistributed.

General Cochet sent the following directive to Securite Militaire: "The Securite Militaire officers would do me a service if they informed the mayors of their personal responsibilities for every prisoner arrested, and of their obligations to make sure that everyone was humanely interrogated, lodged, fed, and where necessary, cared for. A detailed and signed report must be made out for every person arrested, who will be judged at some later date."*

The French Forces of the Interior problem in Marseille was complicated by a staunch rivalry between this group and the Communist France Tireurs et Partisans Francais, both of which were active in battling for the liberation of that city. In Nice, too, after a series of illegal executions threatened to result in street fighting and demonstrations, Seventh Army CIC was forced to act. They maintained the

* Seventh Army CounterIntelligence Rpt No. 1, 15-31 Aug 44, (L-1136), (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

position that though they had no say on the subject of French politics, they did claim the right to protect the security of any area to the rear of Seventh Army. Thus they managed to quiet the situation without any resort to force.

As the advance opened larger areas to Allied jurisdiction, CIC agents found themselves spread farther and farther apart. The personnel shortage was further complicated because "Seventh Army was required to effect security and furnish personnel to the entire zone of advance."*

Travel Control Impossible

Although most of their assignments could be completed, at a reduced efficiency, CIC agents found the task of travel control quite impossible. 36th Division CIC reported optimistically, "Control of the movement of civilians is maintained by Patriot Police in each town entered under instructions from CIC agents. All strangers are stopped and questioned, and detained if there is any doubt of their identity and business."**

However, during August, travel control was not a serious problem, since the Germans had left few vehicles and little gasoline behind them, and there was, as yet, no real influx of refugees. The matter was further simplified by German intelligence who, so far as can be determined, sent not a single line crosser into Seventh Army territory during August 1944.

Moderate Policies Vindicated

As the first violence subsequent to the landings subsided, it was apparent that the moderate CIC policies had been well selected. On the one hand, French Forces of the Interior had done a more complete job of rounding up potential and actual subversives than the handful of CIC agents could ever have done. On the other hand, it was this very freedom which had been allowed the French Forces of the Interior that eventually led them into the excesses which demonstrated to the French that the French Forces of the Interior was not the organization which should permanently handle the problems of French security. As a result, resentment for abuses of all sorts fell upon the French Forces of the Interior, rather than upon either CIC or Securite Militaire. The French were left liberated, purged of subversives, and now in a real position to settle their political problems by themselves.

There was a variety of small problems. Sixth Corps suddenly found itself charged with supervising counterintelligence work along two-hundred kilometers

** 36th CIC Det CIC Situation Summary, 31 Jul - 20 Aug 44. (Conf), (Kansas City Records Center, Box 25095).

of the Franco-Swiss border, up to Gex, France. It was expected that French Forces of the Interior and the French Border Police would handle most of the footwork.

In regard to civilian mail within the areas of occupation, CIC recommended that postcards be authorized throughout all three division areas. Letter mail, under [illegible] censorship, had already been authorized in the army area.

CIC on numerous occasions noted the rifling of enemy headquarters before agents could have them searched. Civilians and Allied front-line soldiers seemed equally culpable. The solution, CIC decided, lay in the hands of unit commanders, whom they informed that all such headquarters should be sealed immediately upon capture, and that either G2 or CIC should be informed of their locations.

Generally speaking, fraternization between soldiers and civilians in France was not the problem that it had been in Italy. A self reliant people, the French were less likely to beg from the invaders, and, though they welcomed American soldiers with enthusiasm, 36th Division CIC reported that the French "did not permit the liberties common in Italy."* On the other hand, it seemed that the average soldier was likely to talk more freely of military matters to the Frenchman, whom he considered to be an Ally, than he might have to the suspect Italian. 36th Division CIC concluded glumly, "There is little doubt that many soldiers reveal what they know of army dispositions and progress."

CIC agents were charged with two additional missions. They were to discover whether there seemed to be any enemy-inspired rumors in circulation, and they were to report on the state of civilian morale in occupied areas. The first task was simple; there were no rumors in evidence which seemed to be of enemy origin. The other was a bit more demanding. CIC reports indicate that civilian morale was almost universally excellent. There seemed to be little or no bitterness felt over the isolated cases of looting or misbehavior by American soldiers. According to 36th Division CIC, "No cases has yet been reported which would indicate hostility or an attitude of indifference."**

The populace of Southern France, strongly anti-Nazi, was particularly violent in its actions against collaborators. Generally the French were not patient enough to bring collaborators to CIC, preferring to deal with them personally. Kenneth Crowell related one instance where a mob of civilians chased down an alley a nude woman with a swastika branded on her forehead, beating her violently as she attempted to escape.***

*** Interview with C. Kenneth Crowell, Chicago, Ill., at the NCICA Convention, Hotel Waldorf-Astoria, New York, N.Y., 6 Aug 1955.

45th CIC Covers Grenoble

The 45th CIC Detachment met its first big job on 25 August upon following their division into the major French city of Grenoble. Before initiating any independent action, Captain Guenthner, Commanding Officer, immediately hunted agencies who would assist agents of his detachment in their work. Conferences were held with M. Renier, a departmental prefect of police, and Col. Collignon, Chef (Chief) of the local Securite Militaire office. Representatives of Seventh Army CIC also attended the conferences.

When the 45th CIC Detachment arrived in Grenoble, there were already 400 civilians under arrest by the French Forces of the Interior. Interrogation of these prisoners was begun by agents of the 45th CIC Detachment, by the few agents of the 307th CIC Detachment who had preceded their detachment to Grenoble, and by whatever civilian Inspecteurs could be found.

All documents found by the French Forces of the Interior in the Grenoble office were given by the French Forces of the Interior to 45th Division CIC agents. They, in turn, handed the documents to the 307th CIC Detachment team in Grenoble after making only cursory examination of the contents.

Although there was little disorder in the city, thanks to generally strong action by the occupying forces, 45th CIC Detachment agents reported one serious situation. Among the prisoners being held were several former members of the Milice and Waffen Schutz Staffeln who had been guilty of particularly serious offenses against citizens of the city. In louder and louder mutterings, residents of Grenoble were demanding that severe action be taken against these criminals. CIC policy was to treat such men as prisoners of war. Seventh Army policy was to try prisoners of war only when full cases had been prepared, and sufficiently after their capture that they could be tried away from the white heat of irrational feeling that accompanied the first days of any liberation. The Prefect of Police advised immediate trials of several of the worst offenders to appease the populace but, 45th Detachment CIC agents insisted that the prisoners all be carefully interrogated, and protected until they could be tried in a more humane manner. The CIC recommendation was decided upon favorably.

This difference of opinion led to another similar quarrel. The French Prefect of Police asked that he be allowed to examine additional Waffen Schutz Staffeln troops who were being captured by the Americans and held by CIC. Because of an S2 directive to the contrary, he was refused permission. CIC suggested, through G2 channels, that since the French police were interested in having all Schutz Staffeln men impounded, and since they were making conscientious efforts toward this end, the prefect should at least be given lists of the names of those captured by the Americans.

And there were, of course, the endless number of small-scale investigations. had presented herself to the 45th Division CI with the story that she was a French agent serving a resistance organization direct from London. Naturally suspicious of such a fanciful tale, agents of the 45th CIC Detachment checked her papers back against their alleged sources. Her story proved true in every detail.

Less true, however, was the story of who had been for some time representing himself, while working with regimental S2, as a member of the very organization to which was discovered to belong. His account of their work and organization differed from her story. Subsequent investigation revealed that this man was known to local resistance leaders only through his own recent introduction to them. He had requested permission from French military officials to wear the uniform of a French officer, and though denied this right, wore the uniform while working with the Americans. CIC ordered him out of his uniform, and sent him back to Seventh Army for disposition.*

By the end of August, Grenoble had been quieted. Teams from the 45th Detachment were already moving north into Villard, Tulins, and Voiron, and other smaller hamlets up along the Isere. By 31 August the detachment was established in Bourgoin.

Rapid Advance Hampers CIC

During the first fast weeks after the landings, CIC had been greatly hampered by the almost unbelievable speed of the rush northward. Sixth Corps reported that CIC agents were unable to remain in any town long enough to finish investigations. Instead, they passed a disproportionate amount of work on to the French Forces of the Interior or Seventh Army CIC.** Securite Militaire agents, assigned to establish offices at the front, found that these were transformed almost immediately into regional offices.*** In short, a tremendous amount of detailed advance planning had to be junked as worthless.

By the end of August, Seventh Army troops had driven 165 miles northward into France--to the outskirts of Lyon and to the foothills of the Vosges. The German Nineteenth Army had lost four of its nine divisions; nearly 60,000 of its soldiers had been captured. But now to Seventh Army commanders, problems of

supply had become increasingly important. There was an overabundance of ammunition, but both food and gasoline were running dangerously short.*

But both Seventh Army in general, and CIC in particular, were still waging a dream-like war in which the enemy always retreats, and in which little mistakes do not really matter much--the only real problem is to keep within snapping distance of his flying heels. The Vosges were being approached, however, and the situation was soon to change.

Chapter 3

SEVENTH ARMY MOVES ON LINE BESIDE THIRD

Because of the rapid advance up through Southern France, efficient CIC work was extremely difficult throughout August. In early September, however, it was impossible. As Seventh Army wrote, "The rapidity of advance prevented comprehensive coverage, and routine cases were turned over to Territorial offices."*

CIC: Way Up Or Way Back

CIC, during all of early September, was theoretically charged with maintaining security in the entire area of the advance--in both French and American areas of occupation. Unfortunately during these weeks Securite Militaire established numerous regional offices according to no overall plan. Generally speaking, CIC concentrated efforts at the extreme front and in the extreme rear. Securite Militaire was left jurisdiction over much of the intermediate area.

Far to the rear, large areas were settling slowly into the long period of waiting between liberation and eventual victory. Yet in these liberated areas, particularly in politically restless Marseilles, the need for CIC's vigilance was as great as ever.

A Little Too Early

Three or four days after the Southern France landings, a team from the 307th Detachment had been dispatched in a cavalcade of twelve jeeps to the critical port of Marseilles. Upon entering the town, the agents found that they had been somewhat hasty, for the area was still solidly in German hands. The team vacated the region immediately, leaving Agent Victor deGuinzbourg behind to reconnoiter the area and contact certain white-list personalities. Wearing nondescript pieces of the U.S. Army uniform, like scores of French civilians, deGuinzbourg was technically undercover in enemy territory.

Agent deGuinzbourg was able to inspect the Gestapo Headquarters and prepare for a later raid on its facilities. However, in the two days before the town's liberation, deGuinzbourg, because of the great number of Nazi troops in the city, was unable to contact any white-list individuals.

While the Allied troops were taking Marseilles in late August, the team from the 307th arrived and immediately raided the Gestapo Headquarters. Records were impounded and personality lists were drawn up from these documents. Several arrests were made immediately, based on these lists.

---

* Seventh Army, Monthly Counterintelligence Rpt No. 2; period 1-30 Sept 44, dtd 30 Sept 44, (L-1136), (Conf), (Departmental Records Branch, AGO, Alexandria, Va.).

Informants Volunteer Services

French civilians rapidly learned where to bring information of intelligence value. They appeared in droves at the CIC office which displayed a sign identifying it as intelligence headquarters. So eager were many of the French civilians to help that deGuinzbourg has stated that "We couldn't help getting an informant network.

The CIC team from the 307th moved on to join the main body of the detachment a few days after Marseilles was liberated. Captain John Schwarzwalder and deGuinzbourg were left behind in the port city to handle intelligence problems, mainly those concerned with the uncertain political situation. A special team of CIC agents was moved in to take over port security and travel control.

Pass System Established at Docks

Original port security measures had been instituted while portions of the docks were still in Nazi hands. Before long, CIC had established an efficient pass system for the post. Common laborers, though hired by interview only, were eventually issued passes. They, and other applicants, were issued ten-day temporary passes without question. During the ten days, all names were checked against files of the Police d'Etat, Fichier Centralo Maritime, and Securite Militaire. Permanent passes were issued persons against whom no derogatory information could be developed.

The port team reported that small boat control was inadequate: CIC had available only a single motorboat properly outfitted with the radio equipment necessary for this type of activity.**

Shortage of CIC personnel made it virtually impossible to institute effective travel control measures. Throughout the campaign, persons of all types could leave or enter the city at will.

CIC Reports on Political Unrest

Captain Schwarzwalder and agent deGunizbourg operated in Marseilles until 13 October when deGuinzbourg rejoined the 307th CIC Detachment in Luneville, and Schwarzwalder drew another assignment in Southern France.

---

* Interview with Victor deGuinzbourg, Brooklyn, N.Y., at Room 620, Library Building, United Nations, New York, N.Y., 8 August 1955.

** "We Caught Spies", by John Schwarzwalder, Duell, Slone and Pearce, New York, 1946, p. 179-182, and Seventh Army Monthly Counterintelligence Rpt. No. 2, 1-30 Sep 44, dtd 30 Sep 44, (Conf), (Departmental Records Branch, AGO, Alexandria, Va.).

DeGuinzbourg recalls that gathering information on the political turmoil in Marseilles was enough to keep the two men busy without leaving time for a search for Nazi stay-behind agents. The gasoline, ammunition, and other supplies that came through Marseilles were vitally needed by the swiftly-moving Seventh Army if the weaknesses of the Nazis in Southern France were to be properly exploited. The boiling political situation in Marseilles had reached such a state that it was the major threat to this supply line to the north.

CIC Averts a Revolution in Marseilles

In the first week of September, the strong core of Communists, mostly dock workers, were openly organizing a strike of such proportions that it easily could have developed into a revolution, the destruction of the present government, and more important to the Americans, the crippling of the fuel and ammunition life line of the Seventh Army.

With the attitudes of intelligence officers at Base Section Headquarters ranging from "Its none of our business" to "Let's stop it right now and quickly," the two CIC agents in Marseilles decided to take immediate action.

Bivouacked about ten miles outside of Marseilles were 10,000 superbly disciplined fighters of the French Foreign Legion. DeGuinzbourg, who was the holder of the rank of "Honorary Private First Class" in the Legion, had maintained liaison with this unit. On the day before the strike was scheduled, deGuinzbourg presented himself to the Legion's commander and suggested that it might be nice to celebrate some French military victory with a big parade in Marseilles on the next day. It was decided that it would be fitting to celebrate the Liberation of Southern France. Fortunately the troops had been polishing up their weapons for a big inspection and were nearly ready to perform at their best.

When the day of the strike arrived, the Legion marched to a wildly cheering throng before an imposing galaxy of French and American generals. As a parade for a parade's sake, it was a great success. More important, those who were organizing the strike evidently noted that the Legionaires were marching with fixed bayonets and loaded weapons.

When the parade was over, the Legion bivouacked in town. There was no strike that day nor in the days that followed. The source of supplies for the advancing forces of the Seventh Army remained intact.

In reference to this incident and generally to the strong Communist movement in Southern France, deGuinzbourg recalled that while the rest of France's political factions were still primarily concerned with defeating the Germans, the Reds had

already begun to put into operation plans for eventual assumption of power in Southern France.*

The Story Goes Round 'N Round

Every so often in the day-to-day doings of any Army unit there is need for comic relief. The Marseilles CIC Team was no exception.

The FFI and other French organizations were allowed to draw freely upon the American supply depots, their only source of materials. There had been frequent reports that a slight Frenchman, a captain in the FFI, had been drawing vast quantities of supplies from all the American depots in the Marseilles area. CIC had warned him to stop his over-zealous requisitioning, but Agent "Woody" French reported that the captain's activities were continuing on as large a scale as ever. Agent French announced to his superiors that he had ordered the man to report to CIC for punishment. Everyone with the detachment had a good laugh and teased French for being naive enough to suppose the little captain would ever show up.

Yet that night, through a heavy rain storm, the Frenchman came to CIC to receive his punishment. Victor deGuinzbourg, deciding to frighten the captain, told him that he would surely be shot for hindering the Allied operations. The Frenchman protested. "After all," he said, "I am a friend of the Americans."

The Agent replied that he certainly did not show it by his actions. To prove his point, the Frenchman recounted how he had helped an American major during the landings in Southern France. DeGuinzbourg scowled. "You helped a man we have discovered to have been a spy," he shouted.

The FFI Captain, apparently not dismayed, told of an American colonel he had aided during the landings. He was informed that he had helped another man convicted by the Americans of spying. The Frenchman, going higher in the chain of command, named a general and claimed to have assisted him. Of course, the general too was a spy. Three strikes and the captain was out.

DeGuinzbourg took the unfortunate requisitioner to the French Securite Militaire and asked them to "take care of this nuisance." This was the last CIC ever saw of the little captain.

Apparently the Securite Militaire, desiring to get his whole story, questioned him extensively and added their own brand of rough treatment for good measure.

* Interview with Victor deGuinzbourg, Brooklyn, N.Y., at Room 620, Library Building, United Nations, New York, N.Y., 8 Aug 55. Also, "We Caught Spies," by John Schwarzwalder, Duell, Sloan and Pearce, New York, 1946, p. 179-190

Anyway, about two months later, while deGuinzbourg was with CIC in Alsace, there came from higher headquarters a report, based on Securite Militaire information, of wide-spread treason in the American Army during the invasion of Southern France. The Securite Militaire report, recounting the captain's testimony, had gone around the various headquarters channels until it finally came to rest at its rather red-faced source.*

CIC Discovers One-Man Subs

The First Special Service Task Force reported that on 9 September two operators of one-man submarines were captured at Menton. Under interrogation these men said that there was another pair of such submarines in the area. CIC turned results of their investigation over to the U. S. Navy.

In an attempt to control fishing, fishermen were required to obtain clearance from French Naval Authority, and then to confine their efforts to narrow strips of ocean usually within two miles of the French Coast.**

Few Refugees

During August there had been no refugee problem to any great degree. In September, Seventh Army CIC reported: "At present the problem of internal movement is simplified by lack of transportation and gasoline." However Civil Affairs reported 274,500 refugees to be on the roads in the ten southern departments out of a total population of 3,795,000. No coordinated travel control system had been established by mid-October, although at the front, travel control was fast becoming more efficient.

During the retreat, German intelligence contented itself with the stay-behind espionage net that had been placed on the French Mediterranean coast. In the early weeks of September, however, as the front stabilized along the Vosges, German intelligence tried new methods. They dispatched a line crosser, who was ordered to gather tactical information and then return to the German side of the lines. Dressed as a priest, he was instructed to ingratiate himself with the Americans by giving them a certain amount of tactical information concerning German emplacements. The French apprehended and executed him.

Proximity to Switzerland increased the enemy's opportunity to infiltrate agents posing as refugees. Conversely, because of Allied use of Switzerland as a point of

---

** Seventh Army, Monthly Counterintelligence Rpt No. 2; Period 1-30 Sept 1944, dtd 30 Sept 1944, (L-1136), (Conf), (Departmental Records Branch, AGO, Alexandria, Va.).

entry for agents, the Germans tightened their own screening methods. All Swiss nationals entering Germany were subjected to thorough checking and subsequent observation.*

Seventh Army organized control measures on the Franco-Swiss border, but passed authority for control here to Securite Militaire during early September. When Securite Militaire took over the border 5,200 French Forces of the Interior had been organized as guards. Despite numerous jurisdictional squabbles--some strips were under military control, some under civil control--Seventh Army reported that Securite Militaire was handling the job efficiently.**

During the early months of September, CIC found front-line counterespionage work becoming both harder and easier. On the one hand, they were now working against a lower class of agent, men recently recruited from the class of collaborators, black market dealers, people subject to blackmail, and liberated criminals--the class that exists in any society, and whose members usually can be spotted by indigent or foreigner. Similarly, CIC had discovered that these inexperienced agents were prone to follow similar patterns: radio sets were carried in standard, recognizable suitcases, and the agents were usually paid in new currency, conveniently numbered in sequence. But, on the other hand, this new stability of the front made espionage operations more valuable to the enemy; they began large-scale activity in dead earnest. Though arrests were becoming more frequent, CIC could be certain that the struggle against German espionage was just beginning.***

The Meeting Of The Armies

On 9 September a patrol of the French Second Armored Division 320 miles up from their Mediterranean landing point, made contact with elements of General Patton's Third Army at Chatillon-sur-Seine. A few hours later American soldiers of the 36th Infantry Division encountered other Third Army troops at Somberon, just to the South of the point of initial contact.

As the three great forces sealed themselves together, close to 100,000 German troops were left isolated in Southern France. Never again were they a serious military factor, and, on 15 September 1944, the Southern France Campaign was officially over.

INTELLIGENCE INSTRUCTIONS)

NUMBER) 1 July 1944

ARREST POLICY

1. All known and suspect enemy agents, persons detected in acts of sabotage or espionage, and persons found in possession of sabotage equipment, secret writing materials, codes, etc., will be arrested without delay and turned over to CIC.

2. Action to be taken regarding local French officials:

a. All officials who are active members of dangerous collaborationist parties and organizations will be suspended and arrested. (See paragraph 4 for suspect parties).

b. All officials reliably reported either voluntarily to have assisted the enemy, or to be a danger to security for other reasons will normally be suspended and arrested. Cases of this kind, based on information in central records or on local denunciations, will in every case be checked by observation and local inquiry before action is taken.

c. In all cases where officials are reported to be unreliable on what appear to be political rather than definite security grounds, CIC personnel will confine themselves to advising Civil Affairs Detachments.

3. Action to be taken regarding local French police organizations:

a. All police who have been active members of collaborationist parties will be arrested.

b. All members of the Milice will be arrested.

c. All members of the police who are reported voluntarily to have assisted the German Intelligence and Police Services will be arrested only after local investigation.

COPY

4. The following are suspect or collaborationist organizations: Parti Populaire Francais (PPF), Rassemblement National Populaire (RNF), Francisse, Ligue Francaise, Groupe "Collaboration", and all their subsidiary groups.

a. All members of uniformed para-military or auxiliary police organizations formed by collaborationist parties will be arrested.

(1) Members of the above groups, if found in uniform, will be treated initially as Prisoners of War.

(2) Members of the above groups not in uniform and who have taken action against the Allied forces, will be arrested as civilian "war criminals."

b. All officials of collaborationist parties will be arrested.

c. All recently active or outstanding members of collaborationist parties will be arrested and interned where it is practicable to do so. If not practicable they should be subject to special security restrictions.

d. Youth movements of collaborationist parties will be treated on the same basis as their parent organizations.

e. All members of German Army organizations recruited from the civil population in occupied territory will be treated as Prisoners of War. These organizations are: The uniformed Legion des Volontaires Francais (LVF). 1st Regiment of "France" (if fighting for the Germans), the French Waffen SS, the uniformed members of the National Socialistiche Kraftfuhrer Korps (NSKK) but not its civilian drivers, and uniformed members of the TODT organization.

5. All civilian nationals of an enemy country will be initially arrested and interned.

6. The following policy is established for the arrest of individual civilians:

a. Civilians who are subject of denunciations will be arrested only after observation and local investigation of the case. This also applies to individuals who arouse the suspicion of CIC personnel. In exceptional cases the immediate detention of suspected may be necessary for tactical reasons; a full investigation will be conducted by the arresting detachment as soon as possible.

b. Civilians caught infiltrating into our lines from enemy occupied territory will be interrogated by CIC personnel before they are evacuated to the rear by Civil Affairs. Suspect among them will be arrested.

c. Civilians committing serious offenses against security regulations will be arrested.

COPY

7. Arrest Forms and reports will be submitted by the arresting CIC Detachment as specified in the Standing Operating Procedure for the Counterintelligence Corps, this Headquarters, dated 12 May 1944. Every effort will be made to investigate each case and prepare a report prior to delivery of the suspect to the Master Interrogation Center.

8. The Arrest Report will be fully completed by the arresting CIC Detachment, and the charges against the subject will be clearly stated. Suspect's identity papers and effects will be delivered to the Military Police, Master Interrogation Center.

9. The CIC report of investigation on each person arrested, together with supporting documents, dispositions, etc., will be forwarded to the AC of S, G-2, this Headquarters, as soon as possible. This report will contain possible leads for further investigation, and will conclude with a statement regarding the status of the case as regards the arresting CIC Detachments, e.g., "case closed", "pending", "investigation continuing", or "additional reports will be submitted".

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter 1

SUPPLY LINE TROUBLES SLOW ADVANCE

By the middle of September, the rapid rush of the Allied armies across France had come to a sudden halt. For the next few months, American and British forces waited uneasily on the Siegfried Line while the long supply route that reached back to Cherbourg was replaced by another, shorter route emanating from Antwerp.

On 15 September, CIC units with the Twelfth Army Group were operating on a front that stretched from Heerleen and Maastricht in Holland to Nancy and Luneville in France. At this time there were five U.S. Army Corps on line with the Twelfth Army Group - XIX, VII and V Corps with the First U.S. Army and XX and XII Corps with the Third U. S. Army.*

CIC units assigned to XIX Corps covered the area around Maastricht, while VII Corps CIC operated in the area of Spa and Verviers, Belgium, and V Corps CIC around Clervaux, Luxembourg, and Malmedy, Belgium. The XX and XII Corps CIC covered the regions of Conflans and Nancy, France, respectively.**

New Units Brought Up On Line

Before 15 December, the numerical strength of the Twelfth Army Group was considerably increased. One new army, two corps and nine divisions were brought up on line during the three months period.

The newly-arrived Ninth Army was inserted in the line north of the First Army in the small area of Holland under Twelfth Army Group jurisdiction. The Ninth U.S. Army received control of the XIX Corps from First Army and took over one of the recently arrived corps, the XIII, still in Great Britain when the period opened.

The other corps brought up on line was VIII Corps, moved from mopping-up operations in Brittany, assigned to the First Army, and placed as the southern-most of its corps.

Six of the new divisions arrived relatively early in the period. To the Ninth Army and XIII Corps went the 84th and 102d Infantry Divisions. Commanding CIC

with the 84th was 1st Lt. Arthur D. Jenkins while 1st Lt. John G. Suman was Commanding Officer of the 102d CIC Detachment.

Assigned to VIII Corps, First Army, was the 9th Armored Division with a CIC Detachment commanded by Capt. William O. Lueck. The 99th CIC Detachment, commanded by Capt. George D. Young, was placed under V Corps, First Army.

The Third U.S. Army received the 510th CIC Detachment and the 95th CIC Detachment.* Both operated with XX Corps in the northern area of the Third Army sector.

In early December, three more divisions were moved up on line. Under Ninth Army CIC was the 78th CIC Detachment, whose Commanding Officer was Capt. Neil M. Ruge. The 106th CIC Detachment, commanded by 1st Lt. Francis E. Coad, was under First Army CIC, and the 87th CIC Detachment, 1st Lt. Sam E. Harwell, Commanding Officer, was under Third Army CIC jurisdiction.**

Shortage of Supplies Blamed

One of the major reasons advanced for the slowdown in ETO after 15 September was that Field Marshall Montgomery's British forces did not clear the Scheldt Estuary and the Dutch port of Antwerp, a maneuver which would have released the Allied forces from total dependence on the lengthy supply route from Cherbourg. Montgomery spent the early part of the period concentrating on OPERATION MARKET GARDEN, an attempt to skirt the Siegfried Line and take the shortest route to Berlin by dropping airborne troops into Holland.

It was 8 November before the 21st Army Group opened the Scheldt and 26 November before the first convoy unloaded at Antwerp.***

According to General Patton, impatient from the standstill, the acute shortages of ammunition, gasoline and bridging materials were holding back the advance.****

3d Armored First In Germany

In the Twelfth Army Group sector, troops of the 3d Armored Division were the first to pierce the German border. On 14 September, Rotgen, just over the border east of Eupen, Belgium, fell into American hands. The only major German city captured prior to 15 December was Aachen which was reduced by troops of the 1st Infantry Division on 21 October after a prolonged siege.

But advance was slow. By 15 December, few American troops were more than ten miles from the border. The dent in the Siegfried Line extended in a north-south direction from the northern limits of Twelfth Army Group jurisdiction south to Lösheim, Germany.*

The major accomplishment of the Third U.S. Army during the period was the capture by the 95th Infantry Division of the ancient walled city of Metz on 20 November.** By 15 December, scattered combat elements of the Third Army had made penetrations into the Saar, but an over-abundance of mud and a great shortage of replacements***prevented clearance of enough area for Third Army CIC units to get their first taste of operations in Germany.****

CIC Operations Change in Static Situation

With the previously swift Allied advance brought to a virtual standstill, corps and division CIC units found their operations somewhat changed. A great majority of the detachments spent as long as two months in one area and some were located in the same region for the whole period. Such a situation meant that combat unit detachments now found that they had time to become concerned with local affairs and political tangles of the towns and villages in their areas.

In clearing personalities for municipal government positions for Military Government and attempting to prevent the rise of Fascist or other totalitaria elements, detachments placed as low as division level spent more time looking into the local political scene.*

The static situation also afforded division and corps detachments, (freed from spending time planning and executing movements to new regions), a chance to experiment with various counterintelligence techniques and develop new ones.

For example, elements within each of the three Armies tested out independently devised plans for coordinated, quickly executed raids and searches of towns and areas already covered once by a CIC unit. These raids, given different names by each of the three detachments using them, served primarily to recheck the security of an area, but also were used to train personnel, both of CIC and of related units whose cooperation in a raid was deemed essential.**

Particularly illustrative of the development of new activities were the ingenious "public opinion polls" of the 29th CIC Detachment. When time permitted, teams of Agents toured the Division, asking questions about troop education, morale and security indoctrination. By getting to the "grass roots" of these matters, CIC was better able to supply answers to security questions raised by higher headquarters.***

Time was available for several units to put into writing the various steps of the civilian screening procedures that they had developed in the field. The 212th CIC Detachment's method was best adapted to a situation demanding speed and efficiency,**** while the thorough technique offered by the 29th CIC Detachment seemed ideally suited to the standstill but hardly practicable for a mobile situation.*****

***** For a discussion of the 29th CIC Det's screening procedure, see the section titled "Ninth Army In Holland & Germany.

The supply shortage, an important cause for the slowdown of the Allied advance, affected CIC operations in only one respect. The inadequate supply of gasoline prevented quick evacuation of suspects from the forward areas to the rear, hampering CIC's efforts to maintain security.*

CIC Authorized To Recruit Personnel

During the period, CIC in ETO began a program of personnel recruitment in an effort to build up detachments to their authorized Table of Organization strength.** Authorization for recruitment of individuals for CIC detachments came from War Department Circular Number 379, dated 19 September 1944.

The War Department Circular set forth certain qualifications for officers and enlisted men. The officers had to be 25 to 38 years old, physically fit for full overseas duty, college graduates, U.S. citizens and cleared by a CIC background investigation. It was desired that the officers be fluent in one or more foreign language and have previous military service in the field.

For enlisted men there was a 24 to 38 age limit. The enlisted man had to be physically fit for full overseas duty, a U.S. citizen, possess an Army Classification Test score of at least 110, and be a college or a high school graduate with either linguistic ability or investigative experience. His character, discretion, integrity and loyalty to the United States must have also been established by a background investigation.***

The War Department Circular was backed up, in regard to the instructions covering enlisted men, by a letter from European Theater of Operations Headquarters to each Army Group headquarters, but this letter made no mention of possible recruitment of officers. It was stressed that the personnel selected should be fluent German linguists. The letter noted that compliance with the War Department Circular was essential, but conceded that the age and educational requirements might be waived in exceptional cases. It was further noted that while individual detachments might recruit personnel and place them

* Hq, 83d Inf Div, 83d CIC Det, Weekly CI Rpt, To: AC of S, G2, 1st Army (U.S.), dtd 6 October 1944, /s/ Oliver A. Victor, 1st Lt, Commanding, (Confidential), (Kansas City Records Center, Box 25095).

** The abolishment of the CIC Center and CIC School in the ZI had resulted in a shortage of qualified agents in ETO. The chapter on CIC activities in the ZI during this period contains an account of this matter.

*** War Department, Washington 25, D.C., 19 Sep 44, Circular #379, p. 1, (Unclassified), (Kansas City Records Center, Box 25094).

on detached service as investigators, final approval and assignment would come from ETO Headquarters.*

The War Department Circular was further disseminated through Twelfth Army Group Headquarters to the various Armies. This order was almost entirely a quote from the European Theater of Operations document with an additional reference to the fact that a limited number of CIC clerks were needed. It was desired that personnel with satisfactory typing and shorthand ability also be recruited by each detachment.**

In laying stress on German linguists, the European Theater of Operations letter hit on a vital need for the detachments with combat units. As the American forces rapidly pushed near Germany, the lack of linguists became a matter of great concern to the local commanders. A letter from the Commanding Officer, 208th CIC Detachment, to the AC of S, G2, VIII Corps, explained that Detachment's plight. Of the five officers and fourteen enlisted men with the unit, two spoke German. An enlisted man from the Corps Military Intelligence Interpreter Team, farmed out to CIC, also spoke German. The 208th noted that efforts to alleviate the situation by borrowing men from Corps or Army Interrogation Prisoner of War Teams had been unsatisfactory, since the men usually were called back to their previous organizations within a few days. Requests for CIC linguists from higher headquarters had been without success. Attempts to use civilian interpreters, paid out of confidential funds, proved unsatisfactory, because high type individuals would not work at the prescribed pay rate nor at the odd hours required. Furthermore, each time the Detachment moved, new German civilian linguists had to be found. It was estimated that the 208th CIC Detachment would require seven additional fluent German linguists on a reasonably permanent basis to carry out their mission inside Nazi Germany.***

Implementing the orders from the War Department, ETO and 12th Army Group, CIC Detachments set out to recruit men for their unit, hoping to acquire suitable German linguists in addition to just filling Table of Organization slots.

* Hq, ETO, U.S. Army, Subj: Enlisted Personnel for CIC Dets, To: CGs, Each Army Group, First Allied Airborne Army, 30 Nov 44, /s/ For The Commanding General: R. B. Lovett, Brig Gen, Adj Gen, (Kansas City Records Center, Box 25094).

** Hq, 12th Army Group, Subj: Enlisted Personnel For CIC Dets, To: CGs, First, Third and Ninth U.S. Armies, 9 Dec 44, /s/ By Command of Lieutenant General Bradley: E. C. Davies, Capt, Asst Adj Gen, (Confidential), (Kansas City Records Center, Box 25097).

*** Hq, VIII Corps, 208th CIC Det, Subject: Linguists for CIC Detachments, To: AC of S, G2, Hq VIII Corps, 7 Nov 44, /s/ Albert R. Bowen, Jr, Capt, Commanding, (Unclassified), (Kansas City Records Center, Box 25097).

Background Investigations Inadequate

There proved to be two unfortunate aspects to the procurement program: recruitment was hasty and background investigations were inadequate. The urgent need for German linguist Agents, as expressed by the 208th CIC Detachment, had apparently overruled some security considerations.

Records indicate that many German linguists operated as Agents, usually on detached service, prior to even a request for a ZI background investigation. In some instances as few as four interviews with officers and men of the subject's unit was sufficient for clearance.*

---

* There seems to have been no uniform procedure for either the ETO or ZI phases of the background investigations of these men.

The Subject of CRF dossier X8374620 was listed as "attached from other organizations" in a roster of the 29th CIC Detachment dated 26 Feb 45. It is recorded that on numerous occasions he performed Agent's duties, (Kansas City Records Center, Box 25094). There is no record that he was ever transferred on ETO orders to CIC. The only records of ZI investigations of the Subject are dated in 1948.

Records of the 207th CIC Detachment contain the complete investigation of a Master Sergeant being considered for CIC. He was recommended for CIC assignment after interviews with four of his acquaintances in ETO and a personal interview by the Commanding Officer of the 207th CIC. The investigation was completed on 7 April 1945, (Kansas City Records Center, Box 25094). ETO rejected the Subject in a letter dated 28 July 1945 because no vacancies existed in the Subject's grade, (Kansas City Records Center, Box 25094).

The subject of CRF dossier X2118408 applied for transfer to the 104th CIC Det. Records indicate that that Det completed its investigation of the Subject on 16 Jan 45. An ETO order dated 22 Feb 45 (Kansas City Records Center, Box 25094) transferred the subject to CIC, but a letter from Army Service Forces in Washington dtd 2 Apr 45 held up the final transfer pending a ZI investigation, CIC, Hq 5th Service Command ran an investigation from 13 April - 21 Apr 45 and Army Service Forces rpted that the subj was "favorably considered" for CIC in correspondence dtd 11 May 45.

German Intelligence Service Activities: Decreasing

By mid-September 1944, there was some optimism that Allied operations against the German Intelligence Service(GIS) had achieved a great measure of success. Perhaps unduly encouraging was the following statement in a memorandum from a Special Counter Intelligence Liaison Officer to Colonel A. B. Dickson, the G2 of First U.S. Army. The memo read in part:
"...the GIS (German Intelligence Service) left a network of stay-behind agents along the so-called Atlantic Wall. This network has been a complete and miserable failure in the First Army area as three of these agents are now working as double agents for the U.S. Army and are feeding the Germans false information. Some agents have surrendered; some have tried to remain unknown, but never working or sending reports to the German Intelligence Service."

The memorandum further labeled the German Intelligence Service as more a myth than a menace and noted that it was the first official German agency to recognize Hitler's hopeless situation.*

A closer analysis was presented by Headquarters, ETO, in its Counterintelligence Report for 16 September to 1 October 1944. Although the many accounts that Nazi agents were still operating in liberated territory were not ignored, the counterintelligence report predicted that the most important operatives had fled the area. The great aggressive zeal of the French resistance groups in rounding up persons who had operated for the enemy was commended, and the feeling was expressed that many potential enemy collaborators had temporarily ceased to function, refusing to risk their necks for what at that time looked so much like a losing cause. The report concluded prophetically: "This ostrich-like action might well be reversed if the tactical situation becomes stale-mated, or if efforts of the Allies such as the airborne landing failed to achieve initially sought success."**

Increasing

When the combat situation had reached what was obviously going to be a lengthy stand-still and OPERATION MARKET GARDEN had failed, the German Intelligence Service came alive again. By mid-October, there was a considerable increase in short term line crossers operating for the Abwehr. In running scores of hastily-trained low level agents, the German high command must have been "playing the percentages." They certainly recognized that the majority of these

---

* Memorandum from SCI Liaison Officer to AC of S, G2, First U.S. Army; G2 Journal, First U.S. Army, 19-21 September 1944. (Departmental Records Branch, AGO, Alexandria, Va.).

** Hq ETO, U.S. Army, Office of the AC of S, G2, CI Rpt for the period 16 Sep to 1 Oct 44, dtd 31 Oct 44, /s/ F.A. Calvert, Lt Col, GSC, Chief, CIB (SECRET), (Departmental Records Branch, AGO, Alexandria, Va.).

men would be captured by Allied counterintelligence. Apparently the return of a small number of these low-grade agents with limited, local, tactical information was considered a satisfactory dividend. *

CIC soon learned the general instructions given these short-term agents. After crossing the Allied lines, the agents were to approach openly the first soldier or Military Policeman they spotted. The German was to say that he had escaped from Nazi territory with valuable tactical information to give the Allies and to request transportation to the nearest Command Post to report this data. At the Command Post the interrogators were to be given plausible but general information, enough to convince them that the agent was not to be regarded as suspicious.

The German was then to request to go to the Allied rear areas to visit friends and relatives. With permission to travel outside the combat zone, he would circulate instead in the combat area, obtaining Order of Battle intelligence. After several days, the agent was to recross the lines with his information. **

An unusual but apparently wide-spread German intelligence operation involved "convict agents" - Frenchmen released by the Nazi from long prison terms given them prior to the war by French authorities. Feeling that these men would not risk turning themselves over to the Allies, the Germans assigned them rudimentary espionage missions. ***

There was some evidence, according to Operational Histories, by mid-November, after the low-grade "guinea pigs" had tested travel routes and controls in the Allied zones, that the German Intelligence Service was beginning to send out more experienced agents. ****

---

* 12th Army Group, Semi-Monthly CI Rpt #5, 1-15 Oct 44, dtd 15 Oct 44 -- from the Office of the AC of S, G2, 12th Army Group, /s/ Edwin C. **** Operational History of Theaters, "Belgium, Luxembourg, France, and Holland."

These line-crossing-agents were supplemented by those stay-behind agents who had managed to evade capture. For instance, one German agent apprehended in Liege stated that he knew of about twenty Belgians and two Germans left behind in the city by the Abwehr to operate a radio transmitter service and engage in sabotage.*

Right up to 15 December, German Intelligence Service activities seemed to accelerate. German soldiers in civilian clothes performing two to four day missions continued to enter American zones. German agents equipped with American uniforms and jeeps began to infiltrate the U.S. lines in ever increasing numbers.

To counter German Intelligence Service operations, in December, a coordinated counterintelligence control line running north-to-south along the Twelfth Army Group sector was established at division rear. Long under consideration as an essential move, this control line proved an important factor in frustrating German Intelligence Service activities.**

Security Service (SD): Threatening

In spite of all the encouragement derived from CIC's capture of numerous low-level line crossers, "convict agents," German soldiers in mufti, and German Intelligence Service agents in U.S. uniform during this period and in the months to come, one heavy cloud of doubt hung over high-level American counterintelligence authorities: There was the threat of the German Sicherheitsdienst (SD) Secret Service of the Schutz Staffeln (SS). A report from Third Army G2 in September discussed at some length the capabilities of this organization.

Pointing out that the Sicherheitsdienst unit, although not numerically large, was by far the most dangerous agency in Germany at that time, the report stated that Sicherheitsdienst personnel would probably be used in espionage and sabotage for which they were thoroughly trained and experienced.

---

* 12th Army Group, Semi-Monthly CI Rpt #6, 16-31 Oct 44, dtd 31 Oct 44, from the Office of the AC of S, G2, 12th Army Group, (SECRET), (Departmental Records Branch, AGO, Alexandria, Va.).

** 12th Army Group, Semi-Monthly CI Rpt #9, 1-15 Dec 44, dtd 15 Dec 44, from the Office of the AC of S, G2, 12th Army Group, /s/ Edwin C. Lee, Lt Col, GSC, Exec, for the AC of S, G2, (Unclass), (Departmental Records Branch, AGO, Alexandria, Va.). NOTE: Full discussions of the activities of German agents in U.S. uniforms and the workings of the American CI control line are contained in the chapter concerning the German counteroffensive in the Ardennes.

The report covered the inception and subsequent history of the Sicherheitsdienst. Prior to the war, the Sicherheitsdienst had served as the highest political intelligence unit in Germany with agents distributed all over the world reporting on the political currents of all nations.

The Sicherheitsdienst employed the most highly skilled German intelligence operatives who usually appeared to be inoffensive civilians or legitimate business representatives. Functioning most often in large cities, agents hired sub-agents and, utilizing this network, received, processed and disseminated information.

The agents took extreme pains to protect their cover. Rarely did the agent himself engage in espionage. He acted as the "brains" of his own intelligence network and was often known to the sub-agents only by a code identification.

At the outbreak of the war, the Germans had espionage networks operating in most of the principal countries, and only a few minor changes were needed to gear the Sicherheitsdienst to war time policy. More stress was placed upon obtaining military intelligence, but there was no let up in the search for valuable political information. New agents, better trained to report on military activities, were added to the organization.

Aside from the threat the Sicherheitsdienst posed in the liberated areas, CIC also was concerned about what it might be able to accomplish inside Germany after the Allies entered. The G2 report concluded: "The SS Sicherheitsdienst can be expected to hamper and harass all Allied forces in Germany. This will be done not on the surface but through underground means. Should there be extensive underground armed resistance to the Allies in Germany, the SD, with its background of many years experience, well-established agents and fanatically pro-Nazi personnel, will probably be the directing agency."*

Another Threat

In bringing up a possible underground resistance movement in Germany, the report referred to another matter that kept CIC from becoming complacent about its future task.

Since the beginning of 1944, various reports, from sources believed to be reliable, indicated that the Nazi regime in Germany was preparing to go underground after the defeat of the Wehrmacht and thereby cause the Allies the maximum of difficulty, and the German who accepted the presence of the Allies the maximum of discomfort.

* Hq, 3rd U.S. Army, G2 Periodic Intelligence Rpt #102, 21 September 1944, in G2 File & Jnl of the 6th Armored Div, 19-21 Sep 44, (Unclassified), (Departmental Records Branch, AGO, Alexandria, Va.).

Himmler was thought to be the Nazi official in charge of these underground preparations. The first step involved setting up so-called "Vehme (revenge) organizations, consisting of carefully chosen political fanatics who belonged to various uniform party organizations, and politically sound members of the Hitler Jugend. These Vehme organizations were reported to be composed of cells of five members, which each cell's activity coordinated by contact men. The Vehme units were to prepare to engage in partisan activity against the occupying forces. Stores of weapons were being built up on both an individual and a regional basis. All Nazi party members were reportedly encouraged to hide some kind of weapon in their homes.

Funds for this underground movement were supposed to be already concealed in neutral nations' banks. Two methods of placement of these funds were in use. Quantities of medical and pharmaceutical products were being sent to Sweden and Switzerland, with the payments for these goods being left in the neutral country as camouflaged bank accounts.

The other scheme called for young Nazi women to marry wealthy neutral nationals, so that they might be given large dowries which then went to neutral banks and were accessible to the underground.

Reports of such schemes were enough to keep even the most optimistic of Allied intelligence officers wary of their German adversaries.*

Chapter 2

CIC WITH OPERATION MARKET-GARDEN

While the American forces waited on the Siegfried Line, preparations were being completed at SHAEF for one of the most daring maneuvers of World War II. Under urging from Field Marshal Montgomery, General Eisenhower had given the "green light" for the largest airborne operation ever attempted.

Code-named MARKET GARDEN, the plan called for a sixty-mile salient to be driven up a side alley route to the heart of the Reich. If successful, it would outflank the Siegfried defenses and carry Montgomery across the lower Rhine to the shortest route to Berlin. The major obstacles to advance were to be the five major waterways between Antwerp and Montgomery's objective at Arnhem.

Three airborne divisions were selected to unroll the carpet across these waterways. The U.S. 101st Airborne Division was to jump near Eindhoven, the American 82d Airborne Division at Nijmegen, and the British 1st Airborne Division at the peninsula near Arnhem. The paratroopers were to seize the bridges spanning these waterways and hold them until Montgomery's ground troops could break through. The British Field Marshal was confident that the link-up would not take longer than 72 hours.

On 17 September, the skies over Holland darkened with aircraft as the First Allied Airborne Army roared toward its destination.*

Three CIC Men With 101st Airborne Division

Near Zon, just north of Eindhoven, the 101st tumbled into the sky for its second operation of the war.**

Making the jump on the first day were three members of the 101st CIC Detachment. The group consisted of Captain Martin E. McGuire,*** the commanding officer, and Agents Howard W. Symmes and Thomas E. Ryan. These three men were the only members of the 101st Detachment who had survived the Normandy jumps without serious injury. Shortly after touching Dutch soil, they were met,

** Ibid, p. 506.

*** Captain McGuire received two stars on parachute wings for combat jumps, the Bronze Star, the Belgian Croiz de Forraguere and the Presidential Citation with one cluster; (Holabird Herald, Vol 2, #51, Holabird Signal Depot, Baltimore, Maryland, 14 December 1945).

in accord with a pre-arranged signal, by a leader of the Dutch underground - an anonymous figure who went under the alias of "Peter." This fabulous individual had circulated among the Germans all during the occupation, concealing his real identity only by undergoing plastic surgery.*

During the first night in Holland, the four men, along with members of the 506th Regiment to which the CIC Detachment was attached, scrambled across the Wilhelmina Canal. At dawn the next morning, they entered Eindhoven unopposed.

Their entry into the city was discovered almost immediately by the Dutch citizens. At first the Americans were surrounded by forty to fifty people and then from everywhere flags and bunting broke out. Citizens put on native costumes and a wild two-day celebration began.

However, the American troops had little time for such gaiety. While the combat elements of the 101st attempted to push south in order to effect a meeting with Montgomery's forces, Captain McGuire and his two Agents, with the invaluable aid of "Peter" and some other loyal Dutchmen, rounded up three hundred suspected Nazi collaborators. Preliminary screening revealed that the suspects knew little in the way of counterintelligence information. Consequently, they were released to the custody of the local Dutch authorities.

Agents Seize Phillips Radio Plant

Agents seized all communication centers in Eindhoven as well as the Phillips Radio Plant, a vast storehouse of scientific information. It took British scientists, who later assumed control of the plant, until the end of the war to finish studying everything of value. When Captain McGuire's group first entered the grounds, they discovered that the entire network of buildings was wired for demolition. A heavy guard was thrown around the area and the wires pulled. "Peter" meanwhile, showed the CIC Agents the cellar of the main building where he and his compatriots had held numerous clandestine meetings directly beneath the unsuspecting Germans. In this factory right under the noses of the Germans, Dutch resistance personnel had manufactured radio sets for the underground.**

Later in the day, while searching a wrecked German bunker, Captain McGuire was amazed to discover that the field telephone was still working. A monitor was immediately placed on the phone. Although no important information was received before the connection was severed by the Germans several hours later, the Agent was surprised to find that the phone had a tie-in with a trunk line leading back to Berlin. From the tone of the overheard conversations, the airborne operation had been a complete surprise to the Germans.

* Interview with Captain Martin E. McGuire reported in (Holabird Herald, Vol 2, #51, Holabird Signal Depot, Baltimore, Maryland, 14 December 1945.)

101st CIC Detachment Acquires Seven New Members

By early evening on 18 September, the 101st CIC Detachment was bolstered by the arrival of seven more Agents who had arrived with other reinforcements that afternoon by glider.*

For the next several days, the Detachment split into three-man teams and established control points and screened refugees. However, no important black list personalities were arrested, all of them having fled previously into Germany. Meanwhile, the 101st Division had contacted the British Second Army to the south and now turned its attention to linking up with the 82d and the British 1st Airborne Division to the north.**

MARKET GARDEN Proves To Be "Briar Patch"

Contacting the other two divisions engaged in MARKET GARDEN proved to be no easy task, for German resistance suddenly stiffened. Although the 82d was relieved in time, the British 1st, which had landed the farthest behind the German lines, was not so fortunate. Surrounded at Arnhem, the red-bereted British paratrooper Division was cut to pieces by repeated armored attacks. Montgomery ruefully conceded later, "The easy path concealed a briar patch."***

Early in October, the 101st Division moved north into new positions between the Waal and Neder Rijn Rivers. By this time it was apparent that any quick thrust across the Rhine was impossible.

In this area for the next thirty days, the 101st engaged in some of the bitterest fighting of the war. Heavy casualties were suffered by the Division, the list including Agent Ryan who was wounded while near the front lines.

McGuire's Men Screen Civilians In The Division Area

Although under constant artillery fire, Captain McGuire and his men undertook the strenuous task of screening all civilians within the division area. In order to accomplish the mission, Captain McGuire utilized the mayors and municipal officials of the nearby villages. Three control points were selected. At each were stationed two CIC Agents and several of the local authorities. Because the only good road was already clogged with military traffic, the control

---

* The Agents were: Alexander A. Notopoulos, William J. Tofant, William E. Clark, William P. Reed, Curtis M. Foster, Nunzio A. Giambalvo and George E. Martin.

** Interview with Major Martin E. McGuire, 24 August 1954, Fort Holabird, Md.

*** A Soldier's Story, by Omar N. Bradley, New York, 1951, p. 414-19.

points were set up beside the canals. As barges filled with refugees drew up alongside, the officials were asked to identify all the persons in the group. Those not known to the local authorities were sent to the other two points to see if someone there could identify them. If no one at the three points knew the refugee, he was considered a suspect and sent to the rear where he was released to the custody of British Field Security, which by this time had established close liaison with the 101st Detachment and had operational control over the area.

With this method, Captain McGuire's detachment was able to screen approximately 8,000 persons, thirty to forty being sent to the rear as suspects.

(U) Liaison with British intelligence was close and in almost all cases favorable. According to Captain McGuire, the only source of antagonism which arose on either side was the degree of responsibility delegated to the American enlisted men. British intelligence officers took a dim view of this, holding to the opinion that contact with the Dutch and Germans should be made by officer personnel and that enlisted men should perform housekeeping chores, act as runners, and carry out other lesser duties. After a series of minor clashes over this point, Captain McGuire politely, but firmly, told the British officers that his men were especially trained to perform all counterintelligence missions and that he would continue to direct that they do so. He also stressed that he was the only officer in his detachment and it was impossible to handle all matters personally.

CIC Hears A Man With Important Information

During November, an unidentified individual walked into the headquarters of the 101st CIC Detachment and announced that he had some important information for the Americans. As a matter of routine, the man was investigated by checking with reliable informants. Agents were startled to learn that the individual was the most sought Nazi collaborator in the vicinity.

CIC informants revealed that the man had been responsible for the massacre of 100 Dutch civilians some weeks previously. Shortly after the Allied airborne drop, the German garrison at an unidentified Dutch village heard over the radio that American paratroopers were approaching. The panic-stricken Germans immediately evacuated the town. The townspeople, overjoyed at being freed of their Nazi masters after four years, began a wild celebration. They broke into the German storehouses and helped themselves to quantities of food and clothing. Others wrecked Nazi offices and the German Commandant's home.

The celebration proved premature however, for soon the Germans returned. They had realized that the radio announcer had been speaking of another village by the same name in Belgium. Incensed at the damage inflicted on their installations, the Nazis began retaliation at once. With the aid of the man who was later to enter the CIC offices, the Germans rounded up the leaders of the ill-fated

celebration and herded them into a barn. While the remainder of the townspeople watched in horror, the Germans set fire to the building.

Interrogation of the collaborator by Agents of the 101st Detachment failed to reveal why he had entered the American lines. Once confronted with his crimes, he refused to speak. He no longer had any vital information to give CIC.

There was no evidence that the former collaborator had been on an espionage mission or was in any way working for the Germans when he visited CIC. The man was released to the custody of the Dutch. Although Captain McGuire was invited to the man's execution the next morning, he declined.

Shortly after this episode, on 29 November, the 101st Airborne Division pulled out of Holland, after seventy-two days in the line, and was sent to a rest camp in Northern France.*

Six Agents of 82d CIC Detachment Jump Into Holland

Six Agents of the 82d CIC Detachment made the jump at Nijmegen. The first phase of their mission consisted of searching targets and arresting known counter-intelligence suspects in the Nijmegen area. Because of the small number of Agents available, many suspects escaped. After the capture of the Nijmegen bridge by the 82d Airborne Division, the main task of the detachment became the supervision of civilian controls. This operation was hardly routine because, hampered by the closeness of combat, local authorities were unable to put into effect no-travel orders for approximately ten days. Agents of the 82d Detachment found that their best informants were priests, doctors, and captured Abwehr and Sicherheitspolizei agents who seemed only too willing to implicate their associates.

SHAEF personality lists were too out of date to be of help, but SHAEF target lists were found most useful and on the whole accurate.**

Chapter 3

FIRST ARMY CIC IN GERMANY

During the third week of September, while the Germans were still reeling from the Allied onslaught across Northern France, the U.S. VII Corps made a quick breach in the main defenses of the Siegfried Line and entered Germany south of Aachen. But shortage of troops and ammunition, along with stiff German resistance, brought the American advance to a halt. Eventually Aachen was completely encircled by the U.S. First Army and taken by the 1st Infantry Division in bitter house-to-house combat. The final surrender of Aachen came on 21 October.*

Although CIC recognized that its operations would be radically changed when Allied troops entered Germany, the sweep across France had been too swift to allow any specific orientation on the unusual problems to be encountered.** Fortunately the several VII Corps CIC units that operated in Germany during the battle for Aachen kept track of how they overcame their major difficulties and passed their knowledge on to the other ETO CIC units.***

These first CIC units to enter enemy territory found that the Germans, habitually obedient to those over them, were best controlled by rigid enforcement of orders. It was found that ordering a German to do something brought results, while a request for action was considered a sign of weakness and was ignored. CIC units were cautioned to take extra pains to be fair to the Germans, since the Nazis had spread stories about American brutality. The German people would cooperate more readily if the Americans quickly indicated by their actions that such stories were not true.

VII Corps CIC found that a German questioned about his political beliefs usually spoke of his party affiliations before Hitler's rise. Often those who admitted Nazi party membership claimed that they had been forced to join to keep their businesses alive. Since it was well-known that the German Catholics, predominant around Aachen, were generally anti-Nazi, many people claimed that they could not be Nazis because of their strong Catholic beliefs. It was found that local priests were helpful in indicating which men were strong Catholics,

** Hqs, Military Intelligence Service, ETO, "Counterintelligence Screening by Interrogation Teams In The Aachen Area," p. 1, 10 March 1945. (CONFIDENTIAL) (Staff and Faculty Library).

*** See Appendix 1 for "Counter Intelligence Screening by Interrogation Teams in the Aachen Area," prepared in March 1945, presumably to be used in training new personnel.

but the priests, after ten years of fighting the appeal of the Nazis, tended to build up the virtues of their strongest parishioners and unduly criticize the backsliders. However, religious affiliation alone was not enough to clear an individual. The final judgement of a man's political beliefs had to be his political record.

CIC found that the eagerness of an informant varied directly with the distance from the front lines. Potential informants tended to sit tight until it was certain that the Wehrmacht would not return. It was also discovered that informants often waited until CIC convictions of some top Nazis indicated that something would be done if they spoke up.

CIC units were reminded that informants in Germany had to be kept under cover as much as possible. In France and Belgium, men had rushed forward to denounce collaborators and were proud to have their neighbors know of their actions. In enemy territory the exact opposite was found to be true. CIC informants in Germany were collaborators in the eyes of most of their neighbors and, as a result, feared retaliation. CIC units were told that their informants expected and should get some special privileges, but that these advantages should be cut off at the first sign of abuse.*

Hints For Interrogating Germans Passed On

(U) The first CIC Detachment in Germany had some helpful hints for Agents interrogating German suspects. Captain George Gallagher, CO of the 9th CIC Detachment, reported, "The main thing in interrogating German civilians or soldiers is to adopt the same attitude toward them that the German military would adopt." The Germans, whom Gallagher said he found to be more accomplished liars that other Europeans, would immediately have the upper hand if the interrogating Agent treated them with deference, or addressed them as if they were American civilians. When the interrogator felt that he had found something out of line, it was recommended that he become "very loud, glaring and forceful and directly accuse the German of lying." Captain Gallagher felt that no harm would be done by such an accusation even if the suspect were telling the truth.

* Hq VII Corps, AC of S, G2, "CIC vs. Naziism", 24 November 1944, /s/ for the AC of S, G2: James K. Dorsett, Jr, Maj, Inf, CI Officer, CONFIDENTIAL, Staff and Faculty Library.

CONFIDENTIAL

It was noted that a German without the proper credentials to back up his claimed status should be immediately suspect, since Europeans were universally careful not to lose their papers. Suspicion was placed on any German civilian male between 18 and 50 until the individual could produce Army discharge papers or a record of physical disability.*

Agents of the 503d CIC Detachment found in interrogating Germans that best results were obtained if hints were dropped that the Americans were in possession of a detailed file card and could quickly spot a lie. Agents were urged to indicate to a German under interrogation the penalty for not telling the complete truth. When convinced that lying would be useless, many individuals supplied a wealth of information concerning activities of others. 503d CIC Agents reported that most Germans had built up, for purposes of self-defense during the Nazi regime, considerable information about their neighbors.

Suspects who could not be convicted immediately were put under "house arrest," meaning that they were ordered to remain in their homes at all times with CIC checking at irregular intervals. Under a threat of sterner penalties for violation, the usually suspects obeyed the house arrest order.

In enemy territory the necessity for complete cooperation between Military Government and CIC became of supreme importance. MG had to set up a government quickly when a town was taken, and CIC had to act just as quickly to insure that appointed officials were not Nazis. Unfortunately, the best men for official positions, those with long experience as civil servants, were most often Nazis. Although the appointments were ultimately up to MG, complete cooperation from CIC was an absolute necessity.

CIC discovered that no matter what men were put in official positions, there were likely to be complaints from the appointee's enemies. Because every official in the course of his work had to do things distasteful to many citizens, complaints often stemmed from a desire to replace the incumbent with someone more easy-going.

---

* "What Occurs When The Division Moves Into New Territory", written by George Gallagher, Capt, CO, 9th CIC Detachment, Undated, CONFIDENTIAL Staff and Faculty Library.

Combat Troops Pose Two New Problems for CIC

The first few CIC units operating in German territory also ran into two new problems involving their relations with tactical troops.

Prior to the entrance into Germany, American troops had been ordered not to fraternize* with the German people. CIC recognized this as a sound security measure, but found that military personnel were often reluctant to give information or testify in cases involving local Germans for fear of becoming suspected of fraternization. CIC Agents were advised to concentrate on their major objective, subversive civilians, and leave fraternization cases strictly in the hands of the unit commanders.

---

* Hqs, First US Army, Subject: Relations of Troops with Civil Populace, To: Corps, Division, and Separate Unit Commanders, 15 September 1944, (RESTRICTED), (KCD BX25097)

CONFIDENTIAL

CIC found that front line troops and their commanders were so eager in their desire to arrest Nazis that CIC was accused by them of coddling war criminals when a German under the mildest suspicion was not immediately apprehended. In some cases it was impossible to convey to combat commanders the necessity of a policy of fairness toward all Germans. In an effort to be as just as possible and yet contain the front line troops, CIC units urged to keep all possible suspects under house arrest.*

Majority of Germans Evacuated From Aachen

When American troops entered Aachen, all but about 10,000 of the 163,000 inhabitants had been evacuated, either voluntarily or forcefully, by the German Army. Most of the refugees moved eastward into Germany, but about one thousand drifted through the lines to settle in eastern Belgium.** As early as 18 September, the 1st CIC Detachment had picked up refugees fleeing from Aachen to the west.***

The 1st CIC Detachment, under 2d Lt. Charles G. Steinway, drew the responsibility of exploiting immediate counterintelligence targets and screening the residents who had not been evacuated. The VII Corps CIC, commanded by Maj. James K. Dorsett, took responsibility from the outset for the screening of Germans to be used in civil government.

After a preliminary screening soon after the Americans arrived, the citizens of Aachen were rescreened by CIC before they were issued passes allowing them to circulate within the city. According to the 1st CIC Detachment, the majority of the civilians encountered were cooperative and seemed to be relieved at the release from Nazi pressure.

A team of four Agents from the 1st CIC searched approximately 100 building targets arranged according to priority on a list provided by First Army headquarters. A member of the division Order of Battle team accompanied the searching parties so that an immediate evaluation could be made of all intelligence data uncovered.

2240

Another team of four Agents was responsible for locating and closing down all means of communication in the city. Using a 1942 telephone directory, the Agents plotted on a map of Aachen the locations of all telephone and telegraph exchanges, both public and private. Most such places were found to be bombed out, but wherever telephone facilities were undamaged, the Agents notified the Division Signal Corps unit.*

Military Government-Appointed Officials Choose Their Own Subordinates

Military Government officials in Aachen appointed a lawyer and business executive named Oppenhoff to the position of Oberburgermeister and allowed him to select nine Burgermeisters. CIC subsequently investigated and cleared these men. The nine Burgermeisters were then allowed by Military Government to choose their own subordinates. In effect this meant that Oppenhoff had been given a virtual free rein in the selection of the government for the city. While most of the men, as individuals, were perfectly suitable from a security standpoint, they naturally tended to hold similar political views, and Military Government had inadvertently created a political machine, in this case one of men that were predominately conservative industrialists. The liberal element of the population was almost completely excluded from participation in government.

When Military Government representatives allowed the power that should have remained with the Allied Occupation to fall to Oppenhoff's group, they greatly hindered any American attempts to oust security risks from the government. CIC found that when investigation of an individual indicated that a clearance should not be granted, the individual's superior would claim the man to be indispensible, and Oppenhoff would personally appeal the matter to Military Government. As a result, some security threats were permitted to remain in the Aachen municipal government.

CIC felt that security would be greatly improved in the future if Military Government chose not only the top man but his subordinates as well. With leaders appointed separately, it would be possible to avoid another clique that could successfully resist CIC efforts to remove undesirables.

CIC also felt that in a government of conflicting viewpoints and interests, the normal jealousies of the individual leaders would make them more likely to inform on each other to CIC. The common interests of the Oppenhoff group made a solid front which hindered CIC efforts to develop informants.** Military Government also recognized the dangers of allowing one man to choose the municipal

* Operational History of Theaters, "Germany Before V-E Day."

** Hqs, VII Corps, Office of the AC of S, G2, "CIC and MG Exterminators, Inc.", 14 January 1944, /s/ for the AC of S, G2 by James K. Dorsett, Major, Infantry, Chief CI Section, CONFIDENTIAL, Departmental Records Branch, AGO, Alexandria, Virginia.

government, and in subsequent operations tended to hold tighter control over the appointments of officials.*

As for the clique, it was February before the Americans could make much of a dent in their solid front. Ten percent of the public officials in Aachen resigned under pressure or were dismissed after investigation during that month.**

The CIC investigation of a newly-appointed municipal official was divided into three phases. The appointee was thoroughly interrogated with special emphasis placed on his attitude toward the Nazi party. Interrogators were instructed to require any person who admitted to having been a member of the Nazi Party to sign a sworn statement to that effect. CIC also conducted a records investigation and questioned the subject's acquaintances. The official was then observed in his new position, largely by informants, since CIC did not have the necessary personnel to accomplish this task.***

A representative example of a proposed municipal official rejected by CIC was chosen by the organization to be an assistant Burgermeister. was a former member of the board of the a sincere Catholic, and an extremely capable executive. CIC investigation revealed that had been for over two years in occupied Russia, holding a directly-appointed rank of in the German Army. admitted that, although he had never been a member of the Nazi Party, the Nazis had placed complete confidence in him. voiced his opinion that the biggest mistake of the Treaty of Versailles was that Germany had not been given equal rights with the other countries, and further stated that he wished to work to build a strong Germany to forestall another such "mistake." Under the provisions of SHAEF directives, was arrested for collaboration. Since was not merely ousted from his official position as a threat to security, the clique was prevented from interposing on his behalf.

When there were insufficient grounds for arrest, CIC could recommend that an official deemed undesirable be removed from his position and no further action taken. Such was the case with proposed head of the told CIC that he had joined the Nazi party in 1933 when told to do so by the leading men of Aachen industry. During the war,

did not suffer financially and worked hard to further the German war effort. Many leading liberals in Aachen denounced as a dangerous partisan of Nazism. However, CIC could not uncover sufficient proof of subversive intentions to make arrest possible, and was simply turned down as a potential civil servant. CIC also rejected individuals who, while not dangerous to American security, had poor reputations.

In extreme cases, CIC had to grant temporary clearances to questionable men because of the need for the experience and special skills of these individuals. A calculated risk of this order was who for years had been the manager of the Aachen branch of what was believed to have been the in Germany. claimed he joined the party in 1933 at the request of his in Berlin. On 3 October 1944, under orders from his employers, Zinnecke evacuated the stocks and records of the On 4 October, he returned to Aachen to CIC recognized that might well have been a Nazi plant in Aachen left with orders to report on the Allied handling of monetary problems. But because of the complete lack of native financial experts, had to be given a temporary clearance by CIC to work under the Military Government fiscal officer. This officer was made fully aware of questionable reliability and replaced him as soon as a competent could be found.*

503d CIC: First Detachment To Enter Germany

While the 1st Infantry Division pushed toward Aachen, the 3d Armored Division was moving up in a northeasterly direction, to complete the encirclement of the city. The first German town to fall into American hands, Rotgen, just over the border, 10 miles south of Aachen, was taken by advance elements of the 3d Armored Division on 14 September.

On the same day, the Commanding Officer of the 503d CIC Detachment, Captain Theodore M. Black, and two of his Agents began the first counterintelligence coverage of a German town. The Agents found Rotgen almost devoid of counterintelligence personalities and data. The Nazi Burgermeister and all the Sicherheitsdienst men had fled, and no Gestapo representatives or informants could be found in the town.

, who had been forced to work for the Germans but had refused to retreat with them, was of great assistance to the three Agents in the initial stages of their work in Rotgen. He briefed CIC on the events

* Hqs, VII Corps, Office of the A C of S, G2, "CIC and MG-Exterminators, Inc.", 14 January 1944, /s/ for the A C of S, G2 by James K. Dorsett, Major, Infantry, Chief CI Section, (CONFIDENTIAL) (Departmental Records Branch, AGO, Alexandria, Va.)

2243

that occured just prior to the city's capture; he gave the names of the people in town suspected of having Nazi leanings; he pointed out the buildings which had formerly served as German headquarters; and he filled the Agents in on the backgrounds of the individuals that Military Government had placed in the reconstructed municipal government.

was ordered, as a by Military Government, to report to CIC the presence or rumored presence of Nazi party and Gestapo members in civilian clothing.

The absence of counterintelligence targets in Rotgen caused the 503d CIC Agents to advance an obvious conclusion: the Germans were ordering all pro-Nazi officials and key Nazi party members to evacuate from towns in the direct path of the Allied sweep to prevent their apprehension and subsequent interrogation by Allied intelligence operatives.

This evacuation policy, which was expected to be strictly enforced now that Allied forces were inside the Reich, did not, in the eyes of the Agents of the 503d CIC, "...preclude the possibility or probability that pro-Nazi persons have been or would be left purposely behind..."*

After 14 September, the 503d CIC Detachment moved on with the 3d Armored Division, and counterintelligence activity in Rotgen was left to the 9th Infantry Division CIC.

On 22 September, a month before Aachen was to fall, the industrial town of Stolberg, six miles east of Aachen, fell to the forces of the 3d Armored. The 503d CIC Agents spent the remainder of the period engaged in operations in Stolberg. Near the middle of December, they were joined by the CIC Detachment of the 104th Infantry Division.**

The Case Of The Spanlose Formung

During the fast-changing combat situation, CIC often received cases outside the scope of counterintelligence when the proper investigative agency was not represented in an area and immediate action was required. To intelligence officers at First Army Headquarters, the prime target in Stolberg was Prym Enterprises,

* 3d Armored Division, 503d CIC Detachment, Memorandum For The AC of S. G2, Subject: Rotgen, Germany (Counterintelligence) 14 September 1944, /s/ Theodore M. Black, Capt. Inf. Commanding, CONFIDENTIAL, (Kansas City Records Center, Bx 25094).

** Numerous documents dated from 15 Sept. to 15 Dec. 44 from the 503d CIC Det. (Kansas City Records Center, Bx 25094).

believed to be the source of turbine blades for a new German Jet aircraft.* While this investigation would normally have been handled by Technical Intelligence teams, Agents of the 503d CIC Detachment were in Stolberg immediately after its capture and the case was assigned to them.

On the morning of 22 September, as the 3d Armored Division fought to occupy the town, CIC began to hunt for information concerning Prym Enterprises and their products. On the outskirts of town, Agents searched the estate of Hans Prym, an official of the company, and confiscated the records found there. Hans Wagermann, Prym's chauffeur and the only man on the estate, knew nothing of the affairs of the factory. Attempts to locate Hans Prym and his son, Axel Prym, who was the active head of Prym Enterprises, were unsuccessful. Interviews in the town of Busbach, outside Stolberg, where many Prym employees lived, indicated that work had stopped at the factory on 12 September. The workers spoke of a "Secret Department," staffed exclusively by about 50 military personnel. This department and its employees had been evacuated to Langenburg in Thuringia.**

That afternoon the town of Stolberg was completely captured by the 3d Armored Division and Agents of the 503d CIC Detachment immediately entered the Prym factory. There they found and interrogated Herr T. Tooran, Personnel Manager of the plant. Tooran called the secret instrument the "Spanlose Formung" (rough translation: Chipless Form) and stated that production of this instrument was in the hands of Herman Kohl, plant General Manager, who had left when production facilities were evacuated. Tooran stated that the part had been tested for about a year but had been in full-scale manufacture for only a few weeks. Tooran conducted CIC Agents through the "Secret Department" and aided the Agents in locating several aluminum objects which Tooran believed might have been the "Spanlose Formung."***

When the 503d CIC learned on 26 September that Hans Prym had returned to his home near Stolberg, Lt Olan Parker was dispatched to interview him. The

sixty-nine (69) year old Prym stated that production of the "Spanlose Formung" had been handled entirely by military personnel. Security measures were so strict, Prym said, that practically the only information he had came from the foreman of the plant's ammunition section, a Mathias Bach.* On the same day, Bach was located and interviewed by Special Agent George T. Bailey. Bach also stressed the strict security and said that those persons with more than hearsay knowledge of the secret item had left Stolberg. Bach felt that Axel Prym, who undoubtedly knew more about the "Spanlose Formung" than anyone outside of the "Secret Department," would soon reappear if he were still alive.**

Axel Prym Located

Later that day, CIC learned that Axel Prym had returned to Stolberg. Prym was able to give Lieutenant Parker and Agent Bailey more detailed technical information than the persons previously interrogated. When Lieutenant Parker showed Prym the objects confiscated in the search of the plant, the German industrialist stated that they were examples of the "Spanlose Formung" which were defective and not completely finished.

CIC Seeks Workers From "Secret Department"

On 1 October, CIC Agents located a list of persons who had worked on the "Spanlose Formung." These names were checked against the Military Government list of registered civilians in Stolberg to see if any of the workers, through some Nazi slip-up, were still in the area.***

As a result of this check, CIC Agents apprehended Hans Dahman, a tool maker in the "Secret Department." Dahman, a member of the Wehrmacht on labor furlough, did not know the purpose of the parts he made, since he was given only the information necessary to perform his job. He felt that the other workers were also kept in the dark as to exactly what they were making. Dahman was in possession of a written order directing his evacuation to Langenburg.

Dahman was the only worker from the "Secret Department" list that investigation yielded, and the 503d CIC Detachment was forced to conclude that persons with additional knowledge of the "Spanlose Formung" had been evacuated from Stolberg. Nevertheless, an investigation which had begun on the basis of hearsay and unconfirmed information had produced positive intelligence of significance.*

Socialist Denounces Nazis - And Some who Aren't

Individuals with left wing political ideologies were among the most ardent anti-Nazis in Germany and consequently among the most eager to be CIC informants. Soon after arriving in Stolberg, the 503d CIC accepted the services of one of the town's

On 6 October, sent CIC a bulky letter filled with vindictiveness and hatred. Military Government was accused of appointing Nazis to municipal government positions in Busbach and Stolberg. wrote: "Our friends, and therefore your friends, say with justification: 'It took Hitler 14 years to build his party of criminals; they, the Americans, have done the same thing in little more than 14 days."

denounced many Military Government appointees to municipal offices. To fill the vacancies that would be created by their removal, he suggested the names of some of his left wing comrades. claimed the appointment of Socialists to a majority of public offices was a natural and logical step for the Americans.

Much of letter was based on misinformation. Herr was named by as Military Government's appointment for Chief of Police in Stolberg and denounced as a Nazi, but had not been appointed to any office. Several others denounced by had already been investigated and arrested by CIC.**

also took the opportunity to denounce several of his longtime enemies who proved, under CIC investigation, to have had no apparent sympathy with Naziism. A typical victim of these grudge denunciations by

Labor Camp Leader Named As A Key Nazi

Later in October, wrote another letter to the 503d CIC, dwelling solely on the history of at the Prym factory in Stolberg.* CIC had arrested on October as a suspected contact for the Gestapo after he had been denounced by the French Liaison Officer with the VII Corps.**

Actually account of inhuman deeds only corroborated the words of other informants. Unlike the previous informants, however, placed considerable blame on the Prym family, writing: "Hans and Axel Prym tolerated all these conditions and undertook nothing to relieve them. They are therefore guilty as accessories."***

Relative to denunciation of the Pryms, CIC investigators felt that it was significant that Axel Prym, who had defended some of the factory's workers when they had been accused of party membership, made no move to defend . CIC Agents felt that had probably been too closely linked with the Gestapo for Prym ever to act against him.****

...But The 503d Is Not Finished With Axel Prym

As the territory around Aachen was cleared of German forces, Military Government was faced with choosing a man for the position of Landrat of Landkreis Aachen (Governor of the Rural County of Aachen). The first name submitted to CIC for investigation was Axel Prym. On 20 November, CIC began a re-investigation of the man who had directly and indirectly been involved in the 503d CIC Detachment's important investigations in Stolberg.*****

On 21 November, CIC received a letter concerning Prym from the described by CIC Agents as a leftist "anti-Nazi" * and an old "comrade" of .** echoed the words of when he wrote: "Axel Prym is also responsible for the terror prevailing in his own plant; everything pertaining to this either went through him or was approved by him." charged that Prym, by approving the evacuation of machinery from his plant, had destroyed the economy of the Stolberg-Busbach area.***

Special Agent Ralph E. Dietz continued the investigation on 21 October with a series of eight interviews in and around Stolberg. First interviewed was Dr. Engelbert Regh, the mayor of Stolbert under the Nazis. Regh remained a controversial figure because of repeated assertions from townspeople and important outside sources that he had effectively resisted the Nazis whenever possible and had been proud that his regime had been "less Nazi" than the government in the neighboring towns.**** CIC felt that Regh would certainly know whatever connections Axel Prym had with the Nazis. Regh stated that Prym had never been interested in political parties, preferring to concentrate on business. Prym had not, to Regh's knowledge, been a Nazi Party member. Prym, because of his conflicts with organized labor, was disliked by the workers in his factory. In general, Regh felt that Prym, at 35, was too young and politically inexperienced for the job.*****

Agent Dietz then interviewed the Military Government-appointed mayor of Stolberg, Dr. Fritz Deutzmann, "a liberal anti-Nazi,"* and former school teacher, and city historian. Deutzmann considered Prym an opportunist willing to cooperate with anyone if it furthered his own ends. According to Deutzmann, Prym's sentiments were with the National-Junker faction.**

Among the others interrogated, August Meurer, an Auxiliary Policeman, felt that Prym always favored the German militarists for his own selfish interest as a manufacturer. Although Meurer was certain Prym had not been a Nazi, he was just as sure that Prym could have prevented the mistreatment of foreign workers at his factory.***

Bruno Klaus, owner of a small factory in Stolberg, felt that Prym, while never a Nazi, was not a "balanced personality."**** Christine Schafer, a former worker at the factory, whose account of her employment pointed up her resentment of the management, claimed that she was certain that Prym was not only a party member but a Blockleiter as well.*****

CIC recommended to Military Government that Prym not be appointed to any official position. It was felt that he had been "too strong a protagonist for the conservative, nationalistic, militaristic viewpoint represented by the large industrialists, Junker landowners, and the Army." CIC concluded that Prym was

youthfulness, his unpopularity in Stolberg, and the possibility that he might later be tried as a war criminal for the maltreatment of the foreign

were also factors that made him unsuitable for an official Military Government position.*

A Review of the Stolberg Operations

(V) In Stolberg, the Americans had their first experience in juggling personalities and political ideologies in order to set up a government in enemy territory. CIC, in this new situation, admitted that too much reliance may have been placed on strong leftists, particularly Both the had been recommended for official position by although it was not on his word alone that CIC cleared them. Although it would have been impossible to install the former Nazi there were strong indications that should a popular vote have been taken, the allegedly might have been elected

Agents Interrogate 57-Year Old "Draftee"

On 22 October, the 503d Detachment learned that elderly a small community near Stolberg, had served with the German Army from 1940 to 1942. Captain Black and Special Agent George L. Kiley, interrogators, learned that he had been forced to "volunteer" in 1940 at the age of 53. In the Army had served as a French translator and later as an instructor in English and in the techniques of memory. The Nazis discharged on 17 March 1942. The German claimed that he had not been a party member, a fact which he felt had cost him a decoration for his services to the Reich.***
